

Title 173 WAC

ECOLOGY, DEPARTMENT OF

Chapters

173-03	Public records.		areas, subareas, and zones established under RCW 90.44.130.
173-04	Practice and procedure.	173-145	Administration of the flood control assistance account program.
173-06	Delegation of powers.		Protection of withdrawal facilities associated with ground water rights.
173-09	Coordinated permit process.	173-150	Water rights.
173-15	Permits for oil or natural gas exploration activities conducted from state marine waters.	173-152	Protection of upper aquifer zones.
173-16	Shoreline Management Act guidelines for development of master programs.	173-154	Flood plain management.
173-18	Shoreline Management Act—Streams and rivers constituting shorelines of the state.	173-158	Minimum standards for construction and maintenance of wells.
173-20	Shoreline Management Act—Lakes constituting shorelines of the state.	173-160	Regulation and licensing of well contractors and operators.
173-22	Adoption of designations of shorelands and wetlands associated with shorelines of the state.	173-162	Emergency drought relief.
173-24	Tax exemptions and credits for pollution control facilities.	173-166	Agricultural water supply facilities.
173-26	State master program approval/amendment procedures.	173-170	Dam safety.
173-27	Shoreline management permit and enforcement procedures.	173-175	Facility oil-handling operations and design standards.
173-40	Pollution disclosure.	173-180A	Facility oil-handling operations manual standards.
173-44	Fees—Radioactive waste management facilities.	173-180B	Facility personnel oil-handling training and certification.
173-50	Accreditation of environmental laboratories.	173-180C	Facility oil spill prevention plan standards.
173-58	Sound level measurement procedures.	173-180D	Facility contingency plan and response contractor standards.
173-60	Maximum environmental noise levels.	173-181	Preassessment screening and oil spill compensation schedule regulations.
173-62	Motor vehicle noise performance standards.	173-183	Water quality standards for ground waters of the state of Washington.
173-80	Limitations on use of Referendum 39 grant funds for water pollution abatement.	173-200	Water quality standards for surface waters of the state of Washington.
173-95A	Uses and limitations of centennial clean water funds.	173-201A	Washington forest practices rules and regulations to protect water quality.
173-98	Uses and limitations of the water pollution control revolving fund.	173-202	Sediment management standards.
173-100	Ground water management areas and programs.	173-204	Whole effluent toxicity testing and limits.
173-124	Quincy ground water management subarea and zones.	173-205	Grant of authority sewerage systems.
173-128A	Odessa ground water management subarea.	173-208	State waste discharge permit program.
173-130A	Odessa ground water subarea management policy.	173-216	Underground injection control program.
173-132	Duck Lake ground water management subarea.	173-218	National Pollutant Discharge Elimination System Permit Program.
173-134A	Quincy ground water subarea management policy.	173-220	Discharge standards and effluent limitations for domestic wastewater facilities.
173-136	The establishment of a system of authorizing the withdrawal of artificially stored ground waters embodied in an approved declaration under RCW 90.44.130, which are commingled with public ground waters in ground water	173-221	Wastewater discharge standards and effluent limitations.
		173-221A	Wastewater discharge permit fees.
		173-222	Wastewater discharge permit fees.
		173-224	Federal Water Pollution Control Act—
		173-225	Establishment of implementation procedures of application for certification.
		173-226	Waste discharge general permit program.
		173-230	Certification of operators of wastewater treatment plants.
		173-240	Submission of plans and reports for construction of wastewater facilities.

173-245	Submission of plans and reports for construction and operation of combined sewer overflow reduction facilities.	173-480	Ambient air quality standards and emission limits for radionuclides.
173-255	Limitations on use of Referendum 26 grant funds for water pollution abatement.	173-481	Ambient air quality and environmental standards for fluorides.
173-270	Puget Sound highway runoff program.	173-490	Emission standards and controls for sources emitting volatile organic compounds (VOC).
173-300	Certification of operators of solid waste incinerator and landfill facilities.	173-491	Emission standards and controls for sources emitting gasoline vapors.
173-303	Dangerous waste regulations.	173-492	Motor fuel specifications for oxygenated gasoline.
173-304	Minimum functional standards for solid waste handling.	173-495	Weather modification.
173-305	Hazardous waste fee regulation.	173-500	Water resources management program established pursuant to the Water Resources Act of 1971.
173-306	Special incinerator ash management standards.	173-501	Instream resources protection program—Nooksack water resource inventory area (WRIA) 1.
173-307	Plans.	173-507	Instream resources protection program—Snohomish River basin, water resource inventory area (WRIA) 7.
173-308	Biosolids management.	173-508	Instream resources protection program—Cedar-Sammamish basin, water resource inventory area (WRIA) 8.
173-310	Litter receptacles.	173-509	Instream resources protection program—Green-Duwamish River basin, water resource inventory area (WRIA) 9.
173-312	Coordinated prevention grants.	173-510	Instream resources protection program—Puyallup River basin, water resource inventory area (WRIA) 10.
173-313	Local solid waste enforcement grant regulation.	173-511	Instream resources protection program—Nisqually River basin, water resource inventory area (WRIA) 11.
173-314	Waste tire carrier and storage site licenses.	173-512	Instream resources protection program—Chambers-Clover Creeks basin, water resource inventory area (WRIA) 12.
173-321	Public participation grants.	173-513	Instream resources protection program—Deschutes River basin, water resource inventory area (WRIA) 13.
173-322	Remedial action grants.	173-514	Instream resources protection program—Kennedy-Goldsborough water resource inventory area (WRIA) 14.
173-325	Low-level radioactive waste disposal.	173-515	Instream resources protection program—Kitsap water resource inventory area (WRIA) 15.
173-326	Commercial low-level radioactive waste disposal—Site use permits.	173-522	Water resources program in the Chehalis River basin, WRIA-22 and 23.
173-328	Mixed waste management fees.	173-531A	Water resource program for the John Day-McNary Pools Reach of the Columbia River, WRIA 31 and parts of WRIsAs 32, 33, 36, and 37.
173-330	Used automotive oil recycling sign requirements for automotive oil sellers.	173-532	Water resources program for the Walla Walla River basin, WRIA-32.
173-331	Vehicle battery recycling.	173-545	Instream resources protection program—Wenatchee River basin, water resource inventory area (WRIA) 45.
173-340	Model Toxics Control Act—Cleanup.	173-548	Water resources program in the Methow River basin, WRIA-48.
173-342	Additional taxable hazardous substance list.	173-549	Water resources program in the Okanogan River basin, WRIA-49.
173-351	Criteria for municipal solid waste landfills.	173-555	Water resources program in the Little Spokane River basin, WRIA-55.
173-360	Underground storage tank regulations.	173-559	Water resources program for the Colville River basin, WRIA-59.
173-400	General regulations for air pollution sources.	173-563	Instream resources protection program for the main stem Columbia River in Washington state.
173-401	Operating permit regulation.		
173-405	Kraft pulping mills.		
173-406	Acid rain regulation.		
173-410	Sulfite pulping mills.		
173-415	Primary aluminum plants.		
173-420	Conformity of transportation activities to air quality implementation plans.		
173-421	Motor vehicle emission control systems.		
173-422	Motor vehicle emission inspection.		
173-425	Open burning.		
173-430	Agricultural burning.		
173-433	Solid fuel burning devices.		
173-434	Solid waste incinerator facilities.		
173-435	Emergency episode plan.		
173-450	Establishing requirements for the receipt of financial aid.		
173-460	Controls for new sources of toxic air pollutants.		
173-470	Ambient air quality standards for particulate matter.		
173-474	Ambient air quality standards for sulfur oxides.		
173-475	Ambient air quality standards for carbon monoxide, ozone, and nitrogen dioxide.		

- 173-564 Water resources management program for the main stem of the Snake River in Washington state.
- 173-590 Procedures relating to the reservation of water for future public water supply.
- 173-591 Reservation of future public water supply for Thurston County.
- 173-592 Reservation of future public water supply for Clark County.
- 173-802 SEPA procedures.
- 173-806 Model ordinance.

**DISPOSITION OF CHAPTERS FORMERLY
CODIFIED IN THIS TITLE**

Chapter 173-02

METHODS OF OPERATION AND ORGANIZATION

- 173-02-010 Purpose. [Order 71-9, § 173-02-010, filed 8/4/71.] Repealed by 78-02-041 (Order DE 77-35), filed 1/17/78. Statutory Authority: RCW 42.17.250 through 42.17.340.
- 173-02-020 General responsibilities. [Order 71-9, § 173-02-020, filed 8/4/71.] Repealed by 78-02-041 (Order DE 77-35), filed 1/17/78. Statutory Authority: RCW 42.17.250 through 42.17.340.
- 173-02-030 Organization. [Order 71-9, § 173-02-030, filed 8/4/71.] Repealed by 78-02-041 (Order DE 77-35), filed 1/17/78. Statutory Authority: RCW 42.17.250 through 42.17.340.
- 173-02-040 Functions. [Order 71-9, § 173-02-040, filed 8/4/71.] Repealed by 78-02-041 (Order DE 77-35), filed 1/17/78. Statutory Authority: RCW 42.17.250 through 42.17.340.
- 173-02-050 Ecological commission. [Order 71-9, § 173-02-050, filed 8/4/71.] Repealed by 78-02-041 (Order DE 77-35), filed 1/17/78. Statutory Authority: RCW 42.17.250 through 42.17.340.
- 173-02-060 Public information. [Order 71-9, § 173-02-060, filed 8/4/71.] Repealed by 78-02-041 (Order DE 77-35), filed 1/17/78. Statutory Authority: RCW 42.17.250 through 42.17.340.
- 173-02-070 Submissions and requests. [Order 71-9, § 173-02-070, filed 8/4/71.] Repealed by 78-02-041 (Order DE 77-35), filed 1/17/78. Statutory Authority: RCW 42.17.250 through 42.17.340.

Chapter 173-08

**ENVIRONMENTAL COORDINATION PROCEDURES ACT OF
1973—MASTER APPLICATION PROCEDURES**

- 173-08-010 Authority. [Order DE 77-23, § 173-08-010, filed 12/1/77; Order 74-6, § 173-08-010, filed 5/1/74.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-08-020 Purpose. [Order DE 77-23, § 173-08-020, filed 12/1/77; Order 74-6, § 173-08-020, filed 5/1/74.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-08-030 Definitions. [Order DE 77-23, § 173-08-030, filed 12/1/77; Order 74-6, § 173-08-030, filed 5/1/74.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-08-040 Master application form. [Order DE 77-23, § 173-08-040, filed 12/1/77; Order 74-6, § 173-08-040, filed 5/1/74.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-08-050 Scope of master application procedure. [Order DE 77-23, § 173-08-050, filed 12/1/77; Order 74-6, § 173-08-050, filed 5/1/74.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-08-060 Certification. [Order 74-6, § 173-08-060, filed 5/1/74.] Repealed by Order DE 77-23, filed 12/1/77.
- 173-08-065 Modification of the proposed project. [Order DE 77-23, § 173-08-065, filed 12/1/77.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.

- 173-08-070 Appeals to final decisions. [Order DE 77-23, § 173-08-070, filed 12/1/77.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.

Chapter 173-10

**PERMIT PROCESSING PROCEDURE APPLICABLE TO TWO OR
MORE PERMIT PROGRAMS**

- 173-10-010 Authority. [Order DE 75-26, § 173-10-010, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-10-020 Purpose. [Order DE 75-26, § 173-10-020, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-10-030 Definitions. [Order DE 75-26, § 173-10-030, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-10-040 Single application form. [Order DE 75-26, § 173-10-040, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-10-050 Public notice. [Order DE 75-26, § 173-10-050, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-10-060 Procedures superseded. [Order DE 75-26, § 173-10-060, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-10-070 Public hearing. [Order DE 75-26, § 173-10-070, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-10-080 Public notice of public hearing. [Order DE 75-26, § 173-10-080, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-10-090 Scope of single application procedure. [Order DE 75-26, § 173-10-090, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-10-100 Final action on the single application. [Order DE 75-26, § 173-10-100, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.
- 173-10-110 Appeal. [Order DE 75-26, § 173-10-110, filed 11/7/75.] Repealed by 95-24-040 (Order 95-13), filed 11/30/95, effective 12/31/95. Statutory Authority: RCW 90.60.040.

Chapter 173-12

GENERAL PROCEDURE

- 173-12-010 Purpose. [Order DE 70-11, § 173-12-010, filed 1/5/71.] Repealed by 95-09-036 (Order 94-47), filed 4/13/95, effective 5/14/95. Statutory Authority: Chapter 43.21 and 34.05 RCW.
- 173-12-020 Scope of directions—Requests for advice and guidance. [Order DE 70-11, § 173-12-020, filed 1/5/71.] Repealed by 95-09-036 (Order 94-47), filed 4/13/95, effective 5/14/95. Statutory Authority: Chapter 43.21 and 34.05 RCW.
- 173-12-030 Requests of the director for advice and guidance. [Order 71-10, § 173-12-030, filed 8/4/71; Order DE 70-11, § 173-12-030, filed 1/5/71.] Repealed by 95-09-036 (Order 94-47), filed 4/13/95, effective 5/14/95. Statutory Authority: Chapter 43.21 and 34.05 RCW.
- 173-12-040 Ecological commission submission of views. [Order DE 70-11, § 173-12-040, filed 1/5/71.] Repealed by 95-09-036 (Order 94-47), filed 4/13/95, effective 5/14/95. Statutory Authority: Chapter 43.21 and 34.05 RCW.
- 173-12-050 Adoption of regulations. [Order 71-10, § 173-12-050, filed 8/4/71; Order DE 70-11, § 173-12-050, filed 1/5/71.] Repealed by 95-09-036 (Order 94-47), filed 4/13/95, effective 5/14/95. Statutory Authority: Chapter 43.21 and 34.05 RCW.
- 173-12-060 Meetings. [Order DE 72-16, § 173-12-060, filed 6/30/72.] Repealed by 95-09-036 (Order 94-47), filed 4/13/95, effective 5/14/95. Statutory Authority: Chapter 43.21 and 34.05 RCW.

Chapter 173-14 PERMITS FOR DEVELOPMENTS ON SHORELINES OF THE STATE		
173-14-010	Authority. [Statutory Authority: RCW 90.58.200, 78-07-011 (Order DE 78-7), § 173-14-010, filed 6/14/78; Order DE 75-22, § 173-14-010, filed 10/16/75; Order 71-18, § 173-14-010, filed 12/16/71.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.	173-14-070 Notice required. [Statutory Authority: RCW 90.58.200, 78-07-011 (Order DE 78-7), § 173-14-070, filed 6/14/78; Order DE 76-17, § 173-14-070, filed 7/27/76; Order DE 75-22, § 173-14-070, filed 10/16/75; Order 71-18, § 173-14-070, filed 12/16/71.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.
173-14-020	Purpose. [Statutory Authority: RCW 90.58.200, 78-07-011 (Order DE 78-7), § 173-14-020, filed 6/14/78; Order DE 75-22, § 173-14-020, filed 10/16/75; Order 71-18, § 173-14-020, filed 12/16/71.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.	173-14-080 Public hearings. [Statutory Authority: RCW 90.58.200, 78-07-011 (Order DE 78-7), § 173-14-080, filed 6/14/78; Order DE 75-22, § 173-14-080, filed 10/16/75; Order 71-18, § 173-14-080, filed 12/16/71.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.
173-14-030	Definitions. [Statutory Authority: RCW 90.58.120 and 90.58.200, 88-19-004 (Order DE 88-23), § 173-14-030, filed 9/8/88. Statutory Authority: Chapter 90.58 RCW, 86-12-011 (Order 86-06), § 173-14-030, filed 5/23/86. Statutory Authority: RCW 90.58.200, 78-07-011 (Order DE 78-7), § 173-14-030, filed 6/14/78; Order DE 76-17, § 173-14-030, filed 7/27/76; Order DE 75-22, § 173-14-030, filed 10/16/75; Order 71-18, § 173-14-030, filed 12/16/71.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.	173-14-090 Filing with department and attorney general. [Statutory Authority: Chapter 90.58 RCW, 86-12-011 (Order 86-06), § 173-14-090, filed 5/23/86. Statutory Authority: RCW 90.58.030, 90.58.120 and 90.58.200, 85-09-043 (Order DE 85-05), § 173-14-090, filed 4/15/85. Statutory Authority: RCW 90.58.200. 78-07-011 (Order DE 78-7), § 173-14-180, filed 6/14/78; Order DE 76-17, § 173-14-180, filed 7/27/76; Order DE 75-22, § 173-14-180, filed 10/16/75.] Repealed by 87-16-101 (Order DE 87-09), filed 8/5/87. Statutory Authority: RCW 90.58.200.

173-14-190 Hearings on regulatory orders. [Statutory Authority: RCW 90.58.200. 78-07-011 (Order DE 78-7), § 173-14-190, filed 6/14/78; Order DE 75-22, § 173-14-190, filed 10/16/75.] Repealed by 81-04-027 (Order DE 80-52), filed 2/2/81. Statutory Authority: RCW 90.58.200 and 90.58.140(3).

Chapter 173-17 SHORELINE MANAGEMENT ACT ENFORCEMENT REGULATIONS

173-17-010 Authority and purpose. [Statutory Authority: RCW 90.58.200. 87-16-101 (Order DE 87-09), § 173-17-010, filed 8/5/87.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-17-020 Definitions. [Statutory Authority: RCW 90.58.200. 87-16-101 (Order DE 87-09), § 173-17-020, filed 8/5/87.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-17-030 Policy. [Statutory Authority: RCW 90.58.200. 87-16-101 (Order DE 87-09), § 173-17-030, filed 8/5/87.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-17-040 Order to cease and desist. [Statutory Authority: RCW 90.58.200. 87-16-101 (Order DE 87-09), § 173-17-040, filed 8/5/87.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-17-050 Civil penalty. [Statutory Authority: RCW 90.58.200. 87-16-101 (Order DE 87-09), § 173-17-050, filed 8/5/87.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-17-060 Appeal of civil penalty. [Statutory Authority: RCW 90.58.200. 87-16-101 (Order DE 87-09), § 173-17-060, filed 8/5/87.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-17-070 Criminal penalty. [Statutory Authority: RCW 90.58.200. 87-16-101 (Order DE 87-09), § 173-17-070, filed 8/5/87.] Repealed by 96-20-075 (Order 95-17),

filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-17-080

Oil or natural gas exploration—Penalty. [Statutory Authority: RCW 90.58.200. 87-16-101 (Order DE 87-09), § 173-17-080, filed 8/5/87.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

Chapter 173-19 SHORELINE MANAGEMENT ACT OF 1971—STATE MASTER PROGRAM

173-19-010

Purpose. [Order DE 74-23, § 173-19-010, filed 12/30/74.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-19-020

Definitions. [Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-19-020, filed 5/23/86; Order DE 74-23, § 173-19-020, filed 12/30/74.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-19-030

Master programs organized by county. [Statutory Authority: RCW 90.58.030 (3)(c), 90.58.120 and 90.58.200. 80-02-123 (Order DE 79-34), § 173-19-030, filed 1/30/80; Order DE 74-23, § 173-19-030, filed 12/30/74.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-19-040

Date of adoption or approval. [Order DE 74-23, § 173-19-040, filed 12/30/74.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-19-044

Local government change of jurisdiction—Effect of annexation. [Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-19-044, filed 5/23/86. Statutory Authority: RCW 90.58.030 (3)(c), 90.58.120 and 90.58.200. 79-09-001 (Order DE 79-6), § 173-19-044, filed 8/2/79.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-19-050

Incorporation by reference. [Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-19-050, filed 5/23/86; Order DE 74-23, § 173-19-050, filed 12/30/74.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-19-060

Amendment of master programs. [Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-19-060, filed 5/23/86. Statutory Authority: RCW 90.58.030 (3)(c), 90.58.120 and 90.58.200. 80-02-123 (Order DE 79-34), § 173-19-060, filed 1/30/80; 79-09-001 (Order DE 79-6), § 173-19-060, filed 8/2/79; Order DE 74-23, § 173-19-060, filed 12/30/74.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-19-061

Approval of master programs and amendments by local government. [Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-19-061, filed 5/23/86.] Repealed by 96-20-075 (Order 95-17), filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.140(3) and [90.58].200.

173-19-062

Submission of master programs and amendments by local government. [Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-19-062, filed 5/23/86. - 173-28-080 Fund availability. [Order 73-8, § 173-28-080, filed 6/19/73.] Repealed by 96-20-074, filed 9/30/96, effective 10/31/96. Statutory Authority: RCW 90.58.200.

Chapter 173-30
MINIMUM WATER FLOWS—CEDAR RIVER

- 173-30-010 Background and authority. [Order 71-7, § 173-30-010, filed 8/17/71.] Repealed by 79-10-002 (Order DE 79-9), filed 9/6/79. Statutory Authority: Chapters 90.22 and 90.54 RCW. Later promulgation, see chapter 173-508 WAC.
- 173-30-020 Applicability. [Order 71-7, § 173-30-020, filed 8/17/71.] Repealed by 79-10-002 (Order DE 79-9), filed 9/6/79. Statutory Authority: Chapters 90.22 and 90.54 RCW. Later promulgation, see chapter 173-508 WAC.
- 173-30-030 Measurement. [Order 71-7, § 173-30-030, filed 8/17/71.] Repealed by 79-10-002 (Order DE 79-9), filed 9/6/79. Statutory Authority: Chapters 90.22 and 90.54 RCW. Later promulgation, see chapter 173-508 WAC.
- 173-30-040 Declaration of minimum flows. [Order 71-7, § 173-30-040, filed 8/17/71.] Repealed by 79-10-002 (Order DE 79-9), filed 9/6/79. Statutory Authority: Chapters 90.22 and 90.54 RCW. Later promulgation, see chapter 173-508 WAC.
- 173-30-050 Future rights. [Order 71-7, § 173-30-050, filed 8/17/71.] Repealed by 79-10-002 (Order DE 79-9), filed 9/6/79. Statutory Authority: Chapters 90.22 and 90.54 RCW. Later promulgation, see chapter 173-508 WAC.
- 173-30-060 Enforcement. [Order 71-7, § 173-30-060, filed 8/17/71.] Repealed by 79-10-002 (Order DE 79-9), filed 9/6/79. Statutory Authority: Chapters 90.22 and 90.54 RCW. Later promulgation, see chapter 173-508 WAC.
- 173-30-070 Public information. [Order 71-7, § 173-30-070, filed 8/17/71.] Repealed by 79-10-002 (Order DE 79-9), filed 9/6/79. Statutory Authority: Chapters 90.22 and 90.54 RCW. Later promulgation, see chapter 173-508 WAC.

Chapter 173-32
ALLOCATION OF FINANCIAL AID TO COUNTIES AND CITIES TO ASSIST IN COMPREHENSIVE PLANNING FOR SOLID WASTE MANAGEMENT

- 173-32-010 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-32-010, filed 9/4/90, effective 10/5/90; Order DE 71-2, § 173-32-010, filed 4/30/71.] Repealed by 97-18-047 (Order 97-17), filed 8/28/97, effective 9/28/97.
- 173-32-020 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-32-020, filed 9/4/90, effective 10/5/90; Order DE 71-2, § 173-32-020, filed 4/30/71.] Repealed by 97-18-047 (Order 97-17), filed 8/28/97, effective 9/28/97.
- 173-32-030 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-32-030, filed 9/4/90, effective 10/5/90; Order DE 71-2, § 173-32-030, filed 4/30/71.] Repealed by 97-18-047 (Order 97-17), filed 8/28/97, effective 9/28/97.
- 173-32-040 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-32-040, filed 9/4/90, effective 10/5/90; Order DE 71-2, § 173-32-040, filed 4/30/71.] Repealed by 97-18-047 (Order 97-17), filed 8/28/97, effective 9/28/97.

Chapter 173-34
EXEMPTIONS FROM THE DETAILED STATEMENT REQUIREMENTS OF THE STATE ENVIRONMENTAL POLICY ACT

- 173-34-010 Purpose. [Order 73-15, § 173-34-010, filed 8/14/73.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-34-020 Definitions. [Order 73-15, § 173-34-020, filed 8/14/73.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-34-030 Exemptions. [Order 73-15, § 173-34-030, filed 8/14/73.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-34-040 Exemptions—Nonexempt actions. [Order 73-15, § 173-34-040, filed 8/14/73.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.

- 173-34-050 Exemptions—Limitation of exemptions. [Order 73-15, § 173-34-050, filed 8/14/73.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.

Chapter 173-70
WATERCRAFT NOISE PERFORMANCE STANDARDS

- 173-70-010 Introduction. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-010, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-020 Definitions. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-020, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-030 Identification of receiving property environments. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-030, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-040 Standards. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-040, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-050 Exemptions. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-050, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-060 Nuisance regulations not prohibited. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-060, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-070 Future standards. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-070, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-080 Implementation schedules. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-080, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-090 Enforcement. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-090, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-100 Appeals. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-100, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-110 Cooperation with local government. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-110, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.
- 173-70-120 Effective date. [Statutory Authority: Chapter 70.107 RCW. 79-04-034 (Order DE 78-20), § 173-70-120, filed 3/22/79, effective 5/1/79.] Repealed by 94-12-001 (Order 92-41), filed 5/18/94, effective 6/18/94. Statutory Authority: Chapter 70.107 RCW.

Chapter 173-90
STANDARDS AND LIMITATIONS ON THE USE OF CLEAN WATER FUNDS FOR POLLUTION ABATEMENT

- 173-90-010 Purpose and scope. [Statutory Authority: 1986 c 3 § 4. 86-19-042 (Order DE 86-25), § 173-90-010, filed 9/12/86.] Repealed by 97-17-082 (Order 97-16), filed 8/19/97, effective 9/19/97.
- 173-90-015 Definitions. [Statutory Authority: 1986 c 3 § 4. 86-19-042 (Order DE 86-25), § 173-90-015, filed 9/12/86.] Repealed by 97-17-082 (Order 97-16), filed 8/19/97, effective 9/19/97.
- 173-90-020 Provision of guidelines. [Statutory Authority: 1986 c 3 § 4. 86-19-042 (Order DE 86-25), § 173-90-020, filed

- 9/12/86.] Repealed by 97-17-082 (Order 97-16), filed 8/19/97, effective 9/19/97.
- 173-90-040 Ground water management area planning grants—Eligibility criteria, funding levels, development of priority rating and priority lists—Eligibility criteria. [Statutory Authority: 1986 c 3 § 4. 86-19-042 (Order DE 86-25), § 173-90-040, filed 9/12/86.] Repealed by 97-17-082 (Order 97-16), filed 8/19/97, effective 9/19/97.
- 173-90-050 Nonpoint source pollution control activity grants—Eligible criteria, funding levels and administration, and establishing highest priority. [Statutory Authority: 1986 c 3 § 4. 86-19-042 (Order DE 86-25), § 173-90-060, filed 9/12/86.] Repealed by 97-17-082 (Order 97-16), filed 8/19/97, effective 9/19/97.
- 173-90-060 Aquifer protection assistance grants—Eligibility criteria, funding levels, and establishing highest priority. [Statutory Authority: 1986 c 3 § 4. 86-19-042 (Order DE 86-25), § 173-90-060, filed 9/12/86.] Repealed by 97-17-082 (Order 97-16), filed 8/19/97, effective 9/19/97.
- 173-90-070 Water pollution control design grants—Eligibility criteria, funding levels, and establishing highest priority. [Statutory Authority: 1986 c 3 § 4. 86-19-042 (Order DE 86-25), § 173-90-070, filed 9/12/86.] Repealed by 97-17-082 (Order 97-16), filed 8/19/97, effective 9/19/97.

Chapter 173-95

USES AND LIMITATIONS OF CENTENNIAL CLEAN WATER FUNDS

- 173-95-010 Purpose and scope. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-010, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-020 Definitions. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-020, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-030 Provision of guidelines. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-030, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-040 Limitations on the use of funds. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-040, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-050 Compliance with applicable laws, regulations and other requirements. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-050, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-060 Indemnification. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-060, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-070 Appropriation of funds by the legislature. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-070, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-080 General provisions. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-080, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-090 Funding processes. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-090, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-100 Marine water facilities funding category. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-100, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-110 Ground water activities and facilities funding category. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-110, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-120 Freshwater lakes and rivers activities and facilities funding category. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-120, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-130 Nonpoint activities and facilities funding category. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-130, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-140 Discretionary activities and facilities funding category. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-140, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-150 Financial hardship eligibility and remedies. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-150, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.
- 173-95-160 Applicability of centennial clean water regulation and funds. [Statutory Authority: Chapter 70.146 RCW. 88-14-125 (Order 88-70), § 173-95-160, filed 7/6/88.] Repealed by 94-04-030, filed 1/26/94, effective 2/26/94.

Chapter 173-108

WITHDRAWAL OF THE WATERS OF THE LITTLE SPOKANE RIVER WATERSHED FROM ADDITIONAL APPROPRIATIONS

- 173-108-010 Authority. [Order 73-19, § 173-108-010, filed 9/21/73.] Repealed by Order DE 75-24, filed 1/6/76. Later promulgation, see chapters 173-500 and 173-555 WAC.
- 173-108-020 Purpose. [Order 73-19, § 173-108-020, filed 9/21/73.] Repealed by Order DE 75-24, filed 1/6/76. Later promulgation, see chapters 173-500 and 173-555 WAC.
- 173-108-030 Definitions. [Order 73-19, § 173-108-030, filed 9/21/73.] Repealed by Order DE 75-24, filed 1/6/76. Later promulgation, see chapters 173-500 and 173-555 WAC.
- 173-108-040 Declaration of withdrawal. [Order 73-19, § 173-108-040, filed 9/21/73.] Repealed by Order DE 75-24, filed 1/6/76.
- 173-108-050 Existing rights not affected. [Order 73-19, § 173-108-050, filed 9/21/73.] Repealed by Order DE 75-24, filed 1/6/76.
- 173-108-060 Existing rights not affected—Exemptions. [Order 73-19, § 173-108-060, filed 9/21/73.] Repealed by Order DE 75-24, filed 1/6/76.

Chapter 173-128

ODESSA GROUND WATER MANAGEMENT SUBAREA

- 173-128-010 Background. [Order 72-25, § 173-128-010, filed 1/15/73.] Repealed by 82-14-041 (Order DE 82-23), filed 6/30/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-128A-020.
- 173-128-020 Purpose. [Order 72-25, § 173-128-020, filed 1/15/73.] Repealed by 82-14-041 (Order DE 82-23), filed 6/30/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-128A-030.
- 173-128-030 Authority. [Order 72-25, § 173-128-030, filed 1/15/73.] Repealed by 82-14-041 (Order DE 82-23), filed 6/30/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-128A-010.
- 173-128-040 Subarea definition. [Order 72-25, § 173-128-040, filed 1/15/73.] Repealed by 82-14-041 (Order DE 82-23), filed 6/30/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-128A-040.
- 173-128-050 Subarea map. [Order 72-25, § 173-128-050, filed 1/15/73.] Repealed by 82-14-041 (Order DE 82-23), filed 6/30/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-128A-050.

Chapter 173-130

ODESSA GROUND WATER SUBAREA MANAGEMENT POLICY

- 173-130-010 Background. [Order DE 73-32, § 173-130-010, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-020.
- 173-130-020 Authority. [Order DE 73-32, § 173-130-020, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-010.
- 173-130-030 Definitions. [Order DE 73-32, § 173-130-030, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-030.
- 173-130-040 Purpose. [Order DE 73-32, § 173-130-040, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82.

	8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-040.		43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2).
173-130-050	Depth zone designation. [Order DE 73-32, § 173-130-050, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2).	173-130-190	Ground water supervisors. [Order DE 73-32, § 173-130-190, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2).
173-130-060	Rate of decline in water level to be controlled. [Order DE 73-32, § 173-130-060, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-060.	173-130-195	Irrigation season. [Order DE 75-33, § 173-130-195, filed 1/23/76.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-130.
173-130-070	Maximum lowering of the water table. [Order DE 73-32, § 173-130-070, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-070.	173-130-200	Review of regulations. [Order DE 75-33, § 173-130-200, filed 1/23/76; Order DE 73-32, § 173-130-200, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-220.
173-130-080	Regulation of withdrawal of ground water. [Order DE 75-33, § 173-130-080, filed 1/23/76; Order DE 73-32, § 173-130-080, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-080.	Chapter 173-134 THE ESTABLISHMENT OF REGULATIONS FOR THE ADMINISTRATION OF THE QUINCY GROUND WATER SUBAREA ESTABLISHED PURSUANT TO RCW 90.44.130	
173-130-090	Notice of regulation. [Order DE 73-32, § 173-130-090, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-090.	173-134-010	Administration of withdrawal of ground waters in the Quincy subarea. [Statutory Authority: Chapters 43.21, 43.21A, 43.27A, 90.03 and 90.44 RCW. 79-08-080 (Order DE 79-4), § 173-134-010, filed 7/26/79; Order 74-35, § 173-134-010, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-010.
173-130-100	No increase in ground water withdrawals during regulation. [Order DE 73-32, § 173-130-100, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2).	173-134-020	Definitions. [Order 74-35, § 173-134-020, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-040.
173-130-110	Supplemental wells regulated. [Order DE 73-32, § 173-130-110, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2).	173-134-030	Quincy ground water subarea—Background statement. [Order 74-35, § 173-134-030, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-020.
173-130-120	Annual volume of water determined. [Order DE 73-32, § 173-130-120, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2).	173-134-040	Quincy ground water subarea—Managed and regulated by department of ecology. [Order 74-35, § 173-134-040, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-050.
173-130-130	New ground water withdrawals. [Order DE 73-32, § 173-130-130, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2).	173-134-050	Quincy ground water subarea—Withdrawals of waters of deep management unit—Controlled by prior appropriation provisions. [Statutory Authority: Chapters 43.21, 43.21A, 43.27A, 90.03 and 90.44 RCW. 79-08-080 (Order DE 79-4), § 173-134-050, filed 7/26/79; Order 74-35, § 173-134-050, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-060.
173-130-140	New applications for withdrawal of ground waters. [Order DE 73-32, § 173-130-140, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-100.	173-134-055	Quincy ground water subarea—Public ground water permit amendments. [Statutory Authority: Chapters 43.21, 43.21A, 43.27A, 90.03 and 90.44 RCW. 79-08-080 (Order DE 79-4), § 173-134-055, filed 7/26/79.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-070.
173-130-150	Time sequence for processing new applications to appropriate ground water. [Order DE 75-33, § 173-130-150, filed 1/23/76; Order DE 73-32, § 173-130-150, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2).	173-134-060	Regulation of water of the shallow management unit—Permit requirements. [Statutory Authority: Chapters 43.21, 43.21A, 43.27A, 90.03 and 90.44 RCW. 79-08-080 (Order DE 79-4), § 173-134-060, filed 7/26/79; Order DE 75-4, § 173-134-060, filed 2/21/75; Order 74-35, § 173-134-060, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-080.
173-130-155	Reworking wells. [Order DE 75-33, § 173-130-155, filed 1/23/76.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-180.	173-134-070	Responsibility for water management—Designation of critical management areas. [Order 74-35, § 173-134-070, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130,
173-130-160	Bore hole logs required. [Order DE 75-33, § 173-130-160, filed 1/23/76; Order DE 73-32, § 173-130-160, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-190.		
173-130-170	Distance of wells from East Low Canal. [Order DE 73-32, § 173-130-170, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). Later promulgation, see WAC 173-130A-110.		
173-130-180	Supplemental surface water. [Order DE 73-32, § 173-130-180, filed 1/25/74.] Repealed by 82-16-103 (Order 82-27), filed 8/4/82. Statutory Authority: RCW		

- 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-090.
- 173-134-080 Establishment of a technical committee of scientific and engineering experts—Purpose. [Order 74-35, § 173-134-080, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-100.
- 173-134-085 Holder request for protection of interest—Department denial—Subject to review before the pollution control hearings board. [Order 74-35, § 173-134-085, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-110.
- 173-134-090 Permits not required—Conditions of exemptions. [Order 74-35, § 173-134-090, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-120.
- 173-134-100 Permits issued or extended—Conditions under which agreements may be entered into. [Order 74-35, § 173-134-100, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-130.
- 173-134-110 Notification requirements. [Order 74-35, § 173-134-110, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see chapter 173-134A WAC.
- 173-134-120 Existing laws and rights recognized—Specific jurisdiction. [Order 74-35, § 173-134-120, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see chapter 173-134A WAC.
- 173-134-130 Modification of rules when action appears justified. [Order 74-35, § 173-134-130, filed 1/9/75.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see chapter 173-134A WAC.
- 173-134-140 Artificially stored ground water permit applications—Lands not covered by declarations. [Statutory Authority: Chapters 43.21, 43.21A, 43.27A, 90.03 and 90.44 RCW. 79-08-080 (Order DE 79-4), § 173-134-140, filed 7/26/79.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see chapter 173-134A WAC.
- 173-134-150 Area described at department Order No. DE 75-54—Public ground water permits. [Statutory Authority: Chapters 43.21, 43.21A, 43.27A, 90.03 and 90.44 RCW. 79-08-080 (Order DE 79-4), § 173-134-150, filed 7/26/79.] Repealed by 80-02-025 (Order DE 79-33), filed 1/9/80. Statutory Authority: RCW 43.21A.080 and 43.27A.090(11).
- 173-134-160 Authorized and unused public ground water in deep management unit—Reservation. [Statutory Authority: Chapters 43.21, 43.21A, 43.27A, 90.03 and 90.44 RCW. 79-08-080 (Order DE 79-4), § 173-134-160, filed 7/26/79.] Repealed by 83-12-060 (Order DE 83-10), filed 6/1/83. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. Later promulgation, see WAC 173-134A-160.
- 173-142-020 Purpose. [Order DE 74-11, § 173-142-020, filed 6/17/74.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.
- 173-142-030 Definitions. [Statutory Authority: RCW 86.16.027, 82-24-026 (Order DE 82-38), § 173-142-030, filed 11/23/82; Order DE 74-11, § 173-142-030, filed 6/17/74.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.
- 173-142-040 Scope of delegation. [Statutory Authority: RCW 86.16.027, 82-24-026 (Order DE 82-38), § 173-142-040, filed 11/23/82; Order DE 74-11, § 173-142-040, filed 6/17/74.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.
- 173-142-050 Conformity with department rules. [Statutory Authority: RCW 86.16.027, 82-24-026 (Order DE 82-38), § 173-142-050, filed 11/23/82; Order DE 74-11, § 173-142-050, filed 6/17/74.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.
- 173-142-060 Subdelegation. [Order DE 74-11, § 173-142-060, filed 6/17/74.] Repealed by 82-24-026 (Order DE 82-38), filed 11/23/82. Statutory Authority: RCW 86.16.027.
- 173-142-070 Requests for delegation. [Statutory Authority: RCW 86.16.027, 82-24-026 (Order DE 82-38), § 173-142-070, filed 11/23/82; Order DE 74-11, § 173-142-070, filed 6/17/74.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.
- 173-142-080 Procedure for delegation. [Statutory Authority: RCW 86.16.027, 82-24-026 (Order DE 82-38), § 173-142-080, filed 11/23/82; Order DE 74-11, § 173-142-080, filed 6/17/74.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.
- 173-142-090 Withdrawal of delegation. [Order DE 74-11, § 173-142-090, filed 6/17/74.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.
- 173-142-100 Permits under delegated programs. [Order DE 74-11, § 173-142-100, filed 6/17/74.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.
- 173-142-110 Appeals. [Order DE 74-11, § 173-142-110, filed 6/17/74.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.

Chapter 173-164 WATER RATE CHARGES

- 173-164-010 Purpose. [Statutory Authority: 1977 ex. sess. c 1. 78-08-026 (Order DE 77-33), § 173-164-010, filed 7/13/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.
- 173-164-020 Authority. [Statutory Authority: 1977 ex. sess. c 1. 78-08-026 (Order DE 77-33), § 173-164-020, filed 7/13/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.
- 173-164-030 Definitions. [Statutory Authority: 1977 ex. sess. c 1. 78-08-026 (Order DE 77-33), § 173-164-030, filed 7/13/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.
- 173-164-040 Rates of charge. [Statutory Authority: 1977 ex. sess. c 1. 78-08-026 (Order DE 77-33), § 173-164-040, filed 7/13/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.
- 173-164-050 Determination of rate. [Statutory Authority: Chapters 43.83B and 43.27A RCW. 88-13-037 (Order 88-11), § 173-164-050, filed 6/9/88. Statutory Authority: RCW 43.83B.345, 81-07-037 (Order DE 81-5), § 173-164-050, filed 3/13/81; 80-09-052 (Order DE 80-28), § 173-164-050, filed 7/14/80. Statutory Authority: 1977 ex. sess. c 1. 78-08-026 (Order DE 77-33), § 173-164-050, filed 7/13/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.
- 173-164-060 Payment schedule. [Statutory Authority: 1977 ex. sess. c 1. 78-08-026 (Order DE 77-33), § 173-164-060, filed 7/13/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.
- 173-164-070 Measurement of water. [Statutory Authority: 1977 ex. sess. c 1. 78-08-026 (Order DE 77-33), § 173-164-070, filed 7/13/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.
- 173-164-080 Regulation review. [Statutory Authority: Chapters 43.83B and 43.27A RCW. 88-13-037 (Order 88-11), §

Chapter 173-142 DELEGATION OF PERMIT PROGRAM UNDER STATE FLOOD CONTROL ZONE ACT

- 173-142-010 Authority. [Order DE 74-11, § 173-142-010, filed 6/17/74.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.

173-164-080, filed 6/9/88.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.

Chapter 173-201

WATER QUALITY STANDARDS FOR SURFACE WATERS OF THE STATE OF WASHINGTON

- 173-201-010 Introduction. [Statutory Authority: RCW 90.48.035 and 90.48.260. 88-02-058 (Order 87-6), § 173-201-010, filed 1/6/88. Statutory Authority: RCW 90.48.035. 82-12-078 (Order DE 82-12), § 173-201-010, filed 6/2/82; 78-02-043 (Order DE 77-32), § 173-201-010, filed 1/17/78; Order 73-4, § 173-201-010, filed 7/6/73.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-020 Water use and quality criteria. [Statutory Authority: RCW 90.48.035. 78-02-043 (Order DE 77-32), § 173-201-020, filed 1/17/78; Order 73-4, § 173-201-020, filed 7/6/73.] Repealed by 82-12-078 (Order DE 82-12), filed 6/2/82. Statutory Authority: RCW 90.48.035.
- 173-201-025 Definitions. [Statutory Authority: RCW 90.48.035 and 90.48.260. 88-02-058 (Order 87-6), § 173-201-025, filed 1/6/88. Statutory Authority: RCW 90.48.035. 82-12-078 (Order DE 82-12), § 173-201-025, filed 6/2/82; 78-02-043 (Order DE 77-32), § 173-201-025, filed 1/17/78.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-030 Water use and quality criteria—General water use and criteria classes. [Order 73-4, § 173-201-030, filed 7/6/73.] Repealed by 78-02-043 (Order DE 77-32), filed 1/17/78. Statutory Authority: RCW 90.48.035.
- 173-201-035 General considerations. [Statutory Authority: RCW 90.48.035 and 90.48.260. 88-02-058 (Order 87-6), § 173-201-035, filed 1/6/88. Statutory Authority: RCW 90.48.035. 82-12-078 (Order DE 82-12), § 173-201-035, filed 6/2/82; 78-02-043 (Order DE 77-32), § 173-201-035, filed 1/17/78.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-040 Water use and quality criteria—General considerations. [Order 73-4, § 173-201-040, filed 7/6/73.] Repealed by 78-02-043 (Order DE 77-32), filed 1/17/78. Statutory Authority: RCW 90.48.035.
- 173-201-045 General water use and criteria classes. [Statutory Authority: RCW 90.48.035 and 90.48.260. 88-02-058 (Order 87-6), § 173-201-045, filed 1/6/88. Statutory Authority: RCW 90.48.035. 82-12-078 (Order DE 82-12), § 173-201-045, filed 6/2/82; 78-02-043 (Order DE 77-32), § 173-201-045, filed 1/17/78.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-047 Toxic substances. [Statutory Authority: RCW 90.48.035 and 90.48.260. 88-02-058 (Order 87-6), § 173-201-047, filed 1/6/88.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-050 Characteristic uses to be protected. [Statutory Authority: RCW 90.48.035. 78-02-043 (Order DE 77-32), § 173-201-050, filed 1/17/78; Order 73-4, § 173-201-050, filed 7/6/73.] Repealed by 82-12-078 (Order DE 82-12), filed 6/2/82. Statutory Authority: RCW 90.48.035.
- 173-201-060 Water course classification. [Order 73-4, § 173-201-060, filed 7/6/73.] Repealed by 78-02-043 (Order DE 77-32), filed 1/17/78. Statutory Authority: RCW 90.48.035.
- 173-201-070 General classifications. [Statutory Authority: RCW 90.48.035 and 90.48.260. 88-02-058 (Order 87-6), § 173-201-070, filed 1/6/88. Statutory Authority: RCW 90.48.035. 82-12-078 (Order DE 82-12), § 173-201-070, filed 6/2/82; 78-02-043 (Order DE 77-32), § 173-201-070, filed 1/17/78; Order 73-4, § 173-201-070, filed 7/6/73.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-080 Specific classifications—Freshwater. [Statutory Authority: RCW 90.48.035 and 90.48.260. 88-02-058 (Order 87-6), § 173-201-080, filed 1/6/88. Statutory Authority: RCW 90.48.035. 82-12-078 (Order DE 82-12), § 173-201-080, filed 6/2/82; 78-02-043 (Order DE 77-32), § 173-201-080, filed 1/17/78; Order 73-4, § 173-201-080, filed 11/16/73; Order 73-4, § 173-201-080, filed 7/6/73.] Repealed by 92-24-037 (Order 92-

29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.

- 173-201-085 Specific classifications—Marine water. [Statutory Authority: RCW 90.48.035. 82-12-078 (Order DE 82-12), § 173-201-085, filed 6/2/82; 78-02-043 (Order DE 77-32), § 173-201-085, filed 1/17/78.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-090 Achievement considerations. [Statutory Authority: RCW 90.48.035 and 90.48.260. 88-02-058 (Order 87-6), § 173-201-090, filed 1/6/88. Statutory Authority: RCW 90.48.035. 82-12-078 (Order DE 82-12), § 173-201-090, filed 6/2/82; 78-02-043 (Order DE 77-32), § 173-201-090, filed 1/17/78; Order 73-4, § 173-201-090, filed 7/6/73.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-100 Implementation. [Statutory Authority: RCW 90.48.035 and 90.48.260. 88-02-058 (Order 87-6), § 173-201-100, filed 1/6/88. Statutory Authority: RCW 90.48.035. 78-02-043 (Order DE 77-32), § 173-201-100, filed 1/17/78; Order 73-4, § 173-201-100, filed 7/6/73.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-110 Surveillance. [Statutory Authority: RCW 90.48.035. 78-02-043 (Order DE 77-32), § 173-201-110, filed 1/17/78; Order 73-4, § 173-201-110, filed 7/6/73.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-120 Enforcement. [Statutory Authority: RCW 90.48.035. 82-12-078 (Order DE 82-12), § 173-201-120, filed 6/2/82; 78-02-043 (Order DE 77-32), § 173-201-120, filed 1/17/78; Order 73-4, § 173-201-120, filed 7/6/73.] Repealed by 92-24-037 (Order 92-29), filed 11/25/92, effective 12/26/92. Statutory Authority: Chapter 90.48 RCW.
- 173-201-130 Definitions. [Order 73-4, § 173-201-130, filed 7/6/73.] Repealed by 78-02-043 (Order DE 77-32), filed 1/17/78. Statutory Authority: RCW 90.48.035.
- 173-201-140 Miscellaneous. [Statutory Authority: RCW 90.48.035. 78-02-043 (Order DE 77-32), § 173-201-140, filed 1/17/78; Order 73-4, § 173-201-140, filed 7/6/73.] Repealed by 82-12-078 (Order DE 82-12), filed 6/2/82. Statutory Authority: RCW 90.48.035.

Chapter 173-223

INTERIM WASTEWATER DISCHARGE PERMIT FEES

- 173-223-015 Purpose and authority. [Statutory Authority: Chapter 43.21A RCW. 89-05-026 (Order 88-53), § 173-223-015, filed 2/13/89; 88-12-035 (Order 88-8), § 173-223-015, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.
- 173-223-020 Applicability. [Statutory Authority: Chapter 43.21A RCW. 88-12-035 (Order 88-8), § 173-223-020, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.
- 173-223-030 Definitions. [Statutory Authority: Chapter 43.21A RCW. 89-05-026 (Order 88-53), § 173-223-030, filed 2/13/89; 88-12-035 (Order 88-8), § 173-223-030, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.
- 173-223-040 Permit fee schedule. [Statutory Authority: Chapter 43.21A RCW. 89-05-026 (Order 88-53), § 173-223-040, filed 2/13/89; 88-12-035 (Order 88-8), § 173-223-040, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.
- 173-223-050 Permit fee payments. [Statutory Authority: Chapter 43.21A RCW. 89-05-026 (Order 88-53), § 173-223-050, filed 2/13/89; 88-12-035 (Order 88-8), § 173-223-050, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.
- 173-223-060 Permits issued by other governmental agencies. [Statutory Authority: Chapter 43.21A RCW. 88-12-035

- (Order 88-8), § 173-223-060, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.
- 173-223-070 Credits. [Statutory Authority: Chapter 43.21A RCW. 89-05-026 (Order 88-53), § 173-223-070, filed 2/13/89; 88-12-035 (Order 88-8), § 173-223-070, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.
- 173-223-080 Transfer of ownership or control. [Statutory Authority: Chapter 43.21A RCW. 88-12-035 (Order 88-8), § 173-223-080, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.
- 173-223-090 Administrative appeals to the director. [Statutory Authority: Chapter 43.21A RCW. 89-05-026 (Order 88-53), § 173-223-090, filed 2/13/89; 88-12-035 (Order 88-8), § 173-223-090, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.
- 173-223-100 Deposits. [Statutory Authority: Chapter 43.21A RCW. 88-12-035 (Order 88-8), § 173-223-100, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.
- 173-223-110 Past due payments. [Statutory Authority: Chapter 43.21A RCW. 88-12-035 (Order 88-8), § 173-223-110, filed 5/26/88, effective 7/1/88.] Repealed by 89-12-027 and 97-22-043 (Orders 89-8 and 97-26), filed 5/31/89 and 10/31/97, effective 12/1/97. Statutory Authority: Chapter 43.21A RCW.

Chapter 173-250

CONSTRUCTION GRANTS PROGRAM—PRIORITY RATING SYSTEM AND PROJECT PRIORITY LIST

- 173-250-010 Purpose and scope. [Statutory Authority: RCW 43.21A.080. 78-09-067 (Order DE 78-11), § 173-250-010, filed 8/24/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.
- 173-250-020 Definitions. [Statutory Authority: RCW 43.21A.080. 78-09-067 (Order DE 78-11), § 173-250-020, filed 8/24/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.
- 173-250-030 Development and approval of the system. [Statutory Authority: RCW 43.21A.080. 78-09-067 (Order DE 78-11), § 173-250-030, filed 8/24/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.
- 173-250-040 Development and approval of the state project priority list. [Statutory Authority: RCW 43.21A.080. 78-09-067 (Order DE 78-11), § 173-250-040, filed 8/24/78.] Repealed by 93-14-116 (Order 92-54), filed 7/2/93, effective 8/2/93.

Chapter 173-301

REGULATIONS RELATING TO MINIMUM FUNCTIONAL STANDARDS FOR SOLID WASTE HANDLING

- 173-301-100 Authority and purpose. [Order DE 72-21, § 173-301-100, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-101 Other agencies. [Order DE 72-21, § 173-301-101, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-105 Effects on pollution, public health and safety. [Order DE 72-21, § 173-301-105, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-110 Definitions. [Statutory Authority: RCW 70.95.060 and chapter 70.95 RCW. 83-09-017 (Order DE 83-2), § 173-301-110, filed 4/13/83; Order DE 72-21, § 173-301-110, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-120 Solid waste storage. [Order DE 72-21, § 173-301-120, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-121 Solid waste storage—Garbage. [Order DE 72-21, § 173-301-121, filed 10/26/72.] Repealed by 86-03-034 (Order

- 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-122 Solid waste storage—Light material. [Order DE 72-21, § 173-301-122, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-123 Solid waste storage—Hazardous wastes. [Order DE 72-21, § 173-301-123, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-124 Solid waste storage—Agricultural wastes. [Order DE 72-21, § 173-301-124, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-125 Solid waste storage—Problem wastes. [Order DE 72-21, § 173-301-125, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-126 Solid waste storage—Storage areas and containers. [Order DE 72-21, § 173-301-126, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-140 Collection and transportation. [Order DE 72-21, § 173-301-140, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-141 Collection and transportation—Prevention of nuisances. [Order DE 72-21, § 173-301-141, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-142 Collection and transportation—Vehicle construction. [Order DE 72-21, § 173-301-142, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-143 Collection and transportation—Vehicle spillage. [Order DE 72-21, § 173-301-143, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-150 Transfer station. [Order DE 72-21, § 173-301-150, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-151 Transfer station—Application and plans. [Order DE 72-21, § 173-301-151, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-152 Transfer station—Architecture and landscaping. [Order DE 72-21, § 173-301-152, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-153 Transfer station—Pollution control and cleanliness. [Order DE 72-21, § 173-301-153, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-154 Transfer station—Roads. [Order DE 72-21, § 173-301-154, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-155 Transfer station—Identification. [Order DE 72-21, § 173-301-155, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-156 Transfer station—Fire protection. [Order DE 72-21, § 173-301-156, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-157 Transfer station—Communications. [Order DE 72-21, § 173-301-157, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-158 Transfer station—Employee facilities. [Order DE 72-21, § 173-301-158, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-159 Transfer station—Attendant. [Order DE 72-21, § 173-301-159, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-160 Transfer station—Safety. [Order DE 72-21, § 173-301-160, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-161 Transfer station—Vector control. [Order DE 72-21, § 173-301-161, filed 10/26/72.] Repealed by 86-03-034

	(Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-196	Solid waste disposal site—Light material control. [Order DE 72-21, § 173-301-196, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-162	Transfer station—Records. [Order DE 72-21, § 173-301-162, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-197	Solid waste disposal site—Records. [Order DE 72-21, § 173-301-197, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-163	Transfer station—Confined tipping. [Order DE 72-21, § 173-301-163, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-300	Sanitary landfill, leachate control. [Order DE 72-21, § 173-301-300, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-164	Transfer station—Scavenging. [Order DE 72-21, § 173-301-164, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-301	Sanitary landfill, leachate control—Pollution prevention. [Order DE 72-21, § 173-301-301, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-180	Solid waste disposal site. [Statutory Authority: RCW 70.95.060 and chapter 70.95 RCW, 83-09-017 (Order DE 83-2), § 173-301-180, filed 4/13/83; Order DE 72-21, § 173-301-180, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-302	Sanitary landfill, leachate control—Gas venting. [Order DE 72-21, § 173-301-302, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-181	Solid waste disposal site—Application and plans. [Statutory Authority: RCW 70.95.060 and chapter 70.95 RCW, 83-09-017 (Order DE 83-2), § 173-301-181, filed 4/13/83; Order DE 72-21, § 173-301-181, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-303	Sanitary landfill, leachate control—Single layer compaction. [Order DE 72-21, § 173-301-303, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-182	Solid waste disposal site—Disposal site design, architecture and landscaping. [Order DE 72-21, § 173-301-182, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-304	Sanitary landfill, leachate control—Daily cover. [Order DE 72-21, § 173-301-304, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-183	Solid waste disposal site—Pollution control. [Order DE 72-21, § 173-301-183, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-305	Sanitary landfill, leachate control—Final cover. [Order DE 72-21, § 173-301-305, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-184	Solid waste disposal site—Roads. [Order DE 72-21, § 173-301-184, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-306	Sanitary landfill, leachate control—Final surface. [Order DE 72-21, § 173-301-306, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-185	Solid waste disposal site—Gate. [Order DE 72-21, § 173-301-185, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-307	Sanitary landfill, leachate control—Equipment. [Order DE 72-21, § 173-301-307, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-186	Solid waste disposal site—Employee facilities. [Order DE 72-21, § 173-301-186, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-308	Sanitary landfill, leachate control—Completion inspection. [Order DE 72-21, § 173-301-308, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-187	Solid waste disposal site—Disposal site identification. [Order DE 72-21, § 173-301-187, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-309	Sanitary landfill, leachate control—Recurrent inspection and maintenance. [Order DE 72-21, § 173-301-309, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-188	Solid waste disposal site—Fire protection. [Order DE 72-21, § 173-301-188, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-310	Sanitary landfill, leachate control—Recording with county auditor. [Order DE 72-21, § 173-301-310, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-189	Solid waste disposal site—Communication. [Order DE 72-21, § 173-301-189, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-320	Sludge management. [Statutory Authority: RCW 70.95.060 and chapter 70.95 RCW, 83-09-017 (Order DE 83-2), § 173-301-320, filed 4/13/83.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-190	Solid waste disposal site—Confined unloading. [Order DE 72-21, § 173-301-190, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-350	Incinerator, applicability of air pollution standards. [Order DE 72-21, § 173-301-350, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-191	Solid waste disposal site—Reclamation. [Order DE 72-21, § 173-301-191, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-351	Incinerator, applicability of air pollution standards—Incoming storage. [Order DE 72-21, § 173-301-351, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-192	Solid waste disposal site—Scavenging. [Order DE 72-21, § 173-301-192, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-352	Incinerator, applicability of air pollution standards—Preuse inspection and performance tests. [Order DE 72-21, § 173-301-352, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-193	Solid waste disposal site—Attendant. [Order DE 72-21, § 173-301-193, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-353	Incinerator, applicability of air pollution standards—Residue disposal. [Order DE 72-21, § 173-301-353, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-194	Solid waste disposal site—Safety. [Order DE 72-21, § 173-301-194, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-354	Incinerator, applicability of air pollution standards—Emergency disposal. [Order DE 72-21, § 173-301-354, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
173-301-195	Solid waste disposal site—Vector control. [Order DE 72-21, § 173-301-195, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.	173-301-355	Incinerator, applicability of air pollution standards—Drains. [Order DE 72-21, § 173-301-355, filed

- 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-356 Incinerator, applicability of air pollution standards—Disposal of process water. [Order DE 72-21, § 173-301-356, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-357 Incinerator, applicability of air pollution standards—Recording pyrometer. [Order DE 72-21, § 173-301-357, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-358 Incinerator, applicability of air pollution standards—Safety. [Order DE 72-21, § 173-301-358, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-359 Incinerator, applicability of air pollution standards—Cleaning. [Order DE 72-21, § 173-301-359, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-400 Compost plant, odorous materials. [Order DE 72-21, § 173-301-400, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-401 Compost plant, odorous materials—Safety. [Order DE 72-21, § 173-301-401, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-402 Compost plant, odorous materials—Byproducts. [Order DE 72-21, § 173-301-402, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-450 Reclamation site. [Order DE 72-21, § 173-301-450, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-451 Reclamation site—Application and plans. [Order DE 72-21, § 173-301-451, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-452 Reclamation site—Architecture and landscaping. [Order DE 72-21, § 173-301-452, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-453 Reclamation site—Pollution control and cleanliness. [Order DE 72-21, § 173-301-453, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-454 Reclamation site—Storage. [Order DE 72-21, § 173-301-454, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-455 Reclamation site—Safety. [Order DE 72-21, § 173-301-455, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-456 Reclamation site—Employee facilities. [Order DE 72-21, § 173-301-456, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-457 Reclamation site—Records. [Order DE 72-21, § 173-301-457, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-500 Other methods of solid waste handling, processing and disposal. [Order DE 72-21, § 173-301-500, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-610 Nonconforming sites and facilities. [Order DE 72-21, § 173-301-610, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-611 Abandoned disposal sites. [Order DE 72-21, § 173-301-611, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-625 Enforcement. [Order DE 72-21, § 173-301-625, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.
- 173-301-626 Inspection. [Order DE 72-21, § 173-301-626, filed 10/26/72.] Repealed by 86-03-034 (Order 85-87), filed 1/10/86. Statutory Authority: Chapter 43.21A RCW.

Chapter 173-302 HAZARDOUS WASTE REGULATION

- 173-302-010 Purpose. [Order DE 77-34, § 173-302-010, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-010.
- 173-302-020 Applicability. [Order DE 77-34, § 173-302-020, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-020.
- 173-302-030 Abbreviations. [Order DE 77-34, § 173-302-030, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-030.
- 173-302-040 Definitions. [Order DE 77-34, § 173-302-040, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-040.
- 173-302-050 Conference. [Order DE 77-34, § 173-302-050, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260.
- 173-302-060 Imminent hazard. [Order DE 77-34, § 173-302-060, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-050.
- 173-302-070 Designation of EHW. [Order DE 77-34, § 173-302-070, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-080 Categorization. [Order DE 77-34, § 173-302-080, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-101.
- 173-302-090 Criteria for dangerous wastes (DW). [Order DE 77-34, § 173-302-090, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-100 Criteria for extremely hazardous waste (EHW). [Order DE 77-34, § 173-302-100, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-110 Hazardous due to toxicity to man and wildlife. [Order DE 77-34, § 173-302-110, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-120 Hazardous due to quantity. [Order DE 77-34, § 173-302-120, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-102.
- 173-302-130 Hazardous due to persistence and potential hazard. [Order DE 77-34, § 173-302-130, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-140 Containers. [Order DE 77-34, § 173-302-140, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-160.
- 173-302-150 Division, dilution, and accumulation. [Order DE 77-34, § 173-302-150, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-150.
- 173-302-160 Appeal of designation. [Order DE 77-34, § 173-302-160, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-165 Disposal prohibited. [Statutory Authority: RCW 70.105.020 and 70.105.030. 78-08-021 (Order DE 78-

- 14), § 173-302-165, filed 7/12/78.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-170 Requirements for generators. [Order DE 77-34, § 173-302-170, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-180 Manifest procedures. [Order DE 77-34, § 173-302-180, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-180.
- 173-302-190 Manifest form. [Order DE 77-34, § 173-302-190, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-180.
- 173-302-200 Waste transporter requirements. [Order DE 77-34, § 173-302-200, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-240.
- 173-302-210 Transporter applicability. [Order DE 77-34, § 173-302-210, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-240.
- 173-302-220 Waste acceptance. [Order DE 77-34, § 173-302-220, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-250 and 173-303-370.
- 173-302-230 Transportation. [Order DE 77-34, § 173-302-230, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-250.
- 173-302-240 Operator requirements. [Order DE 77-34, § 173-302-240, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260.
- 173-302-250 Yearly operating plan. [Order DE 77-34, § 173-302-250, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260.
- 173-302-260 Hazardous waste acceptance. [Order DE 77-34, § 173-302-260, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-370.
- 173-302-270 EHW handling at the disposal site. [Order DE 77-34, § 173-302-270, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260.
- 173-302-280 Environmental requirements. [Order DE 77-34, § 173-302-280, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-290 Security requirements. [Order DE 77-34, § 173-302-290, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-310.
- 173-302-300 Safety requirements. [Order DE 77-34, § 173-302-300, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260.
- 173-302-310 Emergency requirements. [Order DE 77-34, § 173-302-310, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-350 through 173-303-360.
- 173-302-320 Personnel requirements. [Order DE 77-34, § 173-302-320, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-330.
- 173-302-330 Department surveillance. [Order DE 77-34, § 173-302-330, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-340 Financial requirements. [Order DE 77-34, § 173-302-340, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see WAC 173-303-620.
- 173-302-350 Treater requirements. [Order DE 77-34, § 173-302-350, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-360 Treater applicability. [Order DE 77-34, § 173-302-360, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-370 EHW acceptance. [Order DE 77-34, § 173-302-370, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-380 Treatment criteria. [Order DE 77-34, § 173-302-380, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.
- 173-302-390 Compliance. [Statutory Authority: RCW 70.105.020 and 70.105.030. 78-08-021 (Order DE 78-14), § 173-302-390, filed 7/12/78; Order DE 77-34, § 173-302-390, filed 12/29/77.] Repealed by 82-05-023 (Order DE 81-33), filed 2/10/82. Statutory Authority: Chapter 70.105 RCW and RCW 70.95.260. Later promulgation, see chapter 173-303 WAC.

**Chapter 173-309
HAZARDOUS WASTE CLEANUP ACT—LOCAL TOXICS
CONTROL ACCOUNT—INTERIM FINANCIAL ASSISTANCE
PROGRAM**

- 173-309-010 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-309-010, filed 9/4/90, effective 10/5/90. Statutory Authority: RCW 70.105B.220(4). 88-17-009 (Order 88-61), § 173-309-010, filed 8/5/88.] Repealed by 97-18-046 (Order 97-18), filed 8/28/97, effective 9/28/97.
- 173-309-020 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-309-020, filed 9/4/90, effective 10/5/90. Statutory Authority: RCW 70.105B.220(4). 88-17-009 (Order 88-61), § 173-309-020, filed 8/5/88.] Repealed by 97-18-046 (Order 97-18), filed 8/28/97, effective 9/28/97.
- 173-309-030 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-309-030, filed 9/4/90, effective 10/5/90. Statutory Authority: RCW 70.105B.220(4). 88-17-009 (Order 88-61), § 173-309-030, filed 8/5/88.] Repealed by 97-18-046 (Order 97-18), filed 8/28/97, effective 9/28/97.
- 173-309-040 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-309-040, filed 9/4/90, effective 10/5/90. Statutory Authority: RCW 70.105B.220(4). 88-17-009 (Order 88-61), § 173-309-040, filed 8/5/88.] Repealed by 97-18-046 (Order 97-18), filed 8/28/97, effective 9/28/97.
- 173-309-050 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-309-050, filed 9/4/90, effective 10/5/90. Statutory Authority: RCW 70.105B.220(4). 88-17-009 (Order 88-61), § 173-309-050, filed 8/5/88.] Repealed by 97-18-046 (Order 97-18), filed 8/28/97, effective 9/28/97.
- 173-309-060 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-309-060, filed 9/4/90, effective 10/5/90. Statutory Authority: RCW 70.105B.220(4). 88-17-009 (Order 88-61), § 173-309-060, filed 8/5/88.] Repealed by 97-18-046 (Order 97-18), filed 8/28/97, effective 9/28/97.
- 173-309-070 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-309-070, filed 9/4/90, effective 10/5/90. Statutory Authority: RCW 70.105B.220(4). 88-17-009 (Order 88-61), § 173-309-070, filed 8/5/88.] Repealed by 97-18-046 (Order 97-18), filed 8/28/97, effective 9/28/97.
- 173-309-080 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-309-080, filed 9/4/90, effective 10/5/90. Statutory

Authority: RCW 70.105B.220(4), 88-17-009 (Order 88-61), § 173-309-080, filed 8/5/88.] Repealed by 97-18-046 (Order 97-18), filed 8/28/97, effective 9/28/97.

- 173-309-090 Reserved. [Statutory Authority: RCW 43.21A.080 and chapter 70.105D RCW. 90-18-064 (Order 90-17), § 173-309-090, filed 9/4/90, effective 10/5/90. Statutory Authority: RCW 70.105B.220(4), 88-17-009 (Order 88-61), § 173-309-090, filed 8/5/88.] Repealed by 97-18-046 (Order 97-18), filed 8/28/97, effective 9/28/97.

Chapter 173-311

MODERATE RISK WASTE GRANTS

- 173-311-010 Purpose and authority. [Statutory Authority: RCW 43.21A.080, chapter 70.105D RCW and 1990 c 114 § 19. 90-18-066 (Order 90-22), § 173-311-010, filed 9/4/90, effective 10/5/90.] Repealed by 97-18-048 (Order 97-19), filed 8/28/97, effective 9/28/97.
- 173-311-020 Definitions. [Statutory Authority: RCW 43.21A.080, chapter 70.105D RCW and 1990 c 114 § 19. 90-18-066 (Order 90-22), § 173-311-020, filed 9/4/90, effective 10/5/90.] Repealed by 97-18-048 (Order 97-19), filed 8/28/97, effective 9/28/97.
- 173-311-030 Relation to other legislation and administrative rules. [Statutory Authority: RCW 43.21A.080, chapter 70.105D RCW and 1990 c 114 § 19. 90-18-066 (Order 90-22), § 173-311-030, filed 9/4/90, effective 10/5/90.] Repealed by 97-18-048 (Order 97-19), filed 8/28/97, effective 9/28/97.
- 173-311-040 General. [Statutory Authority: RCW 43.21A.080, chapter 70.105D RCW and 1990 c 114 § 19. 90-18-066 (Order 90-22), § 173-311-040, filed 9/4/90, effective 10/5/90.] Repealed by 97-18-048 (Order 97-19), filed 8/28/97, effective 9/28/97.
- 173-311-050 Moderate risk waste grants. [Statutory Authority: RCW 43.21A.080, chapter 70.105D RCW and 1990 c 114 § 19. 90-18-066 (Order 90-22), § 173-311-050, filed 9/4/90, effective 10/5/90.] Repealed by 97-18-048 (Order 97-19), filed 8/28/97, effective 9/28/97.

Chapter 173-315

MODEL TOXICS CONTROL ACT—LOCAL TOXICS CONTROL ACCOUNT—INTERIM FINANCIAL ASSISTANCE PROGRAM

- 173-315-010 Purpose and authority. [Statutory Authority: Chapter 70.105D RCW. 90-10-058 (Order 89-42), § 173-315-010, filed 5/1/90, effective 6/1/90. Statutory Authority: 1989 c 2. 89-17-072 (Order 89-11), § 173-315-010, filed 8/17/89, effective 9/17/89.] Repealed by 97-18-043 (Order 97-20), filed 8/28/97, effective 9/28/97.
- 173-315-020 Definitions. [Statutory Authority: 1989 c 2. 89-17-072 (Order 89-11), § 173-315-020, filed 8/17/89, effective 9/17/89.] Repealed by 97-18-043 (Order 97-20), filed 8/28/97, effective 9/28/97.
- 173-315-030 Relation to other legislation and administrative rules. [Statutory Authority: 1989 c 2. 89-17-072 (Order 89-11), § 173-315-030, filed 8/17/89, effective 9/17/89.] Repealed by 97-18-043 (Order 97-20), filed 8/28/97, effective 9/28/97.
- 173-315-040 General. [Statutory Authority: Chapter 70.105D RCW. 90-10-058 (Order 89-42), § 173-315-040, filed 5/1/90, effective 6/1/90. Statutory Authority: 1989 c 2. 89-17-072 (Order 89-11), § 173-315-040, filed 8/17/89, effective 9/17/89.] Repealed by 97-18-043 (Order 97-20), filed 8/28/97, effective 9/28/97.
- 173-315-050 Reserved. [Statutory Authority: Chapter 70.105D RCW. 90-10-058 (Order 89-42), § 173-315-050, filed 5/1/90, effective 6/1/90. Statutory Authority: 1989 c 2. 89-17-072 (Order 89-11), § 173-315-050, filed 8/17/89, effective 9/17/89.] Repealed by 97-18-043 (Order 97-20), filed 8/28/97, effective 9/28/97.
- 173-315-060 Hazardous waste planning and program grants. [Statutory Authority: RCW 43.21A.080, chapter 70.105D RCW and 1990 c 114 § 19. 90-18-066 (Order 90-22), § 173-315-060, filed 9/4/90, effective 10/5/90. Statutory Authority: 1989 c 2. 89-17-072 (Order 89-11), § 173-315-060, filed 8/17/89, effective 9/17/89.] Repealed by 97-18-043 (Order 97-20), filed 8/28/97, effective 9/28/97.
- 173-315-070 Solid waste planning and program grants. [Statutory Authority: 1989 c 2. 89-17-072 (Order 89-11), § 173-315-070, filed 8/17/89, effective 9/17/89.] Repealed by 97-18-043 (Order 97-20), filed 8/28/97, effective 9/28/97.

Chapter 173-318

PHASE ONE—WASTE REDUCTION AND RECYCLING GRANTS

- 173-318-010 Purpose and authority. [Statutory Authority: Chapters 43.83A and 43.99F RCW. 89-18-070 (Order 89-29), § 173-318-010, filed 9/5/89, effective 10/6/89.] Repealed by 97-18-044 (Order 97-22), filed 8/28/97, effective 9/28/97.
- 173-318-020 Relation to other legislation and administrative rules. [Statutory Authority: Chapters 43.83A and 43.99F RCW. 89-18-070 (Order 89-29), § 173-318-020, filed 9/5/89, effective 10/6/89.] Repealed by 97-18-044 (Order 97-22), filed 8/28/97, effective 9/28/97.
- 173-318-030 Definitions. [Statutory Authority: Chapters 43.83A and 43.99F RCW. 89-18-070 (Order 89-29), § 173-318-030, filed 9/5/89, effective 10/6/89.] Repealed by 97-18-044 (Order 97-22), filed 8/28/97, effective 9/28/97.
- 173-318-040 Funding. [Statutory Authority: Chapters 43.83A and 43.99F RCW. 89-18-070 (Order 89-29), § 173-318-040, filed 9/5/89, effective 10/6/89.] Repealed by 97-18-044 (Order 97-22), filed 8/28/97, effective 9/28/97.
- 173-318-050 Procedures. [Statutory Authority: Chapters 43.83A and 43.99F RCW. 89-18-070 (Order 89-29), § 173-318-050, filed 9/5/89, effective 10/6/89.] Repealed by 97-18-044 (Order 97-22), filed 8/28/97, effective 9/28/97.
- 173-318-060 Eligibility and grantee match requirements. [Statutory Authority: Chapters 43.83A and 43.99F RCW. 89-18-070 (Order 89-29), § 173-318-060, filed 9/5/89, effective 10/6/89.] Repealed by 97-18-044 (Order 97-22), filed 8/28/97, effective 9/28/97.
- 173-318-070 Waste reduction/recycling best management practices study demonstration project grants. [Statutory Authority: Chapters 43.83A and 43.99F RCW. 89-18-070 (Order 89-29), § 173-318-070, filed 9/5/89, effective 10/6/89.] Repealed by 97-18-044 (Order 97-22), filed 8/28/97, effective 9/28/97.
- 173-318-080 Preimplementation program design grants for waste reduction/recycling projects. [Statutory Authority: Chapters 43.83A and 43.99F RCW. 89-18-070 (Order 89-29), § 173-318-080, filed 9/5/89, effective 10/6/89.] Repealed by 97-18-044 (Order 97-22), filed 8/28/97, effective 9/28/97.

Chapter 173-319

COMPREHENSIVE WASTE REDUCTION/RECYCLING GRANTS PROGRAM

- 173-319-010 Purpose and authority. [Statutory Authority: RCW 43.21A.080. 90-22-084 (Order 90-39), § 173-319-010, filed 11/6/90, effective 12/7/90.] Repealed by 97-18-045 (Order 97-23), filed 8/28/97, effective 9/28/97.
- 173-319-020 Relation to other legislation and administrative rules. [Statutory Authority: RCW 43.21A.080. 90-22-084 (Order 90-39), § 173-319-020, filed 11/6/90, effective 12/7/90.] Repealed by 97-18-045 (Order 97-23), filed 8/28/97, effective 9/28/97.
- 173-319-030 Definitions. [Statutory Authority: RCW 43.21A.080. 90-22-084 (Order 90-39), § 173-319-030, filed 11/6/90, effective 12/7/90.] Repealed by 97-18-045 (Order 97-23), filed 8/28/97, effective 9/28/97.
- 173-319-040 General. [Statutory Authority: RCW 43.21A.080. 90-22-084 (Order 90-39), § 173-319-040, filed 11/6/90, effective 12/7/90.] Repealed by 97-18-045 (Order 97-23), filed 8/28/97, effective 9/28/97.
- 173-319-050 Compost study grants. [Statutory Authority: RCW 43.21A.080. 90-22-084 (Order 90-39), § 173-319-050, filed 11/6/90, effective 12/7/90.] Repealed by 97-18-045 (Order 97-23), filed 8/28/97, effective 9/28/97.
- 173-319-060 Waste reduction and recycling public information and education grants. [Statutory Authority: RCW 43.21A.080. 90-22-084 (Order 90-39), § 173-319-060, filed 11/6/90, effective 12/7/90.] Repealed by 97-18-045 (Order 97-23), filed 8/28/97, effective 9/28/97.

Chapter 173-320

BEVERAGE CONTAINERS—DETACHABLE PULL TABS

- 173-320-010 Authority. [Statutory Authority: Chapter 113, Laws of 1982 (chapter 70.132 RCW). 83-12-062 (Order DE 82-39), § 173-320-010, filed 6/1/83.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-320-020 Declaration of purpose. [Statutory Authority: Chapter 113, Laws of 1982 (chapter 70.132 RCW). 83-12-062 (Order DE 82-39), § 173-320-020, filed 6/1/83.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.

- 173-320-030 Applicability. [Statutory Authority: Chapter 113, Laws of 1982 (chapter 70.132 RCW). 83-12-062 (Order DE 82-39), § 173-320-030, filed 6/1/83.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-320-040 Definitions. [Statutory Authority: Chapter 113, Laws of 1982 (chapter 70.132 RCW). 83-12-062 (Order DE 82-39), § 173-320-040, filed 6/1/83.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-320-050 Prohibition. [Statutory Authority: Chapter 113, Laws of 1982 (chapter 70.132 RCW). 83-12-062 (Order DE 82-39), § 173-320-050, filed 6/1/83.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-320-060 Return requirement. [Statutory Authority: Chapter 113, Laws of 1982 (chapter 70.132 RCW). 83-12-062 (Order DE 82-39), § 173-320-060, filed 6/1/83.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-320-070 Complaints. [Statutory Authority: Chapter 113, Laws of 1982 (chapter 70.132 RCW). 83-12-062 (Order DE 82-39), § 173-320-070, filed 6/1/83.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-320-080 Enforcement. [Statutory Authority: Chapter 113, Laws of 1982 (chapter 70.132 RCW). 83-12-062 (Order DE 82-39), § 173-320-080, filed 6/1/83.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.

Chapter 173-335**VEHICLE TIRE RECYCLING AND REMOVAL GRANT REGULATION**

- 173-335-010 Purpose and authority. [Statutory Authority: RCW 70.95.260. 88-17-002 (Order 88-25), § 173-335-010, filed 8/4/88.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-335-020 Definitions. [Statutory Authority: RCW 70.95.260. 88-17-002 (Order 88-25), § 173-335-020, filed 8/4/88.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-335-030 Relation to other legislation and administrative rules. [Statutory Authority: RCW 70.95.260. 88-17-002 (Order 88-25), § 173-335-030, filed 8/4/88.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-335-040 General. [Statutory Authority: RCW 70.95.260. 88-17-002 (Order 88-25), § 173-335-040, filed 8/4/88.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.
- 173-335-050 Administration. [Statutory Authority: RCW 70.95.260. 88-17-002 (Order 88-25), § 173-335-050, filed 8/4/88.] Repealed by 94-07-078 (Order 94-02), filed 3/16/94, effective 4/16/94.

Chapter 173-336**INITIAL INVESTIGATION REGULATION**

- 173-336-010 Purpose and authority. [Statutory Authority: RCW 70.105B.030(2). 88-15-038 (Order 88-20), § 173-336-010, filed 7/15/88.] Repealed by 90-08-120 (Order 90-12), filed 4/4/90, effective 5/5/90. Statutory Authority: Chapter 70.105D RCW.
- 173-336-020 Definitions. [Statutory Authority: RCW 70.105B.030(2). 88-15-038 (Order 88-20), § 173-336-020, filed 7/15/88.] Repealed by 90-08-120 (Order 90-12), filed 4/4/90, effective 5/5/90. Statutory Authority: Chapter 70.105D RCW.
- 173-336-030 General. [Statutory Authority: RCW 70.105B.030(2). 88-15-038 (Order 88-20), § 173-336-030, filed 7/15/88.] Repealed by 90-08-120 (Order 90-12), filed 4/4/90, effective 5/5/90. Statutory Authority: Chapter 70.105D RCW.

Chapter 173-338**HAZARD RANKING SYSTEM REGULATION**

- 173-338-010 Purpose. [Statutory Authority: RCW 70.105B.030(2). 88-15-037 (Order 88-5), § 173-338-010, filed 7/15/88.] Repealed by 90-08-120 (Order 90-12), filed 4/4/90, effective 5/5/90. Statutory Authority: Chapter 70.105D RCW.
- 173-338-020 Definitions. [Statutory Authority: RCW 70.105B.030(2). 88-15-037 (Order 88-5), § 173-338-020, filed 7/15/88.] Repealed by 90-08-120 (Order 90-12), filed 4/4/90, effective 5/5/90. Statutory Authority: Chapter 70.105D RCW.
- 173-338-030 Evaluation criteria. [Statutory Authority: RCW 70.105B.030(2). 88-15-037 (Order 88-5), § 173-338-030, filed 7/15/88.] Repealed by 90-08-120 (Order 90-

12), filed 4/4/90, effective 5/5/90. Statutory Authority: Chapter 70.105D RCW.

- 173-338-040 Scoring procedure. [Statutory Authority: RCW 70.105B.030(2). 88-15-037 (Order 88-5), § 173-338-040, filed 7/15/88.] Repealed by 90-08-120 (Order 90-12), filed 4/4/90, effective 5/5/90. Statutory Authority: Chapter 70.105D RCW.

- 173-338-050 Rescoring. [Statutory Authority: RCW 70.105B.030(2). 88-15-037 (Order 88-5), § 173-338-050, filed 7/15/88.] Repealed by 90-08-120 (Order 90-12), filed 4/4/90, effective 5/5/90. Statutory Authority: Chapter 70.105D RCW.

Chapter 173-402**CIVIL SANCTIONS UNDER WASHINGTON CLEAN AIR ACT**

- 173-402-010 Prior regulations. [Statutory Authority: RCW 70.94.040, 70.94.141 and 70.94.331. 80-08-024 (Order DE 80-23), § 173-402-010, filed 6/24/80.] Repealed by 94-14-067, filed 7/1/94, effective 8/1/94.
- 173-402-020 Subsequent regulations. [Statutory Authority: RCW 70.94.040, 70.94.141 and 70.94.331. 80-08-024 (Order DE 80-23), § 173-402-020, filed 6/24/80.] Repealed by 94-14-067, filed 7/1/94, effective 8/1/94.

Chapter 173-403**IMPLEMENTATION OF REGULATIONS FOR AIR CONTAMINANT SOURCES**

- 173-403-010 Policy and purpose. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-010, filed 4/11/83. Formerly WAC 18-60-010.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-020 Applicability. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-020, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-030 Definitions. [Statutory Authority: Chapters 70.94 and 43.21A RCW. 89-02-055 (Order 88-39), § 173-403-030, filed 1/3/89. Statutory Authority: Chapter 70.94 RCW. 87-19-074 (Order 87-13), § 173-403-030, filed 9/16/87. Statutory Authority: RCW 70.94.331. 86-23-014 (Order 86-30), § 173-403-030, filed 11/10/86; 85-06-047 (Order 84-49), § 173-403-030, filed 3/6/85. Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-18-010 (Order DE 83-22), § 173-403-030, filed 8/26/83; 83-09-013 (Order DE 83-12), § 173-403-030, filed 4/11/83. Formerly WAC 18-60-020.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-050 New source review (NSR). [Statutory Authority: Chapters 70.94 and 43.21A RCW. 89-02-055 (Order 88-39), § 173-403-050, filed 1/3/89. Statutory Authority: RCW 70.94.331. 85-06-047 (Order 84-49), § 173-403-050, filed 3/6/85. Statutory Authority: RCW 70.94.331, 70.94.141 and 43.21A.060. 84-21-098 (Order 84-27), § 173-403-050, filed 10/19/84. Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-18-010 (Order DE 83-22), § 173-403-050, filed 8/26/83; 83-09-013 (Order DE 83-12), § 173-403-050, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-060 Bubble rules. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-18-010 (Order DE 83-22), § 173-403-060, filed 8/26/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-070 Issuance of emission reduction credits. [Statutory Authority: RCW 70.94.331. 85-06-047 (Order 84-49), § 173-403-070, filed 3/6/85. Statutory Authority: RCW 70.94.331, 70.94.141 and 43.21A.060. 84-21-098 (Order 84-27), § 173-403-070, filed 10/19/84. Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-18-010 (Order DE 83-22), § 173-403-070, filed 8/26/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-075 Use of emission reduction credits. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-18-010 (Order DE 83-22), § 173-403-075, filed 8/26/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.

- 173-403-080 Prevention of significant deterioration (PSD). [Statutory Authority: Chapters 70.94 and 43.21A RCW. 89-02-055 (Order 88-39), § 173-403-080, filed 1/3/89. Statutory Authority: RCW 70.94.331. 85-06-047 (Order 84-49), § 173-403-080, filed 3/6/85. Statutory Authority: RCW 70.94.331, 70.94.141 and 43.21A.060. 84-21-098 (Order 84-27), § 173-403-080, filed 10/19/84. Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-18-010 (Order DE 83-22), § 173-403-080, filed 8/26/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-090 Retrofit requirements for visibility protection. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-18-010 (Order DE 83-22), § 173-403-090, filed 8/26/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-100 Compliance schedules. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-100, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-110 Public involvement. [Statutory Authority: RCW 70.94.331. 86-23-014 (Order 86-30), § 173-403-110, filed 11/10/86. Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-18-010 (Order DE 83-22), § 173-403-110, filed 8/26/83. 83-09-013 (Order DE 83-12), § 173-403-110, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-120 Variance. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-120, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-130 Requirements for nonattainment areas. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-130, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-140 Use of dispersion techniques. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-140, filed 4/11/83.] Repealed by 86-23-014 (Order 86-30), filed 11/10/86. Statutory Authority: RCW 70.94.331.
- 173-403-141 Creditable stack height and dispersion techniques. [Statutory Authority: RCW 70.94.331. 86-23-014 (Order 86-30), § 173-403-141, filed 11/10/86.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-145 Adjustment for atmospheric conditions. [Statutory Authority: RCW 70.94.331. 86-23-014 (Order 86-30), § 173-403-145, filed 11/10/86.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-150 Maintenance of pay. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-150, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-160 Requirements for boards and director. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-160, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-170 Regulatory actions. [Statutory Authority: RCW 70.94.331, 70.94.141 and 43.21A.060. 84-21-098 (Order 84-27), § 173-403-170, filed 10/19/84. Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-170, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-180 Criminal penalties. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-180, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-403-190 Appeals. [Statutory Authority: Chapters 43.21A and 70.94 RCW. 83-09-013 (Order DE 83-12), § 173-403-190, filed 4/11/83.] Repealed by 91-05-064 (Order 90-06), filed 2/19/91, effective 3/22/91. Statutory Authority: Chapter 70.94 RCW.
- 173-440-010 Purpose. [Statutory Authority: RCW 70.94.331. 90-19-062 (Order 90-10), § 173-440-010, filed 9/17/90, effective 10/18/90. Statutory Authority: Chapter 70.94 RCW. 87-19-076 (Order 87-15), § 173-440-010, filed 9/16/87.] Repealed by 94-14-067, filed 7/1/94, effective 8/1/94.
- 173-440-020 Applicability. [Statutory Authority: Chapter 70.94 RCW. 87-19-076 (Order 87-15), § 173-440-020, filed 9/16/87.] Repealed by 94-14-067, filed 7/1/94, effective 8/1/94.
- 173-440-030 Definitions. [Statutory Authority: RCW 70.94.331. 90-19-062 (Order 90-10), § 173-440-030, filed 9/17/90, effective 10/18/90. Statutory Authority: Chapter 70.94 RCW. 87-19-076 (Order 87-15), § 173-440-030, filed 9/16/87.] Repealed by 94-14-067, filed 7/1/94, effective 8/1/94.
- 173-440-040 Sensitive areas designated. [Statutory Authority: Chapter 70.94 RCW. 87-19-076 (Order 87-15), § 173-440-040, filed 9/16/87.] Repealed by 94-14-067, filed 7/1/94, effective 8/1/94.
- 173-440-100 Standards. [Statutory Authority: RCW 70.94.331. 90-19-062 (Order 90-10), § 173-440-100, filed 9/17/90, effective 10/18/90. Statutory Authority: Chapter 70.94 RCW. 87-19-076 (Order 87-15), § 173-440-100, filed 9/16/87.] Repealed by 94-14-067, filed 7/1/94, effective 8/1/94.
- 173-440-900 Appendix A—Map. [Statutory Authority: Chapter 70.94 RCW. 87-19-076 (Order 87-15), § 173-440-900, filed 9/16/87.] Repealed by 94-14-067, filed 7/1/94, effective 8/1/94.

SENSITIVE AREAS
(Formerly chapter 18-06 WAC)
- Chapter 173-530**
WATER RESOURCES PROGRAM
IN THE KLICKITAT RIVER BASIN, WRIA-30
- 173-530-910 Authority. [Order DE 76-7, § 173-530-910, filed 4/14/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-530-920 Purpose. [Order DE 76-7, § 173-530-920, filed 4/14/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-530-930 Definitions. [Order DE 76-7, § 173-530-930, filed 4/14/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-530-940 Declaration of withdrawal. [Statutory Authority: RCW 90.54.050. 81-20-041 (Order DE 81-30), § 173-530-940, filed 10/18/81; 78-11-039 (Order DE 78-18), § 173-530-940, filed 10/19/78; Order DE 76-7, § 173-530-940, filed 4/14/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-530-950 Existing rights not affected. [Order DE 76-7, § 173-530-950, filed 4/14/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-530-960 Exemptions. [Order DE 76-7, § 173-530-960, filed 4/14/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- Chapter 173-531**
WATER RESOURCE PROGRAM FOR THE JOHN DAY-MCNARY
POOLS REACH OF THE COLUMBIA RIVER,
WRIA 31 AND PARTS OF WRIAS 32, 33, 36, AND 37
- 173-531-010 Purpose. [Statutory Authority: RCW 90.54.040 and 90.54.050. 78-09-015 (Order DE 77-31), § 173-531-010, filed 8/8/78.] Repealed by 80-08-020 (Order DE 80-1), filed 6/24/80. Statutory Authority: RCW 90.54.040 and 90.54.050. Later promulgation, see WAC 173-531A-010.
- 173-531-020 Definitions. [Statutory Authority: RCW 90.54.040 and 90.54.050. 78-09-015 (Order DE 77-31), § 173-531-020, filed 8/8/78.] Repealed by 80-08-020 (Order DE 80-1), filed 6/24/80. Statutory Authority: RCW

- 90.54.040 and 90.54.050. Later promulgation, see WAC 173-531A-020.
- 173-531-030 Existing water rights protected. [Statutory Authority: RCW 90.54.040 and 90.54.050. 78-09-015 (Order DE 77-31), § 173-531-030, filed 8/8/78.] Repealed by 80-08-020 (Order DE 80-1), filed 6/24/80. Statutory Authority: RCW 90.54.040 and 90.54.050. Later promulgation, see WAC 173-531A-030.
- 173-531-040 Reservation for future irrigation use. [Statutory Authority: RCW 90.54.040 and 90.54.050. 78-09-015 (Order DE 77-31), § 173-531-040, filed 8/8/78.] Repealed by 80-08-020 (Order DE 80-1), filed 6/24/80. Statutory Authority: RCW 90.54.040 and 90.54.050. Later promulgation, see WAC 173-531A-040.
- 173-531-050 Reservation for municipal use. [Statutory Authority: RCW 90.54.040 and 90.54.050. 78-09-015 (Order DE 77-31), § 173-531-050, filed 8/8/78.] Repealed by 80-08-020 (Order DE 80-1), filed 6/24/80. Statutory Authority: RCW 90.54.040 and 90.54.050. Later promulgation, see WAC 173-531A-050.
- 173-531-060 Department to develop an instream resource protection program. [Statutory Authority: RCW 90.54.040 and 90.54.050. 78-09-015 (Order DE 77-31), § 173-531-060, filed 8/8/78.] Repealed by 80-08-020 (Order DE 80-1), filed 6/24/80. Statutory Authority: RCW 90.54.040 and 90.54.050. Later promulgation, see WAC 173-531A-060.
- 173-531-070 Department to review regulation. [Statutory Authority: RCW 90.54.040 and 90.54.050. 78-09-015 (Order DE 77-31), § 173-531-070, filed 8/8/78.] Repealed by 80-08-020 (Order DE 80-1), filed 6/24/80. Statutory Authority: RCW 90.54.040 and 90.54.050. Later promulgation, see WAC 173-531A-070.

Chapter 173-596

PROCEDURES AND POLICIES GOVERNING APPROPRIATIONS OF SIGNIFICANT AMOUNTS OF WATER FOR AGRICULTURAL IRRIGATION USE

- 173-596-010 Background. [Order DE 76-19, § 173-596-010, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-015 Purpose. [Order DE 76-19, § 173-596-015, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-020 Definitions. [Order DE 76-19, § 173-596-020, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-025 Conditions to be included in permits involving substantial withdrawals of public waters. [Order DE 76-19, § 173-596-025, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-030 Regional water supply and multipurpose project considerations. [Order DE 76-19, § 173-596-030, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-035 Processing of applications. [Order DE 76-19, § 173-596-035, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-040 Water right of regional or statewide significance. [Order DE 76-19, § 173-596-040, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-045 Conservation and management program. [Order DE 76-19, § 173-596-045, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-050 Monitoring program. [Order DE 76-19, § 173-596-050, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-055 Effect on existing rights and laws and public entities. [Order DE 76-19, § 173-596-055, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-060 Environmental impact statement. [Order DE 76-19, § 173-596-060, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.
- 173-596-065 Review of regulatory orders. [Order DE 76-19, § 173-596-065, filed 6/8/76.] Repealed by 88-13-037 (Order 88-11), filed 6/9/88. Statutory Authority: Chapters 43.27A, 90.22 and 90.54 RCW.

Chapter 173-800

INTEGRATION OF POLICIES AND PROCEDURES OF SEPA INTO THE PROGRAMS OF THE DEPARTMENT OF ECOLOGY

- 173-800-010 Authority. [Order DE 76-12, § 173-800-010, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-010.
- 173-800-015 Impact of guidelines on the department. [Order DE 76-12, § 173-800-015, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-020 Purpose. [Order DE 76-12, § 173-800-020, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-030.
- 173-800-030 Effect of SEPA. [Order DE 76-12, § 173-800-030, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-040.
- 173-800-035 Integration of SEPA procedures with other departmental operations. [Order DE 76-12, § 173-800-035, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-045.
- 173-800-040 Definitions. [Order DE 76-12, § 173-800-040, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-050 Designation of responsible official. [Order DE 76-12, § 173-800-050, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-050.
- 173-800-060 Timing. [Order DE 76-12, § 173-800-060, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-060.
- 173-800-070 Scope of a proposal and its impacts for the purposes of lead agency determination, threshold determination, and EIS preparation. [Order DE 76-12, § 173-800-070, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-080 Summary of information which may be required of a private applicant. [Order DE 76-12, § 173-800-080, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-070.
- 173-800-090 No presumption of significance for nonexempt actions. [Order DE 76-12, § 173-800-090, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-100 Categorical exemptions. [Order DE 76-12, § 173-800-100, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-105 Exemptions applicable to other agencies. [Order DE 76-12, § 173-800-105, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-110 Exemptions and nonexemptions specifically applicable to the department. [Order DE 76-12, § 173-800-110, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-120 Exemption for emergency actions. [Order DE 76-12, § 173-100-120 (codified as WAC 173-800-120), filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-140 Sensitive areas. [Order DE 76-12, § 173-800-140, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-080.
- 173-800-145 Use and effect of categorical exemptions. [Order DE 76-12, § 173-800-145, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-150 Lead agency—Responsibilities. [Order DE 76-12, § 173-800-150, filed 5/14/76.] Repealed by 78-04-090

- (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-160 Determination of lead agency—Procedures. [Order DE 76-12, § 173-800-160, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-170 Lead agency designation—Governmental proposals. [Order DE 76-12, § 173-800-170, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-180 Lead agency designation—Proposals involving both private and public construction activity. [Order DE 76-12, § 173-800-180, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-190 Lead agency designation—Private projects for which there is only one agency with jurisdiction. [Order DE 76-12, § 173-800-190, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-200 Lead agency designation—Private projects requiring licenses from more than one agency, when one of the agencies is a county/city. [Order DE 76-12, § 173-800-200, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-210 Lead agency designation—Private projects requiring licenses from more than one state agency. [Order DE 76-12, § 173-800-210, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-220 Lead agency designation—Specific proposals. [Order DE 76-12, § 173-800-220, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-230 Local agency transfer of lead agency status to a state agency. [Order DE 76-12, § 173-800-230, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-240 Agreements as to lead agency status. [Order DE 76-12, § 173-800-240, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-250 Agreements between agencies as to division of lead agency duties. [Order DE 76-12, § 173-800-250, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-260 Dispute as to lead agency determination—Resolution by CEP. [Order DE 76-12, § 173-800-260, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-270 Assumption of lead agency status by another agency with jurisdiction. [Order DE 76-12, § 173-800-270, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-280 Individuals making SEPA-related determinations. [Order DE 76-12, § 173-800-280, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-090.
- 173-800-300 Environmental checklist. [Order DE 76-12, § 173-800-300, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-310 Environmental checklist procedures. [Order DE 76-12, § 173-800-310, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-320 Threshold determination procedures—Initial review of environmental checklist. [Order DE 76-12, § 173-800-320, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-330 Threshold determination procedures—Information in addition to checklist. [Order DE 76-12, § 173-800-330, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-340 Threshold determination procedures—Negative declarations. [Order DE 76-12, § 173-800-340, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-345 Assumption of lead agency status by another agency with jurisdiction over a proposal—Prerequisites, effect and form of notice. [Order DE 76-12, § 173-800-345, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-350 Affirmative threshold determination. [Order DE 76-12, § 173-800-350, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-355 Form of declaration of significance/nonsignificance. [Order DE 76-12, § 173-800-355, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-360 Threshold determination criteria—Application of environmental checklist. [Order DE 76-12, § 173-800-360, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-370 Withdrawal of affirmative threshold determination. [Order DE 76-12, § 173-800-370, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-375 Withdrawal of negative threshold determination. [Order DE 76-12, § 173-800-375, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-380 Threshold determination appeal procedures. [Order DE 76-12, § 173-800-380, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-100.
- 173-800-390 Statute of limitation. [Order DE 76-12, § 173-800-390, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-110.
- 173-800-400 Duty to begin preparation of a draft EIS. [Order DE 76-12, § 173-800-400, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-405 Purpose and function of a draft EIS. [Order DE 76-12, § 173-800-405, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-410 Predraft consultation procedures. [Order DE 76-12, § 173-800-410, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-420 Preparation of EIS by persons outside the lead agency. [Order DE 76-12, § 173-800-420, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-425 Organization and style of a draft EIS. [Order DE 76-12, § 173-800-425, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-440 Contents of a draft EIS. [Order DE 76-12, § 173-800-440, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-442 Special considerations regarding contents of an EIS on a nonproject action. [Order DE 76-12, § 173-800-442, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-444 List of elements of the environment. [Order DE 76-12, § 173-800-444, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-450 Public awareness of availability of draft EIS. [Order DE 76-12, § 173-800-450, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-460 Specific agencies to which draft EIS shall be sent. [Order DE 76-12, § 173-800-460, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-465 Agencies possessing environmental expertise. [Order DE 76-12, § 173-800-465, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-470 Cost to the public for reproduction of environmental documents. [Order DE 76-12, § 173-800-470, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
- 173-800-480 Public hearing on a proposal—When required. [Order DE 76-12, § 173-800-480, filed 5/14/76.] Repealed by

	78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.		Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
173-800-485	Public hearing on environmental impact of the proposal. [Order DE 76-12, § 173-800-485, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-800-810	Responsibility of agencies—Amendments to this chapter. [Order DE 76-12, § 173-800-810, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
173-800-490	Public hearing on the proposal—Use of environmental documents. [Order DE 76-12, § 173-800-490, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-800-830	Responsibility of agencies—SEPA public information center. [Order DE 76-12, § 173-800-830, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
173-800-495	Preparation of amended or new draft EIS. [Order DE 76-12, § 173-800-495, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-800-840	Application of these guidelines to on-going actions. [Order DE 76-12, § 173-800-840, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.
173-800-500	Responsibilities of consulted agencies—Local agencies. [Order DE 76-12, § 173-800-500, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-800-910	Severability. [Order DE 76-12, § 173-800-910, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120. Later promulgation, see WAC 173-801-130.
173-800-510	Responsibilities of consulted agencies—State agencies with jurisdiction. [Order DE 76-12, § 173-800-510, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	<p style="text-align: center;">Chapter 173-801 DEPARTMENT OF ECOLOGY "SEPA" GUIDELINES</p>	
173-800-520	Responsibilities of consulted agencies—State agencies with environmental expertise. [Order DE 76-12, § 173-800-520, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.		
173-800-530	Responsibilities of consulted agencies—When predraft consultation has occurred. [Order DE 76-12, § 173-800-530, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-010	Authority. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-010, filed 4/4/78. Formerly WAC 173-800-010.] Repealed by 84-13-037 (Order DE 84-21), filed 6/15/84. Statutory Authority: RCW 43.21C.120 and 43.21C.135. Later promulgation, see chapter 173-802 WAC.
173-800-535	Cost of performance of consulted agency responsibilities. [Order DE 76-12, § 173-800-535, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-020	Adoption by reference. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-020, filed 4/4/78.] Repealed by 84-13-037 (Order DE 84-21), filed 6/15/84. Statutory Authority: RCW 43.21C.120 and 43.21C.135.
173-800-540	Limitations on responses to consultation. [Order DE 76-12, § 173-800-540, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-030	Purpose. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-030, filed 4/4/78. Formerly WAC 173-800-020.] Repealed by 84-13-037 (Order DE 84-21), filed 6/15/84. Statutory Authority: RCW 43.21C.120 and 43.21C.135.
173-800-545	Effect of no written comment. [Order DE 76-12, § 173-800-545, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-040	Effect of SEPA. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-040, filed 4/4/78. Formerly WAC 173-800-030.] Repealed by 84-13-037 (Order DE 84-21), filed 6/15/84. Statutory Authority: RCW 43.21C.120 and 43.21C.135.
173-800-550	Consulted agency coordination. [Order DE 76-12, § 173-800-550, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-045	Integration of SEPA procedures with other departmental operations. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-045, filed 4/4/78. Formerly WAC 173-800-035.] Repealed by 84-13-037 (Order DE 84-21), filed 6/15/84. Statutory Authority: RCW 43.21C.120 and 43.21C.135.
173-800-570	Preparation of the final EIS—Contents—When no critical comments received on the draft EIS. [Order DE 76-12, § 173-800-570, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-050	Designation of responsible official. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-050, filed 4/4/78. Formerly WAC 173-800-050.] Repealed by 84-13-037 (Order DE 84-21), filed 6/15/84. Statutory Authority: RCW 43.21C.120 and 43.21C.135.
173-800-580	Preparation of the final EIS—Contents—When critical comments received on the draft EIS. [Order DE 76-12, § 173-800-580, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-060	Timing. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-060, filed 4/4/78. Formerly WAC 173-800-060.] Repealed by 84-13-037 (Order DE 84-21), filed 6/15/84. Statutory Authority: RCW 43.21C.120 and 43.21C.135.
173-800-600	Circulation of the final EIS. [Order DE 76-12, § 173-800-600, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-070	Summary of information which may be required of a private applicant. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-070, filed 4/4/78. Formerly WAC 173-800-080.] Repealed by 84-13-037 (Order DE 84-21), filed 6/15/84. Statutory Authority: RCW 43.21C.120 and 43.21C.135.
173-800-650	Effect of an adequate final EIS prepared pursuant to NEPA. [Order DE 76-12, § 173-800-650, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-080	Sensitive areas. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-080, filed 4/4/78. Formerly WAC 173-800-140.] Repealed by 84-13-037 (Order DE 84-21), filed 6/15/84. Statutory Authority: RCW 43.21C.120 and 43.21C.135.
173-800-652	Supplementation by a lead agency of an inadequate final NEPA EIS. [Order DE 76-12, § 173-800-652, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-090	Individuals making SEPA-related determinations. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-090, filed 4/4/78. Formerly WAC 173-800-280.] Repealed by 84-13-037 (Order DE 84-21), filed 6/15/84. Statutory Authority: RCW 43.21C.120 and 43.21C.135.
173-800-660	Use of previously prepared EIS for a different proposed action. [Order DE 76-12, § 173-800-660, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.	173-801-100	Threshold determination appeal procedures. [Statutory Authority: RCW 43.21C.120. 78-04-090 (Order DE 78-5), § 173-801-100, filed 4/4/78. Formerly 173-800-380.] Repealed by 84-13-037 (Order DE 84-21), filed
173-800-690	Use of lead agency's EIS by other acting agencies for the same proposal. [Order DE 76-12, § 173-800-690, filed 5/14/76.] Repealed by 78-04-090 (Order DE 78-5), filed 4/4/78. Statutory Authority: RCW 43.21C.120.

Chapter 173-805

MODEL ORDINANCE FOR USE IN INTEGRATION OF SEPA GUIDELINES

- 173-805-010 Policies and authority. [Order DE 76-13, § 173-805-010, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-010.
- 173-805-020 Adoption by reference. [Statutory Authority: RCW 43.21C.130. 78-04-091 (Order DE 78-6), § 173-805-020, filed 4/4/78; Order DE 76-13, § 173-805-020, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-020, 173-806-065, 173-806-110, 173-806-128, 173-806-150, 173-806-155, 173-806-175, 173-806-180, 173-806-185 and 173-806-230.
- 173-805-030 Additional definitions. [Statutory Authority: RCW 43.21C.130. 78-04-091 (Order DE 78-6), § 173-805-030, filed 4/4/78; Order DE 76-13, § 173-805-030, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-030.
- 173-805-040 Time limits applicable to the SEPA process. [Order DE 76-13, § 173-805-040, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-055.
- 173-805-050 Environmentally sensitive areas. [Order DE 76-13, § 173-805-050, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-190.
- 173-805-060 Use of exemptions. [Order DE 76-13, § 173-805-060, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-080.
- 173-805-070 Lead agency determination and responsibilities. [Statutory Authority: RCW 43.21C.130. 78-04-091 (Order DE 78-6), § 173-805-070, filed 4/4/78; Order DE 76-13, § 173-805-070, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-050.
- 173-805-080 Transfer of lead agency status to a state agency. [Order DE 76-13, § 173-805-080, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-053.
- 173-805-090 Environmental checklist. [Order DE 76-13, § 173-805-090, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-090.
- 173-805-100 Preparation of EIS. [Order DE 76-13, § 173-805-100, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-120.
- 173-805-105 Additional elements to be covered in an EIS. [Order DE 76-13, § 173-805-105, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-125.
- 173-805-110 Designation of official to perform consulted agency responsibilities for the city/county. [Order DE 76-13, § 173-805-110, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-140.
- 173-805-115 Designation of responsible official. [Order DE 76-13, § 173-805-115, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-040.
- 173-805-120 (Optional) SEPA public information center. [Statutory Authority: RCW 43.21C.130. 78-04-091 (Order DE 78-6), § 173-805-120, filed 4/4/78; Order DE 76-13, § 173-805-120, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130.
- 173-805-121 Responsibility of agencies—SEPA public information. [Statutory Authority: RCW 43.21C.130. 78-04-091 (Order DE 78-6), § 173-805-121, filed 4/4/78.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130.
- 173-805-125 Regional SEPA public information center. [Order DE 76-13, § 173-805-125, filed 6/8/76.] Repealed by 78-04-091 (Order DE 78-6), filed 4/4/78. Statutory Authority: RCW 43.21C.130.
- 173-805-130 Fees. [Statutory Authority: RCW 43.21C.130. 78-04-091 (Order DE 78-6), § 173-805-130, filed 4/4/78; Order DE 76-13, § 173-805-130, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-200.
- 173-805-135 Notice/statute of limitations. [Order DE 76-13, § 173-805-135, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-173.
- 173-805-140 Severability. [Order DE 76-13, § 173-805-140, filed 6/8/76.] Repealed by 84-13-036 (Order DE 84-25), filed 6/15/84. Statutory Authority: RCW 43.21C.130. Later promulgation, see WAC 173-806-220.

Chapter 173-03 WAC PUBLIC RECORDS

WAC

- 173-03-010 What is the purpose of this chapter?
- 173-03-020 How are specific terms defined in this chapter?
- 173-03-030 How is the department of ecology organized?
- 173-03-040 How do I get access to the public records of the department of ecology?
- 173-03-050 What records are retained and how are they indexed?
- 173-03-060 How do I request a public record?
- 173-03-070 How much will it cost me to view a public record?
- 173-03-080 What happens when the department denies a public records request?
- 173-03-090 What do I do if I object to the department's denial to review a public record?
- 173-03-100 How does the department protect public records?

WAC 173-03-010 What is the purpose of this chapter? The purpose of this chapter is to implement the requirements of RCW 42.17.250 - 42.17.340 relating to public records.

[Statutory Authority: RCW 42.17.250. 98-16-052 (Order 98-12), § 173-03-010, filed 7/31/98, effective 8/31/98. Statutory Authority: RCW 43.17.060 and 42.17.260. 90-21-119 (Order 90-37), § 173-03-010, filed 10/23/90, effective 11/23/90. Statutory Authority: RCW 42.17.250 - 42.17.340. 78-02-041 (Order DE 77-35), § 173-03-010, filed 1/17/78.]

WAC 173-03-020 How are specific terms defined in this chapter? (1) The terms "person," "public record," and "writing" shall have the meanings as stated in RCW 42.17.020.

(2) "Department" means the department of ecology.

(3) "Director" means the director of the department.

(4) "Public records officer" means the employee designated as such by the department.

(5) "Designee" means the employee of the department designated by the director or the public records officer to serve as the public records coordinator at the headquarters offices or at each of the regional offices in the absence of the officer.

[Statutory Authority: RCW 42.17.250, 98-16-052 (Order 98-12), § 173-03-020, filed 7/31/98, effective 8/31/98. Statutory Authority: RCW 43.17.060 and 42.17.260, 90-21-119 (Order 90-37), § 173-03-020, filed 10/23/90, effective 11/23/90. Statutory Authority: RCW 42.17.250 - 42.17.340, 78-02-041 (Order DE 77-35), § 173-03-020, filed 1/17/78.]

WAC 173-03-030 How is the department of ecology organized? (1) Headquarters office.

(a) The headquarters office is located at 300 Desmond Drive, Lacey, Washington. The mailing address for the headquarters office is:

Department of Ecology
P.O. Box 47600
Olympia, Washington 98504-7600

The mailing address for the nuclear waste management program's Hanford project is:

Nuclear Waste Management
1315 W. 4th Ave.
Kennewick, WA 99336

(b) The offices of the director, deputy director(s), program managers and other agency officials are located in the headquarters office.

(c) The titles of the executive staff are as follows:

Chief financial officer for financial services.
Administrative services manager for administrative services.
Director for intergovernmental relations.
Director for employee services.
Director for communications and education.
Assistant administrator for spills prevention, preparedness and response.

(2) The program offices located in the headquarters office are:

- (a) Air quality;
 - (b) Water resources;
 - (c) Water quality;
 - (d) Toxics cleanup;
 - (e) Nuclear waste;
 - (f) Solid waste and financial assistance;
 - (g) Hazardous waste and toxics reductions;
 - (h) Environmental investigations and laboratory services; and
 - (i) Shorelands and environmental assistance.
- (3) Regional offices and their geographical jurisdictions are as follows:

(a) Northwest regional office (Whatcom, Skagit, Snohomish, San Juan, Island, King, and Kitsap counties):

3190 - 160th Avenue S.E.
Bellevue, WA 98008-5452

(b) Southwest regional office (Pierce, Thurston, Mason, Clallam, Jefferson, Grays Harbor, Pacific, Lewis, Cowlitz, Wahkiakum, Clark, and Skamania counties):

300 Desmond Drive
Lacey, WA 98503
Mailing address:
P.O. Box 47775
Olympia, Washington 98504-7775

(c) Central regional office (Okanogan, Chelan, Douglas, Kittitas, Yakima, Benton, and Klickitat counties):

15 West Yakima, Suite 200
Yakima, WA 98902-3401

(d) Eastern regional office (Ferry, Stevens, Pend Oreille, Grant, Lincoln, Spokane, Adams, Whitman, Franklin, Walla Walla, Columbia, Garfield, and Asotin counties):

N. 4601 Monroe, Suite 100
Spokane, Washington 99205-1295

[Statutory Authority: RCW 42.17.250, 98-16-052 (Order 98-12), § 173-03-030, filed 7/31/98, effective 8/31/98. Statutory Authority: RCW 42.17.250 - 42.17.340 and 1992 c 139, 92-20-116 (Order 92-37), § 173-03-030, filed 10/7/92, effective 11/7/92. Statutory Authority: RCW 43.17.060 and 42.17.260, 90-21-119 (Order 90-37), § 173-03-030, filed 10/23/90, effective 11/23/90. Statutory Authority: RCW 42.17.250 - 42.17.340, 78-02-041 (Order DE 77-35), § 173-03-030, filed 1/17/78.]

WAC 173-03-040 How do I get access to the public records of the department of ecology? (1) All public records of the department are available for public inspection and copying under these rules subject to subsections (2), (3), (4), and (5) of this section.

(2) Availability of public records is subject to the exemptions and prohibitions against disclosure contained in RCW 42.17.310, 42.17.130, 42.17.255, 42.17.260, and 90.52.020. In addition, individuals may request, and ecology may grant, confidentiality of documents from disclosure under RCW 43.21A.160 and 70.105.170.

(3) When a public record includes information which, if disclosed, would lead to an unreasonable invasion of personal privacy, and the department becomes aware of this fact, the department shall delete such information before making the record available.

(4) Public records requested may not be readily available for immediate inspection. If the requested records are not readily available, the department shall notify the requester when and where those records will be available.

(5) Public records of the department are kept by the department or state archives until scheduled for destruction by the records retention schedule in accordance with chapter 40.14 RCW. Public records subject to a request for disclosure when scheduled for destruction shall be retained by the department and may not be erased or destroyed until the request is resolved.

[Statutory Authority: RCW 42.17.250, 98-16-052 (Order 98-12), § 173-03-040, filed 7/31/98, effective 8/31/98. Statutory Authority: RCW 42.17.250 - 42.17.340 and 1992 c 139, 92-20-116 (Order 92-37), § 173-03-040, filed 10/7/92, effective 11/7/92. Statutory Authority: RCW 42.17.250 - 42.17.340, 78-02-041 (Order DE 77-35), § 173-03-040, filed 1/17/78.]

WAC 173-03-050 What records are retained and how are they indexed? The records retention schedule established by the division of state archives of the office of the secretary of state serves as an index for the identification and location of the following records:

(1) All records issued before July 1, 1990, for which the department has maintained an index;

(2) Final orders entered after June 30, 1990, that are issued in adjudicative proceedings as defined in RCW 34.05.010(1) and that contain an analysis or decision of substantial importance to the department in carrying out its duties;

(3) Declaratory orders entered after June 30, 1990, that are issued pursuant to RCW 34.05.240 and that contain an analysis or decision of substantial importance to the department in carrying out its duties; and

(4) Interpretive statements as defined in RCW 34.05.010(8) that were entered after June 30, 1990.

The records retention schedule indexes records according to the originating program or section, and then the record series title. Each title is further identified by a statement of function or purpose, and the retention period. The records retention schedule is available to the public for inspection and copying. With the assistance of the public records officer or designee, any person can obtain access to public records of the department using the records retention schedule.

A separate index of policy statements as defined in RCW 34.05.010(4) entered after June 30, 1990, shall be maintained by the department's policy manual coordinator or designees.

[Statutory Authority: RCW 42.17.250. 98-16-052 (Order 98-12), § 173-03-050, filed 7/31/98, effective 8/31/98. Statutory Authority: RCW 43.17.060 and 42.17.260. 90-21-119 (Order 90-37), § 173-03-050, filed 10/23/90, effective 11/23/90. Statutory Authority: RCW 42.17.250 - 42.17.340. 78-02-041 (Order DE 77-35), § 173-03-050, filed 1/17/78.]

WAC 173-03-060 How do I request a public record?

(1) All requests for inspection or copying made in person at a department office shall be made on a form substantially as follows:

REQUEST FOR PUBLIC RECORDS

Date of Request Time of Request

Name

Address

.....

Description of Records:

.....

.....

.....

I understand that if a list of individuals is provided me by the Department of Ecology, it will neither be used to promote the election of an official nor promote nor oppose a ballot proposition as prohibited by RCW 42.17.130 nor for commercial purposes nor give or provide access to material to others for commercial purposes as prohibited by RCW 42.17.260(9).

I understand that I will be charged the amount necessary to reimburse the department's cost for copying.

.....

Signature

Number of pages to be copied

Number of copies per page

Charge per copy \$

Special copy work charge \$

Staff time charge \$

Total charge \$

(2) You may request records in person at a department of ecology office between the hours of 8:00 a.m. to 12:00 noon and 1:00 p.m. to 4:30 p.m., Monday through Friday, excluding legal holidays.

(3) If you make your request by mail, your request must contain the following information:

(a) The name and address of the person making the request and the organization the person represents;

(b) The time of day and calendar date on which the person wishes to inspect the public records;

(c) A description of the public records requested;

(d) A statement whether access to copying equipment is desired;

(e) A phone number where the person can be reached in case the public records officer or designee needs to contact the person for further description of the material or any other reason.

(f) A statement that the record will not be used for commercial purposes.

(4) The department must receive all requests at least five business days before the requested date of inspection to allow the public records officer or designee to make certain the requested records are available and not exempt and, if necessary, to contact the person requesting inspection. The department will process all requests in a timely manner. However, large requests or requests for public records maintained off-site may require more than five business days to prepare. The department will respond to your request within five business days of receiving it, by either:

(a) Providing the record;

(b) Acknowledging that the department has received the request and providing a reasonable estimate of the time the department will require to respond to the request; or

(c) Denying the public record request.

Additional time required to respond to a request may be based upon the need to clarify the intent of the request, to locate and assemble the information requested, to notify third persons or agencies affected by the request, or to determine whether any of the information requested is exempt and that a denial should be made as to all or part of the request. In acknowledging receipt of a public record request that is unclear, the department may ask the requestor to clarify what information the requestor is seeking. If the requestor fails to clarify the request, the agency need not respond to it.

(5) The department may in its discretion fill requests made by telephone or facsimile copy (fax).

[Statutory Authority: RCW 42.17.250. 98-16-052 (Order 98-12), § 173-03-060, filed 7/31/98, effective 8/31/98. Statutory Authority: RCW 42.17.250 - 42.17.340 and 1992 c 139. 92-20-116 (Order 92-37), § 173-03-060, filed

10/7/92, effective 11/7/92. Statutory Authority: RCW 43.17.060 and 42.17.260. 90-21-119 (Order 90-37), § 173-03-060, filed 10/23/90, effective 11/23/90. Statutory Authority: RCW 42.17.250 - 42.17.340. 78-02-041 (Order DE 77-35), § 173-03-060, filed 1/17/78.]

WAC 173-03-070 How much will it cost me to view a public record? The department does not charge a fee for the inspection of public records. The department will charge an amount necessary to reimburse its costs for providing copies of records. This amount shall be reviewed from time to time by the department, and shall represent the costs of providing copies of public records and for use of the department's copy equipment, including staff time spent copying records, preparing records for copying, and restoring files. This charge is the amount necessary to reimburse the department for its actual costs for copying and is payable at the time copies are furnished. The charge for special copy work of nonstandard public records shall reflect the total cost, including the staff time necessary to safeguard the integrity of these records.

[Statutory Authority: RCW 42.17.250. 98-16-052 (Order 98-12), § 173-03-070, filed 7/31/98, effective 8/31/98. Statutory Authority: RCW 42.17.250 - 42.17.340 and 1992 c 139. 92-20-116 (Order 92-37), § 173-03-070, filed 10/7/92, effective 11/7/92. Statutory Authority: RCW 43.17.060 and 42.17.260. 90-21-119 (Order 90-37), § 173-03-070, filed 10/23/90, effective 11/23/90. Statutory Authority: RCW 42.17.250 - 42.17.340. 78-02-041 (Order DE 77-35), § 173-03-070, filed 1/17/78.]

WAC 173-03-080 What happens when the department denies a public records request? When the department refuses, in whole or part, a request for inspection of any public record, it must include a statement of the specific exemption authorizing the refusal and a brief explanation of how the exemption applies to the record withheld.

[Statutory Authority: RCW 42.17.250. 98-16-052 (Order 98-12), § 173-03-080, filed 7/31/98, effective 8/31/98. Statutory Authority: RCW 42.17.250 - 42.17.340. 78-02-041 (Order DE 77-35), § 173-03-080, filed 1/17/78.]

WAC 173-03-090 What do I do if I object to the department's denial to review a public record? (1) Any person who objects to the refusal of a request for a public record may petition for prompt review of that decision by submitting a written request for review. The written request shall specifically refer to the written statement by the public records officer or designee which constituted or accompanied the refusal.

(2) Immediately after receiving a written request for review of a decision denying a public record, the public records officer or other staff member denying the request shall refer it to the director or the director's delegate. The director or delegate shall immediately consider the matter and either affirm or reverse the refusal. The final decision shall be sent to the objecting person within two business days following receipt of the petition for review.

[Statutory Authority: RCW 42.17.250. 98-16-052 (Order 98-12), § 173-03-090, filed 7/31/98, effective 8/31/98. Statutory Authority: RCW 42.17.250 - 42.17.340. 78-02-041 (Order DE 77-35), § 173-03-090, filed 1/17/78.]

WAC 173-03-100 How does the department protect public records? In order to adequately protect the public records of the department, you must comply with the following guidelines while inspecting public records:

(1) You may not remove any public record from the department's premises.

(2) You must have a designated department employee present while you are inspecting a public record.

(3) You may not mark or deface a public record in any manner during inspection.

(4) You may not dismantle public records which are maintained in a file or jacket, or in chronological or other filing order, or those records which, if lost or destroyed, would constitute excessive interference with the department's essential functions.

(5) Access to file cabinets, shelves, vaults, or other storage areas is restricted to department personnel, unless other arrangements are made with the public records officer or designee.

[Statutory Authority: RCW 42.17.250. 98-16-052 (Order 98-12), § 173-03-100, filed 7/31/98, effective 8/31/98. Statutory Authority: RCW 42.17.250 - 42.17.340 and 1992 c 139. 92-20-116 (Order 92-37), § 173-03-100, filed 10/7/92, effective 11/7/92. Statutory Authority: RCW 43.17.060 and 42.17.260. 90-21-119 (Order 90-37), § 173-03-100, filed 10/23/90, effective 11/23/90. Statutory Authority: RCW 42.17.250 - 42.17.340. 78-02-041 (Order DE 77-35), § 173-03-100, filed 1/17/78.]

Chapter 173-04 WAC PRACTICE AND PROCEDURE

WAC

173-04-010	Hearings boards.
173-04-020	Uniform procedural rules.

WAC 173-04-010 Hearings boards. Appeals from decisions and orders of the department of ecology are under the jurisdiction of the pollution control hearings board. Practice and procedure before the pollution control hearings board is governed by the provisions of chapter 371-08 WAC. Declaratory proceedings under the Shoreline Management Act of 1971 (section 18(4), chapter 286, Laws of 1971 ex. sess.) are under the jurisdiction of the shorelines hearings board.

[Order DE 71-14, § 173-04-010, filed 9/3/71.]

WAC 173-04-020 Uniform procedural rules. In those contested cases, declaratory proceedings, and requests for rule making in which the department of ecology has authority to conduct hearings, practice and procedure shall be in accordance with those uniform rules promulgated by the code reviser and codified as chapter 1-08 WAC as now written or as hereafter amended.

[Order DE 71-14, § 173-04-020, filed 9/3/71.]

**DISPOSITION OF SECTIONS FORMERLY
CODIFIED IN THIS CHAPTER**

173-06-010	Introduction. [Order DE 71-13, § 173-06-010, filed 9/8/71.] Repealed by 95-07-058 (Order 94-45), filed 3/9/95, effective 4/9/95. Statutory Authority: RCW 43.21A.090.
173-06-020	Definitions. [Order DE 71-13, § 173-06-020, filed 9/8/71.] Repealed by 95-07-058 (Order 94-45), filed 3/9/95, effective 4/9/95. Statutory Authority: RCW 43.21A.090.
173-06-030	Delegation. [Statutory Authority: Chapter 43.21A RCW, 89-11-021 and 90-07-014 (Order 89-6 and 89-6A), § 173-06-030, filed 5/11/89 and 3/13/90, effective 4/13/90. Statutory Authority: RCW 43.21A.090, 85-24-019 (Order 85-25), § 173-06-030, filed 11/26/85; Order DE 75-7, § 173-06-030, filed 5/16/75; Order DE 71-13, § 173-06-030, filed 9/8/71.] Repealed by 95-07-058 (Order 94-45), filed 3/9/95, effective 4/9/95. Statutory Authority: RCW 43.21A.090.
173-06-040	Director's powers. [Order DE 71-13, § 173-06-040, filed 9/8/71.] Repealed by 95-07-058 (Order 94-45), filed 3/9/95, effective 4/9/95. Statutory Authority: RCW 43.21A.090.
173-06-060	NPDES delegation. [Statutory Authority: RCW 43.21A.090, 79-08-034 (Order DE 79-10), § 173-06-060, filed 7/16/79; Order DE 77-12, § 173-06-060, filed 8/2/77.] Repealed by 80-17-044 (Order DE 80-47), filed 11/19/80. Statutory Authority: RCW 43.21A.090.
173-06-065	NPDES delegation. [Statutory Authority: RCW 43.21A.090, 81-24-033 (Order DE 81-41), § 173-06-065, filed 11/25/81; 81-09-056 (Order DE 81-7), § 173-06-065, filed 4/17/81.] Repealed by 84-20-042 (Order DE 84-39), filed 9/27/84. Statutory Authority: RCW 43.21A.060, 43.21A.080 and 43.21A.090.

WAC 173-06-050 Regulations. Nothing in this chapter shall be construed as a delegation of authority to adopt, amend or repeal any rule or regulation. The power to adopt, amend or repeal rules or regulations rests with the director, or in his absence, the deputy director.

[Order DE 71-13, § 173-06-050, filed 9/8/71.]

WAC 173-06-100 Introduction. Under the provisions of RCW 43.21A.090, the director of ecology may delegate the performance of his or her powers, duties, and functions, other than those relating to the adoption, amendment or rescission of rules and regulations, to employees of the department whenever that appears desirable to fulfill the purposes of the laws implemented by the department.

[Statutory Authority: RCW 43.21A.090, 95-07-058 (Order 94-45), § 173-06-100, filed 3/9/95, effective 4/9/95.]

WAC 173-06-110 Definitions. As used in this chapter:

- (1) "Department" shall mean the department of ecology;
- (2) "Director" shall mean the person bearing such title created pursuant to RCW 43.21A.050. "Deputy director" shall mean the person bearing such title created pursuant to RCW 43.21A.100.

[Statutory Authority: RCW 43.21A.090, 95-07-058 (Order 94-45), § 173-06-110, filed 3/9/95, effective 4/9/95.]

WAC 173-06-120 Delegation. (1) The authority delegated hereby includes the authority to:

- (a) Act on behalf of the department in the administration of programs and all other duties assigned the department; and
- (b) Approve or deny engineering reports, plans and specifications, or amendments thereto, required to be submitted to the department.

(1999 Ed.)

Delegated powers include, but are not limited to, the authority to issue orders, directives or decisions reviewable before appropriate administrative or judicial bodies. The delegation established by this rule shall be effective when the person to whom delegation is made has been issued a letter from the director authorizing him or her to act for the department with respect to the specifics set forth in such letter.

(2) Whenever an individual is delegated the authority to approve or deny engineering reports, plans and specifications, or amendments thereto, such approval or denial must be based on engineering services provided by a registered professional engineer in accordance with current state law.

(3) Any person who has been properly designated to serve in a temporary or acting capacity for an employee who has been delegated authority under this rule shall have the same delegated authority as the individual permanently holding the position.

(4) In the absence of a person who has been delegated authority by the director, managers senior to that person may perform the delegated functions in accordance with their letters of authorization.

(5) In addition to the delegation provided for in the preceding subsections, the director may, under special circumstances, delegate in writing specific signature authority to any department employee.

(6) The authority delegated in this rule is limited to the power to act for the department in carrying out functions within the power of the department, and shall not be construed to authorize acts which are contrary to law or beyond the authority of the department.

[Statutory Authority: RCW 43.21A.090, 95-07-058 (Order 94-45), § 173-06-120, filed 3/9/95, effective 4/9/95.]

WAC 173-06-130 Director's powers. The director may perform all powers, duties and functions within the authority of the department. The delegations authorized by this chapter shall not preclude the director from exercising any of the powers, duties and functions delegated. In the director's absence, the deputy director may act as director.

[Statutory Authority: RCW 43.21A.090, 95-07-058 (Order 94-45), § 173-06-130, filed 3/9/95, effective 4/9/95.]

Chapter 173-09 WAC COORDINATED PERMIT PROCESS

WAC

173-09-010	Authority and purpose.
173-09-020	Definitions.
173-09-030	Designation of a coordinating permit agency.
173-09-040	Brief adjudicative proceedings—Expedited appeal of coordinated permit process timelines.

WAC 173-09-010 Authority and purpose. (1) This chapter is promulgated under the authority of chapter 90.60 RCW (Environmental permit assistance).

(2) The purpose of this chapter is to establish rules to implement the state coordinated permit process.

(3) The purpose of the coordinated permit process is to:

- (a) Assist individuals, businesses, and public agencies in complying with environmental quality laws in an expedited

[Title 173 WAC—p. 37]

fashion, without reducing protection of public health and safety and the environment;

(b) Promote effective dialogue and facilitate the transfer and clarification of technical information, while preventing duplication and minimizing potential conflict between applicable regulatory procedures;

(c) Ensure, where possible, that applicable permit requirements, criteria, and hearings and comment periods are identified, integrated, coordinated, and run concurrently, rather than consecutively;

(d) Promote active coordination of all applicable regulatory and land-use permitting procedures; and

(e) Provide consolidated, effective, and easier opportunities for members of the public to receive information and present their views about proposed projects.

(4) The coordinated permit process is optional for project proponents and intended to provide predictability, administrative consolidation, and, where possible, consolidation of appeal processes. The process is not intended to replace individual laws, nor diminish the substantive decision-making role of individual jurisdictions. The process is also not intended to limit nor abridge the authority of individual permit agencies to make all decisions on all nonprocedural matters regarding their respective component permits, including but not limited to, the determination of permit application completeness, permit approval or approval with conditions, or permit denial.

(5) This chapter implements the requirements of RCW 90.60.140 and establishes an expedited appeals process pursuant to the state Administrative Procedure Act and the provisions of RCW 34.05.425, 34.05.458, and 34.05.482 through 34.05.494 regarding brief adjudicative proceedings.

[Statutory Authority: RCW 90.60.140. 96-15-104, § 173-09-010, filed 7/22/96, effective 8/22/96. Statutory Authority: RCW 90.60.040. 95-24-040 (Order 95-13), § 173-09-010, filed 11/30/95, effective 12/31/95.]

WAC 173-09-020 Definitions. The following definitions shall apply throughout this chapter, unless the context clearly requires otherwise:

(1) "Applicant" means any person or entity, including an agency, applying for a permit from a permit agency. For the purposes of this chapter, "applicant," "project applicant," and "project proponent" are synonymous terms.

(2) "Center" means the permit assistance center established in the department by RCW 90.60.030.

(3) "Coordinating permit agency" means the permit agency that is the lead agency for purposes of chapter 43.21C RCW (State Environmental Policy Act (SEPA)), or has the greatest overall jurisdiction over a project as determined under WAC 173-09-030 (coordinated permit process rule).

(4) "Department" means the department of ecology.

(5) "Lead agency" means the agency with the main responsibility for complying with SEPA's procedural requirements as set forth in WAC 197-11-758 (SEPA rules).

(6) "Participating permit agency" means a permit agency, other than the coordinating permit agency, that is responsible for the issuance of a permit for a project.

(7) "Permit" means any license, certificate, registration, permit, or other form of authorization required by a permit agency to engage in a particular activity.

(8) "Permit agency" means:

(a) The department of ecology, an air pollution control authority, the department of natural resources, the department of fish and wildlife, and the department of health; and

(b) Any other state or federal agency or county, city, or town that participates at the request of the permit applicant and upon the agency's agreement to be subject to this chapter.

(9) "Permit assistance center" or "center" means the center established in the department of ecology by RCW 90.60.030 (Permit assistance center—Duties).

(10) "Petitioner" means an applicant, person, or party filing an appeal pursuant to RCW 90.60.140.

(11) "Presiding officer" means the director of the department or any employee of the department designated in writing by the director as presiding officer.

(12) "Project" means a proposed activity, the conduct of which requires permits from one or more permit agencies.

(13) "Service" means posting in the United States mail, properly addressed, postage prepaid; telefacsimile transmission; or personal service. Service by mail is complete upon deposit in the United States mail. Service by telefacsimile transmission is effective only where copies are simultaneously mailed or sent by commercial service delivery company.

(14) "Time limits" mean project-specific permit decision dates set and agreed to by the applicant, the coordinating permit agency, each permit agency, and each participating permit agency, pursuant to RCW 90.60.070.

(15) "Timely action" means an action taken within the time limits, as defined by subsection (14) of this section.

[Statutory Authority: RCW 90.60.140. 96-15-104, § 173-09-020, filed 7/22/96, effective 8/22/96. Statutory Authority: RCW 90.60.040. 95-24-040 (Order 95-13), § 173-09-020, filed 11/30/95, effective 12/31/95.]

WAC 173-09-030 Designation of a coordinating permit agency. (1) Applicant information requirements. Upon request by an applicant, the permit assistance center shall designate a coordinating permit agency. The applicant shall provide the permit assistance center with the following:

(a) Description of the proposed project, including the location and legal description (i.e., parcel number, and section, township, and range);

(b) Preliminary list of the permits that the proposed project may require;

(c) Identity of the participating permit agencies;

(d) Identity of any public agency that has been or may be designated the lead agency for the proposed project pursuant to chapter 43.21C RCW (SEPA); and

(e) Any additional or more detailed information requested by the center necessary to make the designation. Such information may include, but is not limited to:

(i) Site plan for the proposed project showing where activities are proposed relative to known sensitive areas, habitats, and critical areas; and

(ii) Proposed timing of construction and operation of the project.

(2) Designation criteria and guidance.

(a) If a permit agency is the lead agency under the criteria in WAC 197-11-926 through 197-11-940 (SEPA rules), that permit agency shall be the coordinating permit agency.

(b) If a permit agency has assumed lead agency status under WAC 197-11-942 (SEPA rules), that permit agency shall be the coordinating permit agency.

(c) If two or more permit agencies have agreed to share lead agency status under WAC 197-11-944 (SEPA rules), one of the permit agencies shall, upon agreement with the other permit agency(ies) with whom lead agency status is shared, be the coordinating permit agency.

(d) If none of the permit agencies are lead agency for purposes of chapter 43.21C RCW (SEPA), then the coordinating permit agency shall be the permit agency with the greatest overall jurisdiction over the proposed project. In identifying the permit agency with the greatest overall jurisdiction the center shall consider the following factors:

(i) The types of facilities or activities that make up the proposed project;

(ii) The types of public health and safety and environmental concerns that should be considered in issuing permits for the proposed project;

(iii) The environmental media that may be affected by the proposed project, the extent of those potential effects, and the environmental protection measures that may be taken to prevent the occurrence of, or to mitigate, those potential effects;

(iv) The regulatory activity that is of greatest importance in preventing or mitigating the effects that the proposed project may have on public health and safety or the environment;

(v) The statutory and regulatory requirements that apply to the proposed project and the complexity of those requirements;

(vi) The extent to which a permit agency will assume a major coordination role due to other processes;

(vii) The extent to which the lead agency determination criteria identified in WAC 197-11-946(2) (SEPA rules) are applicable; and

(viii) The extent to which a permit agency has permit coordination expertise.

(e) In designating the coordinating permit agency, the permit assistance center may convene a scoping meeting of the likely coordinating permit agency and participating permit agencies in order to designate the coordinating permit agency.

[Statutory Authority: RCW 90.60.040, 95-24-040 (Order 95-13), § 173-09-030, filed 11/30/95, effective 12/31/95.]

WAC 173-09-040 Brief adjudicative proceedings—Expedited appeal of coordinated permit process timelines. (1) *When will the department use brief adjudicative proceedings?* The department herein adopts by rule the provisions of RCW 34.05.425, 34.05.458, and 34.05.482 through 34.05.494, except where otherwise prohibited by law, for the following: Failure by a permit agency to take timely action on the issuance or denial of a permit in accordance with the time limits established pursuant to RCW 90.60.070. The department will use brief adjudicative proceedings for this matter where:

(a) Their use will not violate any provision of law;

(b) Protection of the public interest does not require the department to give notice and an opportunity to participate to persons other than the parties;

(c) The matter is entirely within one or more categories for which the department has, by rule, adopted the provisions of RCW 34.05.425, 34.05.458, and 34.05.482 through 34.05.494; and

(d) The issue and interests involved in the controversy do not warrant use of the procedures of RCW 34.05.413 through 34.05.479.

(2) *Who will preside over brief adjudicative proceedings held by the department?* The director of the department, or any employee of the department designated in writing by the director, may serve as presiding officer over matters which the department has by rule adopted the provisions of RCW 34.05.425, 34.05.458, and 34.05.482 through 34.05.494.

(3) *How are brief adjudicative proceedings conducted at the department?*

(a) What may be appealed? The following may be appealed: Failure by a permit agency to take timely action on the issuance or denial of a permit in accordance with the time limits established pursuant to RCW 90.60.070.

(b) How is an appeal initiated? Requests for appeal shall:

(i) Be in writing;

(ii) Be plainly labeled "request for expedited appeal of coordinated permit process timelines";

(iii) Specify the factual basis for the appeal and the issue to be adjudicated in the proceeding;

(iv) Identify the subject project or site;

(v) Provide the name, mailing address, telephone number, and fax number (if available) of the petitioner and, if known, the applicant (if different from the petitioner);

(vi) Include a statement, followed by the petitioner's signature, that the petitioner has read the request for appeal and believes the contents to be true; and

(vii) Be simultaneously served upon the following parties:

(A) The Washington State Department of Ecology; Permit Assistance Center; PO Box 47600; Olympia, WA 98504-7600;

(B) The coordinating permit agency for the subject project;

(C) The permit agencies and participating permit agencies party to the coordinated permit process timeline agreement established for the subject project or site pursuant to RCW 90.60.070; and

(D) The applicant, if different from the petitioner, for the subject project.

(c) Who may initiate an appeal? A request for appeal may be initiated by a petitioner pursuant to RCW 90.60.140.

(d) When may an appeal be initiated? A request for appeal may be initiated between the period of time when a permit agency or participating permit agency fails to act on the issuance or denial of a permit, as set forth in a coordinated permit process timeline agreement established pursuant to RCW 90.60.070, and when that permit agency or participating permit agency does act.

(e) What happens after the department receives a request for appeal? After the department receives a request for appeal, the presiding officer:

(i) Shall, within seven days following the date of service of the petitioner's request for appeal, serve upon the petitioner and parties identified in (b)(vii) of this subsection a written statement that:

(A) Acknowledges receipt of the petitioner's request for appeal;

(B) Requests submittal of the petitioner's and parties' written views on the matter; and

(C) States that submittal of written views must be made to the presiding officer within fourteen days following the date of service of such request for written views;

(ii) May, within seven days following the date for submittal of written views, either:

(A) Request that the petitioner and the parties submit additional written information within ten days following the date of service of such request for additional written information; or

(B) Require the parties to present their views on the matter in person at a hearing to be held not more than twenty days following the date of service of such requirement for a hearing, unless the date for such a hearing is extended by mutual agreement of the parties; and

(iii) Shall, within ten days following the later of either the date for submittal of written views per (e)(i) of this subsection, or the date for submittal of additional written information per (e)(ii)(A) of this subsection, or the date for a hearing per (e)(ii)(B) of this subsection, serve upon the petitioner and the parties:

(A) A decision on the matter and a brief written statement explaining the reason for that decision; and

(B) A statement that the decision may be appealed to the pollution control hearings board pursuant to RCW 43.21B.110 (1)(f), 43.21B.230, and 43.21B.310(1).

(4) *What happens after a brief adjudicative proceeding decision?* The center shall adopt the findings of the presiding officer, and if necessary implement the provisions of RCW 90.60.140.

(5) *Is there an official record of the proceeding?* The department record of brief adjudicative proceedings shall, at a minimum, consist of:

(a) The petitioner's request for appeal;

(b) All documents and written material submitted by the petitioner and parties at the request of the presiding officer;

(c) Any recording or written transcript made pursuant to a hearing requested and held by the presiding officer;

(d) All other documentation considered by the presiding officer in deciding the case; and

(e) All decisions issued in the case.

(6) *Is there a right to appeal a brief adjudicative proceeding decision?* A decision of the presiding officer may be appealed to the pollution control hearings board within thirty days pursuant to RCW 43.21B.110 (1)(f), 43.21B.230, and 43.21B.310(1).

(7) *Do the state's model rules of procedure apply to brief adjudicative proceedings held by the department?* For purposes of this chapter, the model rules of procedure contained

in chapter 10-08 WAC are adopted by reference except where they are not consistent with the rules of this chapter.

[Statutory Authority: RCW 90.60.140, 96-15-104, § 173-09-040, filed 7/22/96, effective 8/22/96.]

DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

173-15-040	Penalties. [Statutory Authority: RCW 90.58.550, 90.58.560 and 1983 c 138, 84-01-028 (Order DE 83-35), § 173-15-040, filed 12/12/83.] Repealed by 87-16-101 (Order DE 87-09), filed 8/5/87. Statutory Authority: RCW 90.58.200.
------------	--

WAC 173-15-010 Authority and purpose. These rules are promulgated pursuant to RCW 90.58.550(6) for the purpose of establishing the basic requirements for the exploration activity permit system.

[Statutory Authority: RCW 90.58.550, 90.58.560 and 1983 c 138, 84-01-028 (Order DE 83-35), § 173-15-010, filed 12/12/83.]

WAC 173-15-020 Definitions. The following definitions shall apply:

(1) "Department" means the department of ecology.

(2) "Exploration activity" means reconnaissance or survey work related to gather information about geologic features and formations underlying or adjacent to marine waters. Such activities include sonic, ultrasonic, seismic, sparker, side-scan sonar, infrared, heat sensor, chemical analysis (sniffer), or other remote sensing techniques which do not disturb the surface of the aquatic lands, as well as drilling, core sampling, or other exploratory techniques which penetrate the beds underlying or adjacent to marine waters.

(3) "Marine waters" includes the waters of Puget Sound north to the Canadian border, the waters of the Strait of Juan de Fuca, the waters between the western boundary of the state and the ordinary high water mark, and related bays and estuaries. RCW 90.58.550 (1)(b).

(4) "Normal public use of the marine waters of the state" means those activities generally enjoyed by members of the public including, but not limited to, recreation, fishing (commercial and sports), navigation and commerce.

(5) "Vessel" includes ships, boats, barges, or any other floating craft. RCW 90.58.550 (1)(c).

(6) "Director" means the director of the department of ecology.

(7) "Person" means any individual, public or private corporation, agency, or other entity whatsoever, except for state or federal agencies.

[Statutory Authority: RCW 90.58.550, 90.58.560 and 1983 c 138, 84-01-028 (Order DE 83-35), § 173-15-020, filed 12/12/83.]

WAC 173-15-030 Exploration activity permit system. The permit system established by RCW 90.58.550 shall be as follows:

(1) Applicability.

(a) A person desiring to perform oil or natural gas exploration activities by vessel located on or within marine waters of the state shall first obtain a permit from the department.

(b) An exploration activity permit obtained under (a) of this subsection shall be the sole permit required to be obtained for exploration activity under chapter 90.58 RCW.

(c) Except as provided in (b) of this subsection, nothing herein shall modify any powers of local governments set forth in chapter 90.58 RCW.

(2) Exploration activity permit application.

(a) Applications for an exploration activity permit shall be supplied by the department.

(b) Applications shall be filed with the Shorelands Division, Department of Ecology, Headquarters Office, Olympia, WA 98504.

(c) No application shall be processed until it is deemed complete by the department.

(d) Each application for an exploration activity permit shall be accompanied by a completed environmental checklist as provided in Title 197 WAC.

(3) Processing of complete application.

(a) A complete application will be forwarded to state natural resource management agencies and local governments and Indian tribes affected by the proposed exploration activity.

(b) Comments will be requested regarding the proposed exploration activity and its compatibility with the criteria established under RCW 90.58.550(2). Normally, reviewing agencies will be allowed fifteen days, from receipt of the application as provided by the department, in which to submit comments to the department.

(4) Public notice.

(a) Upon receipt of a completed application, the department shall instruct the applicant to publish notice thereof.

(b) Notices of the proposed exploration activity shall be published in the newspaper of the largest general circulation within each of the counties in which the activity is proposed.

(c) Any person wishing to express views on the proposed exploration activity will be given fifteen days to comment to the department.

(d) All notices of applications for exploration activity permits shall contain, as a minimum, the information called for in the following form:

Notice of Application for
Exploration Activity Permit

Notice is hereby given that (company name or institution) has filed an application for an exploration activity permit for oil and/or natural gas survey and reconnaissance work in (list major bodies of water)

The exploration activity consists of (describe survey gear, vessel, and other equipment in sufficient detail to inform public of the nature of the operation)

The exploration activity is proposed to commence on (date) and end (date).

Any person desiring to express views or to be notified of the action taken on this application should notify the department of ecology in writing of his/her interest within fifteen days of the final date of publication of this notice which is (date). Written comments should be mailed or delivered to the Washington Department of Ecology, Shorelands Division, Mail Stop PV-11, Olympia, WA 98504, (360) 459-6272. Comment period deadline is (date).

(e) An affidavit that the notice has been properly published pursuant to this section shall be provided to the department by the applicant.

(5) Public hearing. A public hearing on the proposed exploration activity permit will be held by the department if it determines, upon consideration of such factors as location, timing, duration, method of operation, and public comments, that a hearing would assist it in implementing the intent of RCW 90.58.550(2).

(6) Department exploration activity permit decision.

(a) The department will approve an exploration activity permit application if it determines that the proposed activity meets the criteria set forth in RCW 90.58.550(2). Exploration activities may not:

(i) Interfere materially with the normal public uses of the marine waters of the state;

(ii) Interfere with activities authorized by a permit issued under RCW 90.58.140(2);

(iii) Injure the marine biota or other fish and wildlife, beds, or tidelands of the waters;

(iv) Violate water quality standards established by the department;

(v) Create a public nuisance; or

(vi) Conflict with a shoreline master program approved by the department under RCW 90.58.090 or 90.58.190.

(b) The department, as lead agency, will comply with the provisions of the State Environmental Policy Act as governed by the procedures established under chapter 43.21 RCW and its implementing rules.

(c) No application for an exploration activity permit shall be approved by the department under this section which relates to surface drilling for oil or gas in the waters of Puget Sound north to the Canadian boundary or the Strait of Juan de Fuca seaward of the ordinary high water mark. RCW 90.58.160.

(7) Exploration activity permit terms and conditions.

(a) The department shall place terms and conditions in the exploration activity permit as necessary to assure that the permitted activity meets the requirements of RCW 90.58.550(2).

(b) Such terms and conditions may include but are not limited to:

(i) Geographic limits on the area of operation;

(ii) Timing of the operation;

(iii) Limitations on hours of operation;

(iv) Placement of on-board observers;

(v) Use of lead boats;

(vi) Insurance or bond; and/or

(vii) Fishermen (or other users group) notification procedures.

(8) Modifications of exploration activity permits. When a permittee seeks to modify an exploration activity permit, detailed maps/charts and text describing the nature of the modification shall be submitted to the department. Modifications to the permit may be made by the department when the department determines that such changes are of a minor nature.

(9) Request for review. All requests for review of any final permit decision under RCW 90.58.550(2) and these rules are governed by the procedures established in chapter 43.21B RCW and its implementing rules.

[Statutory Authority: RCW 90.58.550, 90.58.560 and 1983 c 138. 84-01-028 (Order DE 83-35), § 173-15-030, filed 12/12/83.]

Chapter 173-16 WAC

SHORELINE MANAGEMENT ACT GUIDELINES FOR DEVELOPMENT OF MASTER PROGRAMS

WAC

173-16-010	Purpose.
173-16-020	Applicability.
173-16-030	Definitions.
173-16-040	The master program.
173-16-050	Natural systems.
173-16-060	The use activities.
173-16-064	Ocean management.
173-16-070	Variances and conditional uses.
173-16-200	Appendix.

WAC 173-16-010 Purpose. This regulation is adopted pursuant to chapter 90.58 RCW, in order to: (1) Serve as standards for implementation of the policy of chapter 90.58 RCW for regulations of uses of the shorelines; and

(2) Provide criteria to local governments and the department of ecology in developing master programs.

[Order DE 72-12, § 173-16-010, filed 6/20/72 and 7/20/72.]

WAC 173-16-020 Applicability. The provisions of this chapter shall apply state-wide to all shorelines and shorelines of state-wide significance as defined in chapter 90.58 RCW and WAC 173-16-030.

[Order DE 72-12, § 173-16-020, filed 6/20/72 and 7/20/72.]

WAC 173-16-030 Definitions. As used herein, the following words and phrases shall have the following meanings:

(1) "Act" means Shoreline Management Act of 1971, chapter 90.58 RCW.

(2) "Department" means state of Washington, department of ecology.

(3) "Development" means a use, consisting of the construction or exterior alteration of structures; dredging; drilling; dumping; filling; removal of any sand, gravel or minerals; bulkheading; driving of piling; placing of obstructions; or any project of a permanent or temporary nature which interferes with the normal public use of the surface of the waters overlying lands subject to the act at any state of water level.

(4) "Director" means the director of the department of ecology.

(5) "Extreme low tide" means the lowest line on the land reached by a receding tide.

[Title 173 WAC—p. 42]

(6) "Guidelines" means those standards adopted to implement the policy of this chapter for regulation of use of the shorelines of the state prior to adoption of master programs. Such standards shall also provide criteria to local governments and the department in developing master programs.

(7) "Hearings board" means the shorelines hearings board established by the act.

(8) "Local government" means any county, incorporated city, or town which contains within its boundaries any lands or waters subject to the Shoreline Act of 1971.

(9) "Master program" means the comprehensive use plan for a described area, and the use regulations, together with maps, diagrams, charts or other descriptive material and text, a statement of desired goals and standards developed in accordance with the policies enunciated in section 2 of the act.

(10) "Ordinary high-water mark" means the mark on all lakes, streams, and tidal waters, which will be found by examining the beds and banks and ascertaining where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland, in respect to vegetation, as that condition exists on June 1, 1971, as it may naturally change thereafter, or as it may change thereafter in accordance with permits issued by a local government or the department: *Provided*, That in any area where the ordinary high-water mark cannot be found, the ordinary high-water mark adjoining saltwater shall be the line of mean higher high tide and the ordinary high-water mark adjoining freshwater shall be the line of mean high water.

(11) "Permit" means that required by the act for substantial development on shorelines, to be issued by the local government entity having administrative jurisdiction and subject to review by the department of ecology and the attorney general.

(12) "Shorelines" means all of the water areas of the state, including reservoirs, and their associated wetlands, together with the lands underlying them, except:

(a) Shorelines of state-wide significance;

(b) Shorelines on segments of streams upstream of a point where the mean annual flow is 20 cubic feet per second or less, and the wetlands associated with such upstream segments; and

(c) Shorelines on lakes less than 20 acres in size and wetlands associated with such small lakes.

(13) "Shorelines of state-wide significance" means the following shorelines of the state:

(a) The area between the ordinary high-water mark and the western boundary of the state from Cape Disappointment on the south to Cape Flattery on the north, including harbors, bays, estuaries, and inlets;

(b) Those areas of Puget Sound and adjacent saltwaters and the Strait of Juan de Fuca between the ordinary high-water mark and the line of extreme low tide as follows:

(i) Nisqually Delta - from DeWolf Bight to Tatsolo Point;

(ii) Birch Bay - from Point Whitehorn to Birch Point;

(iii) Hood Canal - from Tala Point to Foulweather Bluff;

(iv) Skagit Bay and adjacent area - from Brown Point to Yokeko Point; and

(1999 Ed.)

(v) Padilla Bay - from March Point to William Point.

(c) Those areas of Puget Sound and the Strait of Juan de Fuca and adjacent saltwaters north to the Canadian line and lying seaward from the line of extreme low tide;

(d) Those lakes, whether natural, artificial or a combination thereof, with a surface acreage of 1,000 acres, or more, measured at the ordinary high-water mark;

(e) Those natural rivers or segments thereof, as follows:

(i) Any west of the crest of the Cascade Range downstream of a point where the mean annual flow is measured at 1,000 cubic feet per second, or more;

(ii) Any east of the crest of the Cascade Range downstream of a point where the annual flow is measured at 200 cubic feet per second, or more, or those portions of rivers east of the crest of the Cascade Range downstream from the first 300 square miles of drainage area, whichever is longer;

(f) Those wetlands associated with (a), (b), (d), and (e) of this subsection.

(14) "Shorelines of the state" means the total of all "shorelines" and "shorelines of state-wide significance" within the state.

(15) "State master program" means the cumulative total of all master programs approved or adopted by the department of ecology.

(16) "Substantial development" means any development of which the total cost, or fair market value, exceeds \$1,000, or any development which materially interferes with normal public use of the water or shorelines of the state; except that the following shall not be considered substantial developments:

(a) Normal maintenance or repair of existing structures or developments, including damage by fire, accident, or elements;

(b) Construction of the normal protective bulkhead, common to single-family residences;

(c) Emergency construction necessary to protect property from damage by the elements;

(d) Construction of a barn or similar agricultural structure on wetlands;

(e) Construction or modification of navigational aids, such as channel markers and anchor buoys;

(f) Construction on wetlands by an owner, lessee, or contract purchaser, of a single-family residence, for his own use or for the use of his family, which residence does not exceed a height of 35 feet above average grade level and which meets all requirements of the state agency or local government having jurisdiction thereof.

(17) "Wetlands" or "wetland areas" means those lands extending landward for 200 feet in all directions, as measured on a horizontal plane from the ordinary high-water mark and all marshes, bogs, swamps, floodways, river deltas, and flood plains associated with the streams, lakes and tidal waters which are subject to the provisions of the act.

[Statutory Authority: RCW 90.58.030, 90.58.120 and 90.58.200. 85-09-043 (Order DE 85-05), § 173-16-030, filed 4/15/85; Order DE 72-12, § 173-16-030, filed 6/20/72 and 7/20/72.]

WAC 173-16-040 The master program. The master program is to be developed by local government to provide an objective guide for regulating the use of shorelines. The

(1999 Ed.)

master program should clearly state local policies for the development of shorelands and indicate how these policies relate to the goals of the local citizens and to specific regulations of uses affecting the physical development of land and water resources throughout the local governments' jurisdiction.

The master program developed by each local government will reflect the unique shoreline conditions and the development requirements which exist and are projected in that area. As part of the process of master program development, local governments can identify problems and seek solutions which best satisfy their needs.

A master program, by its definition, is general, comprehensive and long-range in order to be applicable to the whole area for a reasonable length of time under changing conditions.

"General" means that the policies, proposals and guidelines are not directed towards any specific sites.

"Comprehensive" means that the program is directed towards all land and water uses, their impact on the environment and logical estimates of future growth. It also means that the program shall recognize plans and programs of the other government units, adjacent jurisdictions and private developers.

"Long-range" means that the program is to be directed at least 20-to-30 years into the future, look beyond immediate issues, and follow creative objectives rather than a simple projection of current trends and conditions.

Finally, chapter 90.58 RCW requires that the master program shall constitute use regulations for the various shorelines of the state. Specific guidelines are outlined in RCW 90.58.100(1) for preparing the master programs to accomplish this purpose. It is the intention of these guidelines, especially those related to citizen involvement, and the inventory to aid in carrying out this section of the act.

To facilitate an effective implementation of chapter 90.58 RCW throughout the state, the procedures on the following pages shall be observed while developing master programs for the shorelines. Exceptions to some of the specific provisions of these guidelines may occur where unique circumstances justify such departure. Any departure from these guidelines must, however, be compatible with the intent of the Shoreline Management Act as enunciated in RCW 90.58.020. Further, in all cases, local governments must meet the master program requirements specified in the Shoreline Management Act of 1971.

The following provisions set forth guidelines as to citizen involvement. (1) Citizen involvement. While public involvement and notification is required of the master program at the time of adoption by the act, the general public must be involved in the initial planning stage during formulation of the master plan.

The act requires that prior to approval or adoption of a master program, or a portion thereof, by the department, at least one public hearing shall be held in each county affected by the program for the purpose of obtaining the views and comments of the public.

The act charges the state and local government with not only the responsibility of making reasonable efforts to inform the people of the state about the shoreline management pro-

gram, but also actively encourages participation by all persons, private groups, and entities, which have an interest in shoreline management.

To meet these responsibilities, the local government agencies responsible for the development of the master program should establish a method for obtaining and utilizing citizen involvement. The extent of citizen involvement in the formulation of the master program will be considered by the department in the review of the program. A failure by the local government to encourage and utilize citizen involvement, or to justify not having done so, may be noted as a failure to comply with the act.

Though the department recognizes various forms of citizen involvement as viable approaches for involving the public in the master program, the local government will be encouraged to utilize the method as suggested in these guidelines. If a local government does not followed these guidelines, it should provide an explanation of the method used. The department will be available to explain and help organize the suggested approach to citizen involvement upon request.

The suggested approach to citizen involvement to be utilized by the local government agency responsible for the development of the master program includes the following:

(a) Appoint a citizen advisory committee whose function will be to guide the formulation of the master program through a series of public evening meetings and at least one public hearing. The committee members should represent both commercial interests as well as environmentalists. However, the advisory committee itself is not to be a substitute for general citizen involvement and input. The aim of the committee will be to utilize citizen input in:

- (i) Studying existing public policies related to shorelines.
- (ii) Defining the needs to satisfy local demands for shorelines.
- (iii) Studying the type and condition of local shorelines relative to needs.
- (iv) Developing goals and policies for the master program with the local government fulfilling the specifications of the master program, including designation of the environments.
- (v) Identifying use conflicts.
- (vi) Proposing alternatives for the use of shorelines.
- (vii) Examining the effects of the master program on the environment.

(b) The citizen advisory committee should hold at least three public meetings during development of the master program and designation of the environments according to the following guidelines:

- (i) Public notice (as stated in subsection 1 below) must be provided seven days prior to the evening meeting.
- (ii) All meetings must be open to the public for free discussion.
- (iii) Meetings should be held in the evening at a location accessible to the general public.
- (iv) Record of all meetings should be filed with the local government and made available to the public.
- (v) Local government should provide resource persons to assist in the preparation, organization and diffusion of information.

(vi) The final evening meeting should be held at least seven days prior to the public hearing.

(c) A newsletter should be published by the advisory committee in cooperation with the local government.

(i) The information sheet should be available to the public at posted locations.

(ii) It should be available after the first evening public meeting and prior to the second.

(iii) The date, time, and location of future meetings and hearings should be stated.

(iv) A phone number should be provided to obtain further information.

(v) Public notice should be made of the availability of the newsletter as stated in subsection (d) below.

(d) Publicity of the master program should utilize:

(i) Public notice postings as per subsection (i) below.

(ii) Newsletter.

(iii) Radio, T.V. and local news media.

(iv) A local paper of general circulation.

(v) Announcements to community groups.

(e) At least one public hearing should be held by the local government after the three public meetings have been held to discuss the proposed master plan.

(i) Public notice (as stated in subsection (i) below) must be made a minimum of once in each of three weeks immediately preceding the hearing in one or more newspapers of general circulation in the area in which the hearing is to be held.

(ii) The master program should be available for public inspection at the local government office and available upon request at least seven days prior to the public hearing.

(f) Prior to adoption of the master program, all reasonable attempts should have been made to obtain a general concurrence of the public and the advisory committee. The method of obtaining or measuring concurrence must be established by the local government and must provide a clear indication of how citizen input is utilized.

(g) If the level of concurrence on the master program is not considered adequate by the advisory committee at the conclusion of the public hearing, the local government should hold subsequent public meetings and public hearings until such time as adequate concurrence as per subsection (f) above is reached.

(h) Attached to the master program upon its submission to the department of ecology shall be a record of public meetings and citizen involvement. A discussion of the use of citizen involvement and measurement on concurrence should be included.

(i) Public notice shall include:

(i) Reference to the authority under which the rule is proposed.

(ii) A statement of either the terms or substance of the proposed rule or a description of the subjects and issues involved.

(iii) The time, place and manner in which interested persons may present their views thereon (as stated in RCW 30.04.025 [34.04.025]).

(2) Policy statements. Each local government shall submit policy statements, developed through the citizen involvement process, regarding shoreline development as part of its

master program. Because goal statements are often too general to be useful to very specific decision problems, the policy statements are to provide a bridge for formulating and relating use regulations to the goals also developed through the citizen involvement process. In summary, the policy statements must reflect the intent of the act, the goals of the local citizens, and specifically relate the shoreline management goals to the master program use regulations.

Clearly stated policies are essential to the viability of the master programs. The policy statements will not only support the environmental designations explained below, but, also being more specific than goal statements, will provide an indication of needed environmental designations and use regulations.

The following methodology for developing policy statements is recommended:

(a) Obtain a broad citizen input in developing policy by involving interested citizens and all private and public entities having interest or responsibilities relating to shorelines. Form a citizen advisory committee and conduct public meetings as outlined in WAC 173-16-040(1) to encourage citizens to become involved in developing a master program.

(b) Analyze existing policies to identify those policies that may be incorporated into the master program and those which conflict with the intent of the act. Further, identify constraints to local planning and policy implementation which are a result of previous government actions, existing land-use patterns, actions of adjacent jurisdictions or other factors not subject to local control or influence.

(c) Formulate goals for the use of shoreline areas and develop policies to guide shoreland activities to achieve these goals.

The policies should be consistent with RCW 90.58.020 and provide guidance and support to local government actions regarding shoreline management. Additionally, the policies should express the desires of local citizens and be based on principles of resource management which reflect the state-wide public interest in all shorelines of state-wide significance.

(3) Master program elements. Consistent with the general nature of master programs, the following land and water use elements are to be dealt with, when appropriate, in the local master programs. By dealing with shoreline uses, systematically as belonging to these generic classes of activities, the policies and goals in the master programs can be clearly applied to different shoreline uses. In the absence of this kind of specificity in the master programs, the application of policy and use regulations could be inconsistent and arbitrary.

The plan elements are:

(a) Economic development element for the location and design of industries, transportation facilities, port facilities, tourist facilities, commercial and other developments that are particularly dependent on shoreland locations.

(b) Public access element for assessing the need for providing public access to shoreline areas.

(c) Circulation element for assessing the location and extent of existing and proposed major thoroughfares, transportation routes, terminals and other public facilities and correlating those facilities with the shoreline use elements.

(d) Recreational element for the preservation and expansion of recreational opportunities through programs of acquisition, development and various means of less-than-fee acquisition.

(d) Shoreline use element for considering:

(i) The pattern of distribution and location requirements of land uses on shorelines and adjacent areas, including, but not limited to, housing, commerce, industry, transportation, public buildings and utilities, agriculture, education and natural resources.

(ii) The pattern of distribution and location requirements of water uses including, but not limited to, aquaculture, recreation and transportation.

(f) Conservation element for the preservation of the natural shoreline resources, considering such characteristics as scenic vistas, parkways, estuarine areas for fish and wildlife protection, beaches and other valuable natural or aesthetic features.

(g) Historical/cultural element for protection and restoration of buildings, sites and areas having historic cultural, educational or scientific values.

(h) In addition to the above-described elements, local governments are encouraged to include in their master programs, an element concerned with the restoration of areas to a natural useful condition which are blighted by abandoned and dilapidated structures. Local governments are also encouraged to include in their master programs any other elements, which, because of present uses or future needs, are deemed appropriate and necessary to effectuate the Shoreline Management Act.

(4) Environments. In order to plan and effectively manage shoreline resources, a system of categorizing shoreline areas is required for use by local governments in the preparation of master programs. The system is designed to provide a uniform basis for applying policies and use regulations within distinctively different shoreline areas. To accomplish this, the environmental designation to be given any specific area is to be based on the existing development pattern, the biophysical capabilities and limitations of the shoreline being considered for development and the goals and aspirations of local citizenry.

The recommended system classifies shorelines into four distinct environments (natural, conservancy, rural and urban) which provide the framework for implementing shoreline policies and regulatory measures.

This system is designed to encourage uses in each environment which enhance the character of that environment. At the same time, local government may place reasonable standards and restrictions on development so that such development does not disrupt or destroy the character of the environment.

The basic intent of this system is to utilize performance standards which regulate use activities in accordance with goals and objectives defined locally rather than to exclude any use from any one environment. Thus, the particular uses or type of developments placed in each environment must be designed and located so that there are no effects detrimental to achieving the objectives of the environment designations and local development criteria.

This approach provides an "umbrella" environment class over local planning and zoning on the shorelines. Since every area is endowed with different resources, has different intensity of development and attaches different social values to these physical and economic characteristics, the environment designations should not be regarded as a substitute for local planning and land-use regulations.

(a) The basic concept for using the system is for local governments to designate their shorelines into environment categories that reflect the natural character of the shoreline areas and the goals for use of characteristically different shorelines. The determination as to which designation should be given any specific area should be made in the following manner:

(i) The resources of the shoreline areas should be analyzed for their opportunities and limitations for different uses. Completion of the comprehensive inventory of resources is a requisite to identifying resource attributes which determine these opportunities and limitations.

(ii) Each of the plan elements should be analyzed for their effect on the various resources throughout shoreline areas. Since shorelines are only a part of the system of resources within local jurisdiction, it is particularly important that planning for shorelines be considered an integral part of area-wide planning. Further, plans, policies and regulations for lands adjacent to the shorelines of the state should be reviewed in accordance with RCW 90.58.340.

(iii) Public desires should be considered through the citizen involvement process to determine which environment designations reflect local values and aspirations for the development of different shoreline areas.

(b) The management objectives and features which characterize each of the environments are given below to provide a basis for environment designation within local jurisdictions.

(i) Natural environment. The natural environment is intended to preserve and restore those natural resource systems existing relatively free of human influence. Local policies to achieve this objective should aim to regulate all potential developments degrading or changing the natural characteristics which make these areas unique and valuable.

The main emphasis of regulation in these areas should be on natural systems and resources which require severe restrictions of intensities and types of uses to maintain them in a natural state. Therefore, activities which may degrade the actual or potential value of this environment should be strictly regulated. Any activity which would bring about a change in the existing situation would be desirable only if such a change would contribute to the preservation of the existing character.

The primary determinant for designating an area as a natural environment is the actual presence of some unique natural or cultural features considered valuable in their natural or original condition which are relatively intolerant of intensive human use. Such features should be defined, identified and quantified in the shoreline inventory. The relative value of the resources is to be based on local citizen opinion and the needs and desires of other people in the rest of the state.

(ii) Conservancy environment. The objective in designating a conservancy environment is to protect, conserve and

manage existing natural resources and valuable historic and cultural areas in order to ensure a continuous flow of recreational benefits to the public and to achieve sustained resource utilization.

The conservancy environment is for those areas which are intended to maintain their existing character. The preferred uses are those which are nonconsumptive of the physical and biological resources of the area. Nonconsumptive uses are those uses which can utilize resources on a sustained yield basis while minimally reducing opportunities for other future uses of the resources in the area. Activities and uses of a nonpermanent nature which do not substantially degrade the existing character of an area are appropriate uses for a conservancy environment. Examples of uses that might be predominant in a conservancy environment include diffuse outdoor recreation activities, timber harvesting on a sustained yield basis, passive agricultural uses such as pasture and range lands, and other related uses and activities.

The designation of conservancy environments should seek to satisfy the needs of the community as to the present and future location of recreational areas proximate to concentrations of population, either existing or projected. For example, a conservancy environment designation can be used to complement city, county or state plans to legally acquire public access to the water.

The conservancy environment would also be the most suitable designation for those areas which present too severe biophysical limitations to be designated as rural or urban environments. Such limitations would include areas of steep slopes presenting erosion and slide hazards, areas prone to flooding, and areas which cannot provide adequate water supply or sewage disposal.

(iii) Rural environment. The rural environment is intended to protect agricultural land from urban expansion, restrict intensive development along undeveloped shorelines, function as a buffer between urban areas, and maintain open spaces and opportunities for recreational uses compatible with agricultural activities.

The rural environment is intended for those areas characterized by intensive agricultural and recreational uses and those areas having a high capability to support active agricultural practices and intensive recreational development. Hence, those areas that are already used for agricultural purposes, or which have agricultural potential should be maintained for present and future agricultural needs. Designation of rural environments should also seek to alleviate pressures of urban expansion on prime farming areas.

New developments in a rural environment are to reflect the character of the surrounding area by limiting residential density, providing permanent open space and by maintaining adequate building setbacks from water to prevent shoreline resources from being destroyed for other rural types of uses.

Public recreation facilities for public use which can be located and designed to minimize conflicts with agricultural activities are recommended for the rural environment. Linear water access which will prevent overcrowding in any one area, trail systems for safe nonmotorized traffic along scenic corridors and provisions for recreational viewing of water areas illustrate some of the ways to ensure maximum enjoyment of recreational opportunities along shorelines without

conflicting with agricultural uses. In a similar fashion, agricultural activities should be conducted in a manner which will enhance the opportunities for shoreline recreation. Farm management practices which prevent erosion and subsequent siltation of water bodies and minimize the flow of waste material into water courses are to be encouraged by the master program for rural environments.

(iv) Urban environment. The objective of the urban environment is to ensure optimum utilization of shorelines within urbanized areas by providing for intensive public use and by managing development so that it enhances and maintains shorelines for a multiplicity of urban uses.

The urban environment is an area of high-intensity land-use including residential, commercial, and industrial development. The environment does not necessarily include all shorelines within an incorporated city, but is particularly suitable to those areas presently subjected to extremely intensive use pressure, as well as areas planned to accommodate urban expansion. Shorelines planned for future urban expansion should present few biophysical limitations for urban activities and not have a high priority for designation as an alternative environment.

Because shorelines suitable for urban uses are a limited resource, emphasis should be given to development within already developed areas and particularly to water-dependent industrial and commercial uses requiring frontage on navigable waters.

In the master program, priority is also to be given to planning for public visual and physical access to water in the urban environment. Identifying needs and planning for the acquisition of urban land for permanent public access to the water in the urban environment should be accomplished in the master program. To enhance waterfront and ensure maximum public use, industrial and commercial facilities should be designed to permit pedestrian waterfront activities. Where practicable, various access points ought to be linked to non-motorized transportation routes, such as bicycle and hiking paths.

(5) Shorelines of state-wide significance. The act designated certain shorelines as shorelines of state-wide significance. Shorelines thus designated are important to the entire state. Because these shorelines are major resources from which all people in the state derive benefit, the guidelines and master programs must give preference to uses which favor public and long-range goals.

Accordingly, the act established that local master programs shall give preference to uses which meet the principles outlined below in order of preference. Guidelines for ensuring that these principles are incorporated into the master programs and adhered to in implementing the act follow each principle.

(a) Recognize and protect the state-wide interest over local interest. Development guidelines:

(i) Solicit comments and opinions from groups and individuals representing state-wide interests by circulating proposed master programs for review and comment by state agencies, adjacent jurisdictions' citizen advisory committees, and state-wide interest groups. (See Appendix, Reference No. 32.)

(1999 Ed.)

(ii) Recognize and take into account state agencies' policies, programs and recommendations in developing use regulations. Reference to many of these agencies' policies are provided in the appendix. This information can also be obtained by contacting agencies listed in the *Shoreline Inventory Supplement Number One*.

(iii) Solicit comments, opinions and advice from individuals with expertise in ecology, oceanography, geology, limnology, aquaculture and other scientific fields pertinent to shoreline management. Names of organizations and individuals which can provide expert advice can be obtained from the department's resource specialist listing.

(b) Preserve the natural character of the shoreline. Development guidelines:

(i) Designate environments and use regulations to minimize man-made intrusions on shorelines.

(ii) Where intensive development already occurs, upgrade and redevelop those areas to reduce their adverse impact on the environment and to accommodate future growth rather than allowing high intensity uses to extend into low intensity use or underdeveloped areas.

(iii) Ensure that where commercial timber-cutting is allowed as provided in RCW 90.58.150, reforestation will be possible and accomplished as soon as practicable.

(c) Result in long-term over short-term benefit. Development guidelines:

(i) Prepare master programs on the basis of preserving the shorelines for future generations. For example, actions that would convert resources into irreversible uses or detrimentally alter natural conditions characteristic of shorelines of state-wide significance, should be severely limited.

(ii) Evaluate the short-term-economic gain or convenience of developments in relationship to long-term and potentially costly impairments to the natural environment.

(iii) Actively promote aesthetic considerations when contemplating new development, redevelopment of existing facilities or for the general enhancement of shoreline areas.

(d) Protect the resources and ecology of shorelines. Development guidelines:

(i) Leave undeveloped those areas which contain a unique or fragile natural resource.

(ii) Prevent erosion and sedimentation that would alter the natural function of the water system. In areas where erosion and sediment control practices will not be effective, excavations or other activities which increase erosion are to be severely limited.

(iii) Restrict or prohibit public access onto areas which cannot be maintained in a natural condition under human uses.

(e) Increase public access to publicly owned areas of the shorelines. Development guidelines:

(i) In master programs, give priority to developing paths and trails to shoreline areas, linear access along the shorelines, and to developing upland parking.

(ii) Locate development inland from the ordinary high-water mark so that access is enhanced.

(f) Increase recreational opportunities for the public on the shorelines. Development guidelines:

(i) Plan for and encourage development of facilities for recreational use of the shorelines.

(ii) Reserve areas for lodging and related facilities on uplands well away from the shorelines with provisions for nonmotorized access to the shorelines.

[Order DE 72-12, § 173-16-040, filed 6/20/72 and 7/20/72.]

WAC 173-16-050 Natural systems. This section contains brief and general descriptions of the natural geographic systems around which the shoreline management program is designed. The intent of this section is to define those natural systems to which the Shoreline Management Act applies, to highlight some of the features of those systems which are susceptible to damage from human activity, and to provide a basis for the guidelines pertaining to human-use activities contained in WAC 173-16-060.

It is intended that this section will provide criteria to local governments in the development of their master programs, as required in RCW 90.58.030(a).

(1) Marine beaches. Beaches are relatively level land areas which are contiguous with the sea and are directly affected by the sea even to the point of origination. The most common types of beaches in Washington marine waters are:

(a) Sandy beaches. Waves, wind, tide and geological material are the principal factors involved in the formation of beaches. The beach material can usually be traced to one of four possible sources: The cliffs behind the beach; from the land via rivers; offshore wind; and finally from longshore drifting of material. Longshore-drifting material must have been derived initially from the first three sources. Most beach material in Puget Sound is eroded from the adjacent bluffs composed of glacial till.

The effect of wave action on the movement and deposition of beach material varies depending upon the size of the material. Hence, in most cases, beaches composed of different sized material are usually characterized by different slopes and profiles. The entire process of beach formation is a dynamic process resulting from the effect of wave action on material transport and deposition. Initially, wave action will establish currents which transport and deposit material in various patterns. However, once a particular beach form and profile is established it begins to modify the effects of waves thus altering the initial patterns of material transport and deposition. Hence, in building beach structures such as groins, bulkheads or jetties, it is particularly important to recognize that subsequent changes in wave and current patterns will result in a series of changes in beach formation over time. (See WAC 173-16-060 (6), (11), (12) and (13).)

In the process of beach formation, sand particles are transported up the beach by breaking waves that wash onto the beach in a diagonal direction and retreat in a vertical direction. At the same time, longshore currents are created in the submerged intertidal area by the force of diagonally approaching waves. Beach material suspended by the force of the breaking waves is transported in one direction or another by the longshore current. Longshore drifting of material often results in the net transportation of beach material in one direction causing the loss of material in some areas and gains in others.

The profile of a beach at any time will be determined by the wave conditions during the preceding period. Severe storms will erode or scour much material away from the

beaches due to the force of retreating waves. During calm weather, however, the waves will constructively move material back onto the beach. This destructive and constructive action, called cut and fill, is evidenced by the presence of beach ridges or berms. New ridges are built up in front of those that survive storm conditions as sand is supplied to the beach in succeeding phases of calmer weather. In time, the more stable landward ridges are colonized by successional stages of vegetation. The vegetation stabilizes the ridges, protects them from erosion and promotes the development of soil.

(b) Rocky beaches. Rocky beaches, composed of cobbles, boulders and/or exposed bedrock are usually steeper and more stable than sandy shores. Coarse material is very permeable which allows attacking waves to sink into the beach causing the backwash to be reduced correspondingly. On sandy shores a strong backwash distributes sand more evenly, thus creating a flatter slope.

On rocky shores a zonal pattern in the distribution of plants and animals is more evident than on muddy or sandy shores. The upper beach zone is frequently very dry, limiting inhabitants to species which can tolerate a dry environment. The intertidal zone is a narrow area between mean low tide and mean high tide that experiences uninterrupted covering and uncovering by tidal action. One of the major characteristics of this zone is the occurrence of tidal pools which harbor separate communities which can be considered subzones within the intertidal zone. The subtidal zone is characterized by less stressful tidal influences but is subject to the forces of waves and currents which affect the distribution and kinds of organisms in this zone.

(c) Muddy shores. Muddy shores occur where the energy of coastal currents and wave action is minimal, allowing fine particles of silt to settle to the bottom. The result is an accumulation of mud on the shores of protected bays and mouths of coastal streams and rivers. Most muddy beaches occur in estuarine areas. However, some muddy shore areas may be found in coastal inlets and embayments where salinity is about the same as the adjacent sea.

Few plants have adapted to living on muddy shores. Their growth is restricted by turbidity which reduces light penetration into the water and thereby inhibits photosynthesis. In addition, the lack of solid structures to which algae may attach itself and siltation which smothers plants effectively prevents much plant colonization of muddy shores. While the lack of oxygen in mud makes life for fauna in muddy shores difficult, the abundance of food as organic detritus provides nutrition for a large number of detritus feeders.

(2) Spits and bars. Spits and bars are natural formations composed of sand and gravel and shaped by wind and water currents and littoral drifting. Generally a spit is formed from a headland beach (tall cliff with a curved beach at the foot) and extends out into the water (hooks are simply hookshaped spits). While spits usually have one end free in open water, bars generally are attached to land at both ends. These natural forms enclose an area which is protected from wave action, allowing life forms such as shellfish, to reproduce and live protected from the violence of the open coast. (See WAC 173-16-060(16).)

(3) Dunes. Dunes are mounds or hills of sand which have been heaped up by wind action. Typically, dunes exhibit four distinct features:

(a) Primary dunes. The first system of dunes shoreward of the water, having little or no vegetation, which are intolerant of unnatural disturbances.

(b) Secondary dunes. The second system of dunes shoreward from the water, with some vegetative cover.

(c) Back dunes. The system of dunes behind the secondary dunes, generally having vegetation and some top soil, and being more tolerant of development than the primary and secondary systems.

(d) Troughs. The valleys between the dune systems.

Dunes are a natural levee and a final protection line against the sea. The destructive leveling of, or interference with the primary dune system (such as cutting through the dunes for access) can endanger upland areas by subjecting them to flooding from heavy wave action during severe storms and destroy a distinct and disappearing natural feature. Removal of sand from the beach and shore in dune areas starves dunes of their natural supply of sand and may cause their destruction from lack of sand. (See WAC 173-16-060(16).) Appropriate vegetation can and should be encouraged throughout the entire system for stabilization. (See WAC 173-16-060(21).)

(4) Islands. An island, broadly defined, is a land mass surrounded by water. Islands are particularly important to the state of Washington since two entire counties are made up of islands and parts of several other counties are islands. A fairly small island, such as those in our Puget Sound and north coast area, is an intriguing ecosystem, in that no problem or area of study can be isolated. Every living and nonliving thing is an integral part of the functioning system. Each island, along with the mystique afforded it by man, is a world of its own, with a biological chain, fragile and delicately balanced. Obviously it does not take as much to upset this balance as it would the mainland system. Because of this, projects should be planned with a more critical eye toward preserving the very qualities which make island environments viable systems as well as aesthetically captivating to humans.

(5) Estuaries. An estuary is that portion of a coastal stream influenced by the tide of the marine waters into which it flows and within which the sea water is measurably diluted with freshwater derived from land drainage.

Estuaries are zones of ecological transition between fresh and saltwater. The coastal brackish water areas are rich in aquatic life, some species of which are important food organisms for anadromous fish species which use these areas for feeding, rearing and migration. An estuarine area left untouched by man is rare since historically they have been the sites for major cities and port developments. Because of their importance in the food production chain and their natural beauty, the limited estuarial areas require careful attention in the planning function. Close scrutiny should be given to all plans for development in estuaries which reduce the area of the estuary and interfere with water flow. (See WAC 173-16-060(14).) Special attention should be given to plans for upstream projects which could deplete the freshwater supply of the estuary.

(6) Marshes, bogs, swamps. Marshes, bogs and swamps are areas which have a water table very close to the surface of the ground. They are areas which were formerly shallow water areas that gradually filled through nature's processes of sedimentation (often accelerated by man's activities) and the decay of shallow water vegetation.

Although considered abysmal wastelands by many, these wet areas are extremely important to the food chain. Many species of both animal and plant life depend on this wet environment for existence. Birds and waterfowl choose these locations for nesting places. Wet areas are important as ground water recharge areas and have tremendous flood control value.

The high-water table and poor foundation support provided by the organic soils in these areas usually prevent development on them. The extraction of peat from bogs is possible when it is accomplished in such a manner that the surrounding vegetation and wildlife is left undisturbed and the access roads and shorelines are returned to a natural state upon completion of the operation.

The potential of marshes, bogs and swamps to provide permanent open space in urbanizing regions is high because of the costs involved in making these areas suitable for use. Unlimited public access into them, however, may cause damage to the fragile plant and animal life residing there.

(7) Lakes. A lake can be defined broadly as a body of standing water located inland. Lakes originate in several ways. Many lakes are created each year by man, either by digging a lake basin or by damming a natural valley. Natural lakes can be formed in several ways: By glaciers gouging basins and melting and depositing materials in such a way as to form natural dams; by landslides which close off open ends of valleys; extinct craters which fill with water; changes in the earth's crust, as can happen during earthquakes, forming basins which fill with water; or by changes in a river or stream course which isolate parts of the old course forming lakes, called oxbow lakes.

A lake, like its inhabitants, has a life span. This lifetime may be thousands of years for a large lake or just a few years for a pond. This process of a lake aging is known generally as eutrophication. It is a natural process which is usually accelerated by man's activities. Human sewage, industrial waste, and the drainage from agricultural lands increases the nutrients in a lake which in turn increases the growth of algae and other plants. As plants die, the chemical process of decomposition depletes the water's supply of oxygen necessary for fish and other animal life. These life forms then disappear from the lake, and the lake becomes a marsh or swamp.

Shallow lakes are extremely susceptible to increases in the rate of eutrophication resulting from discharges of waste and nutrient-laden runoff waters. Temperature stratification does not normally occur in shallow lakes. Efficient bottom-to-surface circulation of water in these shallow lakes moves nutrients to the surface photosynthetic zone encouraging increased biotic productivity. Large quantities of organic matter are produced under these conditions. Upon decomposition, heavy demands are made on the dissolved oxygen content of shallow lakes. Eventually, the oxygen level drops and some fish and other life forms die.

The entire ecosystem of a lake can be altered by man. By removing the surrounding forest for lumber or to provide a building site or farm land, erosion into the lake is accelerated. Fertilizers, whether agricultural or those used by homeowners, can enter the lake either from runoff or leaching along with other chemicals that interfere with the intricate balance of living organisms. The construction of bulkheads to control erosion and filling behind them to enlarge individual properties can rob small fish and amphibians of their habitats. The indiscriminate construction of piers, docks and boathouses, can deprive all of the waterfront owners and the general public of a serene natural view and reduce the lake's surface. (See WAC 173-16-060 (5), (8), (11), (12), (13).)

(8) Rivers, streams and creeks. Generally, rivers, streams and creeks can be defined as surface-water runoff flowing in a natural or modified channel. Runoff results either from excessive precipitation which cannot infiltrate the soil, or from ground water where the water table intersects the surface of the ground. Drawn by gravity to progressively lower levels and eventually to the sea, the surface runoff organizes into a system of channels which drain a particular geographic area.

The drainage system serves as a transportation network for nature's leveling process, selectively eroding materials from the higher altitudes and transporting the materials to lower elevations where they are deposited. A portion of these materials eventually reaches the sea where they may form beaches, dunes or spits.

Typically, a river exhibits several distinct stages as it flows from the headwaters to the mouth. In the upper reaches where the gradient is steepest, the hydraulic action of the flowing water results in a net erosion of the stream bed and a V-shaped cross section, with the stream occupying all or most of the valley floor.

Proceeding downstream, the gradient decreases and the valley walls become gentler in slope. A point is eventually reached where erosion and deposition equalize and the action of the stream changes from vertical cutting to lateral meandering. As the lateral movement continues, a flood plain is formed, over which the river meanders and upon which materials are deposited during floods. Finally, when the river enters a body of standing water, the remaining sediment load is deposited.

Extensive human use is made of rivers, including transportation, recreation, waste and sewage dumping and for drinking water. Rivers are dammed for the production of electric power, diked for flood control and withdrawn for the irrigation of crops. Many of these activities directly affect the natural hydraulic functioning of the streams and rivers as well as the biology of the water courses. (See WAC 173-16-060(17).)

(9) Flood plains. A flood plain is a shoreland area which has been or is subject to flooding. It is a natural corridor for water which has accumulated from snow melt or from heavy rainfall in a short period. Flood plains are usually flat areas with rich soil because they have been formed by deposits from flood waters. As such they are attractive places for man to build and farm until the next flood passes across the plain. In certain areas, these plains can be "flood proofed" by diking or building levees along the adjacent river or stream, but

always with provisions for tremendous amounts of water that will sooner or later be generated by weather conditions. Streamway modifications can be placed in such a way to cause channelization. Channelization tends to destroy the vital and fragile flood-plain-shoreline habitats and increase the velocity of waters in times of extreme flow. (See WAC 173-16-060(17).)

This may cause considerable damage downstream even in areas already given some flood protection. In unprotected flood plains, land-use regulations must be applied to provide an adequate open corridor within which the effects of bank erosion, channel shifts and increased runoff may be contained. Obviously, structures which must be built on a flood plain should be of a design to allow the passage of water and, wherever possible, permanent vegetation should be preserved to prevent erosion, retard runoff, and contribute to the natural beauty of the flood plain.

(10) Puget Sound. Puget Sound is a complex of interconnected inlets, bays and channels with tidal sea water entering from the west and freshwater streams entering at many points throughout the system. Most of what is known as Puget Sound was formed by glacial action that terminated near Tenino in Thurston County. The entire system, of which Puget Sound is actually a small portion, also includes the Strait of Georgia and the Strait of Juan de Fuca. The large complex may be divided into nine oceanographic areas which are interrelated: Strait of Juan de Fuca, Admiralty Inlet, Puget Sound Basin, Southern Puget Sound, Hood Canal, Possession Sound, Bellingham Bay, San Juan Archipelago, and Georgia Strait (from *Puget Sound and Adjacent Waters, Appendix XV, Plan Formulation.*)

The economic development of the central Puget Sound Basin has been stimulated by the fact that the sound is one of the few areas in the world which provides several deepwater inland harbors. The use of Puget Sound waters by deep-draft vessels is on the increase due to its proximity to the developing Asian countries. This increased trade will attract more industry and more people which will put more use pressure on the Sound in the forms of recreation (sport fishing, boating and other water-related sports) and the requirements for increased food supply.

Puget Sound waters are rich in nutrients and support a wide variety of marine fish and shellfish species. An estimated 2,820 miles of stream are utilized by anadromous fish for spawning and rearing throughout the area. Some of these fish are chinook, coho, sockeye, pink and chum salmon, steelhead, searun cutthroat and Dolly Vardon trout. All these fish spend a portion of their lives in the saltwaters of Puget Sound and the Pacific Ocean before returning to streams of origin to spawn. The juveniles of these fish spend varying amounts of time in the shore waters of the area before moving to sea to grow to maturity. Aquaculture or sea farming is now in the process of becoming reality in the Puget Sound complex. The mass production of seaweed, clams, geoducks, scallops, shrimp, oysters, small salmon, lobsters and other possibilities looms as an important new industry. Shoreline management is particularly crucial to the success of sea farming. Aquaculture on any scale can be compatible and coexist with maritime shipping and shoreland industrial activities only by careful planning and regulation.

The shoreline resources of Puget Sound include few beach areas which are not covered at high tide. Bluffs ranging from 10 to 500 feet in height rim nearly the entire extent of the Sound making access to beach and intertidal areas difficult. Because of the glacial-till composition of these bluffs, they are susceptible to fluvial and marine erosion and present constant slide hazards. Although Puget Sound is protected from the direct influence of Pacific Ocean weather, storm conditions can create very turbulent and sometimes destructive wave action. Without recognizing the tremendous energy contained in storm waves, development of shoreline resources can be hazardous and deleterious to the resource characteristics which make Puget Sound beaches attractive. (WAC 173-16-060 (11), (12), (13).)

(11) Pacific Ocean. From Cape Flattery on the north to Cape Disappointment on the south, there are approximately 160 miles of beaches, rocky headlands, inlets and estuaries on Washington's Pacific Coast. The shoreline south of Cape Flattery to the Quinault River is generally characterized as being rugged and rocky, with high bluffs. The remaining shoreline south of the Quinault River is predominantly flat sandy beaches with low banks and dunes.

During the winter, Pacific currents set toward the north, while during summer months they set to the south. Associated with the summer currents is a general offshore movement of surface water, resulting in upwelling of water from lower depths. This upwelled water is cold, high in salinity, low in oxygen content and rich in nutrients. It is this latter characteristic which causes upwelled water to be extremely significant in biological terms, since it often triggers "blooms" of marine plant life.

Directions of wave action and littoral drift of sediments shift seasonally with Pacific Ocean storms. Although very little data are available on the net direction of littoral transport, the University of Washington has offshore data which indicate a northerly offshore flow. RCW 43.51.650 declares:

"The beaches bounding the Pacific Ocean from the Straits of Juan de Fuca to Cape Disappointment at the mouth of the Columbia River constitute some of the last unspoiled seashore remaining in the United States. They provide the public with almost unlimited opportunities for recreational activities, like swimming, surfing and hiking; for outdoor sports, like hunting, fishing, clamming, and boating; for the observation of nature as it existed for hundreds of years before the arrival of white men and for relaxation away from the pressures and tensions of modern life. In past years, these recreational activities have been enjoyed by countless Washington citizens, as well as by tourists from other states and countries. The number of people wishing to participate in such recreational activities grows annually. This increasing public pressure makes it necessary that the state dedicate the use of the ocean beaches to public recreation and to provide certain recreational and sanitary facilities. Nonrecreational use of the beach must be strictly limited. Even recreational uses must be regulated in order that Washington's unrivaled seashore may be saved for our children in much the same form as we know it today." (See Appendix Reference Nos. 30 and 31.)

[Order DE 72-12, § 173-16-050, filed 6/20/72 and 7/20/72.]

(1999 Ed.)

WAC 173-16-060 The use activities. This section contains guidelines for the local regulation of use activities proposed for shorelines. Each topic, representing a specific use or group of uses, is broadly defined and followed by several guidelines. These guidelines represent the criteria upon which judgments for proposed shoreline developments will be based until master programs are completed. In addition, these guidelines are intended to provide the basis for the development of that portion of the master program concerned with the regulation of such uses.

In addition to application of the guidelines in this section, the local government should identify the type or types of natural systems (as described in WAC 173-16-050) within which a use is proposed and should impose regulations on those developments and uses which would tend to affect adversely the natural characteristics needed to preserve the integrity of the system. Examples would include but would not be limited to proposed uses that would threaten the character of fragile dune areas, reduce water tables in marshes, impede water flow in estuaries, or threaten the stability of spits and bars.

These guidelines have been prepared in recognition of the flexibility needed to carry out effective local planning of shorelines. Therefore, the interpretation and application of the guidelines may vary relative to different local conditions. Exceptions to specific provisions of these guidelines may occur where local circumstances justify such departure. Any departure from these guidelines must, however, be compatible with the intent of the act as enunciated in RCW 90.58.020.

It should be noted that there are several guidelines for certain activities which are not explicitly defined in the shoreline act as developments for which substantial development permits are not required (for example, the suggestion that a buffer of permanent vegetation be maintained along water bodies in agriculture areas.) While such activities generally cannot be regulated through the permit system, it is intended that they be dealt with in the comprehensive master program in a manner consistent with policy and intent of the Shoreline Act. To effectively provide for the management of the shorelines of the state, master programs should plan for and foster all reasonable and appropriate uses as provided in RCW 90.58.020.

Finally, most of the guidelines are intentionally written in general terms to allow some latitude for local government to expand and elaborate on them as local conditions warrant. The guidelines are adopted state regulations, however, and must be complied with both in permit application review and in master program development.

(1) Agricultural practices. Agricultural practices are those methods used in vegetation and soil management, such as tilling of soil, control of weeds, control of plant diseases and insect pests, soil maintenance and fertilization. Many of these practices require the use of agricultural chemicals, most of which are water soluble and may wash into contiguous land or water areas causing significant alteration and damage to plant and animal habitats, especially those in the fragile shoreline areas. Also, large quantities of mineral and organic sediments enter water bodies through surface erosion when

proper land management techniques are not utilized. Guidelines:

(a) Local governments should encourage the maintenance of a buffer of permanent vegetation between tilled areas and associated water bodies which will retard surface runoff and reduce siltation.

(b) Master programs should establish criteria for the location of confined animal feeding operations, retention and storage ponds for feed lot wastes, and stock piles of manure solids in shorelines of the state so that water areas will not be polluted. Control guidelines prepared by the U.S. Environmental Protection Agency should be followed. (Also see Reference Nos. 3, 4, 5, 6, 7 and 8.)

(c) Local governments should encourage the use of erosion control measures, such as crop rotation, mulching, strip cropping and contour cultivation in conformance with guidelines and standards established by the Soil Conservation Service, U.S. Department of Agriculture.

(2) Aquaculture. Aquaculture is the culture or farming of food fish, shellfish, or other aquatic plants and animals. This activity is of state-wide and national interest. Properly managed, it can result in long term over-short term benefit and can protect the resources and ecology of the shoreline. Aquaculture is dependent on the use of the water area and, when consistent with control of pollution and prevention of damage to the environment, is a preferred use of the water area.

Potential locations for aquaculture are relatively restricted due to specific requirements for water quality, temperature, flows, oxygen content, adjacent land uses, wind protection, commercial navigation, and, in marine waters, salinity. The technology associated with present-day aquaculture is still in its formative stages and experimental. Local shoreline master plans should therefore recognize the necessity for some latitude in the development of this emerging economic water use as well as its potential impact on existing uses and natural systems.

(a) Guidelines:

(i) Aquacultural activities and structures should be located in areas where the navigational access of upland owners, recreational boaters and commercial traffic is not significantly restricted.

(ii) Recognition should be given to the possible detrimental impact aquacultural development might have on the visual access of upland owners and on the general aesthetic quality of the shoreline area.

(iii) As aquaculture technology expands with increasing knowledge and experience, emphasis should be placed on structures which do not significantly interfere with navigation or impair the aesthetic quality of Washington shorelines.

(iv) Certain aquacultural activities are of state-wide interest and should be managed in a consistent manner state-wide. Local master program development and administration should therefore seek to support state aquaculture management programs as expressed in state laws, regulations, and established management plans. State management programs should seek to determine and accommodate local environmental concerns. To facilitate state-local coordination, the department will encourage state agencies to develop specific resource management plans and to include participation of local shoreline agencies.

(v) Shellfish resources and conditions suitable for aquaculture only occur in limited areas. The utility and productivity of these sites is threatened by activities and developments which reduce water quality such as waste discharges, non-point runoff and disruption of bottom sediments. Proposed developments and activities should be evaluated for impact on productive aquaculture areas. Identified impacts should be mitigated through permit conditions and performance standards.

(vi) Aquaculture is a preferred, water-dependent use. Water surface, column, and bedland areas suitable for aquaculture are limited to certain sites. These sites are subject to pressures from competing uses and degradation of water quality. The shoreline program is intended to provide a comprehensive land and water use plan which will reduce these conflicts and provide for appropriate uses. Therefore, a special effort should be made through the shoreline management program to identify and resolve resource use conflicts and resource management issues in regard to use of identified sites.

(b) Implementation of WAC 173-16-060 (2)(a)(vi):

(i) Within one month of the effective date of this regulation, the department of ecology shall notify each local jurisdiction in which major subtidal clam or geoduck beds have been identified by the department of fisheries that a program update will be required. The department of ecology shall provide maps showing the general location of each jurisdiction's major subtidal clam and geoduck beds. The department shall also provide information on subtidal clam and geoduck harvesting techniques, environmental impacts, mitigation measures, and guidance on format and issue coverage for submittal of proposed amendments.

(ii) Each local jurisdiction with identified major beds shall evaluate the application of its shoreline master program to commercial use of the identified beds. Where necessary, amendments to the master program shall be prepared to better address management and use of the beds. For example, such amendments may be necessary to address newly identified concerns, to coordinate with state-wide interests, or to bring policies into conformance with current scientific knowledge.

(iii) Within four months of notification under WAC 173-16-060 (2)(b)(i), each affected jurisdiction shall submit a progress report to the department. This report shall outline the procedure which will be used to comply with WAC 173-16-060 (2)(b)(ii) and an assessment of the need for coastal zone management financial assistance.

(iv) Within thirteen months of notification by the department under WAC 173-16-060 (2)(b)(i), each affected local government shall submit to the department for approval all portions of the shoreline management master program affecting use of the identified sites for shellfish management. Submittals shall include relevant existing master program elements proposed to be retained as well as program additions. Explanation shall be submitted to the department for any use designations or management standards which would prohibit or prevent use of identified sites.

(v) The department, in considering local program submittals, will consider the advice of the state departments of fisheries and natural resources, other interested local, state, and federal agencies, and interest groups pertaining to the sci-

entific basis, sufficiency, and practicality of proposed standards and use regulations.

(vi) The department may postpone notification under (i) above for those subtidal clam and geoduck beds which the department of social and health services believes are not certifiable. Should a bed become certifiable at some future date, the department shall make the notification required in (i) above.

(vii) If a local shoreline jurisdiction does not or is unable to comply with the requirements of this subsection, the department may undertake the required master program evaluation and preparation and adoption of necessary amendments.

(3) Forest management practices. Forest management practices are those methods used for the protection, production and harvesting of timber. Trees along a body of water provide shade which insulate the waters from detrimental temperature change and dissolved oxygen release. A stable water temperature and dissolved oxygen level provide a healthy environment for fish and other more delicate forms of aquatic life. Poor logging practices on shorelines alter this balance as well as result in slash and debris accumulation and may increase the suspended sediment load and the turbidity of the water. Guidelines:

(a) Seeding, mulching, matting and replanting should be accomplished where necessary to provide stability on areas of steep slope which have been logged. Replanted vegetation should be of a similar type and concentration as existing in the general vicinity of the logged area.

(b) Special attention should be directed in logging and thinning operations to prevent the accumulation of slash and other debris in contiguous waterways.

(c) Shoreline areas having scenic qualities, such as those providing a diversity of views, unique landscape contrasts, or landscape panoramas should be maintained as scenic views in timber harvesting areas. Timber harvesting practices, including road construction and debris removal, should be closely regulated so that the quality of the view and viewpoints in shoreline areas of the state are not degraded.

(d) Proper road and bridge design, location and construction and maintenance practices should be used to prevent development of roads and structures which would adversely affect shoreline resources.

(e) Timber harvesting practices in shorelines of the state should be conducted to maintain the state board of health standards for public water supplies. (See Reference No. 34.)

(f) Logging should be avoided on shorelines with slopes of such grade that large sediment runoff will be precipitated, unless adequate restoration and erosion control can be expeditiously accomplished.

(g) Local governments should ensure that timber harvesting on shorelines of state-wide significance does not exceed the limitations established in RCW 90.58.150 except as provided in cases where selective logging is rendered ecologically detrimental or is inadequate for preparation of land for other uses.

(h) Logging within shoreline areas should be conducted to ensure the maintenance of buffer strips of ground vegetation, brush, alder and conifers to prevent temperature

increases adverse to fish populations and erosion of stream banks.

(4) Commercial development. Commercial developments are those uses which are involved in wholesale and retail trade or business activities. Commercial developments range from small businesses within residences, to high-rise office buildings. Commercial developments are intensive users of space because of extensive floor areas and because of facilities, such as parking, necessary to service them. Guidelines:

(a) Although many commercial developments benefit by a shoreline location, priority should be given to those commercial developments which are particularly dependent on their location and/or use of the shorelines of the state and other development that will provide an opportunity for substantial numbers of the people to enjoy the shorelines of the state.

(b) New commercial developments on shorelines should be encouraged to locate in those areas where current commercial uses exist.

(c) An assessment should be made of the effect a commercial structure will have on a scenic view significant to a given area or enjoyed by a significant number of people.

(d) Parking facilities should be placed inland away from the immediate water's edge and recreational beaches.

(5) Marinas. Marinas are facilities which provide boat launching, storage, supplies and services for small pleasure craft. There are two basic types of marinas: The open-type construction (floating breakwater and/or open-pile work) and solid-type construction (bulkhead and/or landfill). Depending upon the type of construction, marinas affect fish and shellfish habitats. Guidelines:

(a) In locating marinas, special plans should be made to protect the fish and shellfish resources that may be harmed by construction and operation of the facility.

(b) Marinas should be designed in a manner that will reduce damage to fish and shellfish resources and be aesthetically compatible with adjacent areas.

(c) Master programs should identify locations that are near high-use or potentially high-use areas for proposed marina sites. Local as well as regional "need" data should be considered as input in location selection.

(d) Special attention should be given to the design and development of operational procedures for fuel handling and storage in order to minimize accidental spillage and provide satisfactory means for handling those spills that do occur.

(e) Shallow-water embayments with poor flushing action should not be considered for overnight and long-term moorage facilities.

(f) The Washington state department of fisheries has prepared guidelines concerning the construction of marinas. These guidelines should be consulted in planning for marinas. (See Reference No. 16.)

(g) State and local health agencies have standards and guidelines for the development of marinas which shall be consulted by local agencies. (See Reference No. 18.)

(6) Mining. Mining is the removal of naturally occurring materials from the earth for economic use. The removal of sand and gravel from shoreline areas of Washington usually results in erosion of land and silting of water. These opera-

tions can create silt and kill bottom-living animals. The removal of sand from marine beaches can deplete a limited resource which may not be restored through natural processes. Guidelines:

(a) When rock, sand, gravel and minerals are removed from shoreline areas, adequate protection against sediment and silt production should be provided.

(b) Excavations for the production of sand, gravel and minerals should be done in conformance with the Washington State Surface Mining Act. (See Reference No. 20.)

(c) Local governments should strictly control or prohibit the removal of sand and gravel from marine beaches.

(d) When removal of sand and gravel from marine beaches is permitted by existing legislation, it should be taken from the least sensitive biophysical areas of the beach.

(7) Outdoor advertising, signs and billboards. Signs are publicly displayed boards whose purpose is to provide information, direction, or advertising. Signs may be pleasing or distracting, depending upon their design and location. A sign, in order to be effective, must attract attention; however, a message can be clear and distinct without being offensive. There are areas where signs are not desirable, but generally it is the design that is undesirable, not the sign itself.

(a) Off-premise outdoor advertising signs should be limited to areas of high-intensity land use, such as commercial and industrial areas.

(b) Master programs should establish size, height, density, and lighting limitations for signs.

(c) Vistas and viewpoints should not be degraded and visual access to the water from such vistas should not be impaired by the placement of signs.

(d) Outdoor advertising signs (where permitted under local regulations) should be located on the upland side of public transportation routes which parallel and are adjacent to rivers and water bodies (unless it can be demonstrated that views will not be substantially obstructed).

(e) When feasible, signs should be constructed against existing buildings to minimize visual obstructions of the shoreline and water bodies.

(8) Residential development. The following guidelines should be recognized in the development of any subdivision on the shorelines of the state. To the extent possible, planned unit developments (sometimes called cluster developments) should be encouraged within the shoreline area. Within planned unit developments, substantial portions of land are reserved as open space or recreational areas for the joint use of the occupants of the development. This land may be provided by allowing houses to be placed on lots smaller than the legal minimum size for normal subdivisions, as long as the total number of dwellings in the planned unit development does not exceed the total allowable in a regular subdivision. Guidelines:

(a) Subdivisions should be designed at a level of density of site coverage and of occupancy compatible with the physical capabilities of the shoreline and water.

(b) Subdivisions should be designed so as to adequately protect the water and shoreline aesthetic characteristics.

(c) Subdividers should be encouraged to provide public pedestrian access to the shorelines within the subdivision.

(d) Residential development over water should not be permitted.

(e) Floating homes are to be located at moorage slips approved in accordance with the guidelines dealing with marinas, piers, and docks. In planning for floating homes, local governments should ensure that waste disposal practices meet local and state health regulations, that the homes are not located over highly productive fish food areas, and that the homes are located to be compatible with the intent of the designated environments.

(f) Residential developers should be required to indicate how they plan to preserve shore vegetation and control erosion during construction.

(g) Sewage disposal facilities, as well as water supply facilities, must be provided in accordance with appropriate state and local health regulations. Storm drainage facilities should be separate, not combined with sewage disposal systems.

(h) Adequate water supplies should be available so that the ground water quality will not be endangered by over-pumping.

(9) Utilities. Utilities are services which produce and carry electric power, gas, sewage, communications and oil. At this time the most feasible methods of transmission are the lineal ones of pipes and wires. The installation of this apparatus necessarily disturbs the landscape but can usually be planned to have minimal visual and physical effect on the environment. Guidelines:

(a) Upon completion of installation/maintenance projects on shorelines, banks should be restored to preproject configuration, replanted with native species and provided maintenance care until the newly planted vegetation is established.

(b) Whenever these facilities must be placed in a shoreline area, the location should be chosen so as not to obstruct or destroy scenic views. Whenever feasible, these facilities should be placed underground, or designed to do minimal damage to the aesthetic qualities of the shoreline area.

(c) To the extent feasible, local government should attempt to incorporate major transmission line right of ways on shorelines into their program for public access to and along water bodies.

(d) Utilities should be located to meet the needs of future populations in areas planned to accommodate this growth.

The Washington state thermal power plant siting law (chapter 80.50 RCW) regulates the location of electrical generating and distribution facilities. Under this law, the state preempts the certification and regulation of thermal power plant sites and thermal power plants. (See Reference No. 28.)

(10) Ports and water-related industries. Ports are centers for water-borne traffic and as such have become gravitational points for industrial/manufacturing firms. Heavy industry may not specifically require a waterfront location, but is attracted to port areas because of the variety of transportation available. Guidelines:

(a) Water-dependent industries which require frontage on navigable water should be given priority over other industrial uses.

(b) Port facilities should be designed to permit viewing of harbor areas from view points, waterfront restaurants and

similar public facilities which would not interfere with port operations or endanger public health and safety.

(c) Sewage treatment, water reclamation, desalinization and power plants should be located where they do not interfere with and are compatible with recreational, residential or other public uses of the water and shorelands. Waste treatment ponds for water-related industry should occupy as little shoreline as possible.

(d) The cooperative use of docking, parking, cargo handling and storage facilities should be strongly encouraged in waterfront industrial areas.

(e) Land transportation and utility corridors serving ports and water-related industry should follow the guidelines provided under the sections dealing with utilities and road and railroad design and construction. Where feasible, transportation and utility corridors should be located upland to reduce pressures for the use of waterfront sites.

(f) Master program planning should be based on a recognition of the regional nature of port services. Prior to allocating shorelands for port uses, local governments should consider state-wide needs and coordinate planning with other jurisdictions to avoid wasteful duplication of port services within port-service regions.

(g) Since industrial docks and piers are often longer and greater in bulk than recreational or residential piers, careful planning must be undertaken to reduce the adverse impact of such facilities on other water-dependent uses and shoreline resources. Because heavy industrial activities are associated with industrial piers and docks, the location of these facilities must be considered a major factor determining the environmental compatibility of such facilities.

(11) Bulkheads. Bulkheads or seawalls are structures erected parallel to and near the high-water mark for the purpose of protecting adjacent uplands from the action of waves or currents. Bulkheads are constructed of steel, timber or concrete piling, and may be either of solid or open-piling construction. For ocean-exposed locations, bulkheads do not provide a long-lived permanent solution, because eventually a more substantial wall is required as the beach continues to recede and layer waves reach the structure.

While bulkheads and seawalls may protect the uplands, they do not protect the adjacent beaches, and in many cases are actually detrimental to the beaches by speeding up the erosion of the sand in front of the structures.

The following guidelines apply to the construction of bulkheads and seawalls designed to protect the immediate upland area. Proposals for landfill must comply with the guidelines for that specific activity. Guidelines:

(a) Bulkheads and seawalls should be located and constructed in such a manner which will not result in adverse effects on nearby beaches and will minimize alterations of the natural shoreline.

(b) Bulkheads and seawalls should be constructed in such a way as to minimize damage to fish and shellfish habitats. Open-piling construction is preferable in lieu of the solid type.

(c) Consider the effect of a proposed bulkhead on public access to publicly owned shorelines.

(d) Bulkheads and seawalls should be designed to blend in with the surroundings and not to detract from the aesthetic qualities of the shoreline.

(e) The construction of bulkheads should be permitted only where they provide protection to upland areas or facilities, not for the indirect purpose of creating land by filling behind the bulkhead. Landfill operations should satisfy the guidelines under WAC 173-16-060(14).

(12) Breakwaters. Breakwaters are another protective structure usually built offshore to protect beaches, bluffs, dunes or harbor areas from wave action. However, because offshore breakwaters are costly to build, they are seldom constructed to protect the natural features alone, but are generally constructed for navigational purposes also. Breakwaters can be either rigid in construction or floating. The rigid breakwaters, which are usually constructed of riprap or rock, have both beneficial and detrimental effects on the shore. All breakwaters eliminate wave action and thus protect the shore immediately behind them. They also obstruct the free flow of sand along the coast and starve the downstream beaches. Floating breakwaters do not have the negative effect on sand movement, but cannot withstand extensive wave action and thus are impractical with present construction methods in many areas. Guidelines:

(a) Floating breakwaters are preferred to solid landfill types in order to maintain sand movement and fish habitat.

(b) Solid breakwaters should be constructed only where design modifications can eliminate potentially detrimental effects on the movement of sand and circulation of water.

(c) The restriction of the public use of the water surface as a result of breakwater construction must be recognized in the master program and must be considered in granting shoreline permits for their construction.

(13) Jetties and groins. Jetties and groins are structures designed to modify or control sand movement. A jetty is generally employed at inlets for the purpose of navigation improvements. When sand being transported along the coast by waves and currents arrives at an inlet, it flows inward on the flood tide to form an inner bar, and outward on ebb tide to form an outer bar. Both formations are harmful to navigation through the inlet.

A jetty is usually constructed of steel, concrete or rock. The type depends on foundation conditions and wave, climate and economic considerations. To be of maximum aid in maintaining the navigation channel, the jetty must be high enough to completely obstruct the sand stream. The adverse effect of a jetty is that sand is impounded at the updrift jetty and the supply of sand to the shore downdrift from the inlet is reduced, thus causing erosion.

Groins are barrier-type structures extending from the backshore seaward across the beach. The basic purpose of a groin is to interrupt the sand movement along a shore.

Groins can be constructed in many ways using timber, steel, concrete or rock, but can be classified into basic physical categories as high or low, long or short, and permeable or impermeable.

Trapping of sand by a groin is done at the expense of the adjacent downdrift shore, unless the groin system is filled with sand to its entrapment capacity. Guidelines:

(a) Master programs must consider sand movement and the effect of proposed jetties or groins on that sand movement. Provisions can be made to compensate for the adverse effects of the structures either by artificially transporting sand to the downdrift side of an inlet with jetties, or by artificially feeding the beaches in case of groins.

(b) Special attention should be given to the effect these structures will have on wildlife propagation and movement, and to the design of these structures which will not detract from the aesthetic quality of the shoreline.

(14) Landfill is the creation of dry upland area by the filling or depositing of sand, soil or gravel into a wetland area. Landfills also occur to replace shoreland areas removed by wave action or the normal erosive processes of nature. However, most landfills destroy the natural character of land, create unnatural heavy erosion and silting problems and diminish the existing water surface. Guidelines:

(a) Shoreline fills or cuts should be designed and located so that significant damage to existing ecological values or natural resources, or alteration of local currents will not occur, creating a hazard to adjacent life, property, and natural resources systems.

(b) All perimeters of fills should be provided with vegetation, retaining walls, or other mechanisms for erosion prevention.

(c) Fill materials should be of such quality that it will not cause problems of water quality. Shoreline areas are not to be considered for sanitary landfills or the disposal of solid waste.

(d) Priority should be given to landfills for water-dependent uses and for public uses. In evaluating fill projects and in designating areas appropriate for fill, such factors as total water surface reduction, navigation restriction, impediment to water flow and circulation, reduction of water quality and destruction of habitat should be considered.

(15) Solid waste disposal. Generally, all solid waste is a possible source of much nuisance. Rapid, safe and nuisance-free storage, collection, transportation and disposal are of vital concern to all persons and communities. If the disposal of solid waste material is not carefully planned and regulated, it can become not only a nuisance but a severe threat to the health and safety of human beings, livestock, wildlife and other biota. Guidelines:

(a) Local master programs and use regulations must be consistent with approved county or multicounty comprehensive solid waste management plans and regulations of jurisdictional health agencies.

(b) Local governments must regulate sanitary landfills and solid waste handling in accordance with regulations for solid waste handling when adopted by the department of ecology. New regulations restricting sanitary landfills within any water course and within flood plains of any water course have been proposed for adoption by the department.

(16) Dredging. Dredging is the removal of earth from the bottom of a stream, river, lake, bay or other water body for the purposes of deepening a navigational channel or to obtain use of the bottom materials for landfill. A significant portion of all dredged materials are deposited either in the water or immediately adjacent to it, often resulting in problems of water quality. Guidelines:

(a) Local governments should control dredging to minimize damage to existing ecological values and natural resources of both the area to be dredged and the area for deposit of dredged materials.

(b) Local master programs must include long-range plans for the deposit and use of spoils on land. Spoil deposit sites in water areas should also be identified by local government in cooperation with the state departments of natural resources, game and fisheries. Depositing of dredge material in water areas should be allowed only for habitat improvement, to correct problems of material distribution affecting adversely fish and shellfish resources, or where the alternatives of depositing material on land is more detrimental to shoreline resources than depositing it in water areas.

(c) Dredging of bottom materials for the single purpose of obtaining fill material should be discouraged.

(17) Shoreline protection. Flood protection and streamway modifications are those activities occurring within the streamway and wetland areas which are designed to reduce overbank flow of high waters and stabilize eroding streambanks. Reduction of flood damage, bank stabilization to reduce sedimentation, and protection of property from erosion are normally achieved through watershed and flood plain management and by structural works. Such measures are often complementary to one another and several measures together may be necessary to achieve the desired end. Guidelines:

(a) Riprapping and other bank stabilization measures should be located, designed and constructed so as to avoid the need for channelization and to protect the natural character of the streamway.

(b) Where flood protection measures such as dikes are planned, they should be placed landward of the streamway, including associated swamps and marshes and other wetlands directly interrelated and interdependent with the stream proper.

(c) Flood protection measures which result in channelization should be avoided.

(18) Road and railroad design and construction. A road is a linear passageway, usually for motor vehicles, and a railroad is a surface linear passageway with tracks for train traffic. Their construction can limit access to shorelines, impair the visual qualities of water-oriented vistas, expose soils to erosion and retard the runoff of flood waters. Guidelines:

(a) Whenever feasible, major highways, freeways and railways should be located away from shorelands, except in port and heavy industrial areas, so that shoreland roads may be reserved for slow-moving recreational traffic.

(b) Roads located in wetland areas should be designed and maintained to prevent erosion and to permit a natural movement of ground water.

(c) All debris, overburden, and other waste materials from construction should be disposed of in such a way as to prevent their entry by erosion from drainage, high water, or other means into any water body.

(d) Road locations should be planned to fit the topography so that minimum alterations of natural conditions will be necessary.

(e) Scenic corridors with public roadways should have provision for safe pedestrian and other nonmotorized travel.

Also, provision should be made for sufficient view points, rest areas and picnic areas in public shorelines.

(f) Extensive loops or spurs of old highways with high aesthetic quality should be kept in service as pleasure bypass routes, especially where main highways, paralleling the old highway, must carry large traffic volumes at high speeds.

(g) Since land-use and transportation facilities are so highly interrelated, the plans for each should be coordinated. The designation of potential high-use areas in master programs should be done after the environmental impact of the transportation facilities needed to serve those areas have been assessed.

(19) Piers. A pier or dock is a structure built over or floating upon the water, used as a landing place for marine transport or for recreational purposes. While floating docks generally create less of a visual impact than those on piling, they constitute an impediment to boat traffic and shoreline trolling. Floating docks can also alter beach sand patterns in areas where tides and littoral drift are significant. On lakes, a proliferation of piers along the shore can have the effect of substantially reducing the usable water surface. Guidelines:

(a) The use of floating docks should be encouraged in those areas where scenic values are high and where conflicts with recreational boaters and fishermen will not be created.

(b) Open-pile piers should be encouraged where shore trolling is important, where there is significant littoral drift and where scenic values will not be impaired.

(c) Priority should be given to the use of community piers and docks in all new major waterfront subdivisions. In general, encouragement should be given to the cooperative use of piers and docks.

(d) Master programs should address the problem of the proliferation of single-purpose private piers and should establish criteria for their location, spacing, and length. The master programs should also delimit geographical areas where pile piers will have priority over floating docks.

(e) In providing for boat docking facilities in the master program, local governments should consider the capacity of the shoreline sites to absorb the impact of waste discharges from boats including gas and oil spillage.

(20) Archeological areas and historic sites. Archeological areas, ancient villages, military forts, old settlers homes, ghost towns, and trails were often located on shorelines because of the proximity of food resources and because water provided an important means of transportation. These sites are nonrenewable resources and many are in danger of being lost through present day changes in land use and urbanization. Because of their rarity and the educational link they provide to our past, these locations should be preserved. Guidelines:

(a) In preparing shoreline master programs, local governments should consult with professional archeologists to identify areas containing potentially valuable archeological data, and to establish procedures for salvaging the data.

(b) Where possible, sites should be permanently preserved for scientific study and public observation. In areas known to contain archeological data, local governments should attach a special condition to a shoreline permit providing for a site inspection and evaluation by an archeologist to ensure that possible archeological data are properly salvaged.

(1999 Ed.)

Such a condition might also require approval by local government before work can resume on the project following such an examination.

(c) Shoreline permits, in general, should contain special provisions which require developers to notify local governments if any possible archeological data are uncovered during excavations.

(d) The National Historic Preservation Act of 1966 and chapter 43.51 RCW provide for the protection, rehabilitation, restoration and reconstruction of districts, sites, buildings, structures and objects significant in American and Washington history, architecture, archeology or culture. The state legislation names the director of the Washington state parks and recreation commission as the person responsible for this program.

(21) Recreation. Recreation is the refreshment of body and mind through forms of play, amusement or relaxation. Water-related recreation accounts for a very high proportion of all recreational activity in the Pacific Northwest. The recreational experience may be either an active one involving boating, swimming, fishing or hunting or the experience may be passive such as enjoying the natural beauty of a vista of a lake, river or saltwater area. Guidelines:

(a) Priority will be given to developments, other than single-family residences which are exempt from the permit requirements of the act, which provide recreational uses and other improvements facilitating public access to shorelines.

(b) Access to recreational locations such as fishing streams and hunting areas should be a combination of areas and linear access (parking areas and easements, for example) to prevent concentrations of use pressure at a few points.

(c) Master programs should encourage the linkage of shoreline parks and public access points through the use of linear access. Many types of connections can be used such as hiking paths, bicycle trails and/or scenic drives.

(d) Attention should be directed toward the effect the development of a recreational site will have on the environmental quality and natural resources of an area.

(e) Master programs should develop standards for the preservation and enhancement of scenic views and vistas.

(f) To avoid wasteful use of the limited supply of recreational shoreland, parking areas should be located inland away from the immediate edge of the water and recreational beaches. Access should be provided by walkways or other methods. Automobile traffic on beaches, dunes and fragile shoreland resources should be discouraged.

(g) Recreational developments should be of such variety as to satisfy the diversity of demands from groups in nearby population centers.

(h) The supply of recreation facilities should be directly proportional to the proximity of population and compatible with the environment designations.

(i) Facilities for intensive recreational activities should be provided where sewage disposal and vector control can be accomplished to meet public health standards without adversely altering the natural features attractive for recreational uses. (See Reference No. 35.)

(j) In locating proposed recreational facilities such as playing fields and golf courses and other open areas which use large quantities of fertilizers and pesticides in their turf

maintenance programs, provisions must be made to prevent these chemicals from entering water. If this type of facility is approved on a shoreline location, provision should be made for protection of water areas from drainage and surface runoff.

(k) State and local health agencies have broad regulations which apply to recreation facilities, recreation watercraft and ocean beaches which should be consulted by local governments in preparing use regulations and issuing permits. (See Reference Nos. 30, 31, 35, 36, 37.)

[Statutory Authority: RCW 90.58.060 and 90.58.190, 80-15-072 (Order DE-80-37), § 173-16-060, filed 10/17/80; Order DE 72-12, § 173-16-060, filed 6/20/72 and 7/20/72.]

WAC 173-16-064 Ocean management. (1) Purpose and intent. This section implements the Ocean Resources Management Act, (RCW 43.143.005 through 43.143.030) enacted in 1989 by the Washington state legislature. The law requires the department of ecology to develop guidelines and policies for the management of ocean uses and to serve as the basis for evaluation and modification of local shoreline management master programs of coastal local governments in Jefferson, Clallam, Grays Harbor, and Pacific counties. The guidelines are intended to clarify state shoreline management policy regarding use of coastal resources, address evolving interest in ocean development and prepare state and local agencies for new ocean developments and activities.

(2) Geographical application. The guidelines apply to Washington's coastal waters from Cape Disappointment at the mouth of the Columbia River north one hundred sixty miles to Cape Flattery at the entrance to the Strait of Juan De Fuca including the offshore ocean area, the near shore area under state ownership, shorelines of the state, and their adjacent uplands. Their broadest application would include an area seaward two hundred miles (RCW 43.143.020) and landward to include those uplands immediately adjacent to land under permit jurisdiction for which consistent planning is required under RCW 90.58.340. The guidelines address uses occurring in Washington's coastal waters, but not impacts generated from activities offshore of Oregon, Alaska, California, or British Columbia or impacts from Washington's offshore on the Strait of Juan de Fuca or other inland marine waters.

(3) Ocean uses defined. Ocean uses are activities or developments involving renewable and/or nonrenewable resources that occur on Washington's coastal waters and includes their associated off shore, near shore, inland marine, shoreland, and upland facilities and the supply, service, and distribution activities, such as crew ships, circulating to and between the activities and developments. Ocean uses involving nonrenewable resources include such activities as extraction of oil, gas and minerals, energy production, disposal of waste products, and salvage. Ocean uses which generally involve sustainable use of renewable resources include commercial, recreational, and tribal fishing, aquaculture, recreation, shellfish harvesting, and pleasure craft activity.

(4) Relationship to existing management programs. These guidelines augment existing requirements of the Shoreline Management Act, chapter 90.58 RCW, and those chapters in Title 173 of the Washington Administrative Code

that implement the act. They are not intended to modify current resource allocation procedures or regulations administered by other agencies, such as the Washington department of fisheries management of commercial, recreational, and tribal fisheries. They are not intended to regulate recreational uses or currently existing commercial uses involving fishing or other renewable marine or ocean resources. Every effort will be made to take into account tribal interests and programs in the guidelines and master program amendment processes. After inclusion in the state coastal zone management program, these guidelines and resultant master programs will be used for federal consistency purposes in evaluating federal permits and activities in Washington's coastal waters. Participation in the development of these guidelines and subsequent amendments to master programs will not preclude state and local government from opposing the introduction of new uses, such as oil and gas development.

These and other statutes, documents, and regulations referred to or cited in these rules may be reviewed at the department of ecology, headquarters in Lacey, Washington, for which the mailing address is Mailstop PV-11, Olympia, WA 98504.

(5) Regional approach. The guidelines are intended to foster a regional perspective and consistent approach for the management of ocean uses. While local governments may have need to vary their programs to accommodate local circumstances, local government should attempt and the department will review local programs for compliance with these guidelines and chapter 173-16 WAC: Shoreline Management Act guidelines for development of master programs. It is recognized that further amendments to the master programs may be required to address new information on critical and sensitive habitats and environmental impacts of ocean uses or to address future activities, such as oil development. In addition to the criteria in RCW 43.143.030, these guidelines apply to ocean uses until local master program amendments are adopted. The amended master program shall be the basis for review of an action that is either located exclusively in, or its environmental impacts confined to, one county. Where a proposal clearly involves more than one local jurisdiction, the guidelines shall be applied and remain in effect in addition to the provisions of the local master programs.

(6) Permit criteria: Local government and the department may permit ocean or coastal uses and activities as a substantial development, variance or conditional use only if the criteria of RCW 43.143.030(2) listed below are met or exceeded:

(a) There is a demonstrated significant local, state, or national need for the proposed use or activity;

(b) There is no reasonable alternative to meet the public need for the proposed use or activity;

(c) There will be no likely long-term significant adverse impacts to coastal or marine resources or uses;

(d) All reasonable steps are taken to avoid and minimize adverse environmental impacts, with special protection provided for the marine life and resources of the Columbia River, Willapa Bay and Grays Harbor estuaries, and Olympic national park;

(e) All reasonable steps are taken to avoid and minimize adverse social and economic impacts, including impacts on

aquaculture, recreation, tourism, navigation, air quality, and recreational, commercial, and tribal fishing;

(f) Compensation is provided to mitigate adverse impacts to coastal resources or uses;

(g) Plans and sufficient performance bonding are provided to ensure that the site will be rehabilitated after the use or activity is completed; and

(h) The use or activity complies with all applicable local, state, and federal laws and regulations.

(7) General ocean uses guidelines. The following guidelines apply to all ocean uses, their service, distribution, and supply activities and their associated facilities that require shoreline permits.

(a) Ocean uses and activities that will not adversely impact renewable resources shall be given priority over those that will. Correspondingly, ocean uses that will have less adverse impacts on renewable resources shall be given priority over uses that will have greater adverse impacts.

(b) Ocean uses that will have less adverse social and economic impacts on coastal uses and communities should be given priority over uses and activities that will have more such impacts.

(c) When the adverse impacts are generally equal, the ocean use that has less probable occurrence of a disaster should be given priority.

(d) The alternatives considered to meet a public need for a proposed use should be commensurate with the need for the proposed use. For example, if there is a demonstrated national need for a proposed use, then national alternatives should be considered.

(e) Chapter 197-11 WAC (SEPA rules) provides guidance in the application of the permit criteria and guidelines of this section. The range of impacts to be considered should be consistent with WAC 197-11-060 (4)(e) and 197-11-792 (2)(c). The determination of significant adverse impacts should be consistent with WAC 197-11-330(3) and 197-11-794. The sequence of actions described in WAC 197-11-768 should be used as an order of preference in evaluating steps to avoid and minimize adverse impacts.

(f) Impacts on commercial resources, such as the crab fishery, on noncommercial resources, such as environmentally critical and sensitive habitats, and on coastal uses, such as loss of equipment or loss of a fishing season, should be considered in determining compensation to mitigate adverse environmental, social and economic impacts to coastal resources and uses.

(g) Allocation of compensation to mitigate adverse impacts to coastal resources or uses should be based on the magnitude and/or degree of impact on the resource, jurisdiction and use.

(h) Rehabilitation plans and bonds prepared for ocean uses should address the effects of planned and unanticipated closures, completion of the activity, reasonably anticipated disasters, inflation, new technology, and new information about the environmental impacts to ensure that state of the art technology and methods are used.

(i) Local governments should evaluate their master programs and select the environment(s) for coastal waters that best meets the intent of chapter 173-16 WAC, these guidelines and chapter 90.58 RCW.

(j) Ocean uses and their associated coastal or upland facilities should be located, designed and operated to prevent, avoid, and minimize adverse impacts on migration routes and habitat areas of species listed as endangered or threatened, environmentally critical and sensitive habitats such as breeding, spawning, nursery, foraging areas and wetlands, and areas of high productivity for marine biota such as upwelling and estuaries.

(k) Ocean uses should be located to avoid adverse impacts on proposed or existing environmental and scientific preserves and sanctuaries, parks, and designated recreation areas.

(l) Ocean uses and their associated facilities should be located and designed to avoid and minimize adverse impacts on historic or culturally significant sites in compliance with chapter 27.34 RCW. Permits in general should contain special provisions that require permittees to comply with chapter 27.53 RCW if any archeological sites or archeological objects such as artifacts and shipwrecks are discovered.

(m) Ocean uses and their distribution, service, and supply vessels and aircraft should be located, designed, and operated in a manner that minimizes adverse impacts on fishing grounds, aquatic lands, or other renewable resource ocean use areas during the established, traditional, and recognized times they are used or when the resource could be adversely impacted.

(n) Ocean use service, supply, and distribution vessels and aircraft should be routed to avoid environmentally critical and sensitive habitats such as sea stacks and wetlands, preserves, sanctuaries, bird colonies, and migration routes, during critical times those areas or species could be affected.

(o) In locating and designing associated onshore facilities, special attention should be given to the environment, the characteristics of the use, and the impact of a probable disaster, in order to assure adjacent uses, habitats, and communities adequate protection from explosions, spills, and other disasters.

(p) Ocean uses and their associated facilities should be located and designed to minimize impacts on existing water dependent businesses and existing land transportation routes to the maximum extent feasible.

(q) Onshore facilities associated with ocean uses should be located in communities where there is adequate sewer, water, power, and streets. Within those communities, if space is available at existing marine terminals, the onshore facilities should be located there.

(r) Attention should be given to the scheduling and method of constructing ocean use facilities and the location of temporary construction facilities to minimize impacts on tourism, recreation, commercial fishing, local communities, and the environment.

(s) Special attention should be given to the effect that ocean use facilities will have on recreational activities and experiences such as public access, aesthetics, and views.

(t) Detrimental effects on air and water quality, tourism, recreation, fishing, aquaculture, navigation, transportation, public infrastructure, public services, and community culture should be considered in avoiding and minimizing adverse social and economic impacts.

(u) Special attention should be given to designs and methods that prevent, avoid, and minimize adverse impacts such as noise, light, temperature changes, turbidity, water pollution and contaminated sediments on the marine, estuarine or upland environment. Such attention should be given particularly during critical migration periods and life stages of marine species and critical oceanographic processes.

(v) Preproject environmental baseline inventories and assessments and monitoring of ocean uses should be required when little is known about the effects on marine and estuarine ecosystems, renewable resource uses and coastal communities or the technology involved is likely to change.

(w) Oil and gas, mining, disposal, and energy producing ocean uses should be designed, constructed, and operated in a manner that minimizes environmental impacts on the coastal waters environment, particularly the seabed communities, and minimizes impacts on recreation and existing renewable resource uses such as fishing.

(x) To the extent feasible, the location of oil and gas, and mining facilities should be chosen to avoid and minimize impacts on shipping lanes or routes traditionally used by commercial and recreational fishermen to reach fishing areas.

(y) Discontinuance or shutdown of oil and gas, mining or energy producing ocean uses should be done in a manner that minimizes impacts to renewable resource ocean uses such as fishing, and restores the seabed to a condition similar to its original state to the maximum extent feasible.

(8) Oil and gas uses and activities. Oil and gas uses and activities involve the extraction of oil and gas resources from beneath the ocean.

(a) Whenever feasible oil and gas facilities should be located and designed to permit joint use in order to minimize adverse impacts to coastal resources and uses and the environment.

(b) Special attention should be given to the availability and adequacy of general disaster response capabilities in reviewing ocean locations for oil and gas facilities.

(c) Because environmental damage is a very probable impact of oil and gas uses, the adequacy of plans, equipment, staffing, procedures, and demonstrated financial and performance capabilities for preventing, responding to, and mitigating the effects of accidents and disasters such as oil spills should be major considerations in the review of permits for their location and operation. If a permit is issued, it should ensure that adequate prevention, response, and mitigation can be provided before the use is initiated and throughout the life of the use.

(d) Special attention should be given to the response times for public safety services such as police, fire, emergency medical, and hazardous materials spill response services in providing and reviewing onshore locations for oil and gas facilities.

(e) Oil and gas facilities including pipelines should be located, designed, constructed, and maintained in conformance with applicable requirements but should at a minimum ensure adequate protection from geological hazards such as liquefaction, hazardous slopes, earthquakes, physical oceanographic processes, and natural disasters.

(f) Upland disposal of oil and gas construction and operation materials and waste products such as cuttings and drill-

ing muds should be allowed only in sites that meet applicable requirements.

(9) Ocean mining. Ocean mining includes such uses as the mining of metal, mineral, sand, and gravel resources from the sea floor.

(a) Seafloor mining should be located and operated to avoid detrimental effects on ground fishing or other renewable resource uses.

(b) Seafloor mining should be located and operated to avoid detrimental effects on beach erosion or accretion processes.

(c) Special attention should be given to habitat recovery rates in the review of permits for seafloor mining.

(10) Energy production. Energy production uses involve the production of energy in a usable form directly in or on the ocean rather than extracting a raw material that is transported elsewhere to produce energy in a readily usable form. Examples of these ocean uses are facilities that use wave action or differences in water temperature to generate electricity.

(a) Energy-producing uses should be located, constructed, and operated in a manner that has no detrimental effects on beach accretion or erosion and wave processes.

(b) An assessment should be made of the effect of energy producing uses on upwelling, and other oceanographic and ecosystem processes.

(c) Associated energy distribution facilities and lines should be located in existing utility rights-of-way and corridors whenever feasible, rather than creating new corridors that would be detrimental to the aesthetic qualities of the shoreline area.

(11) Ocean disposal. Ocean disposal uses involve the deliberate deposition or release of material at sea, such as solid wastes, industrial waste, radioactive waste, incineration, incinerator residue, dredged materials, vessels, aircraft, ordnance, platforms, or other man-made structures.

(a) Storage, loading, transporting, and disposal of materials shall be done in conformance with local, state, and federal requirements for protection of the environment.

(b) Ocean disposal shall be allowed only in sites that have been approved by the Washington department of ecology, the Washington department of natural resources, the United States Environmental Protection Agency, and the United States Army Corps of Engineers as appropriate.

(c) Ocean disposal sites should be located and designed to prevent, avoid, and minimize adverse impacts on environmentally critical and sensitive habitats, coastal resources and uses, or loss of opportunities for mineral resource development. Ocean disposal sites for which the primary purpose is habitat enhancement may be located in a wider variety of habitats, but the general intent of the guidelines should still be met.

(12) Transportation. Ocean transportation includes such uses as: Shipping, transferring between vessels, and offshore storage of oil and gas; transport of other goods and commodities; and offshore ports and airports. The following guidelines address transportation activities that originate or conclude in Washington's coastal waters or are transporting a nonrenewable resource extracted from the outer continental shelf off Washington.

(a) An assessment should be made of the impact transportation uses will have on renewable resource activities such as fishing and on environmentally critical and sensitive habitat areas, environmental and scientific preserves and sanctuaries.

(b) When feasible, hazardous materials such as oil, gas, explosives and chemicals, should not be transported through highly productive commercial, tribal, or recreational fishing areas. If no such feasible route exists, the routes used should pose the least environmental risk.

(c) Transportation uses should be located or routed to avoid habitat areas of endangered or threatened species, environmentally critical and sensitive habitats, migration routes of marine species and birds, marine sanctuaries and environmental or scientific preserves to the maximum extent feasible.

(13) Ocean research. Ocean research activities involve scientific investigation for the purpose of furthering knowledge and understanding. Investigation activities involving necessary and functionally related precursor activities to an ocean use or development may be considered exploration or part of the use or development. Since ocean research often involves activities and equipment, such as drilling and vessels, that also occur in exploration and ocean uses or developments, a case by case determination of the applicable regulations may be necessary.

(a) Ocean research should be encouraged to coordinate with other ocean uses occurring in the same area to minimize potential conflicts.

(b) Ocean research meeting the definition of "exploration activity" of WAC 173-15-020 shall comply with the requirements of chapter 173-15 WAC: Permits for oil or natural gas exploration activities conducted from state marine waters.

(c) Ocean research should be located and operated in a manner that minimizes intrusion into or disturbance of the coastal waters environment consistent with the purposes of the research and the intent of the general ocean use guidelines.

(d) Ocean research should be completed or discontinued in a manner that restores the environment to its original condition to the maximum extent feasible, consistent with the purposes of the research.

(e) Public dissemination of ocean research findings should be encouraged.

(14) Ocean salvage. Ocean salvage uses share characteristics of other ocean uses and involve relatively small sites occurring intermittently. Historic shipwreck salvage which combines aspects of recreation, exploration, research, and mining is an example of such a use.

(a) Nonemergency marine salvage and historic shipwreck salvage activities should be conducted in a manner that minimizes adverse impacts to the coastal waters environment and renewable resource uses such as fishing.

(b) Nonemergency marine salvage and historic shipwreck salvage activities should not be conducted in areas of cultural or historic significance unless part of a scientific effort sanctioned by appropriate governmental agencies.

[Statutory Authority: RCW 90.58.195, 91-10-033 (Order 91-08), § 173-16-064, filed 4/24/91, effective 5/25/91.]

(1999 Ed.)

WAC 173-16-070 Variances and conditional uses.

The act states that each local master program shall contain provisions covering conditional uses and variances. Any permit for a variance or a conditional use granted by local government under an approved master program must be submitted to the department for approval, approval with conditions, or disapproval. The criteria contained in WAC 173-14-140 and 173-14-150 for shoreline conditional use and variance permits shall constitute the minimum criteria for review of these permits by local government and the department. More restrictive criteria may be applied where it exists in approved and adopted local master programs.

These provisions should be utilized in a manner which, while protecting the environment, will assure that a person will be able to utilize his property in a fair and equitable manner.

173-18-410	Whatcom County.
173-18-420	Whitman County.
173-18-430	Yakima County.

WAC 173-18-010 Purpose. The department of ecology, pursuant to RCW 90.58.300, is designated the state agency responsible for the program of regulation of the shorelines of the state. This chapter delimits the streams and

rivers and portions thereof which constitute shorelines of the state pursuant to RCW 90.58.030 (2)(d) and (e).

[Order DE 72-13, § 173-18-010, filed 6/30/72.]

WAC 173-18-020 Applicability. The provisions of this chapter shall apply state wide.

[Order DE 72-13, § 173-18-020, filed 6/30/72.]

WAC 173-18-030 Definitions. The definitions and concepts set forth in RCW 90.58.030 shall apply as used herein.

[Order DE 72-13, § 173-18-030, filed 6/30/72.]

WAC 173-18-040 Streams and rivers. The following provisions of this chapter delimit, by county, the streams and rivers which constitute shorelines of the state as follows:

(1) Streams which constitute shorelines.

(a) Western Washington. The following provisions describe the streams in Western Washington from the point at which the stream reaches a mean annual flow of twenty cubic feet per second down to the mouth of said stream or river: *Provided*, That the stream falls at said point, within the jurisdiction of chapter 90.58 RCW.

(b) Eastern Washington. The following provisions describe the streams in Eastern Washington from the point at which the stream reaches a mean annual flow of twenty cubic feet per second down to the mouth of said stream or river: *Provided*, That the stream falls at said point, within the jurisdiction of chapter 90.58 RCW.

(2) Rivers which constitute shorelines of state-wide significance.

(a) Western Washington. The following provisions describe the point on those rivers in Western Washington where the mean annual flow reaches one thousand cubic feet per second and lists said river in all counties below said point through which said river passes with a mean annual flow in excess of one thousand cubic feet per second: *Provided*, That the river falls at said point within the jurisdiction of chapter 90.58 RCW.

(b) Eastern Washington. The following provisions describe either of the following points on those rivers in Eastern Washington, whichever is farther upstream;

(i) The point at which the mean annual flow exceeds two hundred cubic feet per second, or

(ii) The lowest extremity of the first three hundred square miles of drainage area east of the crest of the Cascade Range; provided that either of said points which is utilized is within the jurisdiction of chapter 90.58 RCW.

(iii) The following provisions additionally list said river in all counties below said point through which said river passes.

(3) Streams or rivers outside the jurisdiction of chapter 90.58 RCW. In those cases where the above described points on streams or rivers fall in geographical areas outside of the jurisdiction of chapter 90.58 RCW. The following provisions list said streams or rivers in all counties downstream from the boundaries of said geographical areas. In such listing, if the body of water is a shoreline of state-wide significance below said geographical area, such will be indicated in the description and by asterisk.

(1999 Ed.)

(4) Other data.

(a) Wherever a river of state-wide significance falls within a county, it is followed by an asterisk.

(b) The following provisions set forth the name of the quadrangle maps where the stream or river is shown. The quadrangle in which the shoreline delimitation begins and the first quadrangle downstream from the county line is underlined. The quadrangle in which the shoreline of state-wide significance begins is followed by an asterisk. The size, in minutes, of all quadrangle maps is designated.

(c) Where quadrangle maps are unavailable, photomaps have been used as indicated.

[Order 73-14, § 173-18-040, filed 8/27/73; Order DE 72-13, § 173-18-040, filed 6/30/72.]

WAC 173-18-044 Review of designations. The department shall review all the designations made herein at least once in every five-year period following the effective date of chapter 90.58 RCW or as frequently before then as is deemed advisable by the department, and prepare the necessary revisions to ensure that the designations conform to the policies of chapter 90.58 RCW and of chapter 173-18 WAC in the manner and form prescribed for adopting and amending rules and regulations in chapter 34.04 RCW (the Administrative Procedure Act).

[Statutory Authority: RCW 90.58.120 and 90.58.200. 80-08-052 (Order DE 80-20), § 173-18-044, filed 6/30/80.]

WAC 173-18-046 Conflicts between designations and criteria. In the event that any of the designations set forth in this chapter conflict with the criteria set forth in RCW 90.58.030(2) or in WAC 173-18-040 the criteria shall control. The designation of the stream or river shall be governed by the criteria.

[Statutory Authority: RCW 90.58.120 and 90.58.200. 80-08-052 (Order DE 80-20), § 173-18-046, filed 6/30/80.]

WAC 173-18-050 Adams County. Streams

Stream Name	Quadrangle Name and Size	Legal Description
(1) Cow Creek*	<u>Karakul Hills</u> * 7 1/2 Marengo 7 1/2 Benge 15 Ritzville S.E. 7 1/2	From mouth of Lugenbeal Creek (Sec.15,T19N,R37E) downstream thru Hallin and Cow lakes, thru Finnel Lake to mouth on Palouse River (Sec.27,T15N,R37E). This stream has a 300 square mile drainage area ending at mouth of Lugenbeal Creek.
(2) Palouse River*	<u>La Crosse</u> 15 Benge 15 Starbuck 15	From Whitman County line (Sec.24,T16N,R38E) along county line downstream to Franklin County line (Sec.5,T15N,R37E), right shore only. This stream has over 300 sq. miles of drainage area.

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(3) Rock Creek*	<u>Revera</u> 7 1/2	From Whitman County line (Sec.12,T18N,R38E) downstream back to Whitman County line (Sec.24 & 25, same township). This stream has over 300 square miles of drainage area.

[Order 73-14, § 173-18-050, filed 8/27/73; Order DE 72-13, § 173-18-050, filed 6/30/72.]

WAC 173-18-060 Asotin County. Streams

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(1) Asotin Creek (S. Fork)	<u>Harlow Ridge</u> 7 1/2 <u>Potter Hill</u> 7 1/2	From the confluence of the South Fork Asotin Creek and the Alder Gulch Stream (Sec.34,T9N,R44E) downstream to mouth at Asotin Creek (Sec.10, same township).
(2) Asotin Creek*	<u>Potter Hill</u> 7 1/2 <u>Rock Pile Creek</u> 7 1/2 <u>Asotin</u> 7 1/2	From the confluence of North and South Forks of Asotin Creek (Sec.10,T9N,R44E) downstream to mouth on Snake River near Asotin (Sec.16, T10N,R46E). This stream has a 300 square mile drainage area ending at mouth of George Creek (Sec.24,T10N,R45E).
(3) Asotin Creek (N. Fork)	<u>Harlow Ridge</u> 7 1/2 <u>Potter Hill</u> 7 1/2	From the Umatilla National Forest boundary (Sec.19, T9N, R44E) downstream to mouth at Asotin Creek (Sec.10, same township).
(4) George Creek	<u>Asotin</u> 7 1/2	From the confluence of George Creek and Pintler Creek (Sec.36,T10N,R45E) downstream to mouth at Asotin Creek (Sec.24, same township).
(5) Grande Ronde River*	<u>Mountain View</u> 7 1/2 <u>Fields Spring</u> 7 1/2 <u>Black Butte</u> 7 1/2 <u>Flora</u> 7 1/2	From the Washington-Oregon boundary (Sec.14, T6N,R43E) downstream to mouth at Snake River and Washington - Idaho boundary line (Sec.13,T7N, R46E). This stream has over 300 square miles of drainage area.
(6) Joseph Creek	<u>Black Butte</u> 7 1/2	From the Oregon-Washington state line (Sec.18,T6N,R46E) downstream to its mouth at Grande Ronde River (Sec.26, T7N,R46E).
(7) Snake River*	<u>Jim Creek Butte</u> 7 1/2 <u>Limekiln Rapids</u> 7 1/2 <u>Captain John Rapids</u> 7 1/2 <u>Lewiston Orchards</u> S. 7 1/2 <u>Asotin</u> 7 1/2 <u>Clarkston</u> 7 1/2 <u>Silcott</u> 7 1/2	From Washington - Oregon boundary (Sec.16,T6N,R47E) downstream to Garfield County line (Sec.6,T11N,R45E), left bank only. This stream has both over 300 square miles of drainage area and over 200 cfs MAF at Washington-Oregon boundary.

[Order DE 76-14, § 173-18-060, filed 5/3/76; Order 73-14, § 173-18-060, filed 8/27/73; Order DE 72-13, § 173-18-060, filed 6/30/72.]

WAC 173-18-070 Benton County. Streams

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(1) Columbia River (Cont.)*	<u>Priest Rapids</u> 15 <u>Richland</u> 15 <u>Eltopia</u> 15	From the Yakima County line (Sec.7, T13N,R24E) downstream right bank only, to Hanford works boundary (Sec.9, same township), plus the right bank within Richland city limits (T10N,R28E; T9N,R28E; T9N,R29E). This stream has over 200 cfs MAF at Yakima County line.
(2) Glade Creek*	<u>Blalock Island</u> * 7 1/2	From mouth of East Fork Glade Creek (Sec.6,T5N,R25E) downstream to mouth on Columbia River (Sec.28, same township). This stream has a 300 square mile drainage area ending at East Branch Glade Creek.
(3) Yakima River (Cont.)*	<u>Prosser</u> 7 1/2 <u>Whitstran</u> 7 1/2 <u>Corral Canyon</u> 15 <u>Richland</u> 15 <u>Badger Mtn.</u> 7 1/2 <u>Eltopia</u> 7 1/2	From Benton-Yakima County line (Sec.7, T8N, R24E) downstream to mouth on Columbia River (Sec.19, T9N, R29E). The flow exceeds 200 cfs MAF at Benton-Yakima County line.

[Order 73-14, § 173-18-070, filed 8/27/73; Order DE 72-13, § 173-18-070, filed 6/30/72.]

WAC 173-18-080 Chelan County. Streams

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(1) Chelan River*	<u>Wenatchee (AMS)</u> * 1:250,000 <u>Manson</u> 7 1/2 <u>Winesap</u> 7 1/2 <u>Cooper Ridge</u> 7 1/2 <u>Chelan</u> 7 1/2 <u>Chelan Falls</u> 7 1/2	From the Lake Chelan Dam (Sec.13,T27N,R22E) downstream to Chelan Falls at mouth at Columbia River (Sec.29, T27N, R23E). The 200 cfs MAF point begins at the dam.
(2) Chiwawa River*	<u>Holden</u> 15 <u>Wenatchee Lake</u> 15 <u>Plain</u> * 7 1/2	From Wenatchee National Forest boundary (NW1/4 Sec.27, T30N, R16E) downstream to mouth at Wenatchee River, (Sec.1, T26N, R17E) (excluding federal lands). The 200 cfs MAF point begins at (SW1/4, NE1/4 Sec.20, T28N, R17E).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(3) Columbia River (Cont.)*	<u>Wells Dam</u> 7 1/2 Wenatchee 7 1/2 Rock Island 7 1/2 Malaga 7 1/2 Rock Island Dam 7 1/2	From the Okanogan County line on the Columbia River (Sec.6, T28N, R24E) downstream along the Douglas/Chelan County line to Kittitas County (Sec.5, T20N, R22E). The flow exceeds 200 cfs MAF at Okanogan-Chelan County line.	(10) Nason Creek*	<u>Labyrinth Mtn.*</u> 7 1/2 Wenatchee Lake 15 Plain 7 1/2	From west section line (Sec.5, T26N, R15E) downstream to mouth at Wenatchee River (Sec.28, T27N, R17E). Exclude federal lands. The 200 cfs MAF point is at confluence with Roaring Creek (Sec.11, T26N, R16E).
(4) Entiat River*	<u>Brief*</u> 7 1/2 Tyee MTN 7 1/2 Baldy MTN 7 1/2 Ardenvoir 7 1/2 Entiat 7 1/2	From the Wenatchee National Forest boundary (Sec.29, T28N, R19E) downstream (excluding all federal properties) to mouth at the Columbia River (Sec.17, T25N, R21E). The 200 cfs MAF point begins at Wenatchee National Forest boundary.	(11) Peshastin Creek	<u>Liberty</u> 15 Leavenworth 15	From the Wenatchee National Forest boundary (Sec.25, T23N, R17E) downstream (excluding all federal lands) to mouth at Wenatchee River (Sec.22, T24N, R18E).
(5) Icicle Creek*	<u>Chiwaukum Mts.</u> 15 Leavenworth 15	From the Wenatchee National Forest boundary (west section line) (Sec.5, T24N, R16E) downstream to mouth at Wenatchee River (Sec.13, T24N, R17E) (excluding federal land). The flow exceeds 200 cfs MAF at Wenatchee National Forest boundary.	(12) Stehekin River*	<u>McGregor Mtn.</u> 7 1/2 Stehekin 7 1/2	From the North Cascades National Park boundary (Sec.11, T33N, R16E) downstream, excluding federal lands, to mouth on Lake Chelan (Sec.36, T33N, R17E). The 200 cfs MAF point begins at National Park boundary.
(6) Little Wenatchee River*	<u>Wenatchee Lake*</u> 15	From confluence with Soda Creek (Sec.10, T27N, R15E) downstream to mouth on Wenatchee Lake (Sec.23, T27N, R16E). Exclude federal lands. The 200 cfs point begins at confluence with Soda Creek.	(13) Wenatchee River*	<u>Plain*</u> 7 1/2 Leavenworth 15 Monitor 7 1/2 Wenatchee 7 1/2 Cashmere 7 1/2	From the outlet on Wenatchee Lake (Sec.28, T27N, R17E) downstream (excluding all federal lands) to the mouth at the Columbia River (Sec.27, T23N, R20E). The 200 cfs MAF point begins at gauging station (Sec.28, T27N, R17E).
(7) Mad River	<u>Tyee Mtn.</u> 7 1/2 Ardenvoir 7 1/2 Chumstick Mtn. 7 1/2	From the Wenatchee National Forest boundary (Sec.13, T26N, R19E) downstream to mouth at Entiat River (Sec.19, T26N, R20E). Exclude federal lands.	(14) White River*	<u>Wenatchee Lake*</u> 15	From Wenatchee National Forest boundary (Sec.18, T28N, R16E) downstream to mouth at Wenatchee Lake (Sec.14, T27N, R16E). Exclude federal land. The 200 cfs MAF point is at gauging station (Sec.5, T27N, R16E).
(8) Mission Creek	<u>Monitor</u> 7 1/2 Cashmere 7 1/2	From the confluence of Mission Creek and Bear Gulch (Sec.31, T23N, R19E) downstream to mouth at Wenatchee River (Sec.4, T23N, R19E).	(15) Railroad Creek	<u>Holden</u> 15 Lucerne 15	From Wenatchee National Forest boundary (Sec.7, T31N, R17E) downstream, excluding federal lands, to mouth at Lake Chelan (Sec.10, T31N, R18E).
(9) Napeequa River	<u>Wenatchee Lake</u> 15	From confluence of Twin Lakes Cr. and Napeequa River (Sec.17, T28N, R16E) downstream to mouth at White River (Sec.18, same township).	(16) Twenty-five Mile Creek	<u>Stormy Mtn.</u> 7 1/2	From south section line (Sec.36, T29N, R20E) downstream to mouth at Lake Chelan (Sec.19, T29N, R21E).
			(17) Phelps Creek	<u>Holden</u> 15	From NE1/4 of SW1/4 (Sec.10, T30N, R16E) downstream to mouth Chiwawa River (Sec.27, same township). Exclude federal lands.

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(18) White-pine Creek	<u>Wenatchee Lake</u> 15	From south section line (Sec.11, T26N, R15E) downstream to mouth at Nason Creek (Sec.1, same township). Exclude federal lands.	(5) Bockman Creek	<u>Lake Pleasant</u> 15	From the Olympic National Forest boundary (Sec.1, T29N, R13W) downstream to mouth at Soleduck River (same section).
(19) Chiwaukum Creek	<u>Chiwaukum Mts.</u> 15 <u>Leavenworth</u> 15	From confluence with South Fork Chiwaukum (Sec.34, T26N, R16E) downstream to mouth at Wenatchee River (Sec.9, T25N, R17E). Exclude federal lands.	(6) Bogachiel River (Cont.)*	<u>Reade Hill</u> 7 1/2 <u>Forks</u> 7 1/2 <u>Quillayute</u> <u>Prairie</u> 7 1/2	From the Jefferson County line (Sec.35, T28N, R13W) downstream to mouth at Quillayute River (Sec.20, T28N, R14W). The flow exceeds 1,000 cfs MAF at Jefferson County line.
(20) Chiwaukum Creek (S. Fork)	<u>Chiwaukum Mts.</u> 15	From confluence with Painter Creek (Sec.3, T25N, R16E) downstream to mouth at Chiwaukum Creek (Sec.34, T26N, R16E). Exclude federal lands.	(7) Calawah River*	<u>Forks</u> * 15	From confluence of North and South Forks of Calawah River (Sec.35, T29N, R13W) downstream to mouth at Bogachiel River (Sec.13, T28N, R14W). The 1,000 cfs MAF point begins at confluence of North and South Forks.
(21) Eight-mile Creek	<u>Chiwaukum Mts.</u> 15	From the west section line (Sec.25, T24N, R16E) downstream to Icicle Cr. (Sec.19, T24N, R17E). Exclude federal lands.	(8) Calawah River (S. Fork)	<u>Forks</u> 15	From the Olympic National Forest boundary (Sec.1, T28N, R13W) downstream to mouth at Calawah River (Sec.35, T29N, R13W).
(22) Ingalls Creek	<u>Mount Stuart</u> 15 <u>Liberty</u> 15	From west section line (Sec.31, T23N, R17E) downstream to mouth at Peshastin Creek (Sec.25, T23N, R17E). Exclude federal lands.	(9) Calawah River (N. Fork)	<u>Pysht</u> 15 <u>Lake Pleasant</u> 15 <u>Forks</u> 15	From the North section line (Sec.15, T29N, R11W) to mouth at Calawah River (Sec.35, T29N, R13W). Exclude federal lands.

(6) Boone Creek	<u>Moclips</u> 7 1/2	From an approximate point in the (NW1/4 of NW1/4 of SW1/4 Sec.4, T19N, R12W) downstream to mouth at Pacific Ocean, near Iron Springs (Sec.4, T19N, R12W).	(15) Copalis River	<u>Quinault Lake</u> 15 Macafee Hill 15 Carlisle 7 1/2 Moclips 7 1/2 Copalis Beach 7 1/2	From the intersection of Copalis River and unimproved road (Sec.30, T21N, R10W) downstream to mouth at Pacific Ocean (Sec.21, T19N, R12W).
(7) Canyon River (Cont.)	<u>Mt. Tebo</u> 15 Wynoochee Valley 15 Grisdale 15	Beginning at Mason Co. and Grays Harbor Co. line (Sec.13, T21N, R7W) downstream to mouth at Satsop West Fork River (Sec.22, T20N, R7W).	(16) Decker Creek (Cont.)	<u>Elma</u> 15	Beginning at a point where Decker Creek crosses Grays Harbor Co. and Mason Co. line (Sec.24, T20N, R7W) downstream to Grays Harbor Co. and Mason Co. line (Sec.25, of same Township).
(8) Carter Creek	<u>Wynoochee Valley</u> 15	From an approximate point on the west line of (NE1/4 Sec.12, T19N, R8W) downstream to mouth at Wynoochee River (Sec.14, T19N, R8W).	(17) Deep Creek	<u>Humtulpils</u> 15 Copalis Crossing 7 1/2	From the confluence of Deep Creek and unnamed creek (Sec.30, T19N, R10W) downstream to mouth at Humtulpils River (Sec.22, T19N, R11W).
(9) Cedar Creek	<u>Copalis Beach</u> 7 1/2	From the confluence of Cedar Creek and unnamed creek (Sec.23, T19N, R12W), downstream to mouth at Copalis River (Sec.22, T19N, R12W).	(18) Delezene Creek	<u>Malone</u> 15	From the confluence of the Delezene Creek and unnamed Creek (SE1/4 of NW1/4 Sec.27, T17N, R6W) downstream to the Chehalis River (Sec.12, T17N, R6W).
(10) Cedar Creek	<u>Rochester</u> 15	From the Thurston County line (Sec.2, T16N, R4W) downstream to mouth at Chehalis River (Sec.10, T16N, R5W).	(19) Donkey Creek	<u>Quinault Lake</u> 15	From the intersection of Olympic National Forest boundary and Donkey Creek (Sec.3, T21N, R9W) downstream to mouth at West Fork Humtulpils River (Sec.16, T21N, R9W).
(11) Charley Creek	<u>Aberdeen</u> 7 1/2	From a point between confluence of one unnamed creek and Charley Creek and confluence of another unnamed creek and Charley Creek (Sec.27, T17N, R9W) downstream to mouth at south channel of Grays Harbor (Sec.18, T17N, R9W).	(20) Elkhorn Creek	<u>Montesano</u> 15	From the confluence of Elk Horn Creek and unnamed creek (Sec.10, T15N, R8W) downstream to Pacific Co. line (same section).
(12) Chehalis River (Cont.)*	<u>Rochester</u> 15 <u>Malone</u> 15 <u>Montesano</u> 15 <u>Aberdeen</u> 7 1/2	From the Thurston Co. line (Sec.10, T15N, R4W) downstream on the southerly shore only (north shore on Indian Reservation). Both shores beginning (Sec.25, T16N, R5W) downstream to mouth at Grays Harbor (Sec.9, T17N, R9W). The flow exceeds 1,000 cfs MAF at Thurston-Grays Harbor County line.	(21) Elk River (E. Br.)	<u>Western</u> 7 1/2	From the confluence of Elk River East Branch and unnamed creek (Sec.5, T15N, R10W) downstream to mouth at Elk River (same section).
			(22) Elk River	<u>Western</u> 7 1/2 Grayland 7 1/2	From the confluence of Elk River and East Branch Elk River (Sec.5, T15N, R10W) to mouth on South Bay (Sec.26, T16N, R11W).
(13) Clo-quallum Creek	<u>Elma</u> 15 <u>Malone</u> 15	From the Mason Co. line (Sec.1, T18N, R6W) downstream to mouth at Chehalis River (Sec.2, T17N, R6W).	(23) Garrard Creek	<u>Malone</u> 15	From the confluence of the Garrard Creek and the Kellogg Creek (Sec.8, T15N, R5W) downstream to mouth at the Chehalis River (Sec.1, T15N, R5W).
(14) Connor Creek	<u>Copalis Beach</u> 7 1/2	From the confluence of Cranberry Creek (Sec.10, T18N, R12W) downstream to mouth at Pacific Ocean (Sec.33, T19N, R12W).	(24) Garrard Creek (S. Fk.) (Cont.)	<u>Malone</u> 15	From the Lewis County line SE corner (Sec.9, T15N, R5W) downstream to mouth at the Garrard Creek (Sec.10, T15N, R5W).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(1) Big Quilcene River	<u>Mt. Walker</u> 7 1/2 Quilcene 7 1/2	From the Olympic National Forest boundary (Sec.27, T27N, R2W) downstream to mouth at Quilcene Bay (Sec.19, T27N, R1W).
(2) Bogachiel River*	Indian Pass* 7 1/2 Anderson Creek 7 1/2 Reade Hill 7 1/2	From the Olympic National Forest boundary (Sec.4, T27N, R12W) downstream to the Clallam County line (Sec.2, T27N, R13W). The flow exceeds 1,000 cfs MAF at Olympic National Park boundary.
(3) Cedar Creek	<u>Destruction Island</u> 15	From the confluence of Cedar Creek and the South Fork of Cedar Creek (Sec.34, T26N, R13W) downstream to the Olympic National Park boundary (Sec.33, T26N, R13W).
(4) Chimacum Creek	<u>Port Townsend</u> S. 7 1/2	From the confluence of Chimacum Creek and unnamed creek in Chimacum Valley (Sec.11, T29N, R1W) downstream to mouth at Bay of Port Townsend (Sec.35, T30N, R1W) near Irontdale.
(5) Christmas Creek	<u>Salmon River</u> 15	From an approximate point near the center of (NE1/4 of Sec.2, T25N, R12W) downstream to mouth at Clearwater River (Sec.22, T25N, R12W).
(6) Clearwater River*	<u>Kloochman Rock</u> 15 Salmon River* 15 Destruction Island 15	From the confluence of Clearwater River and unnamed creek (Sec.25, T26N, R10W) downstream (excluding federal lands) to Quinalt Indian Reservation (Sec.29, T24N, R12W). The 1,000 cfs MAF point begins at mouth of Miller Creek (Sec.27, T25N, R12W).
(7) Dosewallips River	<u>Brinnon</u> 7 1/2	From the Olympic National Forest boundary between (Sec.25, T26N, R3W) and (Sec.30, T26N, R2W) downstream to mouth at Dabob Bay near Brinnon (Sec.2, T25N, R2W).
(8) Duckabush River	<u>Brinnon</u> 7 1/2	From the Olympic National Forest boundary between (Sec.17 & 18, T25N, R2W) downstream to mouth at Hood Canal (Sec.21, T25N, R2W).
(9) Fulton Creek	<u>Brinnon</u> 7 1/2 Holly 7 1/2	From the confluence of Fulton Creek and the South Fork of Fulton Creek (Sec.30, T25N, R2W) downstream to mouth at Hood Canal (Sec.31, T25N, R2W).
(10) Goodman Creek	<u>Forks</u> 15 LaPush 15	From the confluence of Goodman Creek and unnamed creek (Sec.23, T27N, R13W) downstream to Olympic National Park boundary (Sec.23, T27N, R14W).
(11) Hoh River*	<u>Spruce Mt.*</u> 15 Forks 15 Destruction Island 15	From the Olympic National Park boundary (Sec.29, T27N, R10W) downstream to Hoh Indian Reservation boundary (Sec.20, T26N, R13W). The 1,000 cfs MAF point starts at the Olympic National Park boundary.
(12) Hoh River (S. Fk.)	<u>Mt. Tom</u> 15	From the Olympic National Park boundary (Sec.2, T26N, R10W) downstream to the Olympic National Forest boundary (Sec.29, T27N, R10W).
(13) Hurst Creek	<u>Destruction Island</u> 15	From an approximate point near the north line of (SE1/4 of NW1/4 of NE1/4 of Sec.17, T24N, R12W) downstream to mouth at the Clearwater River (Sec.19, T24N, R12W).
(14) Kalaloch Creek	<u>Destruction Island</u> 15	From the confluence of Kalaloch Creek and West Fork Kalaloch Creek (Sec.17, T25N, R13W) downstream to the Olympic National Park boundary (Sec.3, T24N, R13W).
(15) Little Quilcene River	<u>Mt. Walker</u> 7 1/2 Quilcene 7 1/2	From the Olympic National Forest boundary (Sec.33, T28N, R2W) downstream to mouth at Quilcene Bay (Sec.18, T27N, R1W).
(16) Maple Creek	<u>Spruce Mt.</u> 15	From the confluence of Maple Creek and Dry Creek (Sec.3, T26N, R11W) downstream to Hoh River (Sec.35, T27N, R11W).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(17) Matheny Creek	<u>Salmon River</u> 15	From the Olympic National Forest boundary (Sec.24, T24N, R11W) downstream to the Olympic National Park boundary (Sec.22, T24N, R11W).	(25) Shale Creek	<u>Salmon River</u> 15 Destruction Island 15	From an approximate point near the NE corner of the (SE 1/4 of SW 1/4 of Sec.26, T25N, R12W) downstream to mouth at Clearwater River (Sec.28, T25N, R12W).
(18) Miller Creek	<u>Destruction Island</u> 15 <u>Salmon River</u> 15	From the confluence of Miller Creek and unnamed creek (Sec.17, T25N, R12W) downstream to mouth at Clearwater River (Sec.27, T25N, R12W).	(26) Snahapish River	<u>Salmon River</u> 15	From the intersection of Snahapish River and unimproved road (Sec.21, T26N, R11W) downstream to mouth at Clearwater River (Sec.19, T25N, R11W).
(19) Miller Creek (E. Fk.)	<u>Salmon River</u> 15	From the confluence of the East Fork Miller Creek and unnamed creek (Sec.15, T25N, R12W) downstream to mouth at Miller Creek (Sec.27, T25N, R12W).	(27) Snow Creek	<u>Uncas</u> 7 1/2	From the confluence of Snow Creek and unnamed creek from Crocker Lake (Sec.2, T28N, R2W) downstream to mouth at Port Discovery (Sec.24, T29N, R2W).
(20) Minter Creek	<u>Forks</u> 15	From the intersection of the north line of (Sec.30, T27N, R13W) and Minter Creek, downstream to Goodman Creek (Sec.24, T27N, R14W).	(28) Solleks River	<u>Kloochman Rock</u> 15 <u>Salmon River</u> 15	From the confluence of Solleks River and unnamed creek (Sec.2, T25N, R10W) downstream to mouth at Clearwater River (Sec.10, T25N, R11W).
(21) Mosquito Creek	<u>Forks</u> 15	From the intersection of north line of (Sec.5, T26N, R13W) and Mosquito Creek, downstream to Olympic National Park boundary (Sec.36, T27N, R14W).	(29) Stequaleho Creek	<u>Salmon River</u> 15	From the confluence of the Stequaleho Creek and unnamed creek (Sec.19, T25N, R10W) downstream to mouth at Clearwater River (Sec.16, T25N, R11W).
(22) Nolan Creek	<u>Destruction Island</u> 15 <u>Forks</u> 15	From an approximate point on the north line of (NE 1/4 of SW 1/4 of Sec.21, T26N, R12W) downstream to mouth at Hoh River (Sec.23, T26N, R13W).	(30) Winfield Creek	<u>Spruce Mt.</u> 15	From the confluence of Winfield Creek and unnamed creek (Sec.1, T26N, R12W) downstream to mouth at the Hoh River (Sec.27, T27N, R12W).
(23) Owl Creek	<u>Spruce Mt.</u> 15	From an approximate point near the center of the north line of (SW 1/4 of NE 1/4 of Sec.8, T26N, R10W) downstream to mouth at Hoh River (Sec.35, T27N, R11W).	(31) Quinault River*	<u>Mt. Christie*</u> 15 <u>Kloochman Rock</u> 15	From east section line (Sec.33, T24N, R8W) downstream to Jefferson/Grays Harbor County line (Sec.1, T23N, R9W). Exclude federal land. The flow is over 1000 cfs MAF at east section line (Sec.33, T24N, R8W).
(24) Salmon River	<u>Salmon River</u> 15	From the Olympic National Forest boundary (Sec.36, T24N, R11W) downstream back to said boundary (Sec.35) coming out of Indian Reservation (Sec.36, T24N, R12W) returning to Indian Reservation and coming out again (Sec.35, T24N, R12W) downstream to Olympic National Forest boundary (same section).	[Statutory Authority: RCW 90.58.200. 90-06-068 (Order 89-60), § 173-18-200, filed 3/6/90, effective 4/6/90; Order DE 76-14, § 173-18-200, filed 5/3/76; Order 73-14, § 173-18-200, filed 8/27/73; Order DE 72-13, § 173-18-200, filed 6/30/72.]

Stream Name	Quadrangle Name and Size	Legal Description	Stream Name	Quadrangle Name and Size	Legal Description
(1) Bear Creek	<u>Eagle Gorge</u> 7 1/2	From an approximate point (NE corner of SE1/4 of SW1/4 of NW1/4 of Sec.28, T21N, R8E) downstream to mouth at Green River (Sec.20, same township).	(11) Cedar River	<u>North Bend</u> 7 1/2 Hobart 7 1/2 Maple Valley 7 1/2 Renton 7 1/2 Mercer Island 7 1/2 Cumberland 7 1/2	From east section line (Sec.9, T21N, R10E) downstream to mouth at Lake Washington in Renton (Sec.7, T23N, R5E), excluding all federal lands.
(2) Bear Creek	<u>Everett</u> 15 Bothell 7 1/2	From the intersection of Bear Creek and the east section line (Sec.9, T26N, R5E) downstream to mouth at Sammamish River (same section).	(12) Champion Creek	<u>Greenwater</u> 15	From the confluence of Champion Creek and unnamed creek (Sec.28, T20N, R10E) downstream to mouth at Green River (Sec.20, same township).
(3) Bear	<u>Redmond</u> 7 1/2	From the confluence with Seidel Creek (Sec.20, T26N, R6E) downstream to mouth (Sec.6, T25N, R6E).	(13) Charley Creek	<u>Eagle Gorge</u> 7 1/2	From the Snoqualmie National Forest boundary (Sec.3, T20N, R8E) downstream to mouth at Howard Hanson Reservoir (Sec.34, T21N, R8E).
(4) Beckler River (Cont.)	<u>Skykomish</u> 7 1/2	From the Snohomish County line (Sec.5, T26N, R12E) downstream to Skykomish River (South Fork) (Sec.25, T26N, R11E).	(14) Cherry Creek	<u>Monroe</u> 15 Monroe 7 1/2 Carnation 7 1/2	From the confluence of Cherry Creek and Hannen Creek (Sec.2, T26N, R7E) downstream to mouth at Snoqualmie River (Sec.6, same township).
(5) Big Soos Creek	<u>Auburn</u> 7 1/2	From the confluence of the Big Soos Creek and the Little Soos Creek (Sec.35, T22N, R5E) downstream to mouth at Green River (Sec.16, T21N, R5E).	(15) Coal Creek	<u>Cumberland</u> 7 1/2	From the confluence of Coal Creek and unnamed creek (Sec.27, T21N, R7E) downstream to mouth at Fish Lake (Sec.31, same township).
(6) Black River	<u>Renton</u> 7 1/2 Des Moines 7 1/2	From confluence of Spring Brook Creek and Black River (Sec.13, T23N, R4E) downstream to mouth of Duwamish River (Sec.14, same township).	(16) Covington Creek	<u>Black Diamond</u> 7 1/2 Auburn 7 1/2	From the confluence of waters from Lake Sawyer (Sec.4, T21N, R6E) downstream to mouth at Big Soos Creek (Sec.11, T21N, R5E).
(7) Boise Creek	<u>Enumclaw</u> 15 Enumclaw 7 1/2 Buckley 7 1/2	From an approximate point (NW corner of the SE1/4 of SE1/4 of NE 1/4 of Sec.28, T20N, R7E) downstream to mouth at White River (Sec.34, T20N, R6E).	(17) Evans Creek	<u>Redmond</u> 7 1/2	From the confluence of Evans Creek and unnamed creek (Sec.8, T25N, R6E) downstream to mouth at Sammamish River (Sec.11, T25N, R5E).
(8) Boxley Creek	<u>Bandera</u> 15	From an approximate point (NW1/4 of SW 1/4 of Sec.25, T23N, R8E) downstream to mouth at South Fork Snoqualmie River (Sec.24, same township).	(18) Foss River	<u>Skykomish</u> 7 1/2	From the Snoqualmie National Forest boundary (Sec.32, T26N, R12E) downstream (excluding portion of federal lands) to mouth at Skykomish River (Sec.31, same township).
(9) Calligan Creek	<u>Mount Si</u> 15	From an approximate point (SE1/4 of NE1/4 of Sec.3, T24N, R9E) downstream through Calligan Lake to mouth at Snoqualmie River (North Fork) (Sec.31, T25N, R9E).	(19) Friday Creek	<u>Lester</u> 15	From the confluence of Friday Creek and unnamed creek (Sec.18, T20N, R11E) downstream to mouth at the Green River (same section).
(10) Carroll Creek	<u>Scenic</u> 7 1/2	From the Snoqualmie National Forest boundary (Sec.35, T26N, R12E) downstream to mouth at Tye River (Sec.26, same township).	(20) Gale Creek	<u>Bandera</u> 15	From the confluence of Gale Creek and unnamed creek (Sec.36, T21N, R8E) downstream to mouth at Howard Hanson Reservoir (same section).

(21) Granite Creek	<u>Bandera</u> 15	From an approximate point (SE1/4 of SE1/4 of SW1/4 of Sec.11, T23N, R9E) downstream to mouth at the Middle Fork Snoqualmie River (Sec.10, same township).	(29) Issaquah Creek	<u>Hobart</u> 7 1/2 <u>Maple Valley</u> 7 1/2 <u>Issaquah</u> 7 1/2	From the confluence of Holder Creek and Carey Creek (Sec.25, T23N, R6E) downstream to mouth at Sammamish Lake (Sec.17, T24N, R6E).
(22) Green River*	<u>Lester</u> 15 <u>Greenwater</u> 15 <u>Bandera</u> 15 <u>Eagle Gorge*</u> 7 1/2 <u>Cumberland</u> 7 1/2 <u>Black Diamond</u> 7 1/2 <u>Auburn</u> 7 1/2 <u>Renton</u> 7 1/2 <u>Des Moines</u> 7 1/2 <u>Seattle South</u> 7 1/2	From confluence of Green River and Tacoma Creek (Sec.35, T20N, R11E) downstream thru Duwamish River to mouth on Elliott Bay (Sec.18, T24N, R4E) (thru Howard Hanson Reservoir also). The 1,000 cfs MAF point begins at the toe of Howard A. Hanson Dam (Sec.28, T21N, R8E).	(30) Jenkins Creek	<u>Black Diamond</u> 7 1/2 <u>Auburn</u> 7 1/2	From the intersection of Jenkins Creek and light-duty county road (Sec.36, T22N, R5E) downstream to mouth at Big Soos Creek (Sec.2, T21N, R5E).
(23) Green River (N. Fk.)	<u>Bandera</u> 15 <u>Eagle Gorge</u> 7 1/2	From the Snoqualmie National Forest boundary (Sec.18, T21N, R9E) downstream to mouth at Howard Hanson Reservoir (Sec.22, T21N, R8E).	(31) Kimball Creek	<u>Snoqualmie</u> 7 1/2	From the confluence of Coal Creek and Kimball Creek (Sec.31, T24N, R8E) downstream to mouth at Snoqualmie River (Sec.30, same township).
(24) Greenwater River	<u>Lester</u> 15 <u>Greenwater</u> 15	From the Snoqualmie National Forest boundary (Sec.31, T19N, R11E) downstream to White River (along the northerly shore only) (Sec.4, T19N, R9E). Exclude federal lands.	(32) Maloney Creek	<u>Skykomish</u> 7 1/2	From the Snoqualmie National Forest boundary (Sec.35, T26N, R11E) downstream to mouth at South Fork Skykomish River (Sec.26, same township).
(25) Griffin Creek	<u>Lake Joy</u> 7 1/2 <u>Snoqualmie</u> 7 1/2 <u>Fall City</u> 7 1/2	From the confluence of Griffin Creek and East Fork Griffin Creek (Sec.19, T25N, R8E) downstream to mouth at the Snoqualmie River (Sec.28, T25N, R7E).	(33) Martin Creek	<u>Scenic</u> 7 1/2	From the Snoqualmie National Forest boundary (Sec.13, T26N, R12E) downstream to federal boundary (Sec.25, same township).
(26) Hancock Creek	<u>Mount Si</u> 15	From an approximate point (NE1/4 of NW1/4 of Sec.15, T24N, R9E) downstream to mouth at Lake Hancock thence downstream to North Fork Snoqualmie River (Sec.7, same township).	(34) May Creek	<u>Mercer Island</u> 7 1/2	From the intersection of May Creek and light-duty road (SE1/4, SE1/4 Sec.32, T24N, R5E) downstream to mouth at Lake Washington (same section).
(27) Harris Creek	<u>Carnation</u> 7 1/2	From the intersection of Harris Creek and Swan Mill Road (Sec.34, T26N, R7E) downstream to mouth at Snoqualmie River (Sec.5, T25N, R7E).	(35) Mercer Slough	<u>Mercer Island</u> 7 1/2	From the east section line (Sec.5, T24N, R5E) downstream through Mercer Slough to mouth at East Channel (Sec.8, same township).
(28) Index Creek	<u>Index</u> 15 <u>Baring</u> 7 1/2	From the Snoqualmie National Forest boundary (Sec.10, T26N, R10E) downstream to mouth at South Fork Skykomish River (Sec.2, same township).	(36) Miller River	<u>Grotto</u> 7 1/2	From the Snoqualmie National Forest boundary (Sec.33, T26N, R11E) downstream, excluding those reaches within Snoqualmie National Forest, to mouth at Skykomish River (Sec.28, same township).
			(37) Money Creek	<u>Grotto</u> 7 1/2	From the Snoqualmie National Forest boundary (Sec.28, T26N, R11E) downstream back to the Snoqualmie National Forest boundary (same section).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(38) Newaukum Creek	<u>Enumclaw</u> 15 Enumclaw 7 1/2 Buckley 7 1/2 Black Diamond 7 1/2	From the confluence of Newaukum Creek and unnamed creek (Sec.7, T20N, R7E) downstream to mouth at the Green River (Sec.29, T21N, R6E).	(48) Sammamish River	<u>Redmond</u> 7 1/2 Kirkland 7 1/2 River Bothell 7 1/2 Edmonds East 7 1/2	From Sammamish Lake (Sec.13, T25N, R5E) downstream to mouth at Lake Washington (Sec.11, T26N, R4E).
(39) North Creek (Cont.)	<u>Everett</u> 15 Bothell 7 1/2	From King County and Snohomish County line (Sec.5, T26N, R5E) downstream to mouth at Sammamish River (Sec.8, same township).	(49) Sawmill Creek	<u>Lester</u> 15	From the Snoqualmie National Forest boundary (Sec.30, T20N, R11E) downstream, excluding all federal lands to mouth at Green River (Sec.24, T20N, R10E).
(40) North Fork Creek	<u>Lake Joy</u> 7 1/2	From the beginning of creek at swamp (Sec.18, T26N, R8E) downstream to mouth at North Fork Tolt River (Sec.29, same township).	(50) Scatter Creek	<u>Enumclaw</u> 15	From the confluence of Scatter Creek and unnamed creek (Sec.2, T19N, R7E) downstream to mouth at the White River (Sec.11, same township).
(41) Patterson Creek	<u>Fall City</u> 7 1/2	From the confluence of Patterson Creek and Canyon Creek (Sec.8, T24N, R7E) downstream to mouth at the Snoqualmie River (Sec.4, same township).	(51) Skykomish River* (S. Fk.)	<u>Skykomish</u> * 7 1/2 Grotto 7 1/2 Baring 7 1/2	From confluence of Tye River and Foss River (Sec.31, T26N, R12E) downstream to Snohomish County line (Sec.3, T26N, R10E) excluding all federal lands. The 1,000 cfs MAF point begins at mouth of Beckler Creek (Sec.25, T26N, R11E).
(42) Philippa Creek	<u>Mount Si</u> 15	From an approximate point (SE1/4 of Sec.22, T25N, R9E) downstream to mouth at Snoqualmie River (Sec.15, same township).	(52) Smay Creek	<u>Greenwater</u> 15	From the Snoqualmie National Forest boundary (Sec.7, T20N, R10E) downstream to mouth at Green River (Sec.13, T20N, R9E).
(43) Pratt River	<u>Snoqualmie Pass</u> 15 Bandera 15 Mount Si 15	From east section line (Sec.27, T23N, R10E) downstream to mouth on Middle Fk. Snoqualmie R. (Sec.31, T24N, R10E) excluding federal lands.	(53) Snoqualmie River*	<u>Snoqualmie</u> * 7 1/2 Fall City 7 1/2 Carnation 7 1/2 Redmond 7 1/2 Monroe 7 1/2	From the confluence of Middle Fork and South Fork of Snoqualmie River (Sec.33, T24N, R8E) downstream to Snohomish County line (Sec.6, T26N, R7E). The 1,000 cfs MAF point begins at confluence of Middle Fork and South Fork Snoqualmie River.
(44) Raging River	<u>North Bend</u> 7 1/2 Hobart 7 1/2 Fall City 7 1/2	From the confluence of Raging River and unnamed stream (SE1/4 of NW 1/4 Sec.25, T23N, R7E) downstream to mouth at Snoqualmie River (Sec.14, T24N, R7E) near Fall City.	(54) Snoqualmie River (M. Fk.)*	<u>Mount Si</u> * 15 Bandera 15 North Bend 7 1/2 Snoqualmie 7 1/2	From Snoqualmie National Forest boundary (Sec.26, T24N, R10E) downstream to confluence with South Fork of Snoqualmie River (Sec.33, T24N, R8E), excluding all federal lands. The 1,000 cfs MAF point begins at Snoqualmie National Forest boundary.
(45) Rock Creek	<u>Greenwater</u> 15	From the Snoqualmie National Forest boundary (Sec.34, T20N, R10E) downstream to mouth at Green River (Sec.21, same township).	(55) Snoqualmie River (N. Fk.)	<u>Mount Si</u> 15 Snoqualmie 7 1/2 North Bend 7 1/2	From the Snoqualmie National Forest boundary (Sec.12, T25N, R9E) downstream to mouth at Snoqualmie River (Main Fork) (Sec.34, T24N, R8E).
(46) Rock Creek	<u>Hobart</u> 7 1/2	From the confluence of Rock Creek and waters from the diversion ditch (Sec.16, T22N, R7E) downstream to mouth at the Cedar River (Sec.17, same township).			
(47) Rock Creek	<u>Maple Valley</u> 7 1/2	From the intersection of county road, railroad and Rock Creek (Sec.22, T22N, R6E) downstream to Cedar River (Sec.23, same township).			

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(56) Snoqualmie River (S. Fk.)	<u>Bandera</u> 15 North Bend 7 1/2 Snoqualmie 7 1/2	From the Snoqualmie National Forest boundary (Sec.33, T23N, R11E) downstream to confluence with Snoqualmie River (Main Fork) (Sec.33, T24N, R8E) excluding all federal lands.	(65) Tolt River (N. Fk.)	<u>Mount Si</u> 15 Lake Joy 7 1/2	From confluence with Titi-caed Creek (Sec.12, T26N, R9E) downstream to mouth at Tolt River (Sec.31, T26N, R8E).
(57) Spring Brook Creek	<u>Renton</u> 7 1/2	From the intersection of Spring Brook Creek and medium-duty road (SW1/4 of NE1/4 of Sec.24, T23N, R4E) downstream to mouth at Black River (Sec.13, same township).	(66) Tolt River (S. Fk.)	<u>Mount Si</u> 15 Lake Joy 7 1/2	From the Snoqualmie National Forest boundary (Sec.31, T26N, R10E) downstream to mouth at Tolt River (Sec.31, T26N, R8E).
(58) Sunday Creek	<u>Lester</u> 15	From the Snoqualmie National Forest boundary (Sec.3, T20N, R11E) downstream to mouth at the Green River (Sec.18, T20N, R11E) Exclude federal lands.	(67) Tye River	<u>Scenic</u> 7 1/2 Skykomish 7 1/2	From the Snoqualmie National Forest boundary (Sec.26, T26N, R12E) downstream to mouth at Skykomish River (Sec.31, same township) excluding all federal lands.
(59) Sunday Creek	<u>Mount Si</u> 15	From the Snoqualmie National Forest boundary (Sec.13, T25N, R9E) downstream to mouth at the North Fork Snoqualmie River (Sec.15, same township).	(68) Unnamed Tributary to Index Creek	<u>Index</u> 15	From the Snoqualmie National Forest boundary (Sec.10, T26N, R10E) downstream to mouth at Index Creek (same section).
(60) Swamp Creek (Cont.)	<u>Bothell</u> 7 1/2	From Snohomish County line (Sec.2, T26N, R4E) downstream to mouth at Sammamish River (Sec.12, same township).	(69) Unnamed Tributary to Snoqualmie River (N. Fk.)	<u>Mount Si</u> 15	From the confluence of unnamed tributary to Snoqualmie River (North Fork) and another unnamed creek (Sec.29, T24N, R9E) downstream to mouth at North Fork Snoqualmie River (Sec.19, same township).
(61) Taylor Creek	<u>Eagle Gorge</u> 7 1/2 North Bend 7 1/2	From confluence of Middle Fork and South Fork Taylor Creek (Sec.32, T22N, R8E) downstream to mouth at Cedar River (Sec.13, T22N, R7E).	(70) Unnamed Tributary to Tolt River (S. Fk.)	<u>Mount Si</u> 15	From the confluence of unnamed tributary to Tolt River South Fork and another unnamed stream (Sec.35, T26N, R8E) downstream to South Fork Tolt River (same section).
(62) Ten Creek	<u>Snoqualmie</u> 7 1/2	From the intersection of light-duty road and Ten Creek (Sec.11, T24N, R8E) downstream to mouth at Tokul Creek (Sec.9, same township).	(71) White River*	<u>Greenwater</u> * 15 Enumclaw 15 Enumclaw 7 1/2 Buckley 7 1/2 Sumner 7 1/2 Auburn 7 1/2	From confluence of White River and Greenwater River (Sec.4, T19N, R9E) downstream following King-Pierce County line to Pierce County line (Sec.36, T21N, R4E) excluding Indian Reservation lands. The 1,000 cfs MAF point begins at mouth of Greenwater River.
(63) Tokul Creek	<u>Lake Joy</u> 7 1/2 Snoqualmie 7 1/2	From the confluence of Tokul Creek and Beaver Creek (Sec.21, T25N, R8E) downstream to mouth at Snoqualmie River (Sec.24, T24N, R7E).	(72) Issaquah Creek (E. Fk.)	<u>Issaquah</u> 7 1/2	From railroad bridge (SE1/4 Sec.27, T24N, R6E) downstream to mouth at Issaquah Creek (Sec.28, same township).
(64) Tolt River	<u>Lake Joy</u> 7 1/2	From the confluence of North Fork Tolt River and South Fork Tolt River (Sec.31, T26N, R8E) downstream to mouth at Snoqualmie River (Sec.21, T25N, R7E).	(73) Cedar River (N. Fk.)	<u>Snoqualmie Pass</u> 15	From confluence of Cedar River North Fk. and unnamed creek (Sec.7, T21N, R11E) downstream to mouth at Cedar River (Sec.10, T21N, R10E) excluding federal lands.

WAC 173-18-220 Kitsap County. Streams

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(1) Big Beef Creek	<u>Wildcat Lake</u> 7 1/2 <u>Seabeck</u> 7 1/2	From the confluence of Big Beef Creek and unnamed creek (Sec.34, T25N, R1W) downstream to mouth at Big Beef Harbor (Sec.15, same township).	(1) Big Creek	<u>Easton</u> 15	From the Wenatchee National Forest boundary (Sec.35, T20N, R13E) downstream (excluding federal lands) to mouth at Yakima River (Sec.21, T20N, R14E).
(2) Black Jack Creek	<u>Bremerton West</u> 7 1/2	From the confluence of Black Jack Creek and unnamed creek (Sec.11, T23N, R1E) downstream to mouth at Sinclair Inlet (Sec.25, T24N, R1E).	(2) Cabin Creek	<u>Lester</u> 15 <u>Easton</u> 15	From Wenatchee National Forest boundary (Sec.19, T20N, R13E) downstream to mouth on Yakima River (Sec.9, T20N, R13E).
(3) Burley Creek	<u>Burley</u> 7 1/2	From the confluence of Burley Creek and unnamed creek (Sec.12, T22N, R1E) downstream to mouth at Burley Lagoon (same section).	(3) Cle Elum River*	<u>Kachess Lake*</u> 15 <u>Easton</u> 15 <u>Cle Elum</u> 15	From the Wenatchee National Forest boundary crossing Cle Elum Lake (Sec.33, 34 & 35, T21N, R14E) downstream to mouth at Yakima River (Sec.32, T20N, R15E). The stream flow exceeds 200 cfs MAF at Wenatchee National Forest boundary.
(4) Chico Creek	<u>Bremerton West</u> 7 1/2	From the confluence of Chico Creek and Dickerson Creek (Sec.8, T24N, R1E) downstream to mouth in Chico Bay on Dyes Inlet (Sec.5, same township).	(5) Columbia River (Cont.)*	<u>Rock Island Dam*</u> 7 1/2 <u>West Bar</u> 7 1/2 <u>Babcock Ridge</u> 7 1/2 <u>Cape Horn S.E.</u> 7 1/2 <u>Evergreen</u> 7 1/2 <u>Vantage</u> 7 1/2 <u>Beverly</u> 7 1/2 <u>Priest Rapids</u> 7 1/2	From the Chelan Co. line on the Columbia River (Sec.5, T20N, R22E) downstream along the Douglas and Kittitas Co. line to Yakima Co. (Sec.32, T15N, R23E). The stream flow exceeds 200 cfs MAF at Chelan Co. line.
(5) Curley Creek	<u>Bremerton East</u> 7 1/2	From an approximate point (NE1/4 of NE1/4 of Sec.8, T23N, R2E) downstream to mouth at Yukon Harbor (Sec.33, T24N, R2E).	(6) Kachess River*	<u>Kachess Lake*</u> 15	From the Wenatchee National Forest (Sec.3, T20N, R13E) downstream through Lake Easton State Park and to mouth at Yakima River (same section). The flow exceeds 200 cfs MAF at Wenatchee National Forest boundary.
			(7) Little Creek	<u>Easton</u> 15	From the Wenatchee National Forest boundary (Sec.33, T20N, R14E) (excluding all federal lands) downstream to mouth at Yakima River (Sec.22, T20N, R14E).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(8) Log Creek	<u>Lester</u> 15	From confluence of Log Creek and unnamed creek (NW1/4, SW1/4 Sec.31, T20N, R13E) downstream to mouth on Cabin Creek (Sec.19, T20N, R13E).	(17) Wilson Creek*	<u>Ellensburg So.</u> * 7 1/2 Kittitas 7 1/2	From mouth at Naneum Creek (Sec.30, T17N, R19E) downstream to mouth on Yakima River (Sec.31, T17N, R19E). This stream has over 300 sq. miles of drainage area ending at mouth of Cherry Creek (Sec.31, T17N, R19E).
(9) Manastash Creek	<u>Yakima</u> (AMS) Ellensburg 15 Ellensburg S. 7 1/2	From confluence of North and South Forks Manastash Creek (Sec.17, T17N, R17E) downstream to mouth on Yakima River (Sec.4, T17N, R18E).	(18) Yakima River*	<u>Snoqualmie Pass</u> * 15 Kachess 15 Easton 15 Cle Elum 15 Thorp 7 1/2 Ellensburg North 7 1/2 Ellensburg South 7 1/2 Wymer 7 1/2 Pamona 7 1/2 Kittitas 7 1/2	From the Wenatchee National Forest boundary (Sec.15, T21N, R12E) downstream (excluding all federal lands) to the Yakima Co. line (Sec.33, T15N, R19E). The stream flow exceeds 200 cfs MAF at Wenatchee National Forest boundary.
(10) Manastash Creek (South Fork)	<u>Cle Elum</u> 15 Ellensburg 15 Manastash Lake 7 1/2	From the Wenatchee National Forest boundary (Sec.31, T18N, R16E) downstream to mouth at Manastash Creek (Sec.17, T17N, R17E).	(19) Little Naches River*	<u>Lester</u> 15 Easton 15* Cliffdell 7 1/2	From confluence of North Fork & Middle Fork of Little Naches River (Sec.31, T19N, R12E) downstream left bank to mouth of Naches River (Sec.4, T17N, R14E). Exclude federal lands. The 200 cfs MAF point begins at confluence with Crow Creek (Sec.30, T18N, R14E).
(11) Swauk Creek	<u>Thorp</u> 15	From the Wenatchee National Forest boundary (Sec.10, T20N, R17E) downstream (excluding all federal lands) to mouth at Yakima River (Sec.20, T19N, R17E).			
(12) Taneum Creek	<u>Cle Elum</u> 15 Thorp 7 1/2	From Wenatchee National Forest boundary (Sec.30, T19N, R16E) downstream (excluding all federal lands) to mouth on Yakima River (Sec.33, T19N, R17E).			
(13) Teanaway River*	<u>Mt. Stuart</u> * 15 Cle Elum 15	From the confluence of the Middle Fork and the West Fork Teanaway River (Sec.6, T20N, R16E) downstream to Yakima River (Sec.3, T19N, R16E). The 200 cfs MAF point begins at confluence of West Fork & North Fork Teanaway River (Sec.6, T20N, R16E).			
(14) Teanaway River (M. Fk.)	<u>Mt. Stuart</u> 15	From the Wenatchee National Forest boundary (Sec.15, T21N, R15E) downstream to mouth at Teanaway River (Sec.6, T20N, R16E).			
(15) Teanaway River (N. Fk.)	<u>Mt. Stuart</u> 15	From the Wenatchee National Forest boundary (Sec.4, T21N, R16E) downstream (excluding all federal lands) to the Teanaway River (Sec.6, T20N, R16E).			
(16) Teanaway River (W. Fk.)	<u>Kachess Lake</u> 15 Mt. Stuart 15	From the Wenatchee National Forest boundary (Sec.30, T21N, R15E) downstream (excluding all federal lands) to the Teanaway River (Sec.6, T20N, R16E).

The 1,000 cfs MAF point begins at mouth of Mineral Creek (Sec.26, T15N, R5E).
(47) Lincoln Creek (S. Fork)	<u>Adna</u> 15	From confluence of Lincoln Creek South Fork and Wildcat Creek (Sec.7, T14N, R4W) downstream to mouth at Lincoln Creek (Sec.5, same township).	(57) Olequa Creek	<u>Centralia</u> 15 Castle Rock 15	From confluence of Olequa Creek and unnamed creek closest to GN, NP, UP Railroad track (Sec.21, T12N, R2W) downstream to Lewis Co. and Cowlitz Co. line (Sec.32, T11N, R2W).
(48) Lost Creek	<u>Adna</u> 15	From confluence of Lost Creek and unnamed creek north section line (Sec.10, T12N, R4W) downstream to mouth at Stillman Creek (Sec.2 of same township).	(58) Quartz Creek	<u>Spirit Lake</u> 15	From the National Forest boundary (Sec.10, T11N, R6E) downstream to mouth on Cispus River (same section).
(49) Lucas Creek	<u>Onalaska</u> 15 <u>Centralia</u> 15	From confluence of Lucas Creek and unnamed creek (Sec.5, T13N, R1E) downstream to mouth at Newaukum River North Fork (Sec.2, T13N, R1W).	(59) Rainy Creek	<u>Mineral</u> 15 <u>Spirit Lake</u> 15	From confluence of Rainy Creek and unnamed creek (Sec.8, T12N, R6E) downstream to mouth at Davisson Lake (Sec.27, T12N, R5E).
(50) Mill Creek	<u>Onalaska</u> 15	Beginning at the (NW1/4 of SW1/4 Sec.28, T13N, R2E) downstream to mouth at Cowlitz River (Sec.23, T12N, R1E).	(60) Rock Creek	<u>Pe Ell</u> 15	Beginning at a point approximately at the 1/4 corner (Sec.1, T12N, R6W) on Pacific Co. and Lewis Co. line downstream to mouth at Chehalis River (Sec.33, T13N, R5W).
(51) Mineral Creek	<u>Mineral</u> 15	From confluence of Mineral Creek and unnamed creek (Sec.9, T13N, R6E) downstream to mouth at Nisqually River (Sec.26, T15N, R5E).	(61) Roger Creek	<u>Skamokawa</u> 15 <u>Pe Ell</u> 15	From confluence of Little Roger Creek, Big Roger Creek and Roger Creek (Sec.27, T12N, R5W) downstream to mouth at Chehalis River (Sec.22, T12N, R5W).
(52) Mineral Creek (N. Fk.)	<u>Mineral</u> 15	Beginning at the (NW1/4 of SW1/4 Sec.35, T14N, R6E) downstream to mouth at Mineral Creek (Sec.10, T14N, R5E).	(62) Roundtop Creek	<u>Mineral</u> 15	From confluence of Roundtop Creek and unnamed creek (Sec.20, T14N, R5E) downstream to mouth at Mineral Creek (Sec.3, same township).
(53) Newaukum River (M. Fk.)	<u>Centralia</u> 15	From confluence of Newaukum River Middle Fork and unnamed creek (NE of other unnamed creek) (Sec.22, T13N, R1W) downstream to mouth at North Fork Newaukum River (Sec.20 of same township).	(63) Salmon Creek	<u>Toutle</u> 15 Castle Rock 15	From confluence of Salmon Creek and Rapid Creek (Sec.17, T11N, R2E) downstream to Lewis Co. and Cowlitz Co. line, excluding Salmon Creek on Cowlitz Co. side (Sec.34, T11N, R1W) downstream to mouth at Cowlitz River (Sec.19, T11N, R1W).
(54) Newaukum River (N. Fk.)	<u>Onalaska</u> 15	From confluence of Newaukum River North Fork and unnamed creek (Sec.13, T14N, R1E) downstream to mouth at Newaukum River (Sec.18, T13N, R1W).	(64) Salzer Creek	<u>Centralia</u> 15	From the confluence of Salzer Creek and unnamed creek (Sec.23, T14N, R2W) downstream to Chehalis River (Sec.18, T14N, R2W).
(55) Newaukum River (S. Fk.)	<u>Onalaska</u> 15	Beginning at the (NE1/4 of SE1/4 Sec.27, T14N, R2E) downstream to mouth at Newaukum River (Sec.19, T13N, R1W) downstream through Newaukum River to mouth at Chehalis River (Sec.31, T14N, R2W).	(65) Shelton Creek	<u>Morton</u> 15 Elk Rock 15	From confluence of Shelton Creek and unnamed creek (Sec.27, T12N, R4E) downstream to mouth at Davisson Lake (Sec.27, same township).

Stream Name	Quadrangle Name and Size	Legal Description	Stream Name	Quadrangle Name and Size	Legal Description
(66) Siler Creek	<u>Mt. Rainier</u> 30 Randle 15	From confluence of Siler Creek and unnamed creek (Sec.27, T12N, R7E) downstream to mouth at Cowlitz River (Sec.20, same township) exclude federal land.	(76) Thrash Creek	<u>Skamokawa</u> 15	Beginning at (SE1/4 of NE1/4 Sec.31, T12N, R5W) downstream to mouth at Chehalis River (Sec.33, same township).
(67) Silver Creek	<u>Randle</u> 15	From confluence of Silver Creek and Lynx Creek (Sec.22, T13N, R7E) downstream to Cowlitz River (Sec.15, T12N, R7E). Exclude federal lands.	(77) Tilton River	<u>Mineral</u> 15 Onalaska 15 Morton 15	Beginning at the closest point on Tilton River to center of (Sec.5, T13N, R5E) downstream to mouth at Mayfield Lake (Sec.26, T13N, R2E).
(68) Skate Creek	<u>Mt. Rainier</u> 30 Packwood 15	From the Gifford Pinchot National Forest boundary at SE corner (Sec.8, T13N, R9E) downstream to mouth at Cowlitz River (Sec.21, same township).	(78) Tilton River (E. Fk.)	<u>Mineral</u> 15	From confluence of Tilton River East Fork and unnamed creek (NW1/4 Sec.19, T13N, R6E) downstream to mouth at Tilton River South Fork, on downstream to Tilton River (Sec.25, T13N, R4E).
(69) Skookumchuck River	<u>Morton</u> 15 Onalaska 15 Lake Lawrence 7 1/2 Tenino SW 7 1/2 Centralia 15	From confluence of Bigwater Creek and Skookumchuck River (Sec.7, T14N, R3E) downstream excluding federal lands to Lewis Co. and Thurston Co. thence downstream (Sec.28, T15N, R2W) to mouth (Sec.7, T14N, R2W).	(79) Tilton River (N. Fk.)	<u>Morton</u> 15	From north section line Forest boundary (Sec.3, T13N, R3E) downstream to mouth at Tilton River (Sec.30, T13N, R4E). Exclude federal lands.
(70) Smith Creek	<u>Mt. Rainier</u> 30 Packwood 15	From the Gifford Pinchot National Forest boundary (Sec.5, T12N, R9E) downstream to Cowlitz River (Sec.32, T13N, R9E).	(80) Tilton River (S. Fk.)	<u>Mineral</u> 15	Beginning in (NE1/4 of NE1/4 Sec.32, T13N, R5E) downstream to confluence point with East Fork Tilton River, on downstream to mouth at Tilton River (Sec.25, T13N, R4E).
(71) South Hanaford Creek	<u>Centralia</u> 15 Tenino S.W. 7 1/2	Beginning at the (NE1/4 of NE1/4 Sec.12, T14N, R2W) downstream to mouth at Hanaford Creek (Sec.26, T15N, R2W).	(81) Tilton River (W. Fk.)	<u>Mineral</u> 15	From confluence of Trout Creek and Tilton River (W. Fk.) (Sec.2, T13N, R4E) downstream to mouth at Tilton River (Sec.19, T13N, R5E).
(72) Stearns Creek	<u>Centralia</u> 15 Adna 15	From confluence of Stearns Creek and unnamed creek (Sec.32, T13N, R2W) downstream to mouth at Chehalis River (Sec.2, T13N, R3W).	(82) Unnamed Trib. to Newaukum River (S. Fk.)	<u>Onalaska</u> 15	From confluence of unnamed creek and unnamed creek (Sec.27, T14N, R2E) downstream to mouth at Newaukum River South Fork (same section).
(73) Stillman Creek	<u>Ryderwood</u> 15 Adna 15	From confluence of Stillman Creek and unnamed creek (Sec.14, T11N, R4W) downstream to mouth at Chehalis River South Fork (Sec.2, T12N, R4W).	(83) Unnamed Trib. to Stillman Creek	<u>Ryderwood</u> 15	From confluence of unnamed creek and unnamed creek (Sec.9, T11N, R4W) downstream to mouth at Stillman Creek (Sec.34, T12N, R4W).
(74) Stillwater Creek (Cont.)	<u>Ryderwood</u> 15 Castle Rock 15	From Lewis Co. and Cowlitz Co. line south section line (Sec.34, T11N, R3W) downstream to mouth at Olequa Creek (Sec.32, T11N, R2W).	(84) Willame Creek	<u>Mt. Rainier</u> 30 Packwood 15	From Gifford Pinchot National Forest boundary (Sec.31, T13N, R9E) downstream to Cowlitz River (Sec.6, T12N, R9E).
(75) Stowe Creek	<u>Pe Ell</u> 15	From confluence of Stowe Creek and Sand Creek (Sec.35, T13N, R5W) downstream to mouth at Chehalis River (Sec.34, same township).	(85) Winston Creek	<u>Elk Rock</u> 15 Onalaska 15 Toutle 15	From confluence of Winston Creek and Thurston Creek (Sec.11, T11N, R3E) downstream to mouth at Mayfield Lake (Sec.20, T12N, R2E).
			(86) Winston Creek (S. Fk.)	<u>Elk Rock</u> 15	From confluence of Winston Creek South Fork and unnamed creek (Sec.9, T11N, R3E) downstream to mouth at Winston Creek (Sec.36, T12N, R2E).

WAC 173-18-270 Mason County. Streams

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(87) Little Nisqually River	<u>Morton 15</u>	From confluence of Hiawatha Creek and Little Nisqually River (Sec.9, T14N, R4E) downstream to Lewis-Thurston County line (Sec.28, T15N, R4E). Exclude federal lands.

[Order DE 76-14, § 173-18-250, filed 5/3/76; Order 73-14, § 173-18-250, filed 8/27/73; Order DE 72-13, § 173-18-250, filed 6/30/72.]

WAC 173-18-260 Lincoln County. Streams

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(1) Columbia River (cont.)*		All of Columbia River within Lincoln County (Franklin D. Roosevelt Lake) is under federal jurisdiction. The stream flow is over 200 cfs MAF.
(2) Crab Creek*	<u>Sprague Lake NE 7 1/2</u> <u>Sprague Lake 7 1/2</u> <u>Sprague Lake SW 7 1/2</u> <u>Harrington SE 7 1/2</u> <u>Lamona WA 7 1/2</u> U.S.G.S. Blue Line Advance Sylvan Lake 7 1/2 Odessa 7 1/2 Irby 7 1/2 Marlin SW 7 1/2 Marlin 7 1/2	From the confluence of Rock Creek and Crab Creek (Sec.18, T22N, R38E) downstream through Sylvan Lake to Grant County line (Sec.18, T22N, R31E). This stream has over 300 sq. miles of drainage area down to mouth (right bank only) at unnamed tributary (Sec.34, T22N, R37E).
(3) Negro Creek	<u>Sprague 15</u>	From the confluence of Negro Creek and unnamed creek in the town of Sprague (Sec.23, T21N, R38E) downstream to mouth at Sprague Lake (Sec.21, same township).
(4) Spokane River*	<u>Wellpinit* 15</u> <u>Turtle Lake 15</u> <u>Lincoln 15</u>	From the Spokane County line (Sec.24, T27N, R39E) starting on left bank of Long Lake (SE corner of same section) thence downstream along left bank of Long Lake to Spokane River, thence downstream on left bank to (Sec.27, T27N, R38E). This stream has both over 200 cfs MAF flow and over 300 sq. miles of drainage area at Spokane County line.
(5) Wilson Creek*	<u>Almira* 7 1/2</u> <u>Almira SW 7 1/2</u>	From mouth of Corbett Draw (Sec.16, T25N, R31E) downstream to Grant County line (Sec.6, T24N, R31E). This stream has over 300 sq. miles of drainage area ending at mouth of Corbett Draw.

[Order 73-14, § 173-18-260, filed 8/27/73; Order DE 72-13, § 173-18-260, filed 6/30/72.]

(1999 Ed.)

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(1) Baker Creek	<u>Mt. Tebo 15</u>	Beginning at Olympic National Forest boundary, at center of (Sec.10, T21N, R6W) downstream to mouth at Satsop River Middle Fork (Sec.16, same township). Exclude federal land.
(2) Bingham Creek	<u>Mt. Tebo 15</u> <u>Elma 15</u>	Beginning at (SW1/4 of NE1/4 Sec.31, T21N, R5W) downstream to mouth at East Fork Satsop River (Sec.11, T19N, R6W).
(3) Canyon River	<u>Mt. Tebo 15</u> <u>Grisdale 15</u>	Beginning at Olympic National Forest boundary at north section line (Sec.18, T21N, R6W) downstream to Mason County, Grays Harbor County line (same section).
(4) Cloquallum Creek	<u>Elma 15</u>	From a point near intersection of a road and Cloquallum Creek (Sec.14, T19N, R5W) downstream to Grays Harbor County line (Sec.36, T19N, R6W).
(5) Coulter Creek	<u>Belfair 7 1/2</u>	From the confluence of Coulter Creek and unnamed creek (Sec.9, T22N, R1W) downstream to mouth of North Bay (same section).
(6) Cranberry Creek	<u>Potlatch 15</u>	Beginning at NE point of Cranberry Lake (Sec.28, T21N, R3W) downstream to mouth at Oakland Bay (Sec.35 of same township).
(7) Decker Creek	<u>Elma 15</u>	Beginning at (NW1/4 of SE1/4 Sec.18, T20N, R6W) downstream to (Sec.19, T20N, R6W) and Grays Harbor County, Mason County line returning to Mason County line at (Sec.30, T20N, R6W) on downstream to mouth at Satsop River East Fork (Sec.31, T19N, R6W).
(8) Deer Creek	<u>Mason Lake 7 1/2</u> <u>Potlatch 15</u>	From confluence of Deer Creek and unnamed creek (SW1/4 of SE1/4 Sec.19, T21N, R2W) downstream to mouth on Oakland Bay (Sec.36, T21N, R3W).
(9) Dewatto River	<u>Holly 7 1/2</u> <u>Lake Wooten 7 1/2</u> <u>Potlatch 15</u>	From a point approximately 1000' north of section line in (SE1/4 of Sec.6, T23N, R2W) downstream to mouth at Dewatto Bay on Hood Canal (Sec.28, T23N, R3W).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(10) Dry Bed Creek	<u>Mt. Tebo</u> 15 Elma 15	Beginning where Dry Bed Creek crosses the Beeville Loop Road at (Sec.27, T21N, R6W) downstream to mouth at Decker Creek (Sec.5, T19N, R6W).	(19) Lilliwaup Creek	<u>Potlatch</u> 15	Beginning in the Lilliwaup Swamp (Sec.11, T23N, R4W) downstream to mouth at Lilliwaup Bay in Hood Canal at (Sec.30, T23N, R3W).
(11) Dry Creek	<u>Mt. Tebo</u> 15	Beginning where Dry Creek crosses unimproved road at center of (Sec.35, T21N, R6W) downstream to mouth at Dry Bed Creek (Sec.3, T20N, R6W).	(20) McTaggart Creek	<u>Potlatch</u> 15	From confluence of McTaggart Creek and Frigid Creek at (Sec.30, T22N, R4W) downstream to Skokomish River North Fork (same section).
(12) Dry Run Creek	<u>Elma</u> 15	Beginning at (NE1/4 of NW1/4) at South Bend Creek (Sec.27, T19N, R6W) downstream to mouth at Satsop River East Fork (Sec.28 of same township).	(21) Mission Creek	<u>Lake Wotten</u> 7 1/2 Belfair 7 1/2	From confluence of Mission Creek and unnamed creek (Sec.24, T23N, R2W) downstream to mouth at Hood Canal (Sec.1, T22N, R2W).
(13) Golsborough Creek (S. Fork)	<u>Elma</u> 15 Shelton 15	From confluence of Golsborough Creek South Fork and unnamed creek (Sec.25, T20N, R5W) downstream to mouth at Oakland Bay (Sec.20, T20N, R3W).	(22) Rendslan Creek	<u>Potlatch</u> 15	Beginning where Rendslan Creek crosses the north section line of (NW1/4 of SE1/4 Sec.17, T22N, R3W) downstream to mouth at Hood Canal (Sec.19 same township).
(14) Gosnell Creek	<u>Shelton</u> 15 Olympia 15 Squaxin Island 7 1/2	From confluence of Gosnell Creek and unnamed creek (Sec.10, T19N, R4W) downstream through Isabella Lake to mouth at Hammersley Inlet of Puget Sound (Sec.25, T20N, R3W).	(23) Satsop River (E. Fork)	<u>Elma</u> 15	From the confluence of Satsop River East Fork, Phillips Creek and Stillwater Creek (Sec.22, T20N, R5W) downstream to Mason Co., Grays Harbor Co. line (Sec.31, T19N, R6W).
(15) Hamma Hamma River	<u>The Brothers</u> 15	Beginning where the Hamma Hamma River crosses the Olympic National Forest boundary (Sec.7, T24N, R3W) downstream to mouth at Hood Canal of Puget Sound (Sec.27 of same township).	(24) Satsop River (M. Fork)	<u>Mt. Tebo</u> 15 Elma 15	From the Olympic National Forest boundary (Sec.16, T21N, R6W) downstream to Mason Co., Grays Harbor Co. line (Sec.6, T20N, R6W) reentering Mason Co. at (Sec.31, T19N, R6W) to mouth at Satsop River East Fork.
(16) Jefferson Creek	<u>The Brothers</u> 15	Beginning where Jefferson Creek crosses the Olympic National Forest boundary at NW corner (Sec.18, T24N, R3W) downstream to mouth at Hamma Hamma River (Sec.8 of same township) (excluding federal Lands).	(25) Shumocher Creek	<u>Potlatch</u> 15 Mason Lake 7 1/2	From confluence of Shumocher Creek and unnamed creek (Sec.13, T21N, R3W) downstream to mouth at Mason Lake (Sec.7, T21N, R2W).
(17) Johns Creek	<u>Potlatch</u> 15 Shelton 15	Beginning where Johns Creek crosses light-duty road (Sec.30, T21N, R3W) downstream to mouth at Oakland Bay (Sec.3, T20N, R3W).	(26) Skokomish River*	<u>Potlatch*</u> 15	From confluence of North Fork of Skokomish River and South Fork Skokomish River (Sec.18, T21N, R4W) downstream to mouth in Great Bend on Hood Canal (Sec.6, T21N, R3W) excluding portion on left bank within Skokomish Indian Reservation. The 1,000 cfs MAF flow begins at confluence of N. Fork and S. Fork.
(18) Kennedy Creek (Cont.)	<u>Shelton</u> 15	From the Thurston County line (Sec.31, T19N, R3W) downstream to mouth at Oyster Bay (Sec.32, T19N, R3W).			

WAC 173-18-280 Okanogan County. Streams

Stream Name	Quadrangle Name and Size	Legal Description
(27) Skokomish River (N. Fork)	<u>Potlatch</u> 15	From confluence of Skokomish R. N. Fork and Frigid Cr. (Sec.30, T22N, R4W) downstream to confluence with South Fork Skokomish R. (Sec.18, T21N, R4W).
(28) Skokomish River (S. Fork)	<u>Mt. Tebo</u> 15 <u>Potlatch</u> 15	From the Olympic National Forest boundary (Sec.15, T22N, R5W) downstream to confluence with North Fork Skokomish River (Sec.18, T21N, R4W). Exclude federal lands.
(29) Skookum Creek	<u>Shelton</u> 15	From confluence of Skookum Creek and unnamed creek (Sec.27, T19N, R4W) downstream to mouth at Skookum Inlet in Puget Sound (Sec.17, T19N, R3W).
(30) Tahuya River (Cont.)	<u>Wildcat Lake</u> 7 1/2 <u>Holly</u> 7 1/2 <u>Lake Wooten</u> 7 1/2 <u>Potlatch</u> 15	From the Kitsap Co. line (Sec.36, T24N, R2W) downstream to mouth at Hood Canal near Tahuya (Sec.27, T22N, R3W).
(31) Union River (Cont.)	<u>Belfair</u> 7 1/2	From the Kitsap Co. line (Sec.10, T23N, R1W) downstream to mouth of Lynch Cove near Belfair (Sec.31, T23N, R1W).
(32) Unnamed Creek	<u>Mt. Tebo</u> 15 <u>Elma</u> 15	Beginning where logging railroad crosses unnamed creek (Sec.4, T20N, R5W) downstream to mouth at Nahwatzel Lake (Sec.5, same township).
(33) Vance Creek	<u>Mt. Tebo</u> 15	From the Olympic National Forest boundary NW corner of (Sec.4, T21N, R5W) downstream to mouth on Skokomish River (Sec.18, T21N, R4W).
(34) Goldsborough Creek (N. Fork)	<u>Shelton</u> 15	From confluence of Winter Creek and Goldsborough Cr. N. Fk. (Sec.9, T20N, R4W) downstream to mouth at Goldsborough Cr. S. Fk. (Sec.19 same township).
(35) Sherwood Creek	<u>Mason Lake</u> 7 1/2 <u>Vaughn</u> 7 1/2 <u>Belfair</u> 7 1/2	From its start in Mason Lake (Sec.34, T22N, R2W) downstream to mouth at North Bay on Case Inlet (Sec.20, T22N, R1W).

(13) Mashel River	<u>Kapowsin</u> 15 Eatonville 7 1/2	From the confluence of Mashel River and unnamed creek (Sec.18, T16N, R6E) downstream to mouth at Nisqually River (Sec.29, T16N, R4E).	(21) Ohop Creek	<u>Tanwax Lake</u> 7 1/2 Eatonville 7 1/2	From the confluence of Twenty Five Mile Creek and Ohop Creek (Sec.26, T17N, R4E) downstream through Ohop Lake to Kapowsin Creek, thence downstream to mouth at Nisqually River (Sec.25, T16N, R3E).
(14) Milky Creek	<u>Enumclaw</u> 15	From an approximate point near the NW corner of the (NE1/4 of SE1/4 of NW1/4 of Sec.34, T19N, R8E) downstream to the mouth at the Clearwater River (same section).	*NOTE: (Exclude area from La Grande Dam downstream to power house due to use of aqueduct.)		
(15) Minter Creek	<u>Burley</u> 7 1/2 Fox Island 7 1/2	From the confluence of Minter Creek and Huge Creek (Sec.20, T22N, R1E) downstream to mouth at Carr Inlet (Sec.29, same township).	(22) Puyallup River*	<u>Mt. Rainier</u> 30 <u>Kapowsin</u> 15 Orting 7 1/2 Sumner* 7 1/2 Puyallup 7 1/2 Tacoma South 7 1/2 Tacoma North 7 1/2	From the confluence of North and South Forks Puyallup River (Sec.20, T16N, R7E) downstream (excluding all federal lands) to Commencement Bay at Tacoma (Sec.33, T21N, R3E) The 1,000 cfs MAF point begins at mouth of Carbon River (Sec.13, T19N, R4E).
(16) Mowick River	<u>Golden Lakes</u> 7 1/2 Kapowsin 15	From the Mount Rainier National Park boundary (Sec.33, T17N, R7E) downstream to mouth at Puyallup River (Sec.3, T16N, R6E).	(23) Rocky Creek	<u>Vaughn</u> 7 1/2	From the confluence of Rocky Creek and the unnamed creek (Sec.27, T22N, R1W) downstream to mouth at Rocky Bay (same section).
(17) Muck Creek	<u>Fort Lewis</u> 7 1/2	From Fort Lewis Military Reservation boundary (Sec.27, T18N, R2E) downstream through Muck Lake to same boundary (Sec.34, same township).	(24) Rushingwater Creek	<u>Golden Lakes</u> 7 1/2 Kapowsin 15	From the Snoqualmie National Forest boundary (Sec.1, T16N, R6E) downstream to mouth at Mowich River (Sec.2, same township).
(18) Niesson Creek	<u>Kapowsin</u> 15	From an approximate point near the NW corner of the (NE1/4 of NE1/4 of Sec.4, T16N, R6E) downstream to the Puyallup River (Sec.33, T17N, R6E).	(25) Sequatchew Creek	<u>Anderson Island</u> 15 Fort Lewis 7 1/2 Nisqually 7 1/2	From the Fort Lewis Military Reservation (Sec.25, T19N, R1E) downstream to mouth at Nisqually Reach (Sec.22, same township).
(19) Nisqually River*	<u>Randle</u> 15 Mount Wow 7 1/2 Mineral 15 Kapowsin* 15 Eatonville 7 1/2 Bald Hill 7 1/2 Harts Lake 7 1/2 McKenna 7 1/2 Nisqually 7 1/2	From Snoqualmie National Forest boundary (Sec.33, T15N, R7E) downstream along the north and east shores only, excluding all federal lands to the Fort Lewis Military Reservation (Sec.16, T17N, R2E), from Military Reservation (Sec.5, T18N, R1E) to mouth on Nisqually Reach (Sec.28, T19N, R1E). *Note: The 1,000 cfs MAF point starts at mouth of Mineral Creek (Sec.26, T15N, R5E).	(26) South Creek	<u>Ohop Valley</u> 15 Harts Lake 7 1/2 Spanaway 7 1/2 Tanwax Lake 7 1/2	From the confluence of South Creek and unnamed creek (Sec.8, T17N, R4E) downstream to Fort Lewis Military Reservation boundary (Sec.34, T18N, R3E).
			(27) South Prairie Creek	<u>Enumclaw</u> 15 Wilkeson 7 1/2 Buckley 7 1/2 Sumner 7 1/2 Orting 7 1/2	From the Snoqualmie National Forest boundary (Sec.32, T19N, R7E) downstream to mouth at Carbon River (Sec.27, T19N, R5E).
			(28) Spanaway Creek	<u>Tacoma South</u> 15 Tacoma South 7 1/2 Spanaway 7 1/2	From the confluence of waters from Spanaway Lake (Sec.20, T19N, R3E) downstream to mouth at Clover Creek (Sec.8, same township).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(29) Tanwax Creek	<u>Tanwax Lake</u> 7 1/2 Harts Lake 7 1/2 Bald Hill 7 1/2	From the confluence of Tanwax Creek and unnamed creek (Sec.31, T17N, R4E) downstream to mouth at the Nisqually River (Sec.20, T16N, R3E).
(30) Twenty Five Mile Creek	<u>Kapowsin</u> 15 Tanwax Lake 7 1/2	From an approximate point near the west line of the (NE1/4 of NW1/4 of Sec.25, T17N, R4E) downstream to mouth at Ohop Creek (Sec.26, same township).
(31) Unnamed Tributary to Mashel River	<u>Kapowsin</u> 15	From an approximate point near the SW corner of (NE1/4 of Sec.29, T16N, R6E) downstream to mouth at Mashel River (Sec.19, same township).
(32) Voight Creek	<u>Kapowsin</u> 15 Wilkeson 7 1/2 Orting 7 1/2	From the intersection of the west line of (Sec.3, T17N, R6E) and Voight Creek, downstream to mouth at Carbon River (Sec.33, T19N, R5E).
(33) White River*	<u>Greenwater</u> * 15 Enumclaw 15 Enumclaw 7 1/2 Auburn 7 1/2 Sumner 7 1/2 Puyallup 7 1/2 Buckley 7 1/2	From the Snoqualmie National Forest boundary (Sec.36, T19N, R9E) downstream to the King-Pierce County line along County line on southerly shore only to the Muckleshoot Indian Reservation (Sec.2, T20N, R5E) returning from the reservation (Sec.1, T20N, R4E) downstream to mouth at Puyallup River (Sec.26, same township). The 1,000 cfs MAF point begins at mouth of Greenwater River (Sec.4, T19N, R9E).
(34) White River (West Fork)	<u>Greenwater</u> 15	From the Snoqualmie National Forest boundary (Sec.33, T19N, R9E) downstream to mouth at the White River (Sec.23, same township).
(35) Wilkeson Creek	<u>Wilkeson</u> 7 1/2 Buckley 7 1/2	From confluence of Wilkeson Creek and Gale Creek (Sec.34, T19N, R6E) downstream to mouth at South Prairie Creek (Sec.17, same township).
(36) North Puyallup River	<u>Mount Wow</u> 7 1/2	From Mount Rainer National Park boundary (Sec.21, T16N, R7E) downstream to mouth at Puyallup River (Sec.20, T16N, R7E).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(37) South Puyallup River	<u>Mount Wow</u> 7 1/2	From Mount Rainer National Park boundary (Sec.33, T16N, R7E) downstream to mouth at Puyallup River (Sec.20, T16N, R7E).

[Order DE 76-14, § 173-18-310, filed 5/3/76; Order 73-14, § 173-18-310, filed 8/27/73; Order DE 72-13, § 173-18-310, filed 6/30/72.]

WAC 173-18-320 San Juan County. Streams. San Juan County has no 20 cfs streams but has shorelines. No rivers of state-wide significance.

[Order 73-14, § 173-18-320, filed 8/27/73; Order DE 72-13, § 173-18-320, filed 6/30/72.]

WAC 173-18-330 Skagit County. Streams

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(1) Alder Creek	<u>Hamilton</u> 15	From confluence of Alder Creek and unnamed creek (Sec.6, T35N, R7E) downstream to mouth at Skagit River (Sec.18, same township).
(2) Baker River*	<u>Lake Shannon</u> * 15	Beginning at Mt. Baker National Forest boundary in Lake Shannon (Sec.1, T36N, R8E) down through Lake Shannon and Baker Dam to mouth at Skagit River (Sec.11, T35N, R8E). The 1,000 cfs MAF begins at Mt. Baker National Forest boundary.
(3) Bear Creek	<u>Clear Lake</u> 15	From confluence of Bear Creek and unnamed creek (Sec.18, T33N, R6E) downstream to mouth at Pilchuck Creek (Sec.17, same township).
(4) Bear Creek	<u>Hamilton</u> 15	From confluence of Bear Creek and unnamed creek (Sec.10, T36N, R8E) downstream to mouth at Lake Shannon (Sec.14, same township).
(5) Big Creek	<u>Prairie Mt.</u> 7 1/2	Beginning at Mt. Baker National Forest boundary (Sec.18, T33N, R11E) downstream to mouth at Suiattle River (Sec.13, same township).
(6) Boulder Creek	<u>Snowking Mt.</u> 7 1/2 Marblemount 15	From an approximate point (NW1/4 of NW1/4 of SW1/4 Sec.26, T35N, R11E) downstream to mouth at Cascade River (Sec.15, same township).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(7) Carpenter Creek	<u>Mt. Vernon</u> 15 Conway 7 1/2	From confluence of Carpenter Creek and unnamed creek (Sec.17, T33N, R4E) downstream to mouth at Tom Moore Slough (Sec.30, same township).	(17) Grandy Creek	<u>Hamilton</u> 15	From outlet of Grandy Lake (Sec.31, T36N, R8E) downstream to mouth at Skagit River (Sec.15, T35N, R7E).
(8) Cascade River*	<u>Marblemount</u> * 15	From Mt. Baker National Forest boundary (Sec.12, T35N, R11E) downstream to mouth at Skagit River (Sec.18, same township). The 1,000 cfs MAF point begins at mouth of Boulder Creek (Sec.15, T35N, R11E).	(18) Hansen Creek	<u>Wickersham</u> 15	From an approximate point (SW1/4 of SW1/4 Sec.17, T35N, R5E) downstream to mouth at Skagit River (Sec.20, same township).
(9) Cavanaugh Creek	<u>Wickersham</u> 15	From an approximate point (NW1/4 of NE1/4 of SE1/4 Sec.5, T36N, R6E) downstream to mouth at Nooksack River (Sec.2, T36N, R5E).	(19) Howard Creek (Cont.)	<u>Hamilton</u> 15	From Whatcom County line (Sec.2, T36N, R6E) downstream to mouth at Nooksack River South Fork (Sec.13, same township).
(10) Corkindale Creek	<u>Marblemount</u> 15	From confluence of Corkindale Creek and unnamed creek near west section line (Sec.14, T35N, R10E) downstream to mouth at Skagit River (Sec.22, same township).	(20) Illabot Creek	<u>Illabot Peaks</u> 7 1/2 Rockport 7 1/2	From Mt. Baker National Forest boundary (Sec.1, T34N, R10E) downstream to mouth at Skagit River (Sec.29, T35N, R10E).
(11) Cumberland Creek	<u>Oso</u> 15 Hamilton 15	From confluence of Cumberland Creek and unnamed creek (Sec.25, T35N, R6E) downstream to mouth at Skagit River (Sec.14, same township).	(21) Irene Creek	<u>Marblemount</u> 15	From Mt. Baker National Forest boundary (Sec.13, T35N, R11E) downstream to mouth at Cascade River (Sec.12, same township).
(12) Day Creek	<u>Oso</u> 15 Clear Lake 7 1/2	Beginning at outlet of Day Lake (Sec.25, T34N, R6E) downstream to mouth at Skagit River (Sec.20, T35N, R6E).	(22) Jackman Creek	<u>Lake Shannon</u> 15	From Mt. Baker National Forest boundary (Sec.3, T35N, R9E) downstream to mouth at Skagit River (Sec.13, T35N, R8E).
(13) Deer Creek	<u>Oso</u> 15	From the Mt. Baker National Forest boundary (Sec.1, T33N, R7E) downstream to Snohomish County line (Sec.32, same township).	(23) Joe Leary Creek	<u>Samish Lake</u> 15 Bow 7 1/2	From confluence of Joe Leary Creek and unnamed Creek (Sec.20, T35N, R3E) downstream to mouth at Padilla Bay (Sec.18, same township).
(14) Finney Creek	<u>Finney Peak</u> 7 1/2 Lake Shannon 15 Hamilton 15	From the Mt. Baker National Forest boundary (Sec.1, T34N, R8E) downstream to mouth at Skagit River (Sec.13, T35N, R7E).	(24) Jones Creek	<u>Wickersham</u> 15	From an approximate point (SE1/4 of SE1/4 of NE1/4 Sec.32, T36N, R6E) downstream to mouth at Skagit River (Sec.17, T35N, R6E).
(15) Friday Creek (Cont.)	<u>Samish Lake</u> 15 Alger 7 1/2 Lake Whatcom 7 1/2	From Whatcom County line (Sec.1, T36N, R3E) downstream to mouth at Samish River (Sec.5, T35N, R4E).	(25) Jordan Creek	<u>Illabot Peaks</u> 7 1/2	Beginning at Mt. Baker National Forest boundary (Sec.33, T35N, R11E) downstream to mouth at Cascade River (Sec.18, same township).
(16) Gilligan Creek	<u>Clear Lake</u> 15	From confluence of Gilligan Creek and unnamed creek (Sec.11, T34N, R5E) downstream to mouth at Skagit River (Sec.35, T35N, R5E).	(26) Lake Creek	<u>Clear Lake</u> 15 Mt. Vernon 7 1/2	From confluence of Lake Creek and unnamed creek (Sec.17, T33N, R5E) downstream through Big Lake and Nookachamps Creek to the mouth at Nookachamps Creek in Skagit River (Sec.4, T34N, R4E).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(27) Lake Creek	<u>Clear Lake</u> 15	From outlet of Lake Cavanaugh (Sec.22, T33N, R6E) downstream to mouth at Pilchuck Creek (Sec.17, same township).	(37) Rocky Creek	<u>Marblemount</u> 15	Beginning at Mt. Baker National Forest boundary (Sec.22, T35N, R10E) downstream to mouth at Skagit River (same section).
(28) Little Deer Creek	<u>Oso</u> 15	From Mt. Baker National Forest boundary (Sec.35, T34N, R7E) downstream to mouth at Deer Creek (same section).	(38) Samish River (Cont.)	<u>Wickersham</u> 15	From Whatcom County line (Sec.6, T36N, R5E) downstream to mouth at Samish Bay (Sec.5, T35N, R3E).
(29) Mill Creek	<u>Hamilton</u> 15	From an approximate point (SW1/4 of SW1/4 of SW1/4 Sec.23, T35N, R7E) downstream to mouth at Skagit River (Sec.22, same township).	(39) Sauk River (Cont.)*	<u>Darrington*</u> 7 1/2 Rockport 7 1/2	From Snohomish County line (Sec.32, T33N, R10E) downstream to mouth at Skagit River (Sec.35, T35N, R9E). The flow exceeds 1,000 cfs MAF at Snohomish County line.
(30) Nookachamps Creek (E.Fk.)	<u>Clear Lake</u> 15 Mt. Vernon 7 1/2	From confluence of Nookachamps Creek East Fork and unnamed creek (Sec.28, T34N, R5E) downstream to mouth at Nookachamps Creek (Sec.10, T34N, R4E).	(40) Silver Creek	<u>Samish Lake</u> 15 Alger 7 1/2	Beginning where heavy duty highway crosses Silver Creek (Sec.7, T36N, R4E) downstream to mouth at Friday Creek (Sec.18, same township).
(31) Nooksack River (S. Fk.)	<u>Hamilton</u> 15 <u>Wickersham</u> 15	Beginning at Mt. Baker National Forest boundary (Sec.10, T36N, R7E) downstream to Skagit County line (Sec.2, T36N, R5E).	(41) Skagit River*	<u>Marblemount*</u> 15 Lake Shannon 15 Hamilton 15 Wickersham 15 Clear Lake 15 Illabot Peaks 7 1/2 Rockport 7 1/2 Finney Peak 7 1/2 Mount Vernon 7 1/2 Utsalady 7 1/2 Conway 7 1/2	Beginning at Mt. Baker National Forest boundary (Sec.1, T36N, R11E) downstream splitting into the North Fork and the South Fork, on down to mouth at Skagit Bay (Sec.7, T33N, R2E) and (Sec.36, T33N, R3E). The 1,000 cfs MAF point begins at Mt. Baker N.F. boundary.
(32) O'Toole Creek	<u>Oso</u> 15	Beginning at Mt. Baker National Forest boundary (Sec.28, T35N, R7E) downstream to mouth at Skagit River (Sec.21, same township).	(42) Stillaguamish River (N. Fork)	<u>Fortson</u> 7 1/2	From Mt. Baker National Forest boundary (Sec.27, T33N, R9E) downstream to Skagit County and Snohomish County line (Sec.34, same township).
(33) Pilchuck Creek	<u>Clear Lake</u> 15	From confluence of Pilchuck Creek and unnamed creek (Sec.10, T33N, R6E) downstream to Skagit County and Snohomish County line (Sec.33, T33N, R5E).	(43) Suiattle River* (Cont.)	<u>Prairie Mt.*</u> 7 1/2 Darrington 7 1/2	From Skagit-Snohomish County line (Sec.32, T33N, R11E) downstream to mouth at Sauk River (Sec.20, T33N, R10E). This river has over 1,000 cfs MAF at Skagit-Snohomish County line.
(34) Pressentin Creek	<u>Oso</u> 15 <u>Hamilton</u> 15	Beginning at Mt. Baker National Forest boundary (Sec.36, T35N, R7E) downstream to mouth at Skagit River (Sec.13, same township).	(44) Tenas Creek	<u>Prairie Mt.</u> 7 1/2	From Mt. Baker National Forest boundary (Sec.19, T33N, R11E) downstream to mouth at Suiattle River (Sec.30, same township).
(35) Rocky Creek	<u>Clear Lake</u> 15	From confluence of Rocky Creek and unnamed creek (Sec.17, T34N, R6E) downstream to mouth at Day Creek (Sec.10, same township).	(45) Thunder Creek	<u>Lake Shannon</u> 15	Beginning at Mt. Baker National Forest boundary (Sec.17, T36N, R9E) downstream to mouth at Lake Shannon (Sec.24, T36N, R8E).
(36) Rocky Creek	<u>Lake Shannon</u> 15	From Whatcom County line (Sec.1, T36N, R8E) downstream to Skagit County line (same section).			

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(46) Thunder Creek (S. Fk.)	<u>Lake Shannon</u> 15	From an approximate point (NW1/4 of SE1/4 of NE1/4 Sec.20, T36N, R9E) downstream to mouth at Thunder Creek (Sec.18, same township).	(2) Buck Creek (Cont.)	<u>Willard</u> 7 1/2	From Klickitat County line (Sec.2, T3N, R10E) downstream to mouth at White Salmon River (same section).
(47) Unnamed Tributary to Bear Creek	<u>Lake Shannon</u> 15	From confluence of unnamed tributary to Bear Creek and unnamed creek (Sec.10, T36N, R8E) downstream to mouth at Bear Creek (same section).	(3) Canyon Creek	<u>Bridal Veil</u> 15	Beginning in (NW1/4 of SE1/4 Sec.4, T1N, R5E) downstream to Washougal River (Sec.6, same township).
(48) Walker Creek	<u>Clear Lake</u> 15	From an approximate point (SW1/4 of SW1/4 of NE1/4 Sec.5, T33N, R5E) downstream to mouth at Nookachamps Creek East Fork (Sec.30, T34N, R5E).	(4) Columbia River (Cont.)*	<u>Hood River</u> 15 <u>Bonneville Dam</u> 15 <u>Bridal Veil</u> 15	From Klickitat County line (Sec.23, T3N, R10E) downstream along Washington shoreline to Clark County line (Sec.19, T1N, R5E) excluding any federal lands. The flow exceeds 200 cfs MAF at Klickitat County line.
(49) White Creek	<u>Rockport</u> 7 1/2	From confluence of White Creek and unnamed creek (Sec.20, T34N, R10E) downstream to mouth at Sauk River (Sec.31, same township).	(5) Deer Creek	<u>Bridal Veil</u> 15	From an approximate point (NE1/4 of Sec.17, T3N, R6E) downstream to mouth at Prospector Creek (Sec.18, same township).
(50) Youngs Slough	<u>Wickersham</u> 15	From confluence of Youngs Slough and unnamed tributary (Sec.14, T35N, R5E) downstream to mouth at Skagit River (Sec.27, same township).	(6) Dougan Creek	<u>Bridal Veil</u> 15	From the confluence of Dougan Creek and unnamed creek (Sec.2, T2N, R5E) downstream to Washougal River (Sec.11, same township).
(51) Bacon Creek	<u>Marblemount</u> 15	From west section line (Sec.8, T36N, R11E) downstream to mouth at Skagit River (Sec.20, T36N, R11E). Exclude federal lands.	(7) Duncan Creek	<u>Bridal Veil</u> 15	Beginning in (NW1/4 of SE1/4 of NE1/4 of Sec.17, T2N, R6E) downstream to Columbia River (Sec.34, same township).
(52) Diobsud Creek	<u>Marblemount</u> 15	From west section line (Sec.30, T36N, R11E) downstream to mouth at Skagit River (Sec.32, T36N, R11E). Exclude federal lands.	(8) Forest Creek	<u>Wind River</u> 15 <u>Bonneville Dam</u> 15	From the Gifford Pinchot-National Forest boundary (Sec.17, T3N, R7E) downstream to mouth at Rock Creek (same section).
[Order DE 76-14, § 173-18-330, filed 5/3/76; Order 73-14, § 173-18-330, filed 8/27/73; Order DE 72-13, § 173-18-330, filed 6/30/72.]			(9) Greenleaf Creek	<u>Bonneville Dam</u> 15	From an approximate point (NW1/4 of Sec.16, T2N, R7E) downstream through Greenleaf Slough to mouth at Hamilton Creek (Sec.20, same township).
WAC 173-18-340 Skamania County. Streams			(10) Hagen Creek (Cont.)	<u>Bridal Veil</u> 15	From the Clark County line (Sec.6, T2N, R5E) downstream to mouth at the West Fork Washougal River (same section).
(1) Bear Creek	<u>Wind River</u> 15	From the Gifford Pinchot National Forest boundary (Sec.5, T3N, R8E) downstream to mouth at Wind River (Sec.8, same township).	(11) Hamilton Creek	<u>Bridal Veil</u> 15	From the confluence of Hamilton Creek and unnamed creek (Sec.36, T3N, R6E) downstream to Columbia River (Sec.30, T2N, R7E).

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(12) Lava Creek	<u>Willard</u> 15	From Gifford Pinchot National Forest boundary (Sec.33, T4N, R9E) downstream to mouth on Little White Salmon River (Sec.1, T3N, R9E).	(22) Prospector Creek	<u>Bridal Veil</u> 15	From the confluence of Prospector Creek and Deer Creek (Sec.18, T3N, R6E) downstream to mouth at Washougal River (Sec.13, T3N, R5E).
(13) Lewis River*	<u>Burnt Peak</u> * 7 1/2 <u>Mt. St. Helens</u> 15	From Gifford Pinchot National Forest boundary (Sec.24, T7N, R6E) downstream through Swift Reservoir to Cowlitz County line (Sec.31, T7N, R5E) except those reaches within the National Forest. The 1,000 cfs MAF point is at Gifford Pinchot N.F. boundary.	(23) Range Creek	<u>Mt. St. Helens</u> 15	From south section line of (Sec.12, T6N, R5E) downstream to Swift Reservoir (Sec.6, T6N, R6E).
(14) Little White Salmon River*	<u>Willard</u> * 15 <u>Hood River</u> 15	Beginning in (NE1/4 of NE1/4 of NE1/4 Sec.2, T4N, R9E) downstream to Drano Lake (Sec.26, T3N, R9E), excluding all federal lands. The 200 cfs MAF begins at confluence with Lava Creek (Sec.1, T3N, R9E).	(24) Rock Creek	<u>Lookout Mt.</u> 15 <u>Wind River</u> 15 <u>Bonneville Dam</u> 15	From west section line (Sec.2, T3N, R6E) downstream to Columbia River (Sec.1, T2N, R7E).
(15) Little Wind River	<u>Wind River</u> 15 <u>Bonneville Dam</u> 15	From the Gifford Pinchot National Forest boundary (Sec.14, T3N, R8E) downstream to mouth at Wind River (Sec.22, same township).	(25) Siouxon Creek	<u>Lookout Mt.</u> 15	From the Gifford Pinchot National Forest boundary (Sec.31, T6N, R5E) downstream to Clark County line (same section) excluding federal lands.
(16) Lookout Creek	<u>Lookout Mt.</u> 15	From an approximate point (NW1/4 of Sec.6, T3N, R6E) downstream to mouth at Washougal River (Sec.1, T3N, R5E).	(26) Spring Creek	<u>Bonneville Dam</u> 15	From the Gifford Pinchot National Forest boundary (Sec.22, T3N, R7E) downstream to mouth at Rock Creek (Sec.27, same township).
(17) Muddy River	<u>Mt. St. Helens</u> 15	From the west section line (Sec.16, T8N, R6E) downstream to mouth at Lewis River (Sec.24, T7N, R6E). Exclude federal lands.	(27) Stebbins Creek	<u>Bridal Veil</u> 15	From the confluence of Stebbins Creek and unnamed creek (Sec.28, T3N, R6E) downstream to mouth at Washougal River (Sec.6, T2N, R6E).
(18) North Fork Toutle River	<u>Spirit Lake</u> 15	From Spirit Lake (Sec.15, T9N, R5E) downstream to Skamania County line (Sec.18, same township), excluding all federal lands.	(28) Swift Creek	<u>Mt. St. Helens</u> 15	From the Gifford Pinchot National Forest boundary (Sec.4, T7N, R5E) downstream to mouth at Swift Reservoir (Sec.16, same township) except those reaches within the National Forest.
(19) North Siouxon Creek	<u>Mt. St. Helens</u> 15 <u>Lookout Mt.</u> 15	From the Gifford Pinchot National Forest boundary (Sec.16, T6N, R5E) downstream to the Clark County line (Sec.30, same township).	(29) Trout Creek	<u>Wind River</u> 15	Beginning in (SE1/4 of SE1/4 of NE1/4 of Sec.27, T4N, R7E) downstream to mouth at Wind River (Sec.26, same township).
(20) Ole Creek	<u>Mt. St. Helens</u> 15	From the confluence of Ole Creek and an unnamed creek (Sec.31, T7N, R5E) downstream to Lewis River (same section).	(30) Unnamed Tributary to Swift Creek	<u>Mt. St. Helens</u> 15	From the Gifford Pinchot National Forest boundary (Sec.10, T7N, R5E) downstream to mouth at Swift Creek (Sec.9, same township).
(21) Panther Creek	<u>Wind River</u> 15	Beginning in (NW1/4 of SE1/4 of SE1/4 of Sec.25, T4N, R71/2E) downstream to mouth at Wind River (Sec.8, T3N, R8E).	(31) Washougal River	<u>Lookout Mt.</u> 15	From Gifford Pinchot National Forest boundary (Sec.1, T3N, R5E) downstream to mouth at Clark County line (Sec.31, T2N, R5E).

(46) Smith Creek	<u>Lake Whatcom</u> 7 1/2	From confluence of unnamed creek and Smith Creek (SE1/4 of SW1/4, Sec.33, T38N, R4E) downstream to mouth on Lake Whatcom (Sec.5, T37N, R4E).
(37) Terrell Creek	<u>Blaine</u> 7 1/2 Birch Point 7 1/2	Beginning at (NE1/4 of SE1/4 of NE1/4 Sec.2, T39N, R1W) downstream to mouth at Birch Bay (Sec.30, T40N, R1E).	[Order DE 76-14, § 173-18-410, filed 5/3/76; Order 73-14, § 173-18-410, filed 8/27/73; Order DE 72-13, § 173-18-410, filed 6/30/72.]		
WAC 173-18-420 Whitman County. Streams					
<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(38) Unnamed tributary flowing to Canada	<u>Mt. Baker</u> 15 Van Zandt 15	From an approximate point (between NW1/4 and NE1/2 Sec.2, T40N, R6E) to downstream to British Columbia-Washington state boundary (Sec.34, T41N, R6E).	(1) Hangman Creek (Latah Creek)	<u>Tekoa</u> 7 1/2 Oaksdale 7 1/2 Fairfield 15	From the Washington-Idaho boundary (Sec.29, T20N, R46E) downstream to Whitman-Spokane County line (Sec.4, T29N, R45E).
(39) Warm Creek	<u>Mt. Baker</u> 15	From Mt. Baker National Forest boundary (Sec.24, T38N, R6E) downstream to mouth at Nooksack River M. Fk. (Sec.25, same township).	(2) Palouse River (S. Fork)	<u>Pullman</u> 7 1/2 Albion 7 1/2 Colfax South 7 1/2 Colfax North 7 1/2	From the confluence of the South Fork of the Palouse River and unnamed creek (Sec.16, T14N, R45E) downstream to mouth at Palouse River (Sec.11, T16N, R43E) in Colfax.
(40) West Cornell Creek	<u>Mt. Baker</u> 15	From confluence of unnamed creek and West Cornell Creek (Sec.13, T39N, R6E) downstream to mouth at Nooksack River North Fork (Sec.1, same township).	(3) Palouse River*	<u>Palouse</u> 7 1/2 Elberton 7 1/2 Colfax 7 1/2 Diamond 7 1/2 Endicott 15 La Crosse 15 Benge 15 Starbuck 15	From the Washington-Idaho boundary (Sec.5, T16N, R46E) downstream to Adams County line (Sec.24, T16N, R38E) along Adams and Franklin County lines to mouth at Snake River (Sec.19, T13N, R37E). The flow is 200 cfs MAF at Washington-Idaho boundary.
(41) Whatcom Creek	<u>Bellingham N.</u> 7 1/2	From the outlet of Lake Whatcom (Sec.28, T38N, R3E) downstream to mouth at Bellingham Bay (Sec.30, same township).			
(42) Glacier Creek	<u>Mt. Baker</u> 15	From confluence of Glacier Creek and Davis Creek (Sec.8, T39N, R7E) downstream to mouth at North Fork Nooksack River (Sec.6, same township).			

<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>	<u>Stream Name</u>	<u>Quadrangle Name and Size</u>	<u>Legal Description</u>
(4) Pine Creek*	<u>Rosalia</u> 7 1/2 Spangle 15 Malden* 7 1/2 Pine City 7 1/2	From the confluence of Pine Creek and unnamed creek (NW1/4 of Sec.16, T20N, R44E) downstream to mouth at Rock Creek (Sec.15, T20N, R41E), excluding that stretch within Spokane County. This stream has over 300 sq. miles of drainage area ending at mouth of Cache Creek (Sec.23, T20N, R42E).	(2) Ahtanum Creek (N.Fk.)	<u>Foundation Ridge</u> 7 1/2 Pine Mtn. 7 1/2 Tampico 7 1/2	From confluence of Ahtanum Creek North Fork and Ahtanum Creek Middle Fork (Sec.24, T12N, R14E) downstream to mouth at Ahtanum Creek South Fork (Sec.17, T12N, R16E).
(5) Rock Creek*	<u>Pine City</u> 7 1/2 Rock Lake 7 1/2 Ewan 7 1/2 Texas Lake 7 1/2 Revere 7 1/2 La Crosse 15	From the confluence of Rock Creek and Pine Creek (Sec.15, T20N, R41E) downstream through Rock Lake to mouth at Palouse River (Sec.5, T16N, R39E) excluding those reaches in Adams County. Over 300 sq. miles drainage area at confluence of Rock Creek and Pine Creek.	(3) Ahtanum Creek (S.Fk.)	<u>Pine Mtn.</u> 7 1/2 Tampico 7 1/2	From confluence of unnamed creek and Ahtanum Creek South Fork (Sec.24, T12N, R15E) downstream to mouth at Ahtanum Creek (left bank only).
(6) Snake River*	<u>Clarkston</u> * 15 Colton 7 1/2 Bishop 7 1/2 Kirby 7 1/2 Almota 7 1/2 Penawawa 15 Hay 15 Starbuck 15	From the Washington-Idaho boundary (Sec.16, T36N, R46E) downstream along the Whitman-Asotin County line and Garfield-Whitman County line and Columbia-Whitman County line to the Franklin County line (Sec.30, T13N, R37E). All of river under federal jurisdiction. This stream has over 200 cfs MAF flow at Washington-Idaho border.	(4) Columbia River*	<u>Priest Rapids</u> 15	From the Yakima Firing Center boundary (Sec.3, T13N, R23E) downstream along the Grant-Yakima County line to Benton County line (Sec.12, T13N, R23E). The flow exceeds 200 cfs MAF at Yakima Firing Center boundary.
(7) Union Flat Creek*	<u>Ewartsville</u> 7 1/2 Colfax South 7 1/2 Wilcox 7 1/2 Endicott 15 La Crosse* 15	From the confluence of Wilbur Creek and Union Flat Creek (Sec.6, T14N, R44E) downstream to mouth at Palouse River (Sec.35, T16N, R38E). This stream has over 300 sq. miles of drainage area ending at mouth of left bank unnamed tributary (Sec.31, T16N, R39E).	(5) Cowiche Creek (S. Fork)	<u>Tieton</u> 7 1/2 Naches 7 1/2 Wiley City 7 1/2 Yakima 7 1/2 Selah West 7 1/2	From an approximate point (NW1/4 of NE1/4 Sec.33, T14N, R16E) downstream through Cowiche Creek to mouth at Naches River (Sec.9, T13N, R18E).
			(6) Bumping River*	<u>Bumping Lake</u> * 15 Old Scab Mtn. 7 1/2 Cliffdell 7 1/2	From U.S.G.S. gaging station (Sec.23, T16N, R12E) downstream to mouth at Naches and Little Naches rivers (Sec.4, T17N, R14E). Exclude federal lands. The flow is over 200 cfs MAF at U.S.G.S. gaging station.
			(7) Little Naches River*	<u>Lester</u> 15 Easton* 15 Cliffdell 7 1/2	From confluence of North Fork and Middle Fork Little Naches River (Sec.36, T19N, R12E) downstream to mouth at Naches River (Sec.4, T17N, R14E). Exclude federal lands. The 200 cfs MAF point begins at confluence with Crow Creek (Sec.30, T18N, R14E).

[Order DE 76-14, § 173-18-420, filed 5/3/76; Order 73-14, § 173-18-420, filed 8/27/73; Order DE 72-13, § 173-18-420, filed 6/30/72.]

173-20-190	Lakes coming under purview of chapter 90.58 RCW—Cowlitz County lakes of state-wide significance.		
173-20-200	Lakes coming under purview of chapter 90.58 RCW—Douglas County lakes.		

173-20-620	Lakes coming under purview of chapter 90.58 RCW—Skamania County lakes.
173-20-630	Lakes coming under purview of chapter 90.58 RCW—Skamania County lakes of state-wide significance.
173-20-640	Lakes coming under purview of chapter 90.58 RCW—Snohomish County lakes.
173-20-650	Lakes coming under purview of chapter 90.58 RCW—Snohomish County lakes of state-wide significance.
173-20-660	Lakes coming under purview of chapter 90.58 RCW—Spokane County lakes.
173-20-670	Lakes coming under purview of chapter 90.58 RCW—Spokane County lakes of state-wide significance.
173-20-680	Lakes coming under purview of chapter 90.58 RCW—Stevens County lakes.
173-20-690	Lakes coming under purview of chapter 90.58 RCW—Stevens County lakes of state-wide significance.
173-20-700	Lakes coming under purview of chapter 90.58 RCW—Thurston County lakes.
173-20-710	Lakes coming under purview of chapter 90.58 RCW—Thurston County lakes of state-wide significance.
173-20-720	Lakes coming under purview of chapter 90.58 RCW—Wahkiakum County lakes.
173-20-730	Lakes coming under purview of chapter 90.58 RCW—Wahkiakum County lakes of state-wide significance.
173-20-740	Lakes coming under purview of chapter 90.58 RCW—Walla Walla County lakes.
173-20-750	Lakes coming under purview of chapter 90.58 RCW—Walla Walla County lakes of state-wide significance.
173-20-760	Lakes coming under purview of chapter 90.58 RCW—Whatcom County lakes.
173-20-770	Lakes coming under purview of chapter 90.58 RCW—Whatcom County lakes of state-wide significance.
173-20-780	Lakes coming under purview of chapter 90.58 RCW—Whitman County lakes.
173-20-790	Lakes coming under purview of chapter 90.58 RCW—Whitman County lakes of state-wide significance.
173-20-800	Lakes coming under purview of chapter 90.58 RCW—Yakima County lakes.
173-20-810	Lakes coming under purview of chapter 90.58 RCW—Yakima County lakes of state-wide significance.
173-20-820	Private lands within the confines of federal lands.

WAC 173-20-010 Purpose. The department of ecology, pursuant to RCW 90.58.300 is designated the state agency responsible for the program of regulation of the shorelines of the state. This chapter delimits the lakes which are classified as shorelines of the state.

[Order DE 72-14, § 173-20-010, filed 6/30/72.]

WAC 173-20-020 Applicability. The provisions of this chapter shall apply state-wide.

[Order DE 72-14, § 173-20-020, filed 6/30/72.]

WAC 173-20-030 Definitions. As used herein, the following words and phrases shall have the following meanings:

(1) "Lakes" means all the surface water areas of the state, including reservoirs; except

(a) Lakes less than twenty acres in size;

(b) Streams or rivers (as described in WAC 173-18-030);

(c) Shorelines of state-wide significance.

(2) "Lakes of state-wide significance" means those lakes, whether natural, artificial or a combination thereof, with a surface acreage of one thousand acres or more measured at the ordinary high-water mark.

[Order DE 72-14, § 173-20-030, filed 6/30/72.]

WAC 173-20-040 Lakes coming under purview of chapter 90.58 RCW. Volumes I and II of the book *Lakes of Washington* by Ernest E. Wolcott and updated information

[Title 173 WAC—p. 120]

from the United States Geological Survey were used as reference material for this listing.

This listing includes only those lakes coming under purview of chapter 90.58 RCW.

Use designations are taken directly from Lakes of Washington as follows:

R - Recreation-wildlife, general public use, beautification, fishing, etc.

D - Domestic-private use, farm pond, fire protection, stock, garden, etc.

PS - Public supply, municipal use, civic, industrial use, etc.

P - Power hydroelectric.

I - Irrigation.

Acreage given includes only water surface acres and not contiguous wetlands.

[Order DE 73-13, § 173-20-040, filed 8/27/73; Order DE 72-14, § 173-20-040, filed 6/30/72.]

WAC 173-20-044 Review of designations. The department shall review all the designations made herein at least once in every five year period following the effective date of chapter 90.58 RCW or as frequently before then as is deemed advisable by the department, and prepare the necessary revisions to ensure that the designations conform to the policies of chapter 90.58 RCW and of chapter 173-20 WAC in the manner and form prescribed for adoption and amending rules and regulations in chapter 34.04 RCW (the Administrative Procedure Act).

[Statutory Authority: RCW 90.58.120 and 90.58.200. 80-08-053 (Order DE 80-21), § 173-20-044, filed 6/30/80.]

WAC 173-20-046 Conflicts between designations and criteria. In the event that any of the designations set forth in this chapter conflict with the criteria set forth in RCW 90.58.030(2) or in WAC 173-20-030 the criteria shall control. The designation of the lake shall be governed by the criteria.

[Statutory Authority: RCW 90.58.120 and 90.58.200. 80-08-053 (Order DE 80-21), § 173-20-046, filed 6/30/80.]

DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

173-22-015	Relationship to National Coastal Zone Management Act of 1972. [Order DE 73-11, § 173-22-015, filed 7/20/73.] Repealed by 97-04-076 (Order 96-12), filed 2/5/97, effective 3/8/97. Statutory Authority: RCW 90.58.140(3) and [90.58].200.
------------	--

Reviser's note: Order 73-24, filed 8/28/73 amends maps of wetlands associated with shorelines of the state of Washington and is to be used in conjunction with Administrative Order 73-11, filed 7/20/73. Sections within this chapter will show this date where applicable. The maps are listed by county and are entitled "Shoreline Management Act of 1971, chapter 90.58 RCW amendment to the wetland designations of the state of Washington—chapter 173-22 WAC—Department of ecology—September 1973."

Order DE 77-18, filed 9/20/77 amends chapter 173-22 WAC, regarding designations of associated wetlands which constitute shorelines of the state and are subject to the Shoreline Management Act of 1971 as defined by RCW 90.58.030 (c), (d), (e), (f) and (g).

Order DE 78-15, filed 8/15/78 designating associated wetlands in San Juan County, consists of maps omitted from publication in the Washington Administrative Code under the authority of RCW 34.04.050(3) as being unduly cumbersome to publish. Copies of the maps may be obtained from the Department of Ecology, St. Martin's College, Lacey, Washington 98504.

WAC 173-22-010 Purpose. Pursuant to RCW 90.58.030 (2)(f), the department of ecology herein designates the wetland areas associated with the streams, lakes and tidal waters which are subject to the provisions of chapter 90.58 RCW.

[Order DE 72-15, § 173-22-010, filed 6/30/72.]

[Title 173 WAC—p. 132]

WAC 173-22-020 Applicability. The provisions of this chapter shall apply state wide.

[Order DE 72-15, § 173-22-020, filed 6/30/72.]

WAC 173-22-030 Definitions. As used herein, the following words have the following meanings:

(1) "Associated wetlands" means those wetlands which are in proximity to and either influence or are influenced by tidal waters or a lake or stream subject to the Shoreline Management Act;

(2) "Atypical situation" as used herein, refers to areas in which one or more parameters (vegetation, soil, and/or hydrology) have been sufficiently altered by recent human activities or natural events to preclude the presence of wetland indicators of the parameter. Recent refers to the period of time since legal jurisdiction of an applicable law or regulation took effect;

(3) "Duration (inundation/soil saturation)" means the length of time during which water stands at or above the soil surface (inundation), or during which the soil is saturated. As used herein, duration refers to a period during the growing season;

(4) "Flood plain" is synonymous with one hundred-year floodplain and means that land area susceptible to being inundated by stream derived waters with a one percent chance of being equaled or exceeded in any given year. The limit of this area shall be based upon flood ordinance regulation maps or a reasonable method which meets the objectives of the act;

(5) "Floodway" means those portions of the area of a river valley lying streamward from the outer limits of a watercourse upon which flood waters are carried during periods of flooding that occur with reasonable regularity, although not necessarily annually, said floodway being identified, under normal condition, by changes in surface soil conditions or changes in types or quality of vegetative ground cover condition. The floodway shall not include those lands that can reasonably be expected to be protected from flood waters by flood control devices maintained by or maintained under license from the federal government, the state, or a political subdivision of the state. The limit of the floodway is that which has been established in flood regulation ordinance maps or by a reasonable method which meets the objectives of the act;

(6) "Growing season" means the portion of the year when soil temperatures at 19.7 inches below the soil surface are higher than biologic zero (5°C);

(7) "Hydrophytic vegetation" means the sum total of macrophytic plant life growing in water or on a substrate that is at least periodically deficient in oxygen as a result of excessive water content. When hydrophytic vegetation comprises a community where indicators of hydric soils and wetland hydrology also occur, the area has wetland vegetation;

(8) "Hydric soil" means soil that formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part;

(9) "Lake" means a body of standing water in a depression of land or expanded part of a river, including reservoirs, of twenty acres or greater in total area. A lake is bounded by

the ordinary high water mark or, where a stream enters a lake, the extension of the elevation of the lake's ordinary high water mark within the stream;

(10) "Long duration" means a period of inundation from a single event that ranges from seven days to one month.

(11) "Ordinary high water mark" on all lakes, streams, and tidal water is that mark that will be found by examining the bed and banks and ascertaining where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland, in respect to vegetation as that condition exists on June 1, 1971, as it may naturally change thereafter, or as it may change thereafter in accordance with permits issued by a local government or the department. The following criteria clarify this mark on tidal waters, lakes, and streams:

(a) Tidal waters.

(i) In high energy environments where the action of waves or currents is sufficient to prevent vegetation establishment below mean higher high tide, the ordinary high water mark is coincident with the line of vegetation. Where there is no vegetative cover for less than one hundred feet parallel to the shoreline, the ordinary high water mark is the average tidal elevation of the adjacent lines of vegetation. Where the ordinary high water mark cannot be found, it is the elevation of mean higher high tide;

(ii) In low energy environments where the action of waves and currents is not sufficient to prevent vegetation establishment below mean higher high tide, the ordinary high water mark is coincident with the landward limit of salt tolerant vegetation. "Salt tolerant vegetation" means vegetation which is tolerant of interstitial soil salinities greater than or equal to 0.5 parts per thousand;

(b) Lakes. Where the ordinary high water mark cannot be found, it shall be the line of mean high water;

(c) Streams. Where the ordinary high water mark cannot be found, it shall be the line of mean high water. For braided streams, the ordinary high water mark is found on the banks forming the outer limits of the depression within which the braiding occurs;

(12) "Prevalent vegetation" means the plant community or communities that occur in an area during a given period. The prevalent vegetation is characterized by the dominant macrophytic species that comprise the plant community;

(13) "River delta" means those lands formed as an aggradational feature by stratified clay, silt, sand and gravel deposited at the mouths of streams where they enter a quieter body of water. The upstream extent of a river delta is that limit where it no longer forms distributary channels;

(14) "Shorelands" or "shoreland areas" means those lands extending landward for two hundred feet in all directions as measured on a horizontal plane from the ordinary high water mark; floodways and contiguous floodplain areas landward two hundred feet from such floodways; and all wetlands and river deltas associated with the streams, lakes, and tidal waters which are subject to the provisions of this chapter; the same to be designated as to location by the department of ecology. Any county or city may determine that portion of a one-hundred-year-flood plain to be included in its master program as long as such portion includes, as a mini-

(1999 Ed.)

mum, the floodway and the adjacent land extending landward two hundred feet therefrom;

(15) A "stream" is a naturally occurring body of periodic or continuously flowing water where:

(a) The mean annual flow is greater than twenty cubic feet per second; and

(b) The water is contained within a channel. A channel is an open conduit either naturally or artificially created. This definition does not include artificially created irrigation, return flow, or stockwatering channels;

(16) "Tidal water" includes marine and estuarine waters bounded by the ordinary high water mark. Where a stream enters the tidal water, the tidal water is bounded by the extension of the elevation of the marine ordinary high water mark within the stream;

(17) "Typically adapted" is a term that refers to a species being normally or commonly suited to a given set of environmental conditions, due to some feature of its morphology, physiology, or reproduction;

(18) "Very long duration" means a period of inundation from a single event that is greater than one month.

(19) "Wetlands" or "wetland areas" means areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs and similar areas. Wetlands do not include those artificial wetlands intentionally created from nonwetland sites, including, but not limited to, irrigation and drainage ditches, grass-lined swales, canals, detention facilities, wastewater treatment facilities, farm ponds, and landscape amenities, or those wetlands created after July 1, 1990, that were unintentionally created as a result of the construction of a road, street, or highway. Wetlands may include those artificial wetlands intentionally created from nonwetland areas to mitigate the conversion of wetlands; and

(20) The definitions set forth in chapter 90.58 RCW shall also apply as used herein.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 97-04-076 (Order 96-12), § 173-22-030, filed 2/5/97, effective 3/8/97. Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-22-030, filed 5/23/86. Statutory Authority: RCW 90.58.030 (2)(f), 90.58.120, and 90.58.200. 80-08-086 (Order DE 80-22), § 173-22-030, filed 7/2/80; Order DE 73-11, § 173-22-030, filed 7/20/73; Order DE 72-15, § 173-22-030, filed 6/30/72.]

WAC 173-22-035 Wetland identification and delineation. Identification of wetlands and delineation of their boundaries pursuant to this chapter shall be done in accordance with the criteria and indicators listed in WAC 173-22-080. These criteria and indicators along with recommended methods and additional background information can be found in the Washington State Wetland Identification and Delineation Manual, Ecology Publication # 96-94.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 97-04-076 (Order 96-12), § 173-22-035, filed 2/5/97, effective 3/8/97.]

WAC 173-22-040 Shoreland area designation criteria. The following criteria contain the standards for the department's designation of shoreland areas associated with

shorelines of the state which are subject to the jurisdiction of chapter 90.58 RCW:

(1) Tidal waters. The shoreland area shall include:

(a) Those lands which extend landward two hundred feet as measured on a horizontal plane from the ordinary high water mark; and

(b) Those wetlands which are in proximity to and either influence or are influenced by the tidal water. This influence includes but is not limited to one or more of the following: Periodic tidal inundation; hydraulic continuity; formation by tidally influenced geohydraulic processes; or a surface connection through a culvert or tide gate;

(2) Lakes. The shoreland area shall include:

(a) Those lands which extend landward two hundred feet as measured on a horizontal plane from the ordinary high water mark; and

(b) Those wetlands which are in proximity to and either influence or are influenced by the lake. This influence includes but is not limited to one or more of the following: Periodic inundation or hydraulic continuity;

(3) Streams. The shoreland area shall include the greater of:

(a) Those lands which extend landward two hundred feet as measured on a horizontal plane from the ordinary high water mark;

(b) Those floodplains which extend landward two hundred feet as measured on a horizontal plane from the floodway: *Provided*, That local government may, at its discretion, include all or a larger portion of the one hundred-year floodplain within the associated shorelands. Designation of this shoreland area shall be in accordance with chapter 173-19 WAC, the state master program. If the applicable master program does not designate the shoreland area for a stream, it shall be designated under the rules which applied at the time of adoption by the department;

(c) Those wetlands which are in proximity to and either influence or are influenced by the stream. This influence includes but is not limited to one or more of the following: Periodic inundation; location within a floodplain; or hydraulic continuity; and

(d) Those lands within a river delta floodplain except for those lands that can reasonably be expected to be protected from flood waters by flood control devices maintained by or maintained under license from the federal government, the state, or a political subdivision of the state.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 97-04-076 (Order 96-12), § 173-22-040, filed 2/5/97, effective 3/8/97. Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-22-040, filed 5/23/86. Statutory Authority: RCW 90.58.030, 90.58.120 and 90.58.200. 85-09-043 (Order DE 85-05), § 173-22-040, filed 4/15/85. Statutory Authority: RCW 90.58.030 (2)(f), 90.58.120, and 90.58.200. 80-08-086 (Order DE 80-22), § 173-22-040, filed 7/2/80; Order DE 76-30, § 173-22-040, filed 7/27/76; Order DE 73-11, § 173-22-040, filed 7/20/73; Order DE 72-15, § 173-22-040, filed 6/30/72.]

WAC 173-22-050 Review of designations. The department shall review all the designations made herein at least once in every five-year period following the effective date of chapter 90.58 RCW or as frequently as is deemed advisable by the department, and prepare the necessary revisions to ensure that the designations conform to the policies of chap-

ter 90.58 RCW and of chapter 173-22 WAC in the manner and form prescribed for adopting and amending rules and regulations in chapter 34.04 RCW (the Administrative Procedure Act).

[Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-22-050, filed 5/23/86. Statutory Authority: RCW 90.58.030 (2)(f), 90.58.120, and 90.58.200. 80-08-086 (Order DE 80-22), § 173-22-050, filed 7/2/80; Order DE 73-11, § 173-22-050, filed 7/20/73; Order DE 72-15, § 173-22-050, filed 6/30/72.]

WAC 173-22-052 Alterations of shorelines affecting designations. Alterations of the existing conditions of shorelines and wetlands of the state which affect the boundary or volume of those water bodies, whether through authorized development or natural causes, shall warrant a review of the designation of those shorelines and their associated wetlands.

[Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-22-052, filed 5/23/86.]

WAC 173-22-055 Conflicts between designations and criteria. In the event that any of the wetland designations shown on the maps adopted in WAC 173-22-060 conflict with the criteria set forth in this chapter the criteria shall control. The boundary of the designated wetland areas shall be governed by the criteria set forth in WAC 173-22-040.

[Statutory Authority: Chapter 90.58 RCW. 86-12-011 (Order 86-06), § 173-22-055, filed 5/23/86. Statutory Authority: RCW 90.58.030 (2)(f), 90.58.120, and 90.58.200. 80-08-086 (Order DE 80-22), § 173-22-055, filed 7/2/80; Order DE 73-11, § 173-22-055, filed 7/20/73.]

WAC 173-22-060 Shoreline designation maps. Shoreline designation maps are those maps which have been prepared and adopted by the department in a manner consistent with chapter 34.04 RCW (the Administrative Procedure Act) that designate the location of shorelines of the state and their associated wetland areas. Wetland designations are applied under the criteria contained in WAC 173-22-040. Due to the bulk of the maps designating the wetland areas, they are not included in the text of this chapter, but rather are incorporated herein as an appendix hereto, having full legal force and effect as if published herein. Copies of the appendix are available to the public at all reasonable times for inspection in the headquarters of the department of ecology in Olympia, the Washington state code reviser's office, the appropriate county auditor and city clerk. Copies of portions thereof, or of the complete set, will be available from the department at the expense of the party requesting the same. Volumes I, II, and III entitled *Shorelines under the Shoreline Management Act of 1971* (chapter 90.58 RCW, chapter 286, Laws of 1971 1st ex. sess.) were adopted by reference on June 30, 1972.

WAC 173-22-070 Lands within federal boundaries.

In addition to those designations contained in the appendix, those nonfederal lands lying within the exterior boundaries of federal lands and those federal lands leased by the federal government to other persons, which lands fall within the definition of shorelands contained herein, shall also be subject to the jurisdiction of chapter 90.58 RCW.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.97-04-076 (Order 96-12), § 173-22-070, filed 2/5/97, effective 3/8/97; Order DE 73-11, § 173-22-070, filed 7/20/73; Order DE 72-15, § 173-22-070, filed 6/30/72.]

WAC 173-22-080 Wetland delineation manual. The department has prepared a Washington State Wetland Identification and Delineation Manual (Ecology publication # 96-94) to be used in implementing these regulations. The mandatory portions of this manual are adopted into the following regulations. In addition, the manual contains background information, guidance, examples, and methods which may be useful in applying these regulations. The manual is intended to be used in implementing the Shoreline Management Act and other applicable state statutes. The manual is also to be used by local governments in implementing local regulations under the Growth Management Act (chapter 36.70A RCW).

The state manual takes the original 1987 Corps of Engineers manual and incorporates the changes made by the federal government to the 1987 manual since that time. This includes the national guidance issued by the Corps in 1991 and 1992, and the regional guidance issued by the Corps and EPA in 1994. All other changes are of two types:

Additional language added to assist the user in applying the manual to the variety of situations found in the state of Washington; or

Deletion of geographic material or references irrelevant to Washington.

Since the original 1987 manual was developed for use throughout the United States, it contains many references that do not apply to our state. Where appropriate, references to species or situations found in Washington have been added.

(1) Wetland delineation. Purpose and introduction.

It is the purpose of a delineation manual to provide information and methods that will allow a delineator to make an accurate wetland delineation at any time of the year. However, it must be recognized that some wetlands will be more difficult to delineate than others and that all information collected must be used in conjunction with the knowledge and experience of the delineator. The proper collection and recording of field and other supporting data is one of the most critical aspects of any wetland delineation. The wetland delineation regulations are intended to identify areas that

(1999 Ed.)

meet the definition of wetlands found in state law. They are also intended to identify the same areas identified in the Corps of Engineers 1987 Wetlands Delineation Manual, as amended and augmented by official federal guidance issued through January 1995.

The technical approach for identifying and delineating wetlands does not constitute a classification system. It provides a basis for determining whether a given area is a wetland for purposes of federal, state and local regulations without attempting to classify it by wetland type.

Certain wetland types, under the extremes of normal seasonal or annual variability, may not always meet all the wetland criteria defined in the manual. Examples include vernal wetlands during drought years and seasonal wetlands that may lack hydrophytic vegetation and/or wetland hydrology during the dry season. Such areas are discussed in subsection (12) of this section (**Problem Areas**), and guidance is provided for making wetland determinations in these areas.

Three key provisions of the definition of wetlands include:

(a) Inundated or saturated soil conditions resulting from permanent or periodic inundation or saturation by ground water or surface water.

(b) A prevalence of vegetation typically adapted for life in saturated soil conditions (hydrophytic vegetation).

(c) The presence of "normal circumstances."

Explicit in the definition is the consideration of three environmental parameters: Hydrology, soil, and vegetation. Positive wetland indicators of all three parameters are normally present in wetlands. Although vegetation is often the most readily observed parameter, sole reliance on vegetation or either of the other parameters as the determinant of wetlands can sometimes be misleading. Many plant species can grow successfully in both wetlands and nonwetlands, and hydrophytic vegetation and hydric soils may persist for decades following alteration of hydrology that will render an area a nonwetland. The presence of hydric soils and wetland hydrology indicators in addition to vegetation indicators will provide a logical, easily defensible, and technical basis for the presence of wetlands. The combined use of indicators for all three parameters will enhance the technical accuracy, consistency, and credibility of wetland determinations. Therefore, all three parameters were used in developing the criteria for wetlands and all approaches for applying the criteria embody the multiparameter concept.

The procedures described in the methods section of the state delineation manual have been tested and found to be reliable. However, these methods are recommendations and are not mandatory. Site-specific conditions may require modification of field procedures. The user has the flexibility to employ sampling procedures other than those described. However, the basic approach for making wetland determinations should not be altered (i.e., the determination should be based on the dominant plant species, soil characteristics, and hydrologic characteristics of the area in question). The user should document reasons for using a different characterization procedure than described in the state manual. **CAUTION:** Application of methods described in the manual or the modified sampling procedures requires that the user be familiar

[Title 173 WAC—p. 137]

with wetlands of the area and use his/her training, experience, and good judgment in making wetland determinations.

(2) Wetland identification and delineation. Technical criteria. The interaction of hydrology, vegetation, and soil results in the development of characteristics unique to wetlands. Therefore, the following criteria for wetlands are based on these three parameters.

The definition of wetlands (WAC 173-22-030) includes the language found in the federal Clean Water Act regulations. It also includes additional language found in the Shoreline Management Act and Growth Management Act which specifically excludes several types of "artificial" wetlands. Many of these areas specifically excluded in the definition will meet the technical requirements for being a wetland (i.e., will meet all three criteria). The delineation manual identifies all areas that meet the necessary wetland criteria and does not attempt to distinguish these "artificial" wetlands. If necessary, the user will need to independently determine if a wetland as identified by this manual fits in any of the categories of "artificial" wetlands specifically excluded in the definition.

(3) The following criteria, and technical approach comprise the basis for the identification and delineation of wetlands:

Wetlands meet the following criteria:

(a) Vegetation. The prevalent vegetation consists of macrophytes that are typically adapted to areas having hydrologic and soil conditions described in subsection (1)(a) of this section. Hydrophytic species, due to morphological, physiological, and/or reproductive adaptation(s), have the ability to grow, effectively compete, reproduce, and/or persist in anaerobic soil conditions. Indicators of vegetation associated with wetlands are listed in this section.

(b) Soil. A hydric soil is a soil that formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part. (USDA-NRCS 1995, Federal Register, 7/13/94, Vol. 59, No. 133, pp 35680-83.) The following criteria reflect those soils that meet this definition:

(i) All Histosols except Folists; or

(ii) Soils in Aquic suborders, great groups, or subgroups, Albolls suborder, Aquisalsids, Pachic subgroups, or Cumulic subgroups that are:

(A) Somewhat poorly drained with a water table equal to 0.0 foot (ft.) from the surface during the growing season; or

(B) Poorly drained or very poorly drained and have either:

(I) A water table equal to 0.0 ft. during the growing season if textures are coarse sand, sand, or fine sand in all layers within 20 inches(in.), or for other soils;

(II) A water table at less than or equal to 0.5 ft. from the surface during the growing season if permeability is equal to or greater than 6.0 in./hour in all layers within 20 in.; or

(III) The water table is at less than or equal to 1.0 ft. from the surface during the growing season if permeability is less than 6.0 in./hour in any layer within 20 in.; or

(iii) Soils that are frequently ponded for long or very long duration during the growing season; or

(iv) Soils that are frequently flooded for long duration or very long duration during the growing season.

Soil criteria indicators are listed in subsections (6), (7) and (8) of this section.

(c) Hydrology. Areas which are inundated and/or saturated to the surface for a consecutive number of days for more than 12.5 percent of the growing season are wetlands, provided the soil and vegetation parameters are met. Areas inundated or saturated to the surface for a consecutive number of days between 5 percent and 12.5 percent of the growing season in most years may or may not be wetlands. Areas inundated or saturated to the surface for less than 5 percent of the growing season are nonwetlands. Wetland hydrology exists if field indicators are present as described in subsection (10) of this section.

(d) Technical approach for the identification and delineation of wetlands. Except in certain situations defined in this manual, evidence of at least one positive wetland indicator from each parameter (hydrology, soil, and vegetation) must be found in order to make a positive wetland determination.

Characteristics and Indicators of Hydrophytic Vegetation, Hydric Soils, and Wetland Hydrology

(4) Hydrophytic vegetation. The plant community concept is followed throughout the manual. Emphasis is placed on the assemblage of plant species that exert a controlling influence on the character of the plant community, rather than on indicator species. Thus, the presence of scattered individuals of an upland plant species in a community dominated by hydrophytic species is not a sufficient basis for concluding that the area is an upland community. Likewise, the presence of a few individuals of a hydrophytic species in a community dominated by upland species is not a sufficient basis for concluding that the area has hydrophytic vegetation.

(5) Indicators of hydrophytic vegetation. Several indicators may be used to determine whether hydrophytic vegetation is present on a site. However, the presence of a single individual of a hydrophytic species does not mean that hydrophytic vegetation is present. The strongest case for the presence of hydrophytic vegetation can be made when several indicators, such as those in the following list, are present. One of the most common errors made in delineating wetlands has been to assume that the first indicator (a) must be met in every case. This has led to some wetland areas being called nonwetland. Keep in mind that any of the following indicators may be used to meet the vegetation criteria. However, when using any indicator other than (a), it is important to have solid documentation of wetland hydrology and hydric soils. Indicators are listed in order of decreasing reliability. Although all are valid indicators, some are stronger than others. When a decision is based on an indicator appearing in the lower portion of the list, re-evaluate the parameter to ensure that the proper decision was reached.

(a) More than 50 percent of the dominant species are OBL, FACW+, FACW, FACW-, FAC+ or FAC (Table 1) on lists of plant species that occur in wetlands. A national inter-agency panel has prepared a National List of Plant Species that Occur in Wetlands (Reed 1988a). This list categorizes species according to their affinity for occurrence in wetlands.

In addition, a 1993 supplement to the plants species list for Region 9 (Northwest) has been prepared (Reed 1993). Be sure to consult this supplement or any more recent supplements to confirm that a species has the proper indicator status. (The Seattle District of the Corps does not use the FAC neutral option as an indicator of hydrophytic vegetation but

does allow the use of the FAC neutral option as an indicator of hydrology. See Hydrology indicator # 10 for definition.) FAC- species do not count as FAC species for the purposes of meeting indicator (a). Only FAC, FAC+, FACW (+, -) and OBL species count.

Table 1
Plant Indicator Status Categories

<u>Indicator Category</u>	<u>Indicator Symbol</u>	<u>Definition</u>
OBLIGATE WETLAND PLANTS	OBL	Plants that almost always occur (estimated probability >99%) in wetlands under natural conditions, but which may also occur rarely (estimated probability <1%) in nonwetlands. Examples: <i>Typha latifolia</i> , <i>Lysichitum americanum</i>
FACULTATIVE WETLAND PLANTS	FACW	Plants that usually occur (estimated probability 67% to 99%) in wetlands, but also occur (estimated probability 1% to 33% in nonwetlands). Examples: <i>Fraxinus latifolia</i> <i>Cornus stolonifera</i> .
FACULTATIVE PLANTS	FAC	Plants with a similar likelihood (estimated probability 34% to 66%) of occurring in both wetlands and nonwetlands. Examples: <i>Alnus rubra</i> , <i>Rubus spectabilis</i>
FACULTATIVE UPLAND PLANTS	FACU	Plants that sometimes occur (estimated probability 1% to 33%) in wetlands, but occur more often (estimated probability 67% to 99%) in nonwetlands. Examples: <i>Acer macrophyllum</i> , <i>Rubus discolor</i>
OBLIGATE UPLAND PLANTS	UPL	Plants that rarely occur (estimated probability <1%) in wetlands, but occur almost always (estimated probability >99%) in nonwetlands under natural conditions.

Categories were originally developed and defined by the USFWS National Wetlands Inventory and subsequently modified by the National Plant List Panel. The three facultative categories are subdivided by (+) and (-) modifiers. FAC+ species are considered to have a greater estimated probability of occurring in wetlands than FAC species, while FAC- species are considered to have a lesser estimated probability of occurring in wetlands than FAC species.

(b) Other indicators. Although there are several other indicators of hydrophytic vegetation, it will seldom be necessary to use them. However, they may provide additional useful information to strengthen a case for the presence of hydrophytic vegetation. Additional training and/or experience may be required to employ these indicators.

(i) Visual observation of plant species growing in areas of prolonged inundation and/or soil saturation. This indicator can only be applied by experienced personnel who have accumulated information through several years of field experience and written documentation (field notes) that certain species commonly occur in areas of prolonged (>12.5 percent) inundation and/or soil saturation during the growing season. In certain situations, areas with wetland hydrology and hydric soils may be dominated by plant species classified as facultative upland. The most common examples in Washington are Western Hemlock forested wetlands and wet meadows planted with pasture grasses. It is important to keep in mind that facultative upland species are found in wetlands up to 33% of the time and, under certain circumstances, can be the dominant species in a wetland plant community. Usually, however, FACU species are found in uplands. Thus, if you encounter a situation where the hydrology

and soil parameters are clearly met, do not eliminate the area from consideration as a wetland based on a lack of prevalence of facultative or wetter vegetation. Species such as *Gaultheria shallon*, *Acer circinatum*, and *Pteridium aquilinum* may be found in these areas, often on hummocks or downed logs or stumps. More typical wetland species may occur in such areas, though often as nondominants. Thus, occurrence of species commonly observed in other wetland areas provides a strong indication that hydrophytic vegetation is present. If you have strong evidence that the hydrology and soil parameters are met then the vegetation is acting as a hydrophyte and the area is probably a wetland. **CAUTION:** It is necessary to have good documentation that the area experiences prolonged inundation and/or saturation in order to call it a wetland. The presence of standing water or saturated soil on a site at a single point in time or for short periods is insufficient evidence that the species present are able to tolerate long periods of inundation. The user must relate the observed species to other similar situations and determine whether they are normally found in wet areas, taking into consideration the season and immediately preceding weather conditions. If you encounter this situation, you may be dealing with an atypical situation or a problem area.

(ii) Morphological adaptations. Some hydrophytic species have easily recognized physical characteristics that indicate their ability to occur in wetlands. A given species may exhibit several of these characteristics, but not all hydrophytic species have evident morphological adaptations.

(iii) Technical literature. The technical literature may provide a strong indication that plant species comprising the prevalent vegetation are commonly found in areas where soils are periodically saturated for long periods. Sources of available literature include:

(A) Taxonomic references. Such references usually contain at least a general description of the habitat in which a species occurs. A habitat description such as, "Occurs in water of streams and lakes and in alluvial floodplains subject to periodic flooding," supports a conclusion that the species typically occurs in wetlands.

(B) Botanical journals. Some botanical journals contain studies that define species occurrence in various hydrologic regimes.

(C) Technical reports. Governmental agencies periodically publish reports (e.g., literature reviews) that contain information on plant species occurrence in relation to hydrologic regimes.

(D) Technical workshops, conferences, and symposia. Publications resulting from periodic scientific meetings contain valuable information that can be used to support a decision regarding the presence of hydrophytic vegetation. These usually address specific regions or wetland types.

(E) Wetland plant data base. The National Wetland Inventory has produced a Plant Data Base that contains habitat information on over 6,700 plant species that occur at some estimated probability in wetlands, as compiled from the technical literature.

(iv) Physiological adaptations. Physiological adaptations include any features of the metabolic processes of plants that make them particularly fitted for life in saturated soil conditions. *NOTE: It is impossible to detect the presence of physiological adaptations in plant species during on-site visits.*

(v) Reproductive adaptations. Some plant species have reproductive features that enable them to become established and grow in saturated soil conditions.

(6) Hydric soils. Indicators. Indicators are listed in descending order of reliability. Although all are valid indicators, some are stronger indicators than others. When a decision is based on an indicator appearing in the lower portion of the list, re-evaluate the parameter to ensure that the proper decision was reached.

A hydric soil may be either drained or undrained, and a drained hydric soil may not continue to support hydrophytic vegetation. Therefore, not all areas having hydric soils will qualify as wetlands. Only when a hydric soil supports hydrophytic vegetation and the area has indicators of wetland hydrology may the area be referred to as a wetland.

A drained hydric soil is one in which sufficient ground or surface water has been removed by artificial means such that the area will no longer support hydrophytic vegetation or wetland hydrology. On-site evidence of drained soils includes:

(a) Presence of ditches or canals of sufficient depth to lower the water table below the major portion of the root zone of the prevalent vegetation.

(b) Presence of dikes, levees, or similar structures that obstruct normal inundation of an area.

(c) Presence of a tile system to promote subsurface drainage.

(d) Diversion of upland surface run-off from an area.

Although it is important to record such evidence of drainage of an area, a hydric soil that has been drained or partially drained still allows the soil parameter to be met. However, the area will not qualify as a wetland if the degree of drainage has been sufficient to preclude the presence of either hydrophytic vegetation or a hydrologic regime that occurs in wetlands. *NOTE: The mere presence of drainage structures in an area is not sufficient basis for concluding that a hydric soil has been drained; such areas may continue to have wetland hydrology.*

(7) Indicators of hydric soils (nonsandy soils). Several indicators are available for determining whether a given soil meets the definition and criteria for hydric soils. Any one of the following indicates that hydric soils are present.

(a) Organic soils (Histosols). As a general rule, a soil is an organic soil when:

(i) More than 50 percent (by volume) of the upper 32 inches of soil is composed of organic soil material; or

(ii) Organic soil material of any thickness rests on bedrock. Organic soils are saturated for long periods and are commonly called peats or mucks.

(b) Histic epipedons. A histic epipedon is an 8-inch to 16-inch layer at or near the surface of a mineral hydric soil that is saturated with water for 30 consecutive days or more in most years and contains a minimum of 20 percent organic matter when no clay is present or a minimum of 30 percent organic matter when clay content is 60 percent or greater. Soils with histic epipedons are inundated or saturated for sufficient periods to greatly retard aerobic decomposition of the organic surface, and are considered to be hydric soils.

(c) Sulfidic material. When mineral soils emit an odor of rotten eggs, hydrogen sulfide is present. Such odors are only detected in soils that are permanently saturated and have sulfidic material within a few centimeters of the soil surface. Sulfides are produced only in a reducing environment.

(d) Aquic or peraquic moisture regime. An aquic moisture regime is a reducing one; i.e., it is virtually free of dissolved oxygen because the soil is saturated by ground water or by water of the capillary fringe. Because dissolved oxygen is removed from ground water by respiration of microorganisms, roots, and soil fauna, it is also implicit that the soil temperature is above biologic zero (41°F at 20 inches) at the same time the soil is saturated. Soils with peraquic moisture regimes are characterized by the presence of ground water which is always at or near the soil surface and exhibits reducing conditions. Examples include soils of tidal marshes and soils of closed, landlocked depressions that are fed by permanent streams.

(e) Reducing soil conditions. Soils saturated for long or very long duration will usually exhibit reducing conditions. Under such conditions, ions of iron are transformed (reduced) from a ferric valence state (Fe³⁺) to a ferrous valence state

(Fe²⁺). This condition can often be detected in the field by a ferrous iron test. A simple colorimetric field test kit has been developed for this purpose. When a soil extract changes to a pink color upon addition of alpha-alpha-dipyridil, ferrous iron is present, which indicates a reducing soil environment.

NOTE: This test cannot be used in mineral hydric soils having low iron content, organic soils, and soils that have been desaturated for significant periods of the growing season. Caution: This test can only be used as a positive indicator of reducing conditions and it is only effective if it is done at the time that a mineral soil is actively reducing. While the presence of a reaction indicates anaerobic conditions, the lack of a reaction does not indicate a lack of anaerobic conditions.

(f) Soil colors. The colors of various soil components are often the most diagnostic indicator of hydric soils. Colors of these components are strongly influenced by the frequency and duration of soil saturation, which leads to reducing soil conditions. Mineral hydric soils will be either gleyed or will have contrasting mottles and/or low chroma matrix. These are discussed below:

NOTE: Soil terminology is undergoing constant change, and terms such as "mottles" and "low chroma colors" are being replaced with the term "redoximorphic features." In order to retain consistency with the Corps 1987 Manual, the older terms are used below.

(i) Gleyed soils (gray colors). Gleyed soils develop when anaerobic soil conditions result in pronounced chemical reduction of iron, manganese, and other elements, thereby producing gray soil colors. Anaerobic conditions that occur in waterlogged soils result in the predominance of reduction processes, and such soils are greatly reduced. Iron is one of the most abundant elements in soils. Under anaerobic conditions, iron is converted from the oxidized (ferric) state to the reduced (ferrous) state, which results in the bluish, greenish, or grayish colors associated with the gleying effect. Gleying immediately below the A-horizon or 10 inches (whichever is shallower) is an indication of a markedly reduced soil, and gleyed soils are hydric soils. Gleyed soil conditions can be determined by using the gley page of the Munsell Color Charts (Munsell Color 1990).

(ii) Soils with contrasting mottles and/or low chroma matrix. Mineral hydric soils that are saturated for substantial periods of the growing season (but not long enough to produce gleyed soils) will either have high chroma mottles and a low chroma matrix or will lack mottles but have a low matrix chroma. Mottled means "marked with spots of contrasting color." Soils that have high chroma mottles and a low chroma matrix are indicative of a fluctuating water table.

NOTE: Hydric soils can also have low chroma mottles that contrast with the matrix color.

The soil matrix is the portion (usually more than 50 percent) of a given soil layer that has the predominant color. Colors should be determined in soils that have been moistened; otherwise, state that colors are for dry soils. Mineral hydric soils usually have one of the following color features in the horizon immediately below the A-horizon or 10 inches (whichever is shallower):

(A) Matrix chroma of 2 or less in mottled soils.

(B) Matrix chroma of 1 or less in unmottled soils.

NOTE: The matrix chroma of some dark (black) mineral hydric soils (e.g., Aquolls) will not conform to the criteria described in (f)(ii)(A) and (B) of this subsection; in such soils, gray mottles occurring at 10 inches or less are indicative of hydric conditions. Mollisols that are not hydric will often still have dark colored surface soils.

CAUTION: Soils with significant coloration due to the nature of the parent material may not exhibit the above characteristics. In such cases, this indicator cannot be used.

(g) Soil appearing on hydric soils list. Using the criteria for hydric soils, the NTCHS has developed a list of hydric soils. Listed soils have reducing conditions for a significant portion of the growing season in a major portion of the root zone and are frequently saturated within 12 inches of the soil surface if they have not been effectively drained. *CAUTION: Do not use this indicator unless you have field verified that the profile description of the mapping unit conforms to that of the sampled soil.*

(h) Iron and manganese concretions. During the oxidation-reduction process, iron and manganese in suspension are sometimes segregated as oxides into concretions, nodules or soft masses. These accumulations are usually black or dark brown. Concretions >2 mm. in diameter occurring within 7.5 cm. of the surface are evidence that the soil is saturated for long periods near the surface.

CAUTION: Concretions may be relict features. Be careful to confirm that the hydrologic conditions that created the concretions still exist before using this indicator.

(8) Additional indicators of hydric soils (for sandy soils). Not all indicators listed above can be applied to sandy soils. In particular, soil color may not be a reliable indicator in most sandy soils. However, three additional soil features may be used as indicators of sandy hydric soils, including:

(a) High organic matter content in the surface horizon. Organic matter tends to accumulate above or in the surface horizon of sandy soils that are inundated or saturated to the surface for a significant portion of the growing season. Prolonged inundation or saturation creates anaerobic conditions that greatly inhibit decomposition (oxidation) of organic matter.

(b) Streaking of subsurface horizons by organic matter. Organic matter is moved downward through sand as the water table fluctuates. This often occurs more rapidly and to a greater degree in some vertical sections of a sandy soil containing a higher content of organic matter than in others. Thus, the sandy soil appears streaked with darker areas. When soil from a darker area is rubbed between the fingers, the organic matter stains the fingers.

(c) Organic pans. As organic matter is moved downward through sandy soils, it tends to accumulate at the point representing the most commonly occurring depth to the water table. This organic matter tends to become slightly cemented with iron and aluminum, forming a thin layer of hardened soil (spodic horizon). These horizons often occur at depths of 12 to 30 inches below the mineral surface. Wet spodic soils usually have thick dark surface horizons that are high in organic matter with dull, gray horizons above the spodic horizon. Generally, the nearer to the surface the spodic horizon, the more likely the soil is hydric.

CAUTION: In recently deposited sandy material (e.g., accreting sandbars), it may be impossible to find any of these indicators. In such cases, consider this a problem area (Entisols).

NOTE: The NRCS developed and published Field Indicators of Hydric Soils in the United States in July 1996. This document includes many useful indicators of hydric soils, however, some hydric soils will lack one of the indicators included in the NRCS document. Therefore, the indicators are only used as positive indicators — if one or more of the indicators is present, the soil is a hydric soil, but the lack of any of these indicators does not mean the soil is nonhydric. In addition, the Corps has not authorized the use of these new field indicators and has stated that while they may be used as additional information, they do not replace the indicators in the 1987 Manual nor may they be used to contradict the 1987 Manual indicators.

(9) Wetland hydrology. The term "wetland hydrology" encompasses all hydrologic characteristics of areas that are periodically inundated or have soils saturated to the surface at some time during the growing season. Areas with evident characteristics of wetland hydrology are those where the presence of water has an overriding influence on characteristics of vegetation and soils due to anaerobic and chemically reducing conditions, respectively. Such characteristics are usually present in areas that are inundated or have soils that are saturated to the surface for sufficient duration to develop hydric soils and support vegetation typically adapted for life in periodically anaerobic soil conditions. Hydrology is often the least exact of the parameters, and indicators of wetland hydrology are sometimes difficult to find in the field. However, it is essential to establish that a wetland area is periodically inundated or has saturated soils during the growing season.

It is usually impractical to accurately measure the duration of soil saturation in the field because it takes repeated visits over a lengthy (several years) period of time. However, there has been a sufficient amount of research to support that the field indicators provided in the manual and supplementary guidance can be good measures of both the frequency and duration of soil saturation.

Given the requirement that inundation/saturation must be present for a certain portion of the growing season it is important to understand how the concept of growing season should be applied. The definition of growing season is: "The portion of the year when soil temperatures at 19.7 inches below the soil surface are higher than biological zero (41 degrees F). For ease of determination this period can be approximated by the number of frost-free days." The Washington State Wetland Identification and Delineation Manual contains additional guidance on how to determine the growing season.

(10) Indicators of wetland hydrology. Indicators of wetland hydrology may include, but are not necessarily limited to: Drainage patterns, drift lines, sediment deposition, watermarks, stream gage data and flood predictions, historic records, visual observation of saturated soils, and visual observation of inundation. Any of these indicators may be evidence of wetland hydrologic characteristics.

Methods for determining hydrologic indicators can be categorized according to the type of indicator. Recorded data include stream gage data, lake gage data, tidal gage data, flood predictions, and historical records. Use of these data is commonly limited to areas adjacent to streams or other similar areas. Recorded data usually provide both short-term and long-term information about frequency and duration of inundation, but contain little or no information about soil saturation, which must be gained from soil surveys or other similar sources. The remaining indicators require field observations. Field indicators are evidence of present or past hydrologic events (e.g., location and height of flooding). Indicators are listed in order of decreasing reliability. Although all are valid indicators, some are stronger indicators than others. When a decision is based on an indicator appearing in the lower portion of the list, re-evaluate the parameter to ensure that the proper decision was reached. Indicators for recorded data and field observations include:

(a) Recorded data. Stream gage data, lake gage data, tidal gage data, flood predictions, and historical data may be available from the following sources:

(i) Corps of Engineers (CE) district offices. Most CE Districts maintain stream, lake, and tidal gage records for major water bodies in their area. In addition, CE planning and design documents often contain valuable hydrologic information. For example, a General Design Memorandum (GDM) usually describes flooding frequencies and durations for a project area. Furthermore, the extent of flooding within a project area is sometimes indicated in the GDM according to elevation (height) of certain flood frequencies (1-, 2-, 5-, 10-year, etc.).

(ii) U.S. Geological Survey (USGS). Stream and tidal gage data are available from the USGS offices throughout the Nation, and the latter are also available from the National Oceanic and Atmospheric Administration. CE Districts often have such records.

(iii) State, county, and local agencies. These agencies often have responsibility for flood control/relief and flood insurance.

(iv) Natural Resource Conservation Service Small Watershed Projects. Planning documents from this agency are often helpful, and can be obtained from the NRCS district office in the county.

(v) Planning documents of developers.

(b) Field data. The following field hydrologic indicators can be assessed quickly, and although some of them are not necessarily indicative of hydrologic events that occur only during the growing season, they do provide evidence that inundation and/or soil saturation has occurred:

CAUTION: Many delineators have made the mistake of assuming that the wettest conditions occur in the earliest part of the growing season - usually March and April. However, in some situations, the wettest time of the growing season may be later. This is especially true in areas that receive snowmelt run-off or irrigation water or are subject to tidal influence.

(i) Visual observation of inundation. The most obvious and revealing hydrologic indicator may be simply observing the areal extent of inundation. However, because seasonal conditions and recent weather conditions can contribute to

surface water being present on a nonwetland site, both should be considered when applying this indicator.

(ii) Visual observation of soil saturation. Examination of this indicator requires digging a soil pit to a depth of 16 inches and observing the level at which water stands in the hole after sufficient time has been allowed for water to drain into the hole. The required time will vary depending on soil texture. In some cases, the upper level at which water is flowing into the pit can be observed by examining the wall of the hole. This level usually represents the depth to the water table. The depth to saturated soils will always be nearer the surface due to the capillary fringe. For soil saturation to impact vegetation, it must occur within a major portion of the root zone (usually within 12 inches of the surface) of the prevalent vegetation. The major portion of the root zone is that portion of the soil profile in which more than one half of the plant roots occur. *CAUTION: In some heavy clay soils, water may not rapidly accumulate in the hole even when the soil is saturated. If water is observed at the bottom of the hole but has not filled to the 12-inch depth, examine the sides of the hole and determine the shallowest depth at which water is entering the hole. When applying this indicator, the season of the year and preceding weather conditions as well the duration of saturation must be considered. NOTE: This indicator has caused confusion in relation to the hydrology criteria, which stipulates that saturation must be to the surface. If the water table (the level at which standing water is found in an unlined hole) is found within twelve inches of the soil surface in a nonsandy soil, one can assume that soil saturation occurs to the surface. For sandy soils, the water table must be within six inches of the soil surface. However, simply finding the water table at the appropriate depth on one particular day, does not necessarily confirm that saturation to the surface for the appropriate length of time does occur. Conversely, finding the water table below the appropriate depth on one particular day, does not confirm that saturation to the surface for the appropriate length of time does not occur.*

(iii) Watermarks. Watermarks are most common on woody vegetation. They occur as stains on bark or other fixed objects (e.g., bridge pillars, buildings, tree trunks, fences, etc.). When several watermarks are present, the highest reflects the maximum extent of recent inundation.

(iv) Drift lines. This indicator is most likely to be found adjacent to streams or other sources of water flow in wetlands, but also often occurs in tidal marshes. Evidence consists of deposition of debris in a line on the surface or debris entangled in above ground vegetation or other fixed objects. Debris usually consists of remnants of vegetation (branches, stems, and leaves), sediment, litter, and other waterborne materials deposited parallel to the direction of water flow. Drift lines provide an indication of the minimum portion of the area inundated during a flooding event; the maximum level of inundation is generally at a higher elevation than that indicated by a drift line.

(v) Sediment deposits. Plants and other vertical objects often have thin layers, coatings, or depositions of mineral or organic matter on them after inundation. This evidence may remain for a considerable period before it is removed by precipitation or subsequent inundation. Sediment deposition on

vegetation and other objects provides an indication of the minimum inundation level. When sediments are primarily organic (e.g., fine organic material, algae), the detritus may become encrusted on or slightly above the soil surface after dewatering occurs.

(vi) Drainage patterns within wetlands. This indicator, which occurs primarily in wetlands adjacent to streams or in depressions with closed or restricted outlets and impervious subsoils, consists of surface evidence of drainage flow into or through an area that is restricted for a substantial duration. In some wetlands, this evidence may exist as a drainage pattern eroded into the soil, vegetative matter (debris) piled against thick vegetation or woody stems oriented perpendicular to the direction of water flow, or the absence of expected leaf litter. Scouring is often evident around roots of persistent vegetation. Debris may be deposited in or along the drainage pattern. *CAUTION: Drainage patterns also occur in upland areas after periods of considerable precipitation; therefore, topographic position must also be considered when applying this indicator.*

(vii) Oxidized rhizospheres surrounding living roots are acceptable hydrology indicators on a case-by-case basis and may be useful in ground water driven systems. Rhizospheres should also be reasonably abundant and within the upper 12 inches of the soil profile. Oxidized rhizospheres should be supported by other indicators of hydrology if hydrology evidence is weak. *Caution: Make sure that the oxidation is occurring along live roots/rhizomes and thus, that they are not relict.*

(viii) Local soil survey data - If you can field verify that the soil at your sampling site is a soil listed in the county soil survey or on the Washington State List of Hydric Soils, then the data in the soil survey referring to the flooding and/or high water table conditions for that soil can be accepted as valid for your site (assuming the site has not been effectively drained since the time it was mapped by the NRCS).

(ix) Water-stained leaves - Forested wetlands that are inundated at some time of the year will frequently have water stained leaves on the forest floor. These leaves are generally grayish or blackish in appearance, as a result of being underwater for significant periods. This indicator should be used with caution as water-stained leaves don't always indicate long-term inundation/saturation. It is important to compare the color of the leaves in the area presumed to be wetland with leaves of the same species in an adjacent area that is clearly upland. There should be a distinct difference in the color and texture of the leaves.

(x) FAC neutral test - In areas where hydrology evidence is weak or lacking, the FAC neutral test may be employed to corroborate the presence of sufficient hydrology. Apply as follows: Compare the number of dominants that are FACW and OBL with the number of dominants that are FACU and UPL (ignore the "neutral" FAC dominants). If there are more dominants that are FACW or wetter than there are dominants that are FACU or drier, then one can infer that the plant community is reflecting the presence of wetland hydrology. If there is a tie, compare the number of FAC+ and FAC- to see if there is a difference. If there is still a tie between the numbers of dominants, examine the nondominant species to determine if they provide an indication of how strongly

hydrophytic the vegetation is. Any use of nondominants should be clearly documented and explained.

(xi) Other - Explain and provide rationale for use.

(11) Atypical situations. When a determination is made that positive indicators of hydrophytic vegetation, hydric soils, and/or wetland hydrology could not be found due to effects of recent human activities or natural events, it is necessary to employ different methods of determining the presence of indicators for hydrology, soils or vegetation. The term recent refers to the period of time since legal jurisdiction of an applicable law or regulation took effect.

When any of the three types of situations described below occurs, application of normal methods will lead to the conclusion that the area is not a wetland because positive wetland indicators for at least one of the three parameters will be absent. Therefore, apply procedures described in Part IV, Section F of the 1987 Corps of Engineers Wetland Delineation Manual or the Washington State Wetland Identification and Delineation Manual (as appropriate) to determine whether positive indicators of hydrophytic vegetation, hydric soils, and/or wetland hydrology existed prior to alteration of the area.

This section is applicable to delineations made in the following types of situations:

(a) Unauthorized activities. Unauthorized discharges requiring enforcement actions may result in removal or covering of indicators of one or more wetland parameters. Examples include, but are not limited to:

(i) Alteration or removal of vegetation;

(ii) Placement of dredged or fill material over hydric soils; and/or

(iii) Construction of levees, drainage systems, or dams that significantly alter the area hydrology. *NOTE: This section should not be used for activities that have been previously authorized or those that are exempted from regulation.*

(b) Natural events. Naturally occurring events may result in either creation or alteration of wetlands. For example, recent beaver dams may impound water, thereby resulting in a shift of hydrology and vegetation to wetlands. However, hydric soil indicators may not have developed due to insufficient time having passed to allow their development. Fire, avalanches, volcanic activity, and changing river courses are other examples. *NOTE: It is necessary to determine whether alterations to an area have resulted in changes that are now the "normal circumstances."* The relative permanence of the change and whether the area is now functioning as a wetland must be considered.

(c) Human-induced wetlands. These are wetlands that have been purposely or incidentally created by human activities, but in which wetland indicators of one or more parameters are absent. For example, road construction may have resulted in impoundment of water in an area that previously was nonwetland, thereby affecting hydrophytic vegetation and wetland hydrology in the area. However, the area may lack hydric soil indicators. *NOTE: This is not intended to bring into jurisdiction those human-made wetlands that are exempted under agency regulations or policy.* It is also important to consider whether the man-induced changes are now the "normal circumstances" for the area. Both the rela-

tive permanence of the change and the functioning of the area as a wetland are implied.

(12) Problem areas. There are certain wetland types and/or conditions that may make application of indicators of one or more parameters difficult, at least at certain times of the year. These are not considered to be atypical situations. Instead, they are wetland types in which wetland indicators of one or more parameters may be periodically lacking due to normal environmental conditions or seasonal or annual variations in environmental conditions that result from causes other than human activities or catastrophic natural events. When one of these wetland types is encountered, the methods described in Part IV, Section G of the 1987 Manual or the state manual should be used.

(13) Types of problem areas. Representative examples of potential problem areas, types of variations that occur, and their effects on wetland indicators are presented in the following subparagraphs. Similar situations may sometimes occur in other wetland types. *Note: This section is not intended to bring nonwetland areas having wetland indicators of two, but not all three, parameters into jurisdiction. This list is not intended to be limiting.*

(a) Wetlands on slopes (seeps) and other glacial features. Slope wetlands can occur in certain glaciated areas in which thin soils cover relatively impermeable unsorted glacial material or till or in which layers of sorted glacial material have different hydraulic conditions that produce a broad zone of ground water seepage. Such areas are seldom, if ever, flooded, but downslope ground water movement keeps the soils saturated for a sufficient portion of the growing season to produce anaerobic and reducing soil conditions. This fosters development of hydric soil characteristics and selects for hydrophytic vegetation. Indicators of wetland hydrology may be lacking during the drier portion of the growing season.

(b) Seasonal wetlands. In Washington, some depression areas have wetland indicators of all three parameters during the wetter portion of the growing season, but normally lack wetland indicators of hydrology and/or vegetation during the drier portion of the growing season. For example, obligate and facultative wetland plant species normally are dominant during the wetter portion of the growing season, while upland species (annuals) may be dominant during the drier portion of the growing season. Also, these areas may be inundated during the wetter portion of the growing season, but wetland hydrology indicators may be totally lacking during the drier portion of the growing season. It is important to establish that an area truly is a water body. Water in a depression normally must be sufficiently persistent to exhibit an ordinary high-water mark or the presence of wetland characteristics before it can be considered as wetland potentially subject to jurisdiction. The determination that an area exhibits wetland characteristics for a sufficient portion of the growing season to qualify as a wetland must be made on a case-by-case basis. Such determinations should consider the respective length of time that the area exhibits upland and wetland characteristics, and the manner in which the area fits into the overall ecological system as a wetland. Evidence concerning the persistence of an area's wetness can be

obtained from its history, vegetation, soil, drainage characteristics, uses to which it has been subjected, and weather or hydrologic records. This situation is common in eastern Washington and parts of western Washington where precipitation is highly seasonal and/or prolonged droughts occur frequently. It is important to become familiar with the types of wetlands found in these areas. In some cases, it may be necessary to withhold making a final wetland determination until a site is examined during the wettest part of the growing season. Consultation with other experienced delineators may be helpful as well.

(c) Vernal wetlands - Although these systems are usually associated with California, Washington does have vernal wetlands, particularly in the region around Spokane. These wetlands are a distinct type of seasonal wetland described above. The hydrology in these wetlands is driven by winter and early spring rain and snowmelt and may be totally lacking by early summer. A wetland plant community grows and reproduces in spring in response to the wet conditions and is replaced by an upland plant community by summer. Attempts to delineate these wetlands in summer or fall may result in a false negative conclusion. In addition, during periods of extended drought, these wetlands may remain dry for several years.

(d) Vegetated flats. In both coastal and interior areas of Washington, vegetated flats are often dominated by annual species that are categorized as OBL. Application of normal sampling procedures during the growing season will clearly result in a positive wetland determination. However, these areas will appear to be unvegetated mudflats when examined during the nongrowing season, and the area would not qualify at that time as a wetland due to an apparent lack of vegetation.

(e) Mollisols (prairie and steppe soils) - Mollisols are dark colored, base-rich soils. They are common in grassland areas of the state, especially in eastern Washington and the prairies of the south Puget Sound basin. These soils typically have deep, dark topsoil layers (mollic epipedons) and low chroma matrix colors to considerable depths. They are rich in organic matter due largely to the vegetation (deep roots) and reworking of the soil and organic matter by earthworms, ants, moles, and rodents. The low chroma colors of mollisols are not necessarily due to prolonged saturation, so be particularly careful in making wetland determinations in these soils. Become familiar with the characteristics of mollisols with aquic moisture regimes, and be able to recognize these from nonhydryc mollisols.

(f) Entisols (floodplain and sandy soils) - Entisols are usually young or recently formed soils that have little or no evidence of pedogenically developed horizons. These soils are typical of floodplains throughout Washington, but are also found in glacial outwash plains, along tidal waters, and in other areas. They include sandy soils of riverine islands, bars, and banks and finer-textured soils of floodplain terraces. Wet entisols have an aquic or peraquic moisture regime and are considered wetland soils. Some entisols are easily recognized as hydric soils such as the sulfaquents of tidal salt marshes, whereas others pose problems because they do not possess typical hydric soil field indicators. Wet sandy entisols (with loamy fine sand and coarser textures in

horizons within 20 inches of the surface) may lack sufficient organic matter and clay to develop hydric soil colors. When these soils have a hue between 10YR and 10Y and distinct or prominent mottles present, a chroma of 3 or less is permitted to identify the soil as hydric (i.e., an aquic moisture regime). Also, hydrologic data showing that NTCHS criteria # 3 or # 4 are met are sufficient to verify these soils as hydric.

(g) Red parent material and volcanic ash soils - Hydric mineral soil derived from red parent materials (e.g., weathered clays, Triassic sandstones, and Triassic shales) may lack the low chroma colors characteristic of most hydric mineral soils. In these soils, the hue is redder than 10YR because of parent materials that remain red after citrate-dithionite extraction, so the low chroma requirement for hydric soil is waived. Additionally, some hydric soils in Washington that are influenced by volcanic ash or other volcanic material may not exhibit hydric soil indicators.

(h) Spodosols (evergreen forest soils) - These soils are usually associated with coniferous forests. Spodosols have a gray eluvial E-horizon overlying a diagnostic spodic horizon of accumulated (sometimes weakly cemented) organic matter and aluminum. A process called podzolization is responsible for creating these two soil layers. Organic acids from the leaf litter on the soil surface are moved downward through the soil with rainfall, cleaning the sand grains in the first horizon then coating the sand grains with organic matter and iron oxides in the second layer. Certain vegetation produces organic acids that speed podzolization including western hemlock (*Tsuga heterophylla*), spruces (*Picea* spp.), pine (*Pinus* spp.), larches (*Larix* spp.), and oaks (*Quercus* spp.) (Buol, *et al*, 1980). To the untrained observer, the gray leached layer may be mistaken as a field indicator of hydric soil, but if one looks below the spodic horizon the brighter matrix colors often distinguish nonhydryc spodosols from hydric ones. The wet spodosols (formerly called "ground water podzolic soils") usually have thick dark surface horizons, dull gray E-horizons, and low chroma subsoils.

(i) Interdunal swale wetlands - Along the Washington coastline, seasonally wet swales supporting hydrophytic vegetation are located within sand dune complexes on barrier islands and beaches. Some of these swales are inundated or saturated to the surface for considerable periods during the growing season, while others are wet for only the early part of the season. In some cases, swales may be flooded irregularly by the tides. These wetlands have sandy soils that generally lack field indicators of hydric soil. In addition, indicators of wetland hydrology may be absent during the drier part of the growing season. Consequently, these wetlands may be difficult to identify.

(j) Vegetated river bars and adjacent flats - Along streams, particularly in arid and semiarid parts of the state, some river bars and flats may be vegetated by FACU species while others may be colonized by wetter species. If these areas are frequently inundated for $\geq 12.5\%$ of the growing season, they are wetlands. The soils often do not reflect the characteristic field indicators of hydric soils, however, and thereby pose delineation problems.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.97-04-076 (Order 96-12), § 173-22-080, filed 2/5/97, effective 3/8/97.]

Chapter 173-24 WAC

TAX EXEMPTIONS AND CREDITS FOR
POLLUTION CONTROL FACILITIES

WAC

173-24-010	Introduction and purpose.

173-24-070	Identification and classification of facilities.
173-24-080	Approval of a facility.
173-24-090	Installation for the purpose of pollution control.
173-24-100	Operation for the purpose of pollution control.
173-24-110	Meeting the intent and purposes of chapters 70.94 and 90.48 RCW.
173-24-120	Treatment prior to connection to utilities.
173-24-125	Revision of prior findings.
173-24-130	Administrative appeal of department decision.
173-24-140	Delegation.
173-24-150	Delegation of state responsibilities under federal program.

WAC 173-24-010 Introduction and purpose. Chapter 82.34 RCW provides for tax credits and exemptions for pollution control facilities approved by the appropriate control agency. The purpose of this regulation is to establish a procedure for reviewing applications for tax benefits received from the department of revenue for review by the department of ecology, including the establishment of criteria for identifying the individual facilities within each application and, for each facility, approving the facility, approving the facility as a "dual purpose pollution control facility," or denying the facility.

[Statutory Authority: RCW 43.21A.080 and 43.21A.090 and chapter 82.34 RCW. 78-04-015 (Order DE 78-2), § 173-24-010, filed 3/14/78; Order DE 70-7, § 173-24-010, filed 8/4/71.]

WAC 173-24-020 Authority. This regulation is adopted pursuant to the authority granted the director of the department of ecology by RCW 43.21A.080 and 43.21A.090.
[Order DE 70-7, § 173-24-020, filed 8/4/71.]

WAC 173-24-030 Definitions. Unless a different meaning is plainly required by the context, the following words as hereinafter used in this chapter shall have the following meanings:

(1) "Commercial or industrial operation" shall mean the industrial, manufacturing, waste disposal, utility or other commercial establishment operated by an applicant for a certificate under chapter 82.34 RCW.

(2) "Department" shall mean the Washington state department of ecology.

(3) "Dual purpose pollution control facility" or "dual purpose facility" shall mean a facility in which the portion for the purpose of pollution control is so integrated into the total facility with portions for other purposes that separation into identifiable component parts is not possible.

(4) "Facility" shall mean any treatment works, control devices, disposal systems, machinery, equipment, structures or property for which a certificate is applied for under chapter 82.34 RCW or any physically or conceptually identifiable part or accessories thereof.

[Title 173 WAC—p. 146]

(5) "Necessary to the manufacture of products" shall mean that without which manufacture of products at the present or proposed level could not be undertaken.

If the manufacture of products could be undertaken at present levels without a facility, even though such manufacture would be uneconomical or impractical, such facility is not necessary to the manufacture of products. However, if a commercial or industrial operation is recovering or producing chemicals or heat for use in the manufacturing process at the time it submits an application, then any facilities necessary for such production or for recovery of chemicals at present percentage rates will be considered necessary to the manufacture of products.

(6) "Pollution" shall mean "air contaminant" and "air pollution" as defined in RCW 70.94.030, and "pollution" as defined in RCW 90.48.020.

(7) "Products" as used in the phrase, "manufacture of products," shall include the item or items which an industrial operation is designed primarily to manufacture or produce.

(8) "Regional or local air pollution control authority" shall mean any local or regional entity or control program considered as an "authority" for the purpose of chapter 70.94 RCW.

(9) "Single purpose facility" shall mean a facility other than a dual purpose facility.

[Statutory Authority: RCW 43.21A.080 and 43.21A.090 and chapter 82.34 RCW. 78-04-015 (Order DE 78-2), § 173-24-030, filed 3/14/78; Order DE 70-7, § 173-24-030, filed 8/4/71.]

WAC 173-24-040 Applications submitted to the department of revenue. Applications filed pursuant to RCW 82.34.020 shall be submitted to the department of revenue pursuant to that department's requirements. The department of revenue will supply an identifying application number and forward the application to the department or regional or local air pollution control authority, as appropriate, for review pursuant to RCW 82.34.030.

[Order DE 70-7, § 173-24-040, filed 8/4/71.]

WAC 173-24-050 Applications reviewed by the department. The department will review applications for approval of facilities which may be designated "water pollution control facilities" as defined in RCW 82.34.010 (1)(b). The department will also review any application relating to a facility which is not within the jurisdiction of an activated regional or local air pollution control authority, or which is within any area over which the department has assumed jurisdiction pursuant to RCW 70.94.390. The department will also review any application for approval of a facility relating to any air contaminant source subject to rules and regulations adopted by the department or its predecessor agencies pursuant to RCW 70.94.395.

The department will, when necessary, advise the department of revenue of the proper agency or agencies to which an application is to be submitted for review.

[Order DE 70-7, § 173-24-050, filed 8/4/71.]

WAC 173-24-060 Action by the department within thirty days—Request for further information. The department shall within thirty days of receipt of an application from

the department of revenue make the identification and classification described in WAC 173-24-070 and approval or denial described in WAC 173-24-080, or it shall request further information from the applicant. A copy of any request from the department to the applicant for further information shall be transmitted to the department of revenue. The failure of the applicant to supply any additional information requested by the department, without reasonable grounds for such failure, may result in disapproval of all or part of the application.

The department shall notify the department of revenue in writing of its decisions on any application submitted to it, and a copy of such notification shall be sent to the applicant by certified mail.

[Statutory Authority: RCW 43.21A.080 and 43.21A.090 and chapter 82.34 RCW. 78-04-015 (Order DE 78-2), § 173-24-060, filed 3/14/78; Order DE 70-7, § 173-24-060, filed 8/4/71.]

WAC 173-24-070 Identification and classification of facilities. The department will review each application to determine whether the facility is a single, integrated facility, or can be separated, either physically or conceptually, into identifiable component parts. Each component part shall be considered as a separate facility for the purpose of the department's review of the application. The department will identify all such facilities within each application.

For each facility identified, the department shall classify it as a "dual purpose facility" or a "single purpose facility."

[Statutory Authority: RCW 43.21A.080 and 43.21A.090 and chapter 82.34 RCW. 78-04-015 (Order DE 78-2), § 173-24-070, filed 3/14/78; Order DE 70-7, § 173-24-070, filed 8/4/71.]

WAC 173-24-080 Approval of a facility. The department shall approve any facility when:

- (1) It was installed or intended to be installed for the primary purpose of pollution control, and;
- (2) When it is operated or intended to be operated primarily for the purpose of pollution control, and;
- (3) When it is suitable, reasonably adequate, and meets the intent and purposes of chapter 70.94 or 90.48 RCW;

If the facility does not meet these criteria, it shall be denied.

[Statutory Authority: RCW 43.21A.080 and 43.21A.090 and chapter 82.34 RCW. 78-04-015 (Order DE 78-2), § 173-24-080, filed 3/14/78; Order DE 70-7, § 173-24-080, filed 8/4/71.]

WAC 173-24-090 Installation for the purpose of pollution control. A facility will be considered to be installed or intended to be installed for the primary purpose of pollution control when:

- (1) It was installed or intended to be installed in response to a requirement of the department or a regional or local air pollution control authority contained in a permit, order, or regulation which applies to the particular industry or commercial establishment [in] [is] question, and such facility meets or exceeds the requirements of such permit, order, or regulation and

- (2) It was installed pursuant to a requirement developed under chapter 90.48 or 70.94 RCW and not under some other

(1999 Ed.)

statute administered by the department such as, for example, chapter 70.95 or 70.105 RCW.

[Statutory Authority: Chapter 82.34 RCW, RCW 43.21A.080, and 43.21A.090. 80-15-020 (Order DE 80-33), § 173-24-090, filed 10/7/80; Order DE 70-7, § 173-24-090, filed 8/4/71.]

Reviser's note: RCW 34.05.395 requires the use of underlining and deletion marks to indicate amendments to existing rules, and deems ineffectual changes not filed by the agency in this manner. The bracketed material in the above section does not appear to conform to the statutory requirement.

WAC 173-24-100 Operation for the purpose of pollution control. A facility is operated or intended to be operated primarily for the purpose of pollution control when:

- (1) The emissions or effluents from the commercial or industrial operation do or will contain measurably less pollution with the facility installed than they would without the facility installed, and;

- (2) For a facility other than a dual purpose facility it is not necessary to the manufacture of products.

[Statutory Authority: RCW 43.21A.080 and 43.21A.090 and chapter 82.34 RCW. 78-04-015 (Order DE 78-2), § 173-24-100, filed 3/14/78; Order DE 70-7, § 173-24-100, filed 8/4/71.]

WAC 173-24-110 Meeting the intent and purposes of chapters 70.94 and 90.48 RCW. A facility is suitable, reasonably adequate, and meets the intent and purposes of chapters 70.94 and 90.48 RCW, when:

- (1) Normal operation of the particular commercial or industrial operation with the facility installed will not be in violation of any provision of chapter 70.94 or 90.48 RCW and;

- (2) Such operation will meet the requirements of any applicable permits, orders, regulations or standards of the department or a regional or local air pollution control authority.

[Statutory Authority: RCW 43.21A.080 and 43.21A.090 and chapter 82.34 RCW. 78-04-015 (Order DE 78-2), § 173-24-110, filed 3/14/78; Order DE 70-7, § 173-24-110, filed 8/4/71.]

WAC 173-24-120 Treatment prior to connection to utilities. Any facility designed for the primary purpose of reducing, controlling, disposing of, or treating industrial or commercial wastes prior to the ultimate conveyance thereof to the waste collecting facilities of public or privately owned utilities shall be approved if it satisfies the requirements set forth in this chapter; however, any facility installed or constructed for the primary purpose of connecting any commercial establishment with the waste collecting facilities of public or privately owned utilities shall not be eligible for approval.

[Order DE 70-7, § 173-24-120, filed 8/4/71.]

WAC 173-24-125 Revision of prior findings. On its own initiative or on complaint of the local or regional air pollution control agency in which an air pollution control facility is located, the department may revise the prior findings of the appropriate control agency whenever it appears that any of the conditions listed in RCW 82.34.100 (1) or (2) have been met or when the department determines that the prior determination had been made in error.

[Statutory Authority: Chapter 82.34 RCW, RCW 43.21A.080, and 43.21A.090. 80-15-020 (Order DE 80-33), § 173-24-125, filed 10/7/80.]

WAC 173-24-130 Administrative appeal of department decision. The approval or disapproval by the department pursuant to RCW 82.34.030 of any application, or any revision of prior findings by the department pursuant to RCW 82.34.100 shall constitute a decision of the department subject to review by the pollution control hearings board pursuant to chapter 43.21B RCW. Any aggrieved party may appeal any such decision pursuant to the rules and regulations of the pollution control hearings board no later than thirty days after receipt of written notice thereof.

[Order DE 70-7, § 173-24-130, filed 8/4/71.]

WAC 173-24-140 Delegation. The powers, duties and functions vested in the department by chapter 82.34 RCW, will be performed by the deputy director of the department or his delegate.

[Statutory Authority: RCW 43.21A.080 and 43.21A.090 and chapter 82.34 RCW. 78-04-015 (Order DE 78-2), § 173-24-140, filed 3/14/78; Order DE 70-7, § 173-24-140, filed 8/4/71.]

WAC 173-24-150 Delegation of state responsibilities under federal program. The functions of the "state certifying authority" for the federal tax credit program for pollution control facilities shall be performed by the deputy director of the department or his delegate.

[Statutory Authority: RCW 43.21A.080 and 43.21A.090 and chapter 82.34 RCW. 78-04-015 (Order DE 78-2), § 173-24-150, filed 3/14/78; Order DE 70-7, § 173-24-150, filed 8/4/71.]

Chapter 173-26 WAC

STATE MASTER PROGRAM APPROVAL/AMENDMENT PROCEDURES

WAC

173-26-010	Authority and purpose.
173-26-020	Definitions.

PART I STATE MASTER PROGRAM

173-26-030	Master programs required—State master program contents.
173-26-040	Master programs required—Unlisted local governments.
173-26-050	State master program register—Maintained by department.
173-26-060	State master program—Complete record maintained by department.
173-26-070	Adoption of shoreline master programs by rule—Department action.
173-26-080	Master programs required of local governments.

[Title 173 WAC—p. 148]

PART II

SHORELINE MASTER PROGRAM APPROVAL/AMENDMENT

173-26-090	Periodic review—Public involvement encouraged—Amendment of comprehensive plans, development regulations and master programs.
173-26-100	Local process for approving/amending shoreline master programs.
173-26-110	Submittal to department of proposed master programs/amendments.
173-26-120	State process for approving/amending shoreline master programs.
173-26-130	Appeal procedures for master programs.
173-26-140	Shoreline master program administrative interpretation.
173-26-150	Local government annexation—Shoreline environment predesignation in planning jurisdictions.
173-26-160	Local government annexation.

WAC 173-26-010 Authority and purpose. The provisions of this chapter implement the requirements of chapter 90.58 RCW, the Shoreline Management Act of 1971. RCW 90.58.200 authorizes the adoption of rules by the department as necessary and appropriate to carry out the provisions of the act. RCW 90.58.080 directs local governments to develop and administer local shoreline master programs for regulation of uses on shorelines of the state. Such local programs should be integrated with other local government systems for administration and enforcement of land use regulations. RCW 36.70A.480 provides that the goals and policies contained in a local shoreline master program shall be considered an element of the local comprehensive plan required by the Growth Management Act. All other portions of the local shoreline master program, including the use regulations, are considered a part of the local development regulations required by the Growth Management Act.

This chapter is drafted to also reflect RCW 90.58.050 which provides that the Shoreline Management Act is intended to be a cooperative program between local government and the state. It is the intent of this chapter to provide minimum procedural requirements as necessary to comply with the statutory requirements while providing latitude for local government to establish procedural systems based on local needs and circumstances.

Pursuant to the Shoreline Management Act, the department must approve master programs prepared by local governments or adopt them by rule consistent with the act. In order to facilitate this process, Part I of this chapter establishes a recordkeeping system for the department and defines the contents of the state master program. Part II sets forth procedures for approving and adopting master programs and amendments thereto.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-010, filed 9/30/96, effective 10/31/96.]

WAC 173-26-020 Definitions. As used herein, the following words and phrases shall have the following meanings:

(1) "Adoption by rule" means an official action by the department to make a local government shoreline master program effective through rule consistent with the requirements of the Administrative Procedure Act, chapter 34.05 RCW, thereby incorporating the adopted shoreline master program or amendment into the state master program;

(2) "Amendment" means a revision, update, addition, deletion, and/or reenactment to an existing shoreline master program;

(3) "Approval" means an official action by a local government legislative body agreeing to submit a proposed shoreline master program or amendments to the department for review and official action pursuant to this chapter; or an official action by the department to make a local government shoreline master program effective, thereby incorporating the approved shoreline master program or amendment into the state master program;

(4) "Department" means the state department of ecology;

(5) "Development regulations" means the controls placed on development or land use activities by a county or city, including, but not limited to, zoning ordinances, critical areas ordinances, all portions of a shoreline master program other than goals and policies approved or adopted under chapter 90.58 RCW, official controls, planned unit development ordinances, subdivision ordinances, and binding site plan ordinances together with any amendments thereto;

(6) "Document of record" means the most current shoreline master program officially approved or adopted by rule by the department for a given local government jurisdiction, including any changes resulting from appeals filed pursuant to RCW 90.58.190;

(7) "Guidelines" means those standards adopted by the department to implement the policy of chapter 90.58 RCW for regulation of use of the shorelines of the state prior to adoption of master programs. Such standards shall also provide criteria for local governments and the department in developing and amending master programs;

(8) "Local government" means any county, incorporated city or town which contains within its boundaries shorelines of the state subject to chapter 90.58 RCW;

(9) "Shoreline master program" or "master program" means the comprehensive use plan for a described area, and the use regulations together with maps, diagrams, charts, or other descriptive material and text, a statement of desired goals, and standards developed in accordance with the policies enunciated in RCW 90.58.020;

As provided in RCW 36.70A.480, the goals and policies of a shoreline master program for a county or city approved under chapter 90.58 RCW shall be considered an element of the county or city's comprehensive plan. All other portions of the shoreline master program for a county or city adopted under chapter 90.58 RCW, including use regulations, shall be considered a part of the county or city's development regulations; and

(10) "State master program" means the cumulative total of all shoreline master programs and amendments thereto approved or adopted by rule by the department.

In addition, the definitions and concepts set forth in RCW 90.58.030, as amended, shall also apply as used herein.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-020, filed 9/30/96, effective 10/31/96.]

PART I STATE MASTER PROGRAM

WAC 173-26-030 Master programs required—State master program contents. (1) Chapter 90.58 RCW requires all local governments with shorelines of the state within their boundaries to develop and administer a shoreline master pro-

(1999 Ed.)

gram. The state master program is the cumulative total of all shoreline master programs and amendments thereto approved or adopted by rule by the department, together with any changes pursuant to WAC 173-26-040. Local governments which are required to develop and administer shoreline master programs are listed in WAC 173-26-080.

(2) All shoreline master programs adopted by reference in chapter 173-19 WAC existing as of the effective date of this chapter, remain in full force and effect and continue to be considered part of the state master program, as defined herein.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-030, filed 9/30/96, effective 10/31/96.]

WAC 173-26-040 Master programs required—Unlisted local governments. The department shall periodically update the list of local governments contained in WAC 173-26-080. When as a result of annexation, municipal incorporation, or change in shoreline jurisdiction, a city or town with shorelines of the state within its boundaries is not listed, such local government is required to develop and administer a shoreline master program pursuant to chapter 90.58 RCW and this chapter.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-040, filed 9/30/96, effective 10/31/96.]

WAC 173-26-050 State master program register—Maintained by department. The department shall prepare and maintain an official state master program register identifying original department adoption dates and the effective dates of subsequent amendments approved or adopted by the department for each local government shoreline master program. The master program register shall be available for public viewing and inspection during normal business hours at the headquarters of the department. Copies of the register shall be available from the department at the expense of the requesting party. The department shall keep the register current, incorporating master program adoption and amendment dates as they occur.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-050, filed 9/30/96, effective 10/31/96.]

WAC 173-26-060 State master program—Complete record maintained by department. The department shall maintain records for all master programs and subsequent amendments thereto. Master program records shall be organized consistent with the state master program register and shall be available for public viewing and inspection during normal business hours at the headquarters of the department.

The department shall maintain a record of each master program, the action taken by the department on any proposed master program or amendment, and any appeal of the department's action. Such records should be maintained in two groups of files as follows:

(1) Shoreline master program working files corresponding to each proposed master program or amendment containing, where applicable:

(a) Initial submittal from local government;

(b) Record of notice to the public, interested parties, agencies and tribes;

- (c) Staff reports, analysis and recommendations;
- (d) Pertinent correspondence between local government and the department;
- (e) The department's letter denying, approving as submitted or approving alternatives together with findings and conclusions and amended text and/or maps;
- (f) Documents related to any appeal of the department's action on the amendment;
- (g) Supplemental materials including:
 - (i) Interested party mailing list;
 - (ii) Comment letters and exhibits from federal, state, local, and tribal agencies;
 - (iii) Comment letters and exhibits from the general public;
 - (iv) Recorded tapes and/or a summary of hearing oral testimony;
 - (v) A concise explanatory statement, if adopted by rule.
- (2) State master program files, containing the master program currently in effect, with all text and map amendments incorporated, constituting the official state master program approved document of record.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-26-060, filed 9/30/96, effective 10/31/96.]

WAC 173-26-070 Adoption of shoreline master programs by rule—Department action. (1) The department may adopt a shoreline master program by rule in the following circumstances:

(a) Pursuant to RCW 90.58.070(2), when a local government fails to approve a master program relating to shorelines of the state within its jurisdiction in accordance with the time schedule provided for in RCW 90.58.080, the department shall carry out the requirements of RCW 90.58.080 and adopt by rule a master program for shorelines of the state within the jurisdiction of the local government. The department has adopted by rule a master program for shorelines of the state within the jurisdiction of those local governments listed in subsection (2) of this section;

(b) Pursuant to RCW 90.58.090(4), when the department determines that those parts of a master program relating to shorelines of state-wide significance do not provide for optimum implementation of the policy of chapter 90.58 RCW to satisfy the state-wide interest, the department may develop and adopt by rule an alternative to the local government's master program proposal. The department has adopted by rule an alternative master program for shorelines of state-wide significance within the jurisdiction of those local governments listed in subsection (2) of this section.

(2) As set forth in subsection (1)(a) and (b) of this section, the department has adopted by rule a master program, alternative master program or portion thereof for the local governments listed below. This listing shall be updated periodically so as to remove reference to local governments who have complied with the requirements of chapter 90.58 RCW and this chapter, having prepared and submitted a shoreline master program that has been approved by the department.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-26-070, filed 9/30/96, effective 10/31/96.]

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-080, filed 9/30/96, effective 10/31/96.]

PART II SHORELINE MASTER PROGRAM APPROVAL/AMENDMENT

DRAFT REVIEW:

WAC 173-26-090 Periodic review—Public involvement encouraged—Amendment of comprehensive plans, development regulations and master programs. Each local government should periodically review a shoreline master program under its jurisdiction and make amendments to the master program deemed necessary to reflect changing local circumstances, new information or improved data. Each local government shall also review any master program under its jurisdiction and make amendments to the master program necessary to comply with the requirements of RCW 90.58.080 and any applicable guidelines issued by the department. When the amendment is consistent with chapter 90.58 RCW and its applicable guidelines, it may be approved by local government and the department or adopted by rule when appropriate by the department.

In developing master programs and amendments thereto, the department and local governments, pursuant to RCW 90.58.130 shall make all reasonable efforts to inform, fully involve and encourage participation of all interested persons and private entities, and agencies of the federal, state or local government having interests and responsibilities relating to shorelines of the state and the local master program.

Counties and cities planning under chapter 36.70A RCW, shall establish and broadly disseminate to the public a public participation program identifying procedures whereby proposed amendments of the comprehensive plan and development regulations relating to shorelines of the state will be considered by the local governing body consistent with RCW

36.70A.130. Such procedures shall provide for early and continuous public participation through broad dissemination of informative materials, proposals and alternatives, opportunity for written comments, public meetings after effective notice, provision for open discussion, and consideration of and response to public comments.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-090, filed 9/30/96, effective 10/31/96.]

WAC 173-26-100 Local process for approving/amending shoreline master programs. Prior to submittal of a new or amended master program to the department, local government shall solicit public and agency comment during the drafting of proposed new or amended master programs. The degree of public and agency involvement sought by local government should be gauged according to the level of complexity, anticipated controversy, and range of issues covered in the draft proposal. Recognizing that the department must approve all master programs before they become effective, early and continuous consultation with the department is encouraged during the drafting of new or amended master programs. For local governments planning under chapter 36.70A RCW, local citizen involvement strategies should be implemented that insure early and continuous public participation consistent with WAC 365-195-600.

At a minimum, local government shall:

(1) Conduct at least one public hearing to consider the draft proposal;

(2) Publish notice of the hearing in one or more newspapers of general circulation in the area in which the hearing is to be held. The notice shall include:

(a) Reference to the authority(s) under which the action(s) is proposed;

(b) A statement or summary of the proposed changes to the master program;

(c) The date, time, and location of the hearing, and the manner in which interested persons may present their views; and

(d) Reference to the availability of the draft proposal for public inspection at the local government office or upon request;

(3) Consult with and solicit the comments of any persons, groups, federal, state, regional, or local agency, and tribes, having interests or responsibilities relating to the subject shorelines or any special expertise with respect to any environmental impact. The consultation process should include adjacent local governments with jurisdiction over common shorelines of the state;

(4) Where amendments are proposed to a county or regional master program which has been adopted by cities or towns, the county shall coordinate with those jurisdictions and verify concurrence with or denial of the proposal. For concurring jurisdictions, the amendments should be packaged and processed together. The procedural requirements of this section may be consolidated for concurring jurisdictions;

(5) Solicit comments on the draft proposal from the department prior to local approval. For local governments planning under the Growth Management Act, the local government shall notify both the department and the department of community, trade, and economic development of its intent

(1999 Ed.)

to adopt shoreline policies or regulations, at least sixty days prior to final local approval, pursuant to RCW 36.70A.106;

(6) Comply with chapter 43.21C RCW, the State Environmental Policy Act; and

(7) Approve the proposal.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-100, filed 9/30/96, effective 10/31/96.]

WAC 173-26-110 Submittal to department of proposed master programs/amendments. A master program or amendment proposed by local government shall be submitted to the department for its review and formal action. A complete submittal shall include two copies of the following, where applicable:

(1) Documentation (i.e., signed resolution or ordinance) that the proposal has been approved by the local government;

(2) If the proposal includes text amending a master program document of record, it shall be submitted in a form that can replace or be easily incorporated within the existing document. Amended text shall show strikeouts for deleted text and underlining for new text, clearly identifying the proposed changes. At the discretion of the department, strikeouts and underlined text may not be required provided the new or deleted portions of the master program are clearly identifiable;

(3) Amended environment designation map(s), showing both existing and proposed designations, together with corresponding boundaries described in text for each change of environment. Environment designation maps shall include a scale and north arrow and shall be of standard size using distinct reproducible noncolor patterns. All proposals for changes in environment designation and redesignation shall provide written justification for such based on existing development patterns, the biophysical capabilities and limitations of the shoreline being considered, and the goals and aspirations of the local citizenry as reflected in the locally adopted comprehensive land use plan;

(4) A summary of proposed amendments together with explanatory text indicating the scope and intent of the proposal, staff reports, records of the hearing, and/or other materials which document the necessity for the proposed changes to the master program;

(5) Evidence of compliance with chapter 43.21C RCW, the State Environmental Policy Act, specific to the proposal;

(6) Copies of all public, agency and tribal comments received, including a record of names and addresses of interested parties involved in the local government review process or, where no comments have been received, a comment to that effect.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-110, filed 9/30/96, effective 10/31/96.]

WAC 173-26-120 State process for approving/amending shoreline master programs. Review and approval of master programs and amendments by the department shall follow the procedures set forth below:

FORMAL REVIEW:

(1) The department shall review the submitted master program or amendment for compliance with WAC 173-26-

100 and 173-26-110. The department shall notify the local government in writing when it determines that a complete submittal has been received. If the submittal is determined to be incomplete, the department will identify the deficiencies and so notify the local government in writing. The review process will not commence until the department determines the submittal is complete.

(2) The department shall provide reasonable notice and opportunity for written comment to all parties of record who expressed interest regarding the local government proposal and to all persons, groups, agencies, and tribes that have requested in writing notice of proposed master programs or amendments generally or for a specific subject matter. The comment period shall be at least thirty days, unless the department determines that a lack of complexity or controversy surrounding the proposal supports a shorter period.

(3) For master program or amendment proposals involving local governments planning under chapter 36.70A RCW, the department shall provide notice to the department of community, trade, and economic development of its intent to commence formal review of the local government proposal.

(4) At the department's discretion, it may conduct a public hearing during the comment period in the jurisdiction proposing the master program or amendment.

(5) If the department conducts a hearing pursuant to subsection (4) of this section, it shall publish notice of the hearing in at least one newspaper of general circulation in the area affected by the master program. The public notice shall include:

(a) A description of the proposed master program or amendment;

(b) Reference to the authority under which the action is proposed;

(c) The dates, times, and locations of the public hearing, and the manner in which interested persons may obtain copies of the proposal and present their views.

For master program or amendment proposals involving adoption by rule, the notice of the hearing shall be published at least once in each of the three weeks immediately preceding the hearing in one or more newspapers of general circulation in the county in which the hearing is to be held.

(6) Within fifteen days after the close of the department's public comment period, the department shall request of the local government submitting the proposal a review of the issues if any, identified by the public, interested parties, groups, agencies, and tribes, and a written response as to how the proposal addresses the identified issues consistent with the policy of RCW 90.58.020 and the applicable guidelines. Local government shall submit its response to the department within forty-five days of the date of the department's letter requesting a response. If no response is received by the department within the forty-five-day period, the department may proceed with action on the proposal according to subsection (7) of this section. Within the forty-five-day period, the local government may request in writing additional time to prepare a response.

APPROVAL:

(7) Within thirty days after receipt of the local government written response pursuant to subsection (6) of this sec-

[Title 173 WAC—p. 154]

tion, the department shall make written findings and conclusions regarding the consistency of the proposal with the policy of RCW 90.58.020 and the applicable guidelines, provide a response to the issues identified in subsection (6) of this section and either approve the proposal as submitted, recommend specific changes necessary to make the proposal consistent with chapter 90.58 RCW policy and its applicable guidelines, or deny the proposal in those instances where no alteration of the proposal appears likely to be consistent with the policy of RCW 90.58.020 and the applicable guidelines. The written findings and conclusions shall be provided to the local government, all interested parties, tribes, and agencies of record on the proposal.

In reaching its determination of consistency with the policy of RCW 90.58.020 and the applicable guidelines, the department shall approve those parts of a master program relating to shorelines unless it determines that the submitted parts are not consistent with the policy of RCW 90.58.020 and the applicable guidelines. The department shall approve those parts of a master program relating to shorelines of statewide significance only after determining the program provides for optimum implementation of the state-wide interest as set forth in the policy of RCW 90.58.020 and the applicable guidelines.

(a) In cases where the proposal is approved as submitted, the effective date of the approved master program or amendment shall be the date of the department's letter to local government approving the submitted master program or amendments.

(b) If the department recommends changes to the proposal, within thirty days after the department mails the written findings and conclusions to the local government pursuant to this subsection (7), the local government may:

(i) Agree to the proposed changes. Receipt by the department of the written notice of agreement from the local government shall constitute final action by the department approving the revised submittal. Written notice of the local government acceptance shall be provided by the department to all parties of record. In such cases, the effective date of the approved master program or amendment is the date the department receives from local government the written notice of agreement; or

(ii) Submit an alternative proposal. If, in the opinion of the department, the alternative is consistent with the purpose and intent of the changes originally proposed by the department in this subsection (7) and with the policy of RCW 90.58.020 and the applicable guidelines, it shall approve the alternative changes and provide written notice to all parties of record. In such cases, the effective date of the approved master program or amendments is the date of the department's letter to local government approving the alternative proposal.

If the department determines the alternative proposal is not consistent with the purpose and intent of the changes proposed by the department, the department may either deny the alternative proposal or at the request of local government start anew with the review and approval process beginning at WAC 173-26-120.

(8) A master program or amendment thereto takes effect when and in such form as it is approved or adopted by rule by the department except when appealed to the shorelines board

(1999 Ed.)

as provided for in RCW 90.58.190(4) for local governments not planning under chapter 36.70A RCW. The department's approved document of record, filed at the department, constitutes the official master program.

(9) For local governments planning under chapter 36.70A RCW, after final action by the department on a local government's shoreline master program or amendment the local government shall (pursuant to RCW 90.58.090) promptly publish a notice that the department has taken final action on the master program or amendment. For purposes of this section, the date of publication for the master program adoption or amendment shall be the date on which the local government publishes the notice that the department has taken final action on the master program or amendment.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-120, filed 9/30/96, effective 10/31/96.]

WAC 173-26-130 Appeal procedures for master programs. (1) For local governments planning under chapter 36.70A RCW, the growth management hearings board with jurisdiction shall hear and make determinations regarding the department's decision to approve, adopt by rule, or deny a proposed master program or amendment. All petitions for review shall be filed within sixty days after publication of notice by the local government of the department's final action pursuant to WAC 173-26-120(9).

(2) For local governments not planning under chapter 36.70A RCW, all petitions for review shall be filed with the state shorelines hearings board within thirty days of the written decision by the department approving or denying the master program or amendment.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-130, filed 9/30/96, effective 10/31/96.]

WAC 173-26-140 Shoreline master program administrative interpretation. As required by RCW 36.70B.110(11), each local government planning under chapter 36.70A RCW shall adopt procedures for administrative interpretation of its development regulations, which include shoreline master programs. When developing and adopting procedures for administrative interpretation of its shoreline master program, local government shall include provisions requiring consultation with the department to insure that any formal written interpretations are consistent with the purpose and intent of chapter 90.58 RCW and the applicable guidelines.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-140, filed 9/30/96, effective 10/31/96.]

WAC 173-26-150 Local government annexation—Shoreline environment predesignation in planning jurisdictions. Cities and towns planning under the Growth Management Act, chapter 36.70A RCW, may within adopted urban growth areas predesignate environments on shorelines located outside of existing city boundaries. Shoreline environment predesignations shall be consistent with the policy of chapters 36.70A and 90.58 RCW and their applicable guidelines and rules.

(1999 Ed.)

Such predesignation shall be conducted under a city's or town's authority to plan for growth within adopted urban growth areas.

Environment predesignations shall be approved by the department according to the procedures set forth in this chapter for amendment of a shoreline master program. No additional procedures are required by the department at the time of annexation. The shoreline environment designation for a predesignated shoreline area shall take effect concurrent with annexation.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-150, filed 9/30/96, effective 10/31/96.]

WAC 173-26-160 Local government annexation. Except as provided in WAC 173-26-150, in the event of annexation of a shoreline of the state, the local government assuming jurisdiction shall notify the department of such annexation and develop or amend a master program to include the annexed area. Such master program development or amendment shall be consistent with the policy of RCW 90.58.020 and the applicable guidelines and shall be submitted to the department for approval no later than one year from the effective date of annexation.

Until a new or amended master program is adopted by the department, any decision on an application for a shoreline permit in the annexed shoreline area shall be based upon compliance with the master program in effect for the area prior to annexation.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-26-160, filed 9/30/96, effective 10/31/96.]

Chapter 173-27 WAC

SHORELINE MANAGEMENT PERMIT AND ENFORCEMENT PROCEDURES

WAC

PART I

PERMITS FOR DEVELOPMENT ON SHORELINES OF THE STATE

173-27-010	Authority.
173-27-020	Purpose.
173-27-030	Definitions.
173-27-040	Developments exempt from substantial development permit requirement.

173-27-990	Appendix A.

PART I
PERMITS FOR DEVELOPMENT ON SHORELINES
OF THE STATE

WAC 173-27-010 Authority. The provisions of this part implement the requirements of chapter 90.58 RCW, the Shoreline Management Act. Specifically, RCW 90.58.200 authorizes the adoption of rules as necessary to implement the provisions of the act and RCW 90.58.140(3) requires that the department adopt rules for administration and enforcement of the permit system established by the act.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-010, filed 9/30/96, effective 10/31/96.]

WAC 173-27-020 Purpose. RCW 90.58.140(3) requires local governments to establish a program, consistent with rules adopted by the department of ecology, for the administration and enforcement of the permit system for shoreline management. The local program should be integrated with other local government systems for administration and enforcement of land use regulations. It is the intent of these regulations to provide minimum procedural requirements as necessary to comply with statutory requirements while providing latitude for local government to establish procedural systems based on local needs and circumstances. It is also the intent of these regulations to provide for integration of the shoreline permit into a consolidated environmental review and permit process.

This regulation is drafted to also reflect RCW 90.58.050 which provides that the Shoreline Management Act is intended to establish a cooperative program between local government and the state. According to this provision, local government shall have the primary responsibility for initiating the planning required by the act and administering the regulatory program of shoreline management consistent with the policy and provisions of the act, whereas the department shall act primarily in a supportive and review capacity with an emphasis on providing assistance to local government and on insuring compliance with the policies and provisions of the Shoreline Management Act.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-020, filed 9/30/96, effective 10/31/96.]

WAC 173-27-030 Definitions. The following definitions shall apply:

(1) "Act" means chapter 90.58 RCW, the Shoreline Management Act of 1971, as amended;

(2) "Applicable master program" means the master program approved or adopted by the department pursuant to RCW 90.58.090(6) or 90.58.190(4) prior to acceptance of a complete application by local government;

(3) "Average grade level" means the average of the natural or existing topography of the portion of the lot, parcel, or tract of real property which will be directly under the proposed building or structure: In the case of structures to be built over water, average grade level shall be the elevation of the ordinary high water mark. Calculation of the average grade level shall be made by averaging the ground elevations at the midpoint of all exterior walls of the proposed building or structure;

(4) "Conditional use" means a use, development, or substantial development which is classified as a conditional use or is not classified within the applicable master program;

(5) "Department" means the department of ecology;

(6) "Development" means a use consisting of the construction or exterior alteration of structures; dredging; drilling; dumping; filling; removal of any sand, gravel, or minerals; bulkheading; driving of piling; placing of obstructions; or any project of a permanent or temporary nature which interferes with the normal public use of the surface of the waters overlying lands subject to the act at any stage of water level;

(7) "Exempt" developments are those set forth in WAC 173-27-040 and RCW 90.58.030 (3)(e), 90.58.140(9), 90.58.147, 90.58.355, and 90.58.515 which are not required to obtain a substantial development permit but which must otherwise comply with applicable provisions of the act and the local master program;

(8) "Fair market value" of a development is the open market bid price for conducting the work, using the equipment and facilities, and purchase of the goods, services and materials necessary to accomplish the development. This would normally equate to the cost of hiring a contractor to undertake the development from start to finish, including the cost of labor, materials, equipment and facility usage, transportation and contractor overhead and profit. The fair market value of the development shall include the fair market value of any donated, contributed or found labor, equipment or materials;

(9) "Height" is measured from average grade level to the highest point of a structure: *Provided*, That television antennas, chimneys, and similar appurtenances shall not be used in calculating height, except where such appurtenances obstruct the view of the shoreline of a substantial number of residences on areas adjoining such shorelines, or the applicable master program specifically requires that such appurtenances be included: *Provided further*, That temporary construction equipment is excluded in this calculation;

(10) "Local government" means any county, incorporated city, or town which contains within its boundaries any lands or waters subject to chapter 90.58 RCW;

(11) "Natural or existing topography" means the topography of the lot, parcel, or tract of real property immediately prior to any site preparation or grading, including excavation or filling;

(12) "Party of record" includes all persons, agencies or organizations who have submitted written comments in response to a notice of application; made oral comments in a formal public hearing conducted on the application; or notified local government of their desire to receive a copy of the final decision on a permit and who have provided an address for delivery of such notice by mail;

(13) "Permit" means any substantial development, variance, conditional use permit, or revision authorized under chapter 90.58 RCW;

(14) "Public interest" means the interest shared by the citizens of the state or community at large in the affairs of government, or some interest by which their rights or liabilities are affected including, but not limited to, an effect on public property or on health, safety, or general welfare resulting from a use or development;

(15) "Structure" means a permanent or temporary edifice or building, or any piece of work artificially built or composed of parts joined together in some definite manner, whether installed on, above, or below the surface of the ground or water, except for vessels;

(16) "Transmit" means to send from one person or place to another by mail or hand delivery. The date of transmittal for mailed items is the date that the document is certified for mailing or, for hand-delivered items, is the date of receipt at the destination;

(17) "Variance" is a means to grant relief from the specific bulk, dimensional or performance standards set forth in the applicable master program and not a means to vary a use of a shoreline;

(18) "Vessel" includes ships, boats, barges, or any other floating craft which are designed and used for navigation and do not interfere with the normal public use of the water;

(19) The definitions and concepts set forth in RCW 90.58.030, and chapters 173-25 and 173-26 WAC also apply as used in this chapter.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-030, filed 9/30/96, effective 10/31/96.]

WAC 173-27-040 Developments exempt from substantial development permit requirement. (1) Application and interpretation of exemptions.

(a) Exemptions shall be construed narrowly. Only those developments that meet the precise terms of one or more of the listed exemptions may be granted exemption from the substantial development permit process.

(b) An exemption from the substantial development permit process is not an exemption from compliance with the act or the local master program, nor from any other regulatory requirements. To be authorized, all uses and developments must be consistent with the policies and provisions of the applicable master program and the Shoreline Management Act. A development or use that is listed as a conditional use pursuant to the local master program or is an unlisted use, must obtain a conditional use permit even though the development or use does not require a substantial development permit. When a development or use is proposed that does not comply with the bulk, dimensional and performance standards of the master program, such development or use can only be authorized by approval of a variance.

(c) The burden of proof that a development or use is exempt from the permit process is on the applicant.

(d) If any part of a proposed development is not eligible for exemption, then a substantial development permit is required for the entire proposed development project.

(e) Local government may attach conditions to the approval of exempted developments and/or uses as necessary

(1999 Ed.)

to assure consistency of the project with the act and the local master program.

(2) The following developments shall not require substantial development permits:

(a) Any development of which the total cost or fair market value, whichever is higher, does not exceed two thousand five hundred dollars, if such development does not materially interfere with the normal public use of the water or shorelines of the state. For purposes of determining whether or not a permit is required, the total cost or fair market value shall be based on the value of development that is occurring on shorelines of the state as defined in RCW 90.58.030 (2)(c). The total cost or fair market value of the development shall include the fair market value of any donated, contributed or found labor, equipment or materials;

(b) Normal maintenance or repair of existing structures or developments, including damage by accident, fire or elements. "Normal maintenance" includes those usual acts to prevent a decline, lapse, or cessation from a lawfully established condition. "Normal repair" means to restore a development to a state comparable to its original condition, including but not limited to its size, shape, configuration, location and external appearance, within a reasonable period after decay or partial destruction, except where repair causes substantial adverse effects to shoreline resource or environment. Replacement of a structure or development may be authorized as repair where such replacement is the common method of repair for the type of structure or development and the replacement structure or development is comparable to the original structure or development including but not limited to its size, shape, configuration, location and external appearance and the replacement does not cause substantial adverse effects to shoreline resources or environment;

(c) Construction of the normal protective bulkhead common to single-family residences. A "normal protective" bulkhead includes those structural and nonstructural developments installed at or near, and parallel to, the ordinary high water mark for the sole purpose of protecting an existing single-family residence and appurtenant structures from loss or damage by erosion. A normal protective bulkhead is not exempt if constructed for the purpose of creating dry land. When a vertical or near vertical wall is being constructed or reconstructed, not more than one cubic yard of fill per one foot of wall may be used as backfill. When an existing bulkhead is being repaired by construction of a vertical wall fronting the existing wall, it shall be constructed no further waterward of the existing bulkhead than is necessary for construction of new footings. When a bulkhead has deteriorated such that an ordinary high water mark has been established by the presence and action of water landward of the bulkhead then the replacement bulkhead must be located at or near the actual ordinary high water mark. Beach nourishment and bioengineered erosion control projects may be considered a normal protective bulkhead when any structural elements are consistent with the above requirements and when the project has been approved by the department of fish and wildlife.

(d) Emergency construction necessary to protect property from damage by the elements. An "emergency" is an unanticipated and imminent threat to public health, safety, or the environment which requires immediate action within a

time too short to allow full compliance with this chapter. Emergency construction does not include development of new permanent protective structures where none previously existed. Where new protective structures are deemed by the administrator to be the appropriate means to address the emergency situation, upon abatement of the emergency situation the new structure shall be removed or any permit which would have been required, absent an emergency, pursuant to chapter 90.58 RCW, these regulations, or the local master program, obtained. All emergency construction shall be consistent with the policies of chapter 90.58 RCW and the local master program. As a general matter, flooding or other seasonal events that can be anticipated and may occur but that are not imminent are not an emergency;

(e) Construction and practices normal or necessary for farming, irrigation, and ranching activities, including agricultural service roads and utilities on shorelands, construction of a barn or similar agricultural structure, and the construction and maintenance of irrigation structures including but not limited to head gates, pumping facilities, and irrigation channels: *Provided*, That a feedlot of any size, all processing plants, other activities of a commercial nature, alteration of the contour of the shorelands by leveling or filling other than that which results from normal cultivation, shall not be considered normal or necessary farming or ranching activities. A feedlot shall be an enclosure or facility used or capable of being used for feeding livestock hay, grain, silage, or other livestock feed, but shall not include land for growing crops or vegetation for livestock feeding and/or grazing, nor shall it include normal livestock wintering operations;

(f) Construction or modification, by or under the authority of the Coast Guard or a designated port management authority, of navigational aids such as channel markers and anchor buoys;

(g) Construction on shorelands by an owner, lessee or contract purchaser of a single-family residence for their own use or for the use of their family, which residence does not exceed a height of thirty-five feet above average grade level and which meets all requirements of the state agency or local government having jurisdiction thereof. "Single-family residence" means a detached dwelling designed for and occupied by one family including those structures and developments within a contiguous ownership which are a normal appurtenance. An "appurtenance" is necessarily connected to the use and enjoyment of a single-family residence and is located landward of the ordinary high water mark and the perimeter of a wetland. On a state-wide basis, normal appurtenances include a garage; deck; driveway; utilities; fences; installation of a septic tank and drainfield and grading which does not exceed two hundred fifty cubic yards and which does not involve placement of fill in any wetland or waterward of the ordinary high water mark. Local circumstances may dictate additional interpretations of normal appurtenances which shall be set forth and regulated within the applicable master program. Construction authorized under this exemption shall be located landward of the ordinary high water mark;

(h) Construction of a dock, including a community dock, designed for pleasure craft only, for the private noncommercial use of the owners, lessee, or contract purchaser of a single-family and multiple-family residences. A dock is a land-

ing and moorage facility for watercraft and does not include recreational decks, storage facilities or other appurtenances. This exception applies if either:

(i) In salt waters, the fair market value of the dock does not exceed two thousand five hundred dollars; or

(ii) In fresh waters the fair market value of the dock does not exceed ten thousand dollars, but if subsequent construction having a fair market value exceeding two thousand five hundred dollars occurs within five years of completion of the prior construction, the subsequent construction shall be considered a substantial development for the purpose of this chapter.

For purposes of this section salt water shall include the tidally influenced marine and estuarine water areas of the state including the Pacific Ocean, Strait of Juan de Fuca, Strait of Georgia and Puget Sound and all bays and inlets associated with any of the above;

(i) Operation, maintenance, or construction of canals, waterways, drains, reservoirs, or other facilities that now exist or are hereafter created or developed as a part of an irrigation system for the primary purpose of making use of system waters, including return flow and artificially stored ground water from the irrigation of lands;

(j) The marking of property lines or corners on state-owned lands, when such marking does not significantly interfere with normal public use of the surface of the water;

(k) Operation and maintenance of any system of dikes, ditches, drains, or other facilities existing on June 4, 1975, which were created, developed or utilized primarily as a part of an agricultural drainage or diking system;

(l) Any project with a certification from the governor pursuant to chapter 80.50 RCW;

(m) Site exploration and investigation activities that are prerequisite to preparation of an application for development authorization under this chapter, if:

(i) The activity does not interfere with the normal public use of the surface waters;

(ii) The activity will have no significant adverse impact on the environment including but not limited to fish, wildlife, fish or wildlife habitat, water quality, and aesthetic values;

(iii) The activity does not involve the installation of any structure, and upon completion of the activity the vegetation and land configuration of the site are restored to conditions existing before the activity;

(iv) A private entity seeking development authorization under this section first posts a performance bond or provides other evidence of financial responsibility to the local jurisdiction to ensure that the site is restored to preexisting conditions; and

(v) The activity is not subject to the permit requirements of RCW 90.58.550;

(n) The process of removing or controlling aquatic noxious weeds, as defined in RCW 17.26.020, through the use of an herbicide or other treatment methods applicable to weed control that are recommended by a final environmental impact statement published by the department of agriculture or the department of ecology jointly with other state agencies under chapter 43.21C RCW;

(o) Watershed restoration projects as defined herein. Local government shall review the projects for consistency

with the shoreline master program in an expeditious manner and shall issue its decision along with any conditions within forty-five days of receiving all materials necessary to review the request for exemption from the applicant. No fee may be charged for accepting and processing requests for exemption for watershed restoration projects as used in this section.

(i) "Watershed restoration project" means a public or private project authorized by the sponsor of a watershed restoration plan that implements the plan or a part of the plan and consists of one or more of the following activities:

(A) A project that involves less than ten miles of stream-reach, in which less than twenty-five cubic yards of sand, gravel, or soil is removed, imported, disturbed or discharged, and in which no existing vegetation is removed except as minimally necessary to facilitate additional plantings;

(B) A project for the restoration of an eroded or unstable stream bank that employs the principles of bioengineering, including limited use of rock as a stabilization only at the toe of the bank, and with primary emphasis on using native vegetation to control the erosive forces of flowing water; or

(C) A project primarily designed to improve fish and wildlife habitat, remove or reduce impediments to migration of fish, or enhance the fishery resource available for use by all of the citizens of the state, provided that any structure, other than a bridge or culvert or instream habitat enhancement structure associated with the project, is less than two hundred square feet in floor area and is located above the ordinary high water mark of the stream.

(ii) "Watershed restoration plan" means a plan, developed or sponsored by the department of fish and wildlife, the department of ecology, the department of natural resources, the department of transportation, a federally recognized Indian tribe acting within and pursuant to its authority, a city, a county, or a conservation district that provides a general program and implementation measures or actions for the preservation, restoration, re-creation, or enhancement of the natural resources, character, and ecology of a stream, stream segment, drainage area, or watershed for which agency and public review has been conducted pursuant to chapter 43.21C RCW, the State Environmental Policy Act;

(p) A public or private project, the primary purpose of which is to improve fish or wildlife habitat or fish passage, when all of the following apply:

(i) The project has been approved in writing by the department of fish and wildlife as necessary for the improvement of the habitat or passage and appropriately designed and sited to accomplish the intended purpose;

(ii) The project has received hydraulic project approval by the department of fish and wildlife pursuant to chapter 75.20 RCW; and

(iii) The local government has determined that the project is consistent with the local shoreline master program. The local government shall make such determination in a timely manner and provide it by letter to the project proponent.

(3) Hazardous substance remedial actions. The procedural requirements of chapter 90.58 RCW shall not apply to a project for which a consent decree, order or agreed order has been issued pursuant to chapter 70.105D RCW or to the department of ecology when it conducts a remedial action

under chapter 70.105D RCW. The department shall, in consultation with the appropriate local government, assure that such projects comply with the substantive requirements of chapter 90.58 RCW, chapter 173-26 WAC and the local master program.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-040, filed 9/30/96, effective 10/31/96.]

WAC 173-27-050 Letter of exemption. Some projects conducted on shorelines of the state also require review and approval by federal agencies. Ecology is designated as the coordinating agency for the state with regard to permits issued by the U.S. Army Corps of Engineers. The following is intended to facilitate ecology's coordination of local actions, with regard to exempt development, with federal permit review.

(1) The local government shall prepare a letter of exemption, addressed to the applicant and the department, whenever a development is determined by a local government to be exempt from the substantial development permit requirements and the development is subject to one or more of the following federal permit requirements:

(a) A U.S. Army Corps of Engineers section 10 permit under the Rivers and Harbors Act of 1899; (The provisions of section 10 of the Rivers and Harbors Act generally apply to any project occurring on or over navigable waters. Specific applicability information should be obtained from the Corps of Engineers.) or

(b) A section 404 permit under the Federal Water Pollution Control Act of 1972. (The provisions of section 404 of the Federal Water Pollution Control Act generally apply to any project which may involve discharge of dredge or fill material to any water or wetland area. Specific applicability information should be obtained from the Corps of Engineers.)

(2) The letter shall indicate the specific exemption provision from WAC 173-27-040 that is being applied to the development and provide a summary of the local government's analysis of the consistency of the project with the master program and the act.

(3) Local government may specify other developments not described within subsection (1) of this section as requiring a letter of exemption prior to commencement of the development.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-050, filed 9/30/96, effective 10/31/96.]

WAC 173-27-060 Applicability of chapter 90.58 RCW to federal lands and agencies. The policies and provisions of chapter 90.58 RCW including the permit system shall be applied in the following manner to federal agencies on lands meeting the criteria of the Shoreline Management Act for shorelines of the state.

(1) Within the coastal counties.

Direct federal agency actions and projects shall be consistent to the maximum extent practicable with the approved Washington state coastal zone management program subject to certain limitations set forth in the Federal Coastal Zone Management Act, 16 U.S.C. 1451 et seq. (CZMA) and regulations adopted pursuant thereto. Other applicable federal law

governing the federal agency actions may determine whether the permit system of chapter 90.58 RCW is applicable.

The Shoreline Management Act is incorporated into the Washington state coastal zone management plan and, thereby, those direct federal actions occurring on lands subject to the act must be consistent to the maximum practicable extent with the act, regulations adopted pursuant to the act and with the local master program. Local government is in the best position to determine the appropriate procedure for review of federal development activities at the local level while the state must take action on federal consistency determinations submitted to it.

(a) When the department receives a consistency determination for a development proposed by the federal government on land subject to the act, it shall request that local government review the proposal and respond in writing that the local government:

(i) Cannot make a determination of the consistency of the project with the master program without reviewing the project in the regular permit process; or

(ii) Has reviewed the project for consistency with the local master program without using the permit system. Local government may recommend that the project be approved, approved only under certain specified conditions or denied.

(iii) Defers review of the project to the state.

(b) Upon receipt of a response from local government that a permit is required to make a determination, the department shall inform the requesting agency of the local government finding and shall indicate that concurrence with the consistency determination cannot be granted until a permit is issued. If the local government chooses to review and make a recommendation without using the permit system it shall so notify the department and submit its recommendation to the department within thirty days unless a longer period of time is agreed to by the federal agency and the department. If no response is received from local government within thirty days they shall be deemed to have deferred review of the project.

(c) Nothing in this section shall be deemed to preclude independent review of the project by the state pursuant to any appropriate authority consistent with the approved coastal zone management plan.

(d) The coastal counties, as established in Washington's approved coastal zone management plan, consist of the following counties: Whatcom, Skagit, San Juan, Island, Snohomish, King, Pierce, Thurston, Mason, Kitsap, Jefferson, Clallam, Grays Harbor, Pacific and Wahkiakum.

(2) Outside of the coastal counties.

(a) Direct federal agency actions that are reasonably likely to affect any coastal use or resource shall be consistent with the approved coastal zone management plan to the maximum extent practicable subject to limitations set forth in the Federal Coastal Zone Management Act, 16 U.S.C. 1451 et seq. (CZMA) and regulations adopted pursuant thereto. Other applicable federal law governing the federal agency actions may determine whether the permit system of chapter 90.58 RCW is applicable.

(b) Except as provided in (a) of this subsection, federal agencies shall not be required to obtain permits for developments undertaken by the federal government on lands owned

in fee by the federal government or on easements obtained by the federal government for a specified purpose where the proposed development is consistent with the specified purpose, unless under either circumstance the federal government grants or reserves to the state or local government substantial jurisdiction over activities on those lands.

(c) Except as provided in (a) of this subsection, the permit system shall apply to developments undertaken on lands not federally owned but under lease, license, or other similar federal property rights short of fee ownership, to the federal government.

(3) The policies and provisions of chapter 90.58 RCW, including the permit system, shall apply state-wide to all non-federal developments and uses undertaken on federal lands and on lands subject to nonfederal ownership, lease or easement, even though such lands may fall within the external boundaries of a federal ownership.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-060, filed 9/30/96, effective 10/31/96.]

WAC 173-27-070 Application of the permit system to substantial development undertaken prior to the effective date of the act. (1) Substantial development undertaken on the shorelines of the state prior to the effective date of the act shall not require a permit except under the following circumstances:

(a) When the activity was unlawful prior to the effective date of the act.

(b) When there has been an unreasonable period of dormancy in the project between its inception and the effective date of the act.

(c) When the development is not completed within two years after the effective date of the act.

(d) When substantial development occurred prior to the effective date of the act on a shoreline and continued on to a different lake, river or tributary after the effective date, a permit shall be required for the development undertaken after the effective date.

(e) Substantial development undertaken prior to the effective date of the act shall not continue without a permit into other phases that were not part of the plan being followed at the time construction commenced.

(2) When a change in the area subject to the jurisdiction of the act occurs as a result of a determination of jurisdiction by the department based on the provisions of RCW 90.58.030 (2)(d) or (e), the effective date of the act shall be the date the department provides written notice of the change to the local government(s) in which the affected area is located.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-070, filed 9/30/96, effective 10/31/96.]

WAC 173-27-080 Nonconforming use and development standards. When nonconforming use and development standards do not exist in the applicable master program, the following definitions and standards shall apply:

(1) "Nonconforming use or development" means a shoreline use or development which was lawfully constructed or established prior to the effective date of the act or the applicable master program, or amendments thereto, but

which does not conform to present regulations or standards of the program.

(2) Structures that were legally established and are used for a conforming use but which are nonconforming with regard to setbacks, buffers or yards; area; bulk; height or density may be maintained and repaired and may be enlarged or expanded provided that said enlargement does not increase the extent of nonconformity by further encroaching upon or extending into areas where construction or use would not be allowed for new development or uses.

(3) Uses and developments that were legally established and are nonconforming with regard to the use regulations of the master program may continue as legal nonconforming uses. Such uses shall not be enlarged or expanded, except that nonconforming single-family residences that are located landward of the ordinary high water mark may be enlarged or expanded in conformance with applicable bulk and dimensional standards by the addition of space to the main structure or by the addition of normal appurtenances as defined in WAC 173-27-040 (2)(g) upon approval of a conditional use permit.

(4) A use which is listed as a conditional use but which existed prior to adoption of the master program or any relevant amendment and for which a conditional use permit has not been obtained shall be considered a nonconforming use. A use which is listed as a conditional use but which existed prior to the applicability of the master program to the site and for which a conditional use permit has not been obtained shall be considered a nonconforming use.

(5) A structure for which a variance has been issued shall be considered a legal nonconforming structure and the requirements of this section shall apply as they apply to pre-existing nonconformities.

(6) A structure which is being or has been used for a nonconforming use may be used for a different nonconforming use only upon the approval of a conditional use permit. A conditional use permit may be approved only upon a finding that:

(a) No reasonable alternative conforming use is practical; and

(b) The proposed use will be at least as consistent with the policies and provisions of the act and the master program and as compatible with the uses in the area as the preexisting use.

In addition such conditions may be attached to the permit as are deemed necessary to assure compliance with the above findings, the requirements of the master program and the Shoreline Management Act and to assure that the use will not become a nuisance or a hazard.

(7) A nonconforming structure which is moved any distance must be brought into conformance with the applicable master program and the act.

(8) If a nonconforming development is damaged to an extent not exceeding seventy-five percent of the replacement cost of the original development, it may be reconstructed to those configurations existing immediately prior to the time the development was damaged, provided that application is made for the permits necessary to restore the development within six months of the date the damage occurred, all per-

mits are obtained and the restoration is completed within two years of permit issuance.

(9) If a nonconforming use is discontinued for twelve consecutive months or for twelve months during any two-year period, the nonconforming rights shall expire and any subsequent use shall be conforming. A use authorized pursuant to subsection (6) of this section shall be considered a conforming use for purposes of this section.

(10) An undeveloped lot, tract, parcel, site, or division of land located landward of the ordinary high water mark which was established in accordance with local and state subdivision requirements prior to the effective date of the act or the applicable master program but which does not conform to the present lot size standards may be developed if permitted by other land use regulations of the local government and so long as such development conforms to all other requirements of the applicable master program and the act.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-080, filed 9/30/96, effective 10/31/96.]

WAC 173-27-090 Time requirements of permit. The following time requirements shall apply to all substantial development permits and to any development authorized pursuant to a variance or conditional use permit.

(1) Upon a finding of good cause, based on the requirements and circumstances of the project proposed and consistent with the policy and provisions of the master program and the act, local government may adopt appropriate time limits as a part of action on a substantial development permit and local government, with the approval of the department, may adopt appropriate time limits as a part of action on a conditional use or variance permit: "Good cause based on the requirements and circumstances of the project," shall mean that the time limits established are reasonably related to the time actually necessary to perform the development on the ground and complete the project that is being permitted, and/or are necessary for the protection of shoreline resources.

(2) Where neither local government nor the department include specific provisions establishing time limits on a permit as a part of action on the permit, the following time limits shall apply:

(a) Construction shall be commenced or, where no construction is involved, the use or activity shall be commenced within two years of the effective date of a shoreline permit. Provided, that local government may authorize a single extension for a period not to exceed one year based on reasonable factors, if a request for extension has been filed before the expiration date and notice of the proposed extension is given to parties of record and the department.

(b) Authorization to conduct development activities shall terminate five years after the effective date of a shoreline permit. Provided, that local government may authorize a single extension for a period not to exceed one year based on reasonable factors, if a request for extension has been filed before the expiration date and notice of the proposed extension is given to parties of record and the department.

(3) The effective date of a shoreline permit shall be the date of the last action required on the shoreline permit and all other government permits and approvals that authorize the development to proceed, including all administrative and

legal actions on any such permit or approval. It is the responsibility of the applicant to inform the local government of the pendency of other permit applications filed with agencies other than the local government and of any related administrative and legal actions on any permit or approval. If no notice of the pendency of other permits or approvals is given to the local government prior to the date established by the shoreline permit or the provisions of this section, the expiration of a permit shall be based on the shoreline permit.

(4) When permit approval is based on conditions, such conditions shall be satisfied prior to occupancy or use of a structure or prior to commencement of a nonstructural activity: *Provided*, That an alternative compliance limit may be specified in the permit.

(5) Revisions to permits under WAC 173-27-100 may be authorized after original permit authorization has expired under subsection (2) of this section: *Provided*, That this procedure shall not be used to extend the original permit time requirements or to authorize substantial development after the time limits of the original permit.

(6) Local government shall notify the department in writing of any change to the effective date of a permit, as authorized by this section, with an explanation of the basis for approval of the change. Any change to the time limits of a permit other than those authorized by this section shall require a new permit application.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-090, filed 9/30/96, effective 10/31/96.]

WAC 173-27-100 Revisions to permits. A permit revision is required whenever the applicant proposes substantive changes to the design, terms or conditions of a project from that which is approved in the permit. Changes are substantive if they materially alter the project in a manner that relates to its conformance to the terms and conditions of the permit, the master program and/or the policies and provisions of chapter 90.58 RCW. Changes which are not substantive in effect do not require approval of a revision.

When an applicant seeks to revise a permit, local government shall request from the applicant detailed plans and text describing the proposed changes.

(1) If local government determines that the proposed changes are within the scope and intent of the original permit, and are consistent with the applicable master program and the act, local government may approve a revision.

(2) "Within the scope and intent of the original permit" means all of the following:

(a) No additional over water construction is involved except that pier, dock, or float construction may be increased by five hundred square feet or ten percent from the provisions of the original permit, whichever is less;

(b) Ground area coverage and height may be increased a maximum of ten percent from the provisions of the original permit;

(c) The revised permit does not authorize development to exceed height, lot coverage, setback, or any other requirements of the applicable master program except as authorized under a variance granted as the original permit or a part thereof;

(d) Additional or revised landscaping is consistent with any conditions attached to the original permit and with the applicable master program;

(e) The use authorized pursuant to the original permit is not changed; and

(f) No adverse environmental impact will be caused by the project revision.

(3) Revisions to permits may be authorized after original permit authorization has expired under WAC 173-27-080(2). The purpose of such revisions shall be limited to authorization of changes which are consistent with this section and which would not require a permit for the development or change proposed under the terms of chapter 90.58 RCW, this regulation and the local master program. If the proposed change constitutes substantial development then a new permit is required. *Provided*, this subsection shall not be used to extend the time requirements or to authorize substantial development beyond the time limits of the original permit.

(4) If the sum of the revision and any previously approved revisions under former WAC 173-14-064 or this section violate the provisions in subsection (2) of this section, local government shall require that the applicant apply for a new permit.

(5) The revision approval, including the revised site plans and text consistent with the provisions of WAC 173-27-180 as necessary to clearly indicate the authorized changes, and the final ruling on consistency with this section shall be filed with the department. In addition, local government shall notify parties of record of their action.

(6) If the revision to the original permit involves a conditional use or variance, local government shall submit the revision to the department for the department's approval, approval with conditions, or denial, and shall indicate that the revision is being submitted under the requirements of this subsection. The department shall render and transmit to local government and the applicant its final decision within fifteen days of the date of the department's receipt of the submittal from local government. Local government shall notify parties of record of the department's final decision.

(7) The revised permit is effective immediately upon final decision by local government or, when appropriate under subsection (6) of this section, upon final action by the department.

(8) Appeals shall be in accordance with RCW 90.58.180 and shall be filed within twenty-one days from the date of receipt of the local government's action by the department or, when appropriate under subsection (6) of this section, the date the department's final decision is transmitted to local government and the applicant. Appeals shall be based only upon contentions of noncompliance with the provisions of subsection (2) of this section. Construction undertaken pursuant to that portion of a revised permit not authorized under the original permit is at the applicant's own risk until the expiration of the appeals deadline. If an appeal is successful in proving that a revision is not within the scope and intent of the original permit, the decision shall have no bearing on the original permit.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-100, filed 9/30/96, effective 10/31/96.]

WAC 173-27-110 Notice required. (1) Local government shall develop and adopt a system which provides for notification of the public, the department and other agencies with jurisdiction of applications for a shoreline management substantial development, conditional use, or variance permit. Notification pursuant to this section may be carried out as a part of an integrated local permit notification procedure.

(2) The system shall assure that notice of application shall be provided within fourteen days after the determination of completeness as provided in RCW 36.70B.070 and WAC 173-27-180, and include the following in whatever sequence or format the local government deems appropriate:

(a) The date of application, the date of the notice of completion for the application, and the date of the notice of application;

(b) A description of the proposed project action and a list of the project permits included in the application and, if applicable, a list of any studies requested under RCW 36.70B.070, 36.70B.090 and WAC 173-27-180;

(c) The identification of other permits not included in the application to the extent known by the local government;

(d) The identification of existing environmental documents that evaluate the proposed project, and, if not otherwise stated on the document providing the notice of application, such as a city land use bulletin, the location where the application and any studies can be reviewed;

(e) A statement of the public comment period, which shall be not less than thirty days following the date of notice of application, and statements of the right of any person to comment on the application, receive notice of and participate in any hearings, request a copy of the decision once made, and any appeal rights. A local government may accept public comments at any time prior to the closing of the record of an open record predecision hearing, if any, or, if no open record predecision hearing is provided, prior to the decision on the project permit;

(f) The date, time, place, and type of hearing, if applicable and scheduled at the date of notice of the application;

(g) A statement of the preliminary determination, if one has been made at the time of notice, of those development regulations that will be used for project mitigation and of consistency; and

(h) Any other information determined appropriate by the local government.

(3) If an open record predecision hearing, as defined in RCW 36.70B.020, is required for the requested project permits, the notice of application shall be provided at least fifteen days prior to the open record hearing.

(4) The notification system shall assure that notice to the general public and property owners in the vicinity of such application is given by at least one of the following methods:

(a) Mailing of the notice to the latest recorded real property owners as shown by the records of the county assessor within at least three hundred feet of the boundary of the property upon which the development is proposed;

(b) Posting of the notice in a conspicuous manner on the property upon which the project is to be undertaken; or

(c) Any other manner deemed appropriate by local authorities to accomplish the objectives of reasonable notice to adjacent landowners and the public.

(1999 Ed.)

(5) The notification system shall provide for timely notification of individuals and organizations that request such notice in writing.

(6) The notification system shall provide notice to all agencies with jurisdiction per chapter 43.21C RCW and to all other agencies that request in writing any such notice.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-110, filed 9/30/96, effective 10/31/96.]

WAC 173-27-120 Special procedures for limited utility extensions and bulkheads. (1) An application for a substantial development permit for a limited utility extension or for the construction of a bulkhead or other measures to protect a single-family residence and its appurtenant structures from shoreline erosion shall be subject to all of the requirements of this chapter except that the following time periods and procedures shall be used:

(a) The public comment period shall be twenty days. The notice provided shall state the manner in which the public may obtain a copy of the local government decision on the application no later than two days following its issuance;

(b) The local government shall issue its decision to grant or deny the permit within twenty-one days of the last day of the comment period specified in subsection (2)(a) of this section; and

(c) If there is an appeal of the decision to grant or deny the permit to the local government legislative authority, the appeal shall be finally determined by the legislative authority within thirty days.

(2) For purposes of this section, a limited utility extension means the extension of a utility service that:

(a) Is categorically exempt under chapter 43.21C RCW for one or more of the following: Natural gas, electricity, telephone, water, or sewer;

(b) Will serve an existing use in compliance with this chapter; and

(c) Will not extend more than two thousand five hundred linear feet within the shorelines of the state.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-120, filed 9/30/96, effective 10/31/96.]

WAC 173-27-130 Filing with department. (1) All applications for a permit or a permit revision shall be submitted to the department upon a final decision by local government. Final decision by local government shall mean the order or ruling, whether it be an approval or denial, which is established after all local administrative appeals related to the permit have concluded or the opportunity to initiate such appeals have lapsed.

(2) When a substantial development permit and a conditional use or variance permit are required for a development, the submittal on the permits shall be made concurrently.

(3) A complete submittal shall consist of the following documents and information:

(a) A copy of the complete application pursuant to WAC 173-27-180;

(b) Findings and conclusions that establish the basis for the decision including but not limited to identification of shoreline environment designation, applicable master program policies and regulations and the consistency of the

[Title 173 WAC—p. 163]

project with appropriate review criteria for the type of permit(s) as established in WAC 173-27-140 through 173-27-170;

(c) The final decision of the local government;

(d) The permit data sheet required by WAC 173-27-190; and

(e) Where applicable, local government shall also file the applicable documents required by chapter 43.21C RCW, the State Environmental Policy Act, or in lieu thereof, a statement summarizing the actions and dates of such actions taken under chapter 43.21C RCW.

(4) When the project has been modified in the course of the local review process, plans or text shall be provided to the department that clearly indicate the final approved plan.

(5) Submittal of substantial development permits, conditional use permits, variances, rescissions and revisions is complete when all of the documents required pursuant to subsections (3) and (4) of this section have been received by the department. If the department determines that the submittal does not contain all of the documents and information required by this section, the department shall identify the deficiencies and so notify local government and the applicant in writing. The submittal and permit are void unless and until the material requested in writing is submitted to the department.

(6) "Date of filing" of a local government final decision involving approval or denial of a substantial development permit, or involving a denial of a variance or conditional use permit, is the date of actual receipt of a complete submittal by the department.

(7) "Date of filing" of a permit for a conditional use or variance approved by local government, and such permits which also involve concurrent submittal by local government of a substantial development permit, is the date of transmittal of the department's final decision on the variance or conditional use permit to local government and the applicant.

(8) The department shall provide a written notice to the local government and the applicant of the "date of filing."

(9) When a permit has been appealed pursuant to RCW 90.58.180, upon conclusion of all review proceedings, a copy of the final order shall be provided to the local government and the department. When the project has been modified in the course of the review proceeding, plans or text shall be provided to the local government, consistent with the provisions of WAC 173-27-180, that clearly indicate the final approved plan and the local government shall reissue the permit accordingly and submit a copy of the reissued permit and supporting documents consistent with subsection (3) of this section to the department for completion of the file on the permit. The purpose of this provision is to assure that the local and department files on the permit are complete and accurate and not to provide a new opportunity for appeal of the permit.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-130, filed 9/30/96, effective 10/31/96.]

WAC 173-27-140 Review criteria for all development. (1) No authorization to undertake use or development on shorelines of the state shall be granted by the local government unless upon review the use or development is deter-

mined to be consistent with the policy and provisions of the Shoreline Management Act and the master program.

(2) No permit shall be issued for any new or expanded building or structure of more than thirty-five feet above average grade level on shorelines of the state that will obstruct the view of a substantial number of residences on areas adjoining such shorelines except where a master program does not prohibit the same and then only when overriding considerations of the public interest will be served.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-140, filed 9/30/96, effective 10/31/96.]

WAC 173-27-150 Review criteria for substantial development permits. (1) A substantial development permit shall be granted only when the development proposed is consistent with:

(a) The policies and procedures of the act;

(b) The provisions of this regulation; and

(c) The applicable master program adopted or approved for the area. Provided, that where no master program has been approved for an area, the development shall be reviewed for consistency with the provisions of chapter 173-26 WAC, and to the extent feasible, any draft or approved master program which can be reasonably ascertained as representing the policy of the local government.

(2) Local government may attach conditions to the approval of permits as necessary to assure consistency of the project with the act and the local master program.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-150, filed 9/30/96, effective 10/31/96.]

WAC 173-27-160 Review criteria for conditional use permits. The purpose of a conditional use permit is to provide a system within the master program which allows flexibility in the application of use regulations in a manner consistent with the policies of RCW 90.58.020. In authorizing a conditional use, special conditions may be attached to the permit by local government or the department to prevent undesirable effects of the proposed use and/or to assure consistency of the project with the act and the local master program.

(1) Uses which are classified or set forth in the applicable master program as conditional uses may be authorized provided that the applicant demonstrates all of the following:

(a) That the proposed use is consistent with the policies of RCW 90.58.020 and the master program;

(b) That the proposed use will not interfere with the normal public use of public shorelines;

(c) That the proposed use of the site and design of the project is compatible with other authorized uses within the area and with uses planned for the area under the comprehensive plan and shoreline master program;

(d) That the proposed use will cause no significant adverse effects to the shoreline environment in which it is to be located; and

(e) That the public interest suffers no substantial detrimental effect.

(2) In the granting of all conditional use permits, consideration shall be given to the cumulative impact of additional requests for like actions in the area. For example, if condi-

tional use permits were granted for other developments in the area where similar circumstances exist, the total of the conditional uses shall also remain consistent with the policies of RCW 90.58.020 and shall not produce substantial adverse effects to the shoreline environment.

(3) Other uses which are not classified or set forth in the applicable master program may be authorized as conditional uses provided the applicant can demonstrate consistency with the requirements of this section and the requirements for conditional uses contained in the master program.

(4) Uses which are specifically prohibited by the master program may not be authorized pursuant to either subsection (1) or (2) of this section.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-160, filed 9/30/96, effective 10/31/96.]

WAC 173-27-170 Review criteria for variance permits. The purpose of a variance permit is strictly limited to granting relief from specific bulk, dimensional or performance standards set forth in the applicable master program where there are extraordinary circumstances relating to the physical character or configuration of property such that the strict implementation of the master program will impose unnecessary hardships on the applicant or thwart the policies set forth in RCW 90.58.020.

(1) Variance permits should be granted in circumstances where denial of the permit would result in a thwarting of the policy enumerated in RCW 90.58.020. In all instances the applicant must demonstrate that extraordinary circumstances shall be shown and the public interest shall suffer no substantial detrimental effect.

(2) Variance permits for development and/or uses that will be located landward of the ordinary high water mark (OHWM), as defined in RCW 90.58.030 (2)(b), and/or landward of any wetland as defined in RCW 90.58.030 (2)(h), may be authorized provided the applicant can demonstrate all of the following:

(a) That the strict application of the bulk, dimensional or performance standards set forth in the applicable master program precludes, or significantly interferes with, reasonable use of the property;

(b) That the hardship described in (a) of this subsection is specifically related to the property, and is the result of unique conditions such as irregular lot shape, size, or natural features and the application of the master program, and not, for example, from deed restrictions or the applicant's own actions;

(c) That the design of the project is compatible with other authorized uses within the area and with uses planned for the area under the comprehensive plan and shoreline master program and will not cause adverse impacts to the shoreline environment;

(d) That the variance will not constitute a grant of special privilege not enjoyed by the other properties in the area;

(e) That the variance requested is the minimum necessary to afford relief; and

(f) That the public interest will suffer no substantial detrimental effect.

(3) Variance permits for development and/or uses that will be located waterward of the ordinary high water mark

(1999 Ed.)

(OHWM), as defined in RCW 90.58.030 (2)(b), or within any wetland as defined in RCW 90.58.030 (2)(h), may be authorized provided the applicant can demonstrate all of the following:

(a) That the strict application of the bulk, dimensional or performance standards set forth in the applicable master program precludes all reasonable use of the property;

(b) That the proposal is consistent with the criteria established under subsection (2)(b) through (f) of this section; and

(c) That the public rights of navigation and use of the shorelines will not be adversely affected.

(4) In the granting of all variance permits, consideration shall be given to the cumulative impact of additional requests for like actions in the area. For example if variances were granted to other developments and/or uses in the area where similar circumstances exist the total of the variances shall also remain consistent with the policies of RCW 90.58.020 and shall not cause substantial adverse effects to the shoreline environment.

(5) Variances from the use regulations of the master program are prohibited.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200.96-20-075 (Order 95-17), § 173-27-170, filed 9/30/96, effective 10/31/96.]

WAC 173-27-180 Application requirements for substantial development, conditional use, or variance permit. A complete application for a substantial development, conditional use, or variance permit shall contain, as a minimum, the following information:

(1) The name, address and phone number of the applicant. The applicant should be the owner of the property or the primary proponent of the project and not the representative of the owner or primary proponent.

(2) The name, address and phone number of the applicant's representative if other than the applicant.

(3) The name, address and phone number of the property owner, if other than the applicant.

(4) Location of the property. This shall, at a minimum, include the property address and identification of the section, township and range to the nearest quarter, quarter section or latitude and longitude to the nearest minute. All applications for projects located in open water areas away from land shall provide a longitude and latitude location.

(5) Identification of the name of the shoreline (water body) that the site of the proposal is associated with. This should be the water body from which jurisdiction of the act over the project is derived.

(6) A general description of the proposed project that includes the proposed use or uses and the activities necessary to accomplish the project.

(7) A general description of the property as it now exists including its physical characteristics and improvements and structures.

(8) A general description of the vicinity of the proposed project including identification of the adjacent uses, structures and improvements, intensity of development and physical characteristics.

(9) A site development plan consisting of maps and elevation drawings, drawn to an appropriate scale to depict

clearly all required information, photographs and text which shall include:

(a) The boundary of the parcel(s) of land upon which the development is proposed.

(b) The ordinary high water mark of all water bodies located adjacent to or within the boundary of the project. This may be an approximate location provided, that for any development where a determination of consistency with the applicable regulations requires a precise location of the ordinary high water mark the mark shall be located precisely and the biological and hydrological basis for the location as indicated on the plans shall be included in the development plan. Where the ordinary high water mark is neither adjacent to or within the boundary of the project, the plan shall indicate the distance and direction to the nearest ordinary high water mark of a shoreline.

(c) Existing and proposed land contours. The contours shall be at intervals sufficient to accurately determine the existing character of the property and the extent of proposed change to the land that is necessary for the development. Areas within the boundary that will not be altered by the development may be indicated as such and contours approximated for that area.

(d) A delineation of all wetland areas that will be altered or used as a part of the development.

(e) A general indication of the character of vegetation found on the site.

(f) The dimensions and locations of all existing and proposed structures and improvements including but not limited to; buildings, paved or graveled areas, roads, utilities, septic tanks and drainfields, material stockpiles or surcharge, and stormwater management facilities.

(g) Where applicable, a landscaping plan for the project.

(h) Where applicable, plans for development of areas on or off the site as mitigation for impacts associated with the proposed project shall be included and contain information consistent with the requirements of this section.

(i) Quantity, source and composition of any fill material that is placed on the site whether temporary or permanent.

(j) Quantity, composition and destination of any excavated or dredged material.

(k) A vicinity map showing the relationship of the property and proposed development or use to roads, utilities, existing developments and uses on adjacent properties.

(l) Where applicable, a depiction of the impacts to views from existing residential uses and public areas.

(m) On all variance applications the plans shall clearly indicate where development could occur without approval of a variance, the physical features and circumstances on the property that provide a basis for the request, and the location of adjacent structures and uses.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-180, filed 9/30/96, effective 10/31/96.]

WAC 173-27-190 Permits for substantial development, conditional use, or variance. (1) Each permit for a substantial development, conditional use or variance, issued by local government shall contain a provision that construction pursuant to the permit shall not begin and is not authorized until twenty-one days from the date of filing as defined

in RCW 90.58.140(6) and WAC 173-27-130, or until all review proceedings initiated within twenty-one days from the date of such filing have been terminated; except as provided in RCW 90.58.140 (5)(a) and (b).

(2) Permits for substantial development, conditional use, or variance may be in any form prescribed and used by local government including a combined permit application form. Such forms will be supplied by local government.

(3) A permit data sheet shall be submitted to the department with each shoreline permit. The permit data sheet form shall be as provided in Appendix A of this regulation.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-190, filed 9/30/96, effective 10/31/96.]

WAC 173-27-200 Department review of conditional use and variance permits. (1) After local government approval of a conditional use or variance permit, local government shall submit the permit to the department for the department's approval, approval with conditions, or denial. The department shall render and transmit to local government and the applicant its final decision approving, approving with conditions, or disapproving the permit within thirty days of the date of submittal by local government pursuant to WAC 173-27-110.

(2) The department shall review the complete file submitted by local government on conditional use and variance permits and any other information submitted or available that is relevant to the application. The department shall base its determination to approve, approve with conditions or deny a conditional use permit or variance on consistency with the policy and provisions of the act and, except as provided in WAC 173-27-210, the criteria in WAC 173-27-160 and 173-27-170.

(3) Local government shall provide timely notification of the department's final decision to those interested persons having requested notification from local government pursuant to WAC 173-27-130.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-200, filed 9/30/96, effective 10/31/96.]

WAC 173-27-210 Minimum standards for conditional use and variance permits. Pursuant to RCW 90.58.100(5) and 90.58.140(3), the criteria contained in WAC 173-27-160 and 173-27-170 for shoreline conditional use and variance permits shall constitute the minimum criteria for review of these permits by local government and the department. Local government and the department may, in addition, apply the more restrictive criteria where they exist in approved and adopted master programs.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-210, filed 9/30/96, effective 10/31/96.]

WAC 173-27-220 Requests for review. All requests for review of any final permit decisions under chapter 90.58 RCW and chapter 173-27 WAC are governed by the procedures established in RCW 90.58.180 and chapter 461-08 WAC, the rules of practice and procedure of the shorelines hearings board.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-220, filed 9/30/96, effective 10/31/96.]

PART II

SHORELINE MANAGEMENT ACT ENFORCEMENT

WAC 173-27-240 Authority and purpose. This part is adopted under RCW 90.58.200 and 90.58.210 to implement the enforcement responsibilities of the department and local government under the Shoreline Management Act. The act calls for a cooperative program between local government and the state. It provides for a variety of means of enforcement, including civil and criminal penalties, orders to cease and desist, orders to take corrective action, and permit rescission. The following should be used in addition to other mechanisms already in place at the local level and does not preclude other means of enforcement.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-240, filed 9/30/96, effective 10/31/96.]

WAC 173-27-250 Definitions. The definitions contained in WAC 173-27-030 shall apply in this part also except that the following shall apply when used in this part of the regulations:

(1) "Permit" means any form of permission required under the act prior to undertaking activity on shorelines of the state, including substantial development permits, variances, conditional use permits, permits for oil or natural gas exploration activities, permission which may be required for selective commercial timber harvesting, and shoreline exemptions; and

(2) "Exemption" means authorization from local government which establishes that an activity is exempt from substantial development permit requirements under WAC 173-27-040, but subject to regulations of the act and the local master program.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-250, filed 9/30/96, effective 10/31/96.]

WAC 173-27-260 Policy. These regulations should be used by local government in carrying out enforcement responsibilities under the act, unless local government adopts separate rules to implement the act's enforcement provision.

Enforcement action by the department or local government may be taken whenever a person has violated any provision of the act or any master program or other regulation promulgated under the act. The choice of enforcement action and the severity of any penalty should be based on the nature of the violation, the damage or risk to the public or to public resources, and/or the existence or degree of bad faith of the persons subject to the enforcement action.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-260, filed 9/30/96, effective 10/31/96.]

WAC 173-27-270 Order to cease and desist. Local government and/or the department shall have the authority to serve upon a person a cease and desist order if an activity being undertaken on shorelines of the state is in violation of chapter 90.58 RCW or the local master program.

(1) Content of order. The order shall set forth and contain:

(a) A description of the specific nature, extent, and time of violation and the damage or potential damage; and

(1999 Ed.)

(b) A notice that the violation or the potential violation cease and desist or, in appropriate cases, the specific corrective action to be taken within a given time. A civil penalty under WAC 173-27-280 may be issued with the order.

(2) Effective date. The cease and desist order issued under this section shall become effective immediately upon receipt by the person to whom the order is directed.

(3) Compliance. Failure to comply with the terms of a cease and desist order can result in enforcement actions including, but not limited to, the issuance of a civil penalty.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-270, filed 9/30/96, effective 10/31/96.]

WAC 173-27-280 Civil penalty. (1) A person who fails to conform to the terms of a substantial development permit, conditional use permit or variance issued under RCW 90.58.140, who undertakes a development or use on shorelines of the state without first obtaining a permit, or who fails to comply with a cease and desist order issued under these regulations may be subject to a civil penalty by local government. The department may impose a penalty jointly with local government, or alone only upon an additional finding that a person:

(a) Has previously been subject to an enforcement action for the same or similar type of violation of the same statute or rule; or

(b) Has been given previous notice of the same or similar type of violation of the same statute or rule; or

(c) The violation has a probability of placing a person in danger of death or bodily harm; or

(d) Has a probability of causing more than minor environmental harm; or

(e) Has a probability of causing physical damage to the property of another in an amount exceeding one thousand dollars.

(2) In the alternative, a penalty may be issued to a person by the department alone, or jointly with local government for violations which do not meet the criteria of subsection (1)(a) through (e) of this section, after the following information has been provided in writing to a person through a technical assistance visit or a notice of correction:

(a) A description of the condition that is not in compliance and a specific citation to the applicable law or rule;

(b) A statement of what is required to achieve compliance;

(c) The date by which the agency requires compliance to be achieved;

(d) Notice of the means to contact any technical assistance services provided by the agency or others; and

(e) Notice of when, where, and to whom a request to extend the time to achieve compliance for good cause may be filed with the agency.

Furthermore, no penalty shall be issued by the department until the individual or business has been given a reasonable time to correct the violation and has not done so.

(3) Amount of penalty. The penalty shall not exceed one thousand dollars for each violation. Each day of violation shall constitute a separate violation.

(4) Aiding or abetting. Any person who, through an act of commission or omission procures, aids or abets in the vio-

lation shall be considered to have committed a violation for the purposes of the civil penalty.

(5) Notice of penalty. A civil penalty shall be imposed by a notice in writing, either by certified mail with return receipt requested or by personal service, to the person incurring the same from the department and/or the local government, or from both jointly. The notice shall describe the violation, approximate the date(s) of violation, and shall order the acts constituting the violation to cease and desist, or, in appropriate cases, require necessary corrective action within a specific time.

(6) Application for remission or mitigation. Any person incurring a penalty may apply in writing within thirty days of receipt of the penalty to the department or local government for remission or mitigation of such penalty. Upon receipt of the application, the department or local government may remit or mitigate the penalty only upon a demonstration of extraordinary circumstances, such as the presence of information or factors not considered in setting the original penalty.

When a penalty is imposed jointly by the department and local government, it may be remitted or mitigated only upon such terms as both the department and the local government agree.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-280, filed 9/30/96, effective 10/31/96.]

WAC 173-27-290 Appeal of civil penalty. (1) Right of appeal. Persons incurring a penalty imposed by the department or imposed jointly by the department and local government may appeal the same to the shorelines hearings board. Appeals to the shorelines hearings board are adjudicatory proceedings subject to the provisions of chapter 34.05 RCW. Persons incurring a penalty imposed by local government may appeal the same to the local government legislative authority.

(2) Timing of appeal. Appeals shall be filed within thirty days of receipt of notice of penalty unless an application for remission or mitigation is made to the department or local government. If such application is made, appeals shall be filed within thirty days of receipt of local government's and/or the department's decision regarding the remission or mitigation.

(3) Penalties due.

(a) Penalties imposed under this section shall become due and payable thirty days after receipt of notice imposing the same unless application for remission or mitigation is made or an appeal is filed. Whenever an application for remission or mitigation is made, penalties shall become due and payable thirty days after receipt of local government's and/or the department's decision regarding the remission or mitigation. Whenever an appeal of a penalty is filed, the penalty shall become due and payable upon completion of all review proceedings and upon the issuance of a final decision confirming the penalty in whole or in part.

(b) If the amount of a penalty owed the department is not paid within thirty days after it becomes due and payable, the attorney general, upon request of the department, shall bring an action in the name of the state of Washington to recover such penalty. If the amount of a penalty owed local government is not paid within thirty days after it becomes due and payable, local government may take actions necessary to recover such penalty.

(4) Penalty recovered. Penalties recovered by the department shall be paid to the state treasurer. Penalties recovered by local government shall be paid to the local government treasury. Penalties recovered jointly by the department and local government shall be divided equally between the department and the local government unless otherwise stipulated in the order.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-290, filed 9/30/96, effective 10/31/96.]

WAC 173-27-300 Criminal penalty. The procedures for criminal penalties shall be governed by RCW 90.58.220.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-300, filed 9/30/96, effective 10/31/96.]

WAC 173-27-310 Oil or natural gas exploration—Penalty. Persons violating the provisions of RCW 90.58.550 or chapter 173-15 WAC shall be subject to a civil penalty issued by the department in an amount of up to five thousand dollars a day. The procedures for oil or natural gas exploration penalties shall be governed by RCW 90.58.560.

[Statutory Authority: RCW 90.58.140(3) and [90.58].200. 96-20-075 (Order 95-17), § 173-27-310, filed 9/30/96, effective 10/31/96.]

FEES—RADIOACTIVE WASTE MANAGEMENT FACILITIES

WAC

173-44-010	Purpose and scope.
173-44-020	Authority.
173-44-030	Definitions.
173-44-040	Perpetual care and maintenance fee.
173-44-050	PCM fee—Method of payment.
173-44-060	PCM fee—Disposition.
173-44-070	Severability.

WAC 173-44-010 Purpose and scope. The proper perpetual care and maintenance of radioactive waste management facilities is required to protect the public health, safety, and welfare. This chapter establishes the fees charged by the Washington state department of ecology for financing the necessary perpetual care and maintenance of radioactive waste management facilities. Promulgation of this regulation is further intended to satisfy the state's financial responsibilities to the United States government pursuant to the perpetual care agreement executed July 29, 1965.

[Statutory Authority: 1983 1st ex.s. c 19 and Title 43 RCW. 83-18-020 (Order DE 83-25), § 173-44-010, filed 8/30/83. Formerly WAC 173-16-010.]

WAC 173-44-020 Authority. This chapter is promulgated by the state department of ecology pursuant to authority granted in RCW 43.21F.045 and chapter 19, Laws of 1983 1st ex. sess.

[Statutory Authority: 1983 1st ex.s. c 19 and Title 43 RCW. 83-18-020 (Order DE 83-25), § 173-44-020, filed 8/30/83. Formerly WAC 173-16-020.]

WAC 173-44-030 Definitions. (1) "Facility" means any site, location, structure, or property used or to be used for the storage, disposal, or burial of radioactive materials or waste, which lies within the one hundred acre tract described in the perpetual care agreement between the state of Washington and the United States government executed July 29, 1965.

(2) "Department" means the Washington state department of ecology.

(3) "Perpetual care and maintenance" means the activities necessary to stabilize and secure a closed facility during the perpetual care period, including but not limited to: Trench stabilization; upkeep of erosion control measures, fences, and warning signs; and sampling of monitor wells.

[Title 173 WAC—p. 170]

(4) "Sublessee" means a party to a sublease with the state of Washington for a portion of the one thousand acres of land, as described in the state's lease with the United States government executed September 10, 1964, lying within the Hanford Reservation.

[Statutory Authority: 1983 1st ex.s. c 19 and Title 43 RCW. 83-18-020 (Order DE 83-25), § 173-44-030, filed 8/30/83. Formerly WAC 173-16-030.]

WAC 173-44-040 Perpetual care and maintenance fee. (1) Any sublessee of the state who stores, disposes, or buries radioactive materials or waste at a facility shall pay a perpetual care and maintenance fee.

(2) The perpetual care and maintenance fee shall be one dollar seventy-five cents per cubic foot of radioactive material or waste buried or permanently stored at a facility.

[Statutory Authority: 1983 1st ex.s. c 19 and Title 43 RCW. 83-18-020 (Order DE 83-25), § 173-44-040, filed 8/30/83. Formerly WAC 173-16-040.]

WAC 173-44-050 PCM fee—Method of payment. (1) The perpetual care and maintenance fee shall be due on a quarterly basis for the quarters ending January 15, April 15, July 15, and October 15. All perpetual care and maintenance fee payments shall be paid within forty-five days after the due date.

(2) Perpetual care and maintenance payments shall be by check, draft, or money order payable to the Washington state department of ecology.

[Statutory Authority: 1983 1st ex.s. c 19 and Title 43 RCW. 83-18-020 (Order DE 83-25), § 173-44-050, filed 8/30/83. Formerly WAC 173-16-050.]

WAC 173-44-060 PCM fee—Disposition. (1) Upon receipt of perpetual care and maintenance fee payments, the department shall transmit such payments to the state treasurer for deposit in the perpetual maintenance account authorized by chapter 19, Laws of 1983 1st ex. sess.

(2) Moneys in the perpetual maintenance account shall be invested by the state investment board in the same manner as other state moneys. Any interest accruing as a result of investment shall accrue to the perpetual maintenance account.

(3) The department shall maintain a segregated account of perpetual care and maintenance fee payments which are deposited in the perpetual maintenance account.

(4) The department, in consultation with the state radiation control agency, shall periodically evaluate the perpetual care and maintenance fee to determine whether it will provide adequate financing to assure perpetual care and maintenance of a closed facility. Any adjustments to the fees shall be made by rule adopted pursuant to chapter 34.04 RCW.

[Statutory Authority: 1983 1st ex.s. c 19 and Title 43 RCW. 83-18-020 (Order DE 83-25), § 173-44-060, filed 8/30/83. Formerly WAC 173-16-060.]

WAC 173-44-070 Severability. If any portion of this chapter or its application to any person or circumstance is held invalid, the remainder of this chapter, or the application of the provision to other persons or circumstances, shall not be affected.

(1999 Ed.)

WAC 173-50-010 Purpose. The purpose of this chapter is to establish a state program for accreditation of environmental laboratories which conduct tests for or prepare data for submittal to the department of ecology. The accreditation program implemented under this chapter is designed to satisfy the intent of RCW 43.21A.230.

[Statutory Authority: RCW 43.21A.230, 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-010, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-020 Scope. The environmental laboratory accreditation program applies to laboratories, within or outside the state, which conduct tests for or prepare analytical data for submittal to the department. Federal laboratories may participate in the accreditation program on a voluntary basis.

[Statutory Authority: RCW 43.21A.230, 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-020, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-030 Objectives. The primary objective of the accreditation program is to assure accredited laboratories have a demonstrated capability to accurately analyze environmental samples. A secondary objective is to assist environmental laboratories in improving their quality assurance/quality control procedures. Accreditation does not guarantee validity of analytical data submitted by the laboratory subsequent to accreditation.

[Statutory Authority: RCW 43.21A.230, 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-030, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-040 Definitions. Definitions set forth in this section shall apply throughout this chapter, unless context clearly indicates otherwise.

(1) "Accreditation" means the formal recognition by the department that an environmental laboratory is capable of producing accurate analytical data, signified by the issuance of a written certificate accompanied by a scope of accreditation indicating those parameters and methods for which the laboratory has been accredited. The term "accredit" as used in this chapter is intended to have the same meaning as the term "certify" as used in RCW 43.21A.230. Any laboratory accredited under this chapter shall be deemed to have been certified under RCW 43.21A.230. The department does not, by certifying or accrediting any laboratory pursuant to this chapter, vouch for or warrant the accuracy of any particular work done or report issued by the laboratory.

(2) "Analytical data" means the recorded qualitative and/or quantitative results of a chemical, physical, biological, microbiological, radiochemical, or other scientific determination.

(3) "Department" means the state of Washington department of ecology.

(4) "Environmental laboratory" means any facility under the ownership and technical management of a single entity in a single geographical locale, where scientific examinations are performed on samples taken from the environment, the data from which is submitted to the department under the provisions of a department regulation, permit, or contractual agreement.

(5) "Mandatory analytical method" means a recognized written procedure for acquiring analytical data which is required by law or a regulatory agency of the federal or state government.

(6) "Matrix" means the substance from which a material to be analyzed is extracted, such as ground or surface water, wastewater, air, solid waste, nuclear waste, and hazardous waste.

(7) "Parameter" means a single determination or group of related determinations using a specific written method chosen by an applying laboratory.

(8) "Performance audit" means evaluation of the results of analyses of unknown samples whose true values are unknown to the laboratory conducting the analyses and which are provided by a source external to the environmental laboratory. Such samples may be referred to as performance evaluation samples.

(9) "Quality control" means those activities designed to assure analytical data produced by an environmental laboratory meet data quality objectives for accuracy. Those activities include routine application of statistically based procedures to evaluate and control the accuracy of analytical results.

(10) "Quality assurance (QA)" means those activities whose purpose is to assure that a quality control program is effective. A quality assurance program is a totally integrated program for assuring reliability of measurement data.

(11) "Quality assurance manual" means a written record of the policies, organization, objectives, and specific quality control and quality assurance activities established for use in an environmental laboratory to assure accuracy of analytical results. Volume and scope of quality assurance manuals vary with complexity of laboratory mission.

(12) "Recognized analytical method" means a documented analytical procedure for analysis of an environmental sample which was developed through collaborative studies by organizations or groups recognized by the department.

(13) "System audit" means an on-site inspection of laboratory capabilities by an agency external to the laboratory.

(14) "Registration" means participation of a laboratory in a program to prepare the laboratory for accreditation, signified by issuance of a written certificate accompanied by a scope of registration indicating those parameters for which the laboratory has achieved registration status.

(15) "Registered" means the status of continued participation in the preparatory program. Only laboratories owned and operated by municipalities, industries, and other activities which are dischargers as defined in chapter 173-220 or 173-216 WAC shall be eligible for participation in the preparatory program. Such laboratories are also eligible for accreditation. The department does not, by registering any laboratory pursuant to these rules, vouch for or warrant the accuracy of any particular work done or report issued by the laboratory.

Note: Above referenced chapters are available through the Department of Ecology, P.O. Box 47600, Olympia, WA 98504-7600.

[Statutory Authority: RCW 43.21A.230, 93-20-011 (Order 92-53), § 173-50-040, filed 9/22/93, effective 10/23/93; 90-21-090 (Order 90-21), § 173-50-040, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-040, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-050 Responsibilities. (1) The department shall require persons and organizations submitting analytical data to the department under the purview of department programs to use environmental laboratories which are accredited or registered under the provisions of this chapter.

(2) The department shall not require use of accredited or registered laboratories for determination of analytical parameters for which no suitable accreditation process can be reasonably devised as determined by the quality assurance section.

(3) The department shall develop a procedural manual describing specifics of the accreditation process. As a minimum, the procedural manual shall describe in detail the procedures to be followed for: Submitting an application; preparing a quality assurance manual; system (on-site) audits; performance audits; accreditation of out-of-state laboratories; determination and payment of fees; issuance, denial, suspension, and revocation of accreditation or registration; and methods for notifying laboratories and authorized department officials of accreditation actions. The procedural manual shall be made available to all interested persons.

(4) Managers of environmental laboratories desiring accreditation or registration shall submit an application along with appropriate fees to the department fiscal officer, submit results of performance evaluations, a quality assurance manual and other required documentation to the quality assurance section, and assist/accommodate department personnel during system audits as required.

[Statutory Authority: RCW 43.21A.230, 93-20-011 (Order 92-53), § 173-50-050, filed 9/22/93, effective 10/23/93; 90-21-090 (Order 90-21), § 173-50-050, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order

89-1 and 89-1A), § 173-50-050, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-060 Requirements for accreditation and registration. (1) Managers of environmental laboratories desiring accreditation or registration shall submit to the department fiscal officer an application and pay required fees as predetermined by coordination with the quality assurance section. Concurrently, the laboratory manager shall submit a copy of their laboratory quality assurance manual to the quality assurance section and arrange with the quality assurance section for completion of a performance audit and system audit.

(2) Through the application, laboratory managers shall request accreditation or registration in applicable parameters and provide evidence that sufficient personnel, equipment, and facilities are available to successfully perform analytical methods as specified in the application. The quality assurance manual submitted concurrently with the application shall be in detail and scope commensurate with the size and mission of the laboratory.

(3) Eligible laboratories shall achieve registration status by submitting a completed application, paying required fees, and submitting a quality assurance manual to the quality assurance section.

[Statutory Authority: RCW 43.21A.230, 90-21-090 (Order 90-21), § 173-50-060, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-060, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-070 Performance audit. (1) The quality assurance section shall advise applying laboratories of specific requirements for performance audits which shall be completed for applicable parameters no more frequently than twice annually (see exception in subsection (4) of this section). Current performance audits conducted under the provisions of other recognized programs may be used to satisfy the accreditation program performance audit requirement. Sufficiency of such audits shall be determined by the quality assurance section.

(2) Submission of raw data along with the report of analysis of the performance evaluation sample may be required at the discretion of the quality assurance section.

(3) Performance audits for certain accreditation parameters may be waived at the discretion of the quality assurance section if performance evaluation samples are not available or for other valid reasons.

(4) Accredited laboratories and laboratories seeking accreditation which fail to accurately analyze a performance evaluation sample may be allowed a second performance audit. If necessitated by a second failure, a third performance audit may be allowed (as an exception to subsection (1) of this section) only after the laboratory has investigated cause for failure in the preceding audits and completed corrective actions.

(5) Registered laboratories shall submit results of performance evaluation sample analyses to the quality assurance section. Registration status shall not be denied or revoked solely for failure to accurately analyze performance evaluation samples. Registered laboratories shall investigate causes for errors in performance evaluation sample analysis results

which have been identified as unacceptable or otherwise in error. The results of this investigation shall be reported to the quality assurance section within forty-five days of receipt of the performance evaluation report. The report to the quality assurance section shall identify probable causes for error and corrective actions taken to preclude recurrence.

(6) Applying laboratories shall be responsible for obtaining performance evaluation samples. No fee shall be charged to the department for analysis of performance evaluation samples.

[Statutory Authority: RCW 43.21A.230, 93-20-011 (Order 92-53), § 173-50-070, filed 9/22/93, effective 10/23/93; 90-21-090 (Order 90-21), § 173-50-070, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-070, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-080 System audit. The laboratory shall undergo a system audit by the department to assess critical elements and areas of recommended practices.

(1) Critical elements for accreditation. Those elements of an environmental laboratory's operations which are critical to the consistent generation of reliable, accurate data are critical elements for accreditation. Those critical elements shall be the subject of intense scrutiny throughout the accreditation process and deficiencies in critical elements may be the basis for denial or revocation of accreditation status. Functional areas within which there are critical elements are:

(a) Analytical methods. The system audit shall seek to determine if documentation of mandatory or recognized analytical methods are present at the laboratory, readily available to analysts, and being routinely followed. If a locally-developed method is being followed, the audit may include an evaluation of the adequacy of that method.

(b) Equipment and supplies. The system audit shall seek to determine if sufficient equipment and supplies as required by analytical methods are available, being adequately maintained, and are in a condition to allow successful performance of applicable analytical procedures.

(c) Quality assurance. The laboratory quality assurance manual shall be reviewed for adequacy prior to the system audit. The system audit shall include a review of quality assurance plans and quality assurance/quality control records for programs/projects within which the laboratory is generating analytical data for submission to the department.

(d) Sample management. The system audit shall include a review of applicable procedures for receipt, preservation, transportation, and storage of samples. The laboratory shall be held responsible only for those elements of sample management over which it has direct control.

(e) Data management. The system audit shall include a review of applicable procedures for checking documentation of raw data, calculations, transcription and computer data entry, reports of analytical results, and other activities necessary to assure accurate management of laboratory data.

(2) Recommended practices. Those elements of laboratory operations which might affect efficiency, safety, and other administrative functions, but do not normally affect quality of analytical data, shall be brought to the attention of laboratory management under the heading of "recommended practices" and individually, shall not be the basis for denial or

revocation of accreditation status. Functional areas within which recommended practices may be noted are:

(a) Personnel. The system audit shall seek to determine if managerial, supervisory, and analytical personnel have adequate training and experience to allow satisfactory completion of analytical procedures and compilation of reliable, accurate data. Minimum recommended education and experience criteria for laboratory personnel shall be specified in the program procedural manual.

(b) Facilities. The system audit shall seek to determine if laboratory facilities allow efficient generation of reliable, accurate data in a safe environment.

(c) Safety. When the system audit notes laboratory safety problems, those judged serious shall be referred to appropriate state or federal agencies.

(3) Registered laboratories shall be advised in a written system audit report prepared by the department of deficiencies in meeting critical element and recommended practice standards. The laboratory must respond in writing to the department within forty-five days of receipt of the system audit report concerning corrective actions taken as a result of the system audit report.

[Statutory Authority: RCW 43.21A.230, 93-20-011 (Order 92-53), § 173-50-080, filed 9/22/93, effective 10/23/93; 90-21-090 (Order 90-21), § 173-50-080, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-080, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-090 Evaluation and issuance of certificate. (1) Accreditation. Following receipt of an application and completion of a performance audit and system audit, the quality assurance section shall submit a report to the affected laboratory concerning the results of the overall accreditation process. The report shall list findings, assess the importance of each finding, and make recommendations concerning actions necessary to ensure resolution of problems. After completing the accreditation review, the quality assurance section shall decide, based on information in the application and results of the system audit, performance audit, and review of the quality assurance manual, whether accreditation should be granted. If this decision is affirmative, a certificate shall be issued authorizing the affected laboratory to submit analytical data to the department as specified on an accompanying scope of accreditation. The certificate shall remain the property of the department and shall be surrendered to the department upon revocation of accreditation status. If accreditation is not justified, the department shall issue a report specifying areas of deficiency and steps necessary to upgrade the laboratory to accredited status. In such cases, the laboratory shall provide documentation that the specified deficiencies have been corrected. Based on such documentation the department shall decide whether to grant, renew, deny, or revoke accreditation.

(2) Registration. Registered laboratories shall be issued a certificate and accompanying scope of registration. The certificate shall remain the property of the department of ecology and shall be surrendered to the department upon revocation of the registration status.

[Statutory Authority: RCW 43.21A.230, 93-20-011 (Order 92-53), § 173-50-090, filed 9/22/93, effective 10/23/93; 90-21-090 (Order 90-21), § 173-50-090, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order

89-1 and 89-1A), § 173-50-090, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-100 Interim accreditation. If for valid reasons based on a deficiency in the department and not the laboratory, the quality assurance section cannot conduct a complete assessment of laboratory capabilities in a timely manner, an interim accreditation may be granted. The accreditation shall be based on submission of an application and fees by the laboratory, successful completion of a performance audit where appropriate, and department approval of the laboratory's quality assurance manual.

[Statutory Authority: RCW 43.21A.230, 93-20-011 (Order 92-53), § 173-50-100, filed 9/22/93, effective 10/23/93; 90-21-090 (Order 90-21), § 173-50-100, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-100, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-110 Provisional accreditation. Laboratories which have deficiencies requiring corrective action but can produce valid analytical data as determined by the quality assurance section may be given a provisional accreditation. When the laboratory has corrected such deficiencies, it may provide evidence of correction to the quality assurance section, or request reaudit, as appropriate. Upon determining deficiencies have been corrected, the quality assurance section shall take action to award full accreditation as in WAC 173-50-090. Provisional accreditation shall not be renewed for a subsequent accreditation period unless laboratory management can demonstrate that all reasonable measures to correct deficiencies noted during the initial capability assessment have been exhausted.

[Statutory Authority: RCW 43.21A.230, 90-21-090 (Order 90-21), § 173-50-110, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-110, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-120 Accreditation and registration categories. Environmental laboratories shall be accredited or registered within the broad categories Chemistry I (general), Chemistry II (trace metals), Organics I (gas chromatography (GC), high pressure liquid chromatography (HPLC) methods), Organics II (gas chromatography/mass spectrometry (GC/MS) methods), Radioactivity, Microbiology, and Bioassay/Toxicity. Within those broad categories, laboratories shall specifically be accredited or registered to perform within the well-defined parameters identified in WAC 173-50-190 or as requested by the applying laboratory, using specific, recognized analytical methods chosen by the applying laboratory. Additional parameters may be designated in the program procedural manual without amendment of this chapter if required to allow more efficient execution of the accreditation program.

[Statutory Authority: RCW 43.21A.230, 93-20-011 (Order 92-53), § 173-50-120, filed 9/22/93, effective 10/23/93; 90-21-090 (Order 90-21), § 173-50-120, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-120, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-130 Requirements for maintaining accreditation and registration status. (1) Accreditation shall be granted for a one-year period and shall expire one

year after the effective date of accreditation. Exceptions to the one year accreditation may be made for documented cause. In such cases, accreditation may be granted for a period up to two years. Renewal shall require submission of an application and appropriate fees, an update of the laboratory's quality assurance manual, and successful completion of performance audit requirements. System audits shall be required for renewal of accreditation at periods not to exceed three years from the previous system audit. For documented cause, system audits can be extended up to four years from the previous audit.

(2) Registration shall be granted for a one-year period and shall expire one year after the effective date of registration. Renewal shall require submission of an application and appropriate fees, an update of the laboratory's quality assurance manual, and completion of a new performance audit. System audits shall be required for renewal of registration at periods not to exceed three years from the previous system audit.

[Statutory Authority: RCW 43.21A.230, 93-20-011 (Order 92-53), § 173-50-130, filed 9/22/93, effective 10/23/93; 90-21-090 (Order 90-21), § 173-50-130, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-130, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-140 Denying accreditation and registration status. (1) A laboratory may be denied accreditation for failing to comply with standards for critical elements of the system audit, for misrepresenting its capabilities or failing to disclose pertinent information in the application, for falsifying analytical data, or for failing to render appropriate fees. Additionally, a laboratory may be denied accreditation for a specific parameter for unsatisfactory analysis of that parameter in the performance audit. Laboratories denied accreditation may appeal under the provisions of WAC 173-50-200 or, following correction of deficiencies, may reapply for accreditation to include payment of appropriate fees as determined in WAC 173-50-190.

(2) A laboratory may be denied registration status only for failure to render appropriate fees, for failing to disclose pertinent information in the application, or for misrepresenting its capabilities.

[Statutory Authority: RCW 43.21A.230, 90-21-090 (Order 90-21), § 173-50-140, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-140, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-150 Revoking accreditation and registration status. (1) Accreditation status may be suspended or revoked if the laboratory violates a state rule relative to the analytical procedures for which it is accredited, misrepresents itself to the department, fails to submit an application and associated fees for renewal, falsifies reports of analysis, or engages in unethical or fraudulent practices concerning the generation of analytical data. Additionally, an accredited laboratory may be reaudited for cause and, if found to be deficient in its ability to provide accurate analytical data, may have its accreditation suspended or revoked.

(2) Registration status may be revoked for failure to submit a renewal application, failure to pay appropriate fees, failure to submit required performance evaluation sample analy-

sis results, failure to report on corrective actions taken if performance evaluation results are unacceptable or otherwise in error, failure to submit to a system audit, failure to report on corrective actions taken on deficiencies identified in a system audit, repeated failure to correct the deficiencies identified in the performance or system audits, or for misrepresenting the capabilities of the registered laboratory.

[Statutory Authority: RCW 43.21A.230, 90-21-090 (Order 90-21), § 173-50-150, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-150, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-160 Reciprocity. The department may recognize accreditation (or certification, registration, licensure, approval) of an out-of-state laboratory by another state with which the department has established a reciprocity agreement. In such cases, the out-of-state laboratory shall submit an application and associated fee to offset administrative costs of processing its application (see WAC 173-50-190(5)), and a copy of their accreditation documentation including scope of accreditation. After review of the application and accreditation to assure compliance with minimum accreditation requirements as stated in this chapter, the laboratory may be recognized as authorized to submit analytical data to the department.

[Statutory Authority: RCW 43.21A.230, 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-160, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-170 Third-party accreditation. The department may recognize accreditation (or certification, registration, licensure, approval) of a laboratory, including in-state laboratories, by a third party when the accreditation is determined to be equivalent to that described in this chapter. Laboratories applying for recognition of third-party accreditation shall submit an application and associated fee to offset administrative costs (see WAC 173-50-190(5)), and provide documented information demonstrating requirements for accreditation have been fulfilled as a result of accreditation carried out by a third party. After review of the application and accreditation to ensure compliance with minimum accreditation requirements as stated in this chapter, the laboratory may be recognized as authorized to submit analytical data to the department.

[Statutory Authority: RCW 43.21A.230, 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-170, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-180 Exemptions. (1) The application form shall provide for wastewater dischargers whose laboratories meet the exemption qualifications of RCW 43.21A.230 to request exemption from the accreditation program. Those laboratories shall be required to submit evidence that they are participating in a federal Environmental Protection Agency Administered Quality Assurance Program including as a minimum the following elements: Current QA program/project plans; performance evaluation audits; system audits; corrective action for audit deficiencies; quality control guidelines and records; and training in quality assurance for laboratory management personnel. The department shall grant exemption from accreditation require-

ments of this chapter upon receipt of confirmation from Region X of the federal Environmental Protection Agency of such participation by a laboratory.

(2) Exemption shall be granted only for those analytical parameters included in the federal Environmental Protection Agency Quality Assurance Program. The exemption status shall be reviewed annually based upon submittal by the laboratory of a new application and updated evidence of continued participation in a sufficient quality assurance program.

Note: The federal Environmental Protection Agency does not presently administer a complete quality assurance program for wastewater dischargers in the state of Washington, such as would provide an exemption under subsection (1) of this section. Thus, this exemption is not presently available. The Environmental Protection Agency considers annual analysis of performance evaluation samples to constitute only one element of participation in a quality assurance program. The complete Environmental Protection Agency Quality Assurance Program is described in their Order 5360.1, "Policy and Program Requirements to Implement the Mandatory Quality Assurance Program," which is the basis for exemption requirements stated in subsection (1) of this section.

[Statutory Authority: RCW 43.21A.230, 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-180, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-190 Fee structure. (1) Fees in this chapter are established to cover costs of administering the accreditation program. The fee per parameter and maximum fee per category are identified in Table 1. Laboratory directors may request addition of parameters within given categories.

TABLE 1 - FEE SCHEDULE

(2) Out-of-state laboratories shall coordinate directly with the quality assurance section to determine the anticipated cost of completing the accreditation process. Reimbursement of the cost of travel and per diem shall be added to the normal fee indicated in WAC 173-50-190(1).

(3) On-site inspections shall not be conducted nor shall interim or provisional or other accreditations be granted until appropriate fees have been received by the department.

(4) The fee to defray costs to the department recognition of third-party accreditation (WAC 173-50-170) shall be three hundred dollars. The fee for recognition of a laboratory under a reciprocity agreement (WAC 173-50-160) shall be three hundred dollars, or as specified in the reciprocity agreement, but not less than three hundred dollars.

(5) Apart from the fee process, applicant laboratories shall be required to acquire and analyze performance evaluation (PE) samples for parameters specified by the quality assurance section. The source of PE samples, if other than the federal Environmental Protection Agency, shall be approved by the quality assurance section. To the extent feasible as determined by the quality assurance section, perfor-

mance evaluation samples already being analyzed by the applicant laboratories, shall be used to fulfill performance audit requirements of this chapter.

(6) In addition to fees as determined by the number of parameters and methods in WAC 173-50-190(1), laboratories seeking registration status are required to pay an annual fee of six hundred dollars.

(7) If a laboratory withdraws from the accreditation process after the application has been processed, but before accreditation or registration is granted, the fee will be nonrefundable up to an amount of two hundred dollars as reimbursement for costs of processing the application.

(8) Dollar amounts listed in subsections (1), (4), (6), and (7) of this section may be adjusted every two years based on inflation as indicated by the implicit price deflator for state and local government services as published by the economic and revenue forecast council. Dollar amounts listed in subsections (1), (4), (6), and (7) of this section may be decreased at any time the department determines they are higher than needed to meet program requirements. The department shall notify affected parties of any fee adjustment at least thirty days prior to making any fee adjustment.

[Statutory Authority: RCW 43.21A.230, 93-20-011 (Order 92-53), § 173-50-190, filed 9/22/93, effective 10/23/93; 90-21-090 (Order 90-21), § 173-50-190, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-190, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-200 Appeals. An environmental laboratory manager may appeal final accreditation and registration actions within thirty days of notification of final action in accordance with chapter 43.21B RCW.

[Statutory Authority: RCW 43.21A.230, 93-20-011 (Order 92-53), § 173-50-200, filed 9/22/93, effective 10/23/93; 90-21-090 (Order 90-21), § 173-50-200, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-200, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-210 Enforcement. The department may enter any premises in which analytical data pertaining to accreditation and registration under the provisions of this chapter are generated or stored, for the purpose of conducting system audits or otherwise enforcing this chapter. Refusal to permit entry for such purposes shall result in denial, revocation, or suspension of accreditation or registration status.

[Statutory Authority: RCW 43.21A.230, 90-21-090 (Order 90-21), § 173-50-210, filed 10/19/90, effective 11/19/90; 89-10-001 and 90-07-017 (Order 89-1 and 89-1A), § 173-50-210, filed 4/20/89 and 3/13/90, effective 4/13/90.]

WAC 173-50-220 Assistance to laboratories. During those calendar years in which a system audit is not required, registered laboratories may request a visit by quality assurance section personnel for the purpose of providing assistance in correcting deficiencies and improving practices for those tests covered by the scope of registration. These visits will be for the purpose of technical assistance and will not result in preparation of a corrective action report by the registered laboratory.

[Statutory Authority: RCW 43.21A.230, 90-21-090 (Order 90-21), § 173-50-220, filed 10/19/90, effective 11/19/90.]

(1999 Ed.)

Chapter 173-58 WAC

SOUND LEVEL MEASUREMENT PROCEDURES

WAC

173-58-010	Introduction.
173-58-020	Definitions.
173-58-030	Instrumentation.
173-58-040	Ambient conditions.
173-58-050	Measurement equipment preparation and use.
173-58-060	Equipment variation allowances.
173-58-070	Environmental noise measurement procedure.
173-58-080	Close proximity exhaust system sound level measurement procedure.
173-58-090	Reserved.

WAC 173-58-010 Introduction. (1) Authority. Statutory authority for the guidance and direction contained in these procedures is authorized by chapter 70.107 RCW, the Noise Control Act of 1974.

(2) Purpose. The purpose of these rules is to establish standardized procedures for the measurement of sound levels of sources regulated by the department of ecology, including, but not limited to, environmental noise, motor racing vehicles, construction, float planes, railroads, and aircraft engine testing. Vessels, as defined in RCW 88.12.010 (21) and regulated for noise under chapter 88.12 RCW (Regulation of recreational vessels), shall be exempt from chapter 173-58 WAC.

(3) Personnel. For the purposes of enforcement, the measurements shall be conducted only by persons qualified by training in the use of sound measuring equipment and proper site selection.

(4) These regulations will be amended as needed to include any new instrumentation, equipment, or procedures which the department shall deem necessary to accurately measure sound levels for enforcement purposes.

[Statutory Authority: Chapter 70.107 RCW, 94-12-001 (Order 92-41), § 173-58-010, filed 5/18/94, effective 6/18/94; 79-04-033 (Order DE 78-19), § 173-58-010, filed 3/22/79.]

WAC 173-58-020 Definitions. As used in this chapter, unless the context clearly indicates otherwise:

(1) "Background sound level" means the level of all sounds in a given environment, independent of the specific source being measured.

(2) "dBA" means the sound pressure level in decibels measured using the "A" weighting network on a sound level meter.

(3) "Department" means the department of ecology.

(4) "Director" means the director of the department of ecology.

(5) "EDNA" means the environmental designation for noise abatement, being an area or zone (environment) within which maximum permissible noise levels are established.

(6) "Impulse sound" means either a single pressure peak or a single burst of multiple pressure peaks which occur for a duration of less than one second as measured on a peak unweighted sound level meter.

(7) "Local government" means county or city government or any combination of the two.

(8) "Noise" means the intensity, duration and character of sounds, from any and all sources.

[Title 173 WAC—p. 177]

(9) "Operator" means any person who is in actual physical or electronic control of a motor vehicle, aircraft, off highway vehicle, or any other engine driven vehicle.

(10) "Person" means any individual, corporation, partnership, association, governmental body, state agency, or other entity whatsoever.

(11) "Property boundary" means the surveyed line at ground surface, which separates the real property owned, rented, or leased by one or more persons, from that owned, rented, or leased by one or more other persons, and its vertical extension.

(12) "Racing event" means any motor vehicle competition conducted under a permit issued by a governmental authority having jurisdiction or, if such permit is not required, then under the auspices of a recognized sanctioning body.

(13) "Receiving property" means real property within which the maximum permissible noise levels specified in WAC 173-60-040 shall not be exceeded from sources outside such property.

(14) "Shoreline" means the existing intersection of water with the ground surface or with any permanent, shore-connected facility.

(15) "Sound level meter" means a device or combination of devices which measures sound pressure levels and conforms to Type 1, Type 2, or Type 3 standards as specified in the American National Standards Institute Specification S1.4-1971. An impulse sound level meter shall be a peak or impulse, unweighted sound level meter which is capable of measuring impulse sound in conformance with the Type 1 or Type 2 specifications of ANSI S1.4-1971.

[Statutory Authority: Chapter 70.107 RCW. 94-12-001 (Order 92-41), § 173-58-020, filed 5/18/94, effective 6/18/94; 79-04-033 (Order DE 78-19), § 173-58-020, filed 3/22/79.]

WAC 173-58-030 Instrumentation. The following instrumentation and equipment shall be used for the measurement procedures established in this chapter:

(1) Sound level meter. The sound level meter shall meet the Type 1, Type 2, or Type 3 requirements of ANSI S1.4-1971. The meter weighting and response mode will be set as required in the specific procedure used. The sound level meter shall be returned to the manufacturer or a qualified laboratory at least once a year, to be calibrated to standards traceable to the National Bureau of Standards.

Type 1, Type 2, or Type 3 sound level meters shall be used for any initial inspection procedures, but only Type 1 or Type 2 sound level meters shall be used for the measurement of sound levels for enforcement purposes.

(2) Sound level calibrator. An acoustically coupled calibrator shall be used periodically to assure the accuracy of the sound level meter and microphone. The calibrator shall be returned to the manufacturer or a qualified laboratory at least once a year to be calibrated to standards traceable to the National Bureau of Standards.

(3) Tachometer. The tachometer shall be either one of two types: electric or vibrating reed. The electric tachometer shall be an inductive pickup type for easy attachment to any spark plug cable, contain its own internal power supply, and shall meet SAE J197 specifications for off road electric

tachometers. The vibrating reed tachometer shall be designed for use on any internal combustion engine. Calibration accuracy for both types of tachometers shall be at least ± 3 percent of full scale reading. All tachometers shall be calibrated at least once a year in accordance with the manufacturer's calibration procedures.

(4) Windscreen. A windscreen of open cell foam, cloth, or other acoustically invisible material as shall be provided by the manufacturer, shall be placed over the microphone to protect it from moisture, exhaust gases and wind effects.

(5) Anemometer. An anemometer shall be used periodically during measurements to test the wind speed.

[Statutory Authority: Chapter 70.107 RCW. 79-04-033 (Order DE 78-19), § 173-58-030, filed 3/22/79.]

WAC 173-58-040 Ambient conditions. The following ambient conditions shall be observed during measurements and shall determine whether testing is to occur or not:

(1) Wind. Sound level measurements shall not be made when the wind speed is in excess of:

(a) 20 mph (32 km/hr) for the close proximity test, WAC 173-58-080;

(b) 12 mph (19 km/hr) for all other tests.

(2) Precipitation. Sound level measurements shall not be made when precipitation is falling in such a way as to affect the equipment or the measurement readings.

(3) Background sound level. Sound level measurements shall not be made when the difference between the background sound level and the level of the measured sound source is less than 10 dBA, unless, the measurement personnel are technically qualified to logarithmically subtract the background level from the measured source's sound level.

[Statutory Authority: Chapter 70.107 RCW. 79-04-033 (Order DE 78-19), § 173-58-040, filed 3/22/79.]

WAC 173-58-050 Measurement equipment preparation and use. (1) Battery check. A battery check shall be conducted on all instruments before field calibration and measurement.

(2) Calibration. Sound level meters shall be field calibrated (using procedures described in the manufacturer's instruction manual) at the beginning and end of each measurement period, and at intervals not exceeding two hours when the instrument is used for more than a two-hour period.

(3) Microphone orientation. The microphone shall be oriented with respect to the sound source as described in the manufacturer's instruction manual.

[Statutory Authority: Chapter 70.107 RCW. 79-04-033 (Order DE 78-19), § 173-58-050, filed 3/22/79.]

WAC 173-58-060 Equipment variation allowances. Due to unavoidable variations in measurement sites and test instruments, the following allowances shall be made for the respective sound level meters:

± 1 dBA for Type 1 sound level meters

± 2 dBA for Type 2 sound level meters

This tolerance value shall be applied, after all necessary calculations have been made, to the final reported sound level for the measured sound source.

[Statutory Authority: Chapter 70.107 RCW. 79-04-033 (Order DE 78-19), § 173-58-060, filed 3/22/79.]

WAC 173-58-070 Environmental noise measurement procedure. (Reserved.)

[Statutory Authority: Chapter 70.107 RCW. 79-04-033 (Order DE 78-19), § 173-58-070, filed 3/22/79.]

WAC 173-58-080 Close proximity exhaust system sound level measurement procedure. This section establishes specific procedures for the measurement of sound levels from exhaust systems at a distance of 20 inches (0.5 meter) from the exhaust outlet. The procedures of subsections (3), (4) and (5) of this section shall not be used for exhaust systems which utilize the introduction of water to the exhaust gas flow for the purpose of muffling the exhaust noise levels, or systems which exhaust the gas flow directly into water.

(1) For the purposes of this section "vehicle" means any motor driven contrivance used as a means of transportation or recreation off of public highways.

(2) Initial inspection. An initial inspection of the vehicle exhaust system shall be conducted to determine if the following defects or modifications exist:

(a) The absence of a muffler;

(b) The presence of a muffler cut-out, bypass, or similar device which is not standard or normal equipment for the exhaust system being inspected;

(c) Defects in the exhaust system including, but not limited to, pinched outlets, and holes or rusted through areas of the muffler or pipes;

(d) The presence of equipment which will produce excessive or unusual noise from the exhaust system.

If the above defects are observed and are a violation of the muffler integrity standards established for the type of vehicle which is being inspected, then a citation shall be issued in accordance with the enforcement section of the applicable regulation.

An evaluation of the vehicle sound level shall also be made by the enforcement officer, using the human ear as a sensing device.

If the exhaust noise is discernibly louder than the engine noise, or if any of the defects or modifications described above exist but are not violations of applicable regulations, the enforcement officer shall request the vehicle operator to submit the vehicle to any measurement procedures described in this chapter which are applicable to the type of vehicle being inspected. If the operator refuses to submit the vehicle to these measurement procedures, he shall be in violation of this chapter.

(3) Test site and instrumentation set up. The test site and instrumentation shall be set up as follows:

(a) The test site shall be a flat, open area free of large, sound-reflecting surfaces (other than the surface on which the vehicle is resting), such as signboards, buildings, large docks, hillsides, or other vehicles, located within a 16-foot (5-meter) radius of the vehicle being tested and the location of the microphone. The vehicle shall not be on a hoist, rack, or over

a pit. Testing shall not occur within a shop or building. Nobody shall stand in the measurement area, except the observer and the vehicle operator.

(b) The microphone shall be at the same height as the center of the exhaust outlet if possible, but no closer to any surface than 8 inches (0.2 meter). The microphone shall be positioned with its longitudinal axis parallel to the ground, 20 ± 1 inches (0.5 meter) from the edge of the exhaust outlet, and 45 ± 10 degrees from the axis of the outlet. For exhaust outlets located inboard from the vehicle body, the microphone shall be located at the above specified angle and at least 8 inches (0.2 meter) from the nearest part of the vehicle.

For vehicles provided with exhaust outlets spaced more than 12 inches (0.3 meter) apart, measurements shall be made for each outlet as if it were the only one, and the highest level shall be recorded. If the exhaust outlets are less than twelve inches (0.3 meter) apart, a single measurement shall be made for any one of the outlets.

For vehicles with a vertical exhaust, the microphone shall be placed at a height of 48 ± 2 inches (1.2 meter). Its axis shall be vertical and oriented upwards. It shall be placed at a distance of 20 ± 1 inches (0.5 meter) from the side of the vehicle nearest the exhaust outlet.

For vehicles with the exhaust system outlet near the engine, the engine hood (if one exists) should be closed as much as possible to reduce engine noise.

If a measuring device is attached to the exhaust outlet and the microphone to maintain proper distance, insure that no vibrations from the vehicle shall be transmitted to the instrument.

(4) Vehicle operation. The vehicle shall be operated as follows:

(a) Controlled ignition vehicles. The engine shall be operated at a normal operating temperature with transmission in park or neutral. Sound level measurements shall be made at three-fourths (75 percent) of the RPM for rated horsepower ± 100 RPM of meter reading.

(b) Vehicles with motorcycle engines. The engine shall be operated at normal operating temperatures with the transmission in neutral. If no neutral is provided, the vehicle shall be operated either with the rear wheel or wheels 2-4 inches (5-10 centimeters) clear of the ground, or with the drive chain or belt removed. The sound level measurement shall be made with the engine speed stabilized at one of the following values:

(i) If the engine data is available, test the vehicle at one-half (50 percent) of the RPM for maximum rated horsepower ± 100 RPM.

(ii) If the engine data is not available, and if the vehicle has a tachometer showing the manufacturer's recommended maximum engine speed ("red line"), test the vehicle at 60 percent of the "red line" RPM ± 100 RPM.

(iii) If the engine data and red line RPM are not available, test the vehicle at:

(A) 3500 ± 100 RPM for engines with total cylinder displacement between 0-950 cc (0-58 in.³).

(B) $2800 \text{ RPM} \pm 100 \text{ RPM}$ for engines with total cylinder displacement greater than 950 cc (58 in.³).

(c) Diesel engine vehicles. The engine shall be operated at normal operating temperatures with transmission in park or neutral. Sound level measurements shall be made at the vehicle's maximum governed no-load speed. If the engine is not provided with a governor, the vehicle shall be operated in the same manner as a vehicle with a controlled ignition.

(5) Measurement. The exhaust system sound level shall be measured as follows:

(a) The sound level meter shall be set for slow response and on the "A" weighting scale.

(b) The sound level meter shall be observed during the full cycle of engine acceleration-deceleration. The recorded sound level shall be the highest value obtained at the appropriate, constant engine speed as specified in subsection (4) of this section, and shall exclude peaks due to unrelated ambient noise, engine noise, or extraneous impulsive-type noise.

(c) At least two measurements shall be made, and the reported sound level shall be the average of the two highest readings which are within one dBA of each other.

[Statutory Authority: Chapter 70.107 RCW. 79-04-033 (Order DE 78-19), § 173-58-080, filed 3/22/79.]

WAC 173-58-090 Reserved.

[Statutory Authority: Chapter 70.107 RCW. 94-12-001 (Order 92-41), § 173-58-090, filed 5/18/94, effective 6/18/94; 79-04-033 (Order DE 78-19), § 173-58-090, filed 3/22/79.]

Chapter 173-60 WAC

MAXIMUM ENVIRONMENTAL NOISE LEVELS

WAC

173-60-010	Authority and purpose.
173-60-020	Definitions.
173-60-030	Identification of environments.
173-60-040	Maximum permissible environmental noise levels.
173-60-050	Exemptions.
173-60-060	Nuisance regulations not prohibited.
173-60-070	Future regulations.
173-60-080	Variances and implementation schedules.
173-60-090	Enforcement policy.
173-60-100	Appeals.
173-60-110	Cooperation with local government.
173-60-120	Effective date.

WAC 173-60-010 Authority and purpose. These rules are adopted pursuant to chapter 70.107 RCW, the Noise Control Act of 1974, in order to establish maximum noise levels permissible in identified environments, and thereby to provide use standards relating to the reception of noise within such environments. Vessels, as defined in RCW 88.12.010(21) and regulated for noise under chapter 88.12 RCW (Regulation of recreational vessels), shall be exempt from chapter 173-60 WAC.

[Statutory Authority: Chapter 70.107 RCW. 94-12-001 (Order 92-41), § 173-60-010, filed 5/18/94, effective 6/18/94; Order 74-32, § 173-60-010, filed 4/22/75, effective 9/1/75.]

WAC 173-60-020 Definitions. (1) "Background sound level" means the level of all sounds in a given environment, independent of the specific source being measured.

(2) "dBA" means the sound pressure level in decibels measured using the "A" weighting network on a sound level meter. The sound pressure level, in decibels, of a sound is 20

times the logarithm to the base 10 of the ratio of the pressure of the sound to a reference pressure of 20 micropascals.

(3) "Department" means the department of ecology.

(4) "Director" means the director of the department of ecology.

(5) "Distribution facilities" means any facility used for distribution of commodities to final consumers, including facilities of utilities that convey water, waste water, natural gas, and electricity.

(6) "EDNA" means the environmental designation for noise abatement, being an area or zone (environment) within which maximum permissible noise levels are established.

(7) "Existing" means a process, event, or activity in an established area, producing sound subject to or exempt from this chapter, prior to the effective date of September 1, 1975.

(8) "Local government" means county or city government or any combination of the two.

(9) "Noise" means the intensity, duration and character of sounds, from any and all sources.

(10) "Person" means any individual, corporation, partnership, association, governmental body, state agency or other entity whatsoever.

(11) "Property boundary" means the surveyed line at ground surface, which separates the real property owned, rented, or leased by one or more persons, from that owned, rented, or leased by one or more other persons, and its vertical extension.

(12) "Racing event" means any motor vehicle competition conducted under a permit issued by a governmental authority having jurisdiction or, if such permit is not required, then under the auspices of a recognized sanctioning body.

(13) "Receiving property" means real property within which the maximum permissible noise levels specified herein shall not be exceeded from sources outside such property.

(14) "Sound level meter" means a device which measures sound pressure levels and conforms to Type 1 or Type 2 as specified in the American National Standards Institute Specification S1.4-1971.

[Statutory Authority: Chapter 70.107 RCW. 94-12-001 (Order 92-41), § 173-60-020, filed 5/18/94, effective 6/18/94; 83-15-046 (Order DE 82-42), § 173-60-020, filed 7/19/83; Order DE 77-1, § 173-60-020, filed 6/1/77; Order 74-32, § 173-60-020, filed 4/22/75, effective 9/1/75.]

WAC 173-60-030 Identification of environments. (1) Except when included within specific prior designations as provided in subsections (2), (3), and (4) of this section, the EDNA of any property shall be based on the following typical uses, taking into consideration the present, future, and historical usage, as well as the usage of adjacent and other lands in the vicinity.

(a) Class A EDNA - Lands where human beings reside and sleep. Typically, Class A EDNA will be the following types of property used for human habitation:

(i) Residential

(ii) Multiple family living accommodations

(iii) Recreational and entertainment, (e.g., camps, parks, camping facilities, and resorts)

(iv) Community service, (e.g., orphanages, homes for the aged, hospitals, health and correctional facilities)

(b) Class B EDNA - Lands involving uses requiring protection against noise interference with speech. Typically, Class B EDNA will be the following types of property:

- (i) Commercial living accommodations
- (ii) Commercial dining establishments
- (iii) Motor vehicle services
- (iv) Retail services
- (v) Banks and office buildings
- (vi) Miscellaneous commercial services, property not used for human habitation
- (vii) Recreation and entertainment, property not used for human habitation (e.g., theaters, stadiums, fairgrounds, and amusement parks)

(viii) Community services, property not used for human habitation (e.g., educational, religious, governmental, cultural and recreational facilities).

(c) Class C EDNA - Lands involving economic activities of such a nature that higher noise levels than experienced in other areas is normally to be anticipated. Persons working in these areas are normally covered by noise control regulations of the department of labor and industries. Uses typical of Class A EDNA are generally not permitted within such areas. Typically, Class C EDNA will be the following types of property:

- (i) Storage, warehouse, and distribution facilities.
- (ii) Industrial property used for the production and fabrication of durable and nondurable man-made goods
- (iii) Agricultural and silvicultural property used for the production of crops, wood products, or livestock.

(d) Where there is neither a zoning ordinance in effect nor an adopted comprehensive plan, the legislative authority of local government may, by ordinance or resolution, designate specifically described EDNAs which conform to the above use criteria and, upon departmental approval, EDNAs so designated shall be as set forth in such local determination.

(e) Where no specific prior designation of EDNAs has been made, the appropriate EDNA for properties involved in any enforcement activity will be determined by the investigating official on the basis of the criteria of (a), (b), and (c) of this subsection.

(2) In areas covered by a local zoning ordinance, the legislative authority of the local government may, by ordinance or resolution designate EDNAs to conform with the zoning ordinance as follows:

- (a) Residential zones - Class A EDNA
- (b) Commercial zones - Class B EDNA
- (c) Industrial zones - Class C EDNA

Upon approval by the department, EDNAs so designated shall be as set forth in such local determination. EDNA designations shall be amended as necessary to conform to zone changes under the zoning ordinance.

(3) In areas not covered by a local zoning ordinance but within the coverage of an adopted comprehensive plan the legislative authority of the local government may, by ordinance or resolution designate EDNAs to conform with the comprehensive plan as follows:

- (a) Residential areas - Class A EDNA
- (b) Commercial areas - Class B EDNA
- (c) Industrial areas - Class C EDNA

Upon approval by the department EDNAs so designated shall be as set forth in such local determination. EDNA designations shall be amended as necessary to conform to changes in the comprehensive plan.

(4) The department recognizes that on certain lands, serenity, tranquility, or quiet are an essential part of the quality of the environment and serve an important public need. Special designation of such lands with appropriate noise level standards by local government may be adopted subject to approval by the department. The director may make such special designation pursuant to the procedures of the Administrative Procedure Act, chapter 34.04 RCW.

[Order 74-32, § 173-60-030, filed 4/22/75, effective 9/1/75.]

WAC 173-60-040 Maximum permissible environmental noise levels. (1) No person shall cause or permit noise to intrude into the property of another person which noise exceeds the maximum permissible noise levels set forth below in this section.

(2)(a) The noise limitations established are as set forth in the following table after any applicable adjustments provided for herein are applied.

EDNA OF NOISE SOURCE	EDNA OF RECEIVING PROPERTY		
	Class A	Class B	Class C
CLASS A	55dBA	57 dBA	60 dBA
CLASS B	57	60	65
CLASS C	60	65	70

(b) Between the hours of 10:00 p.m. and 7:00 a.m. the noise limitations of the foregoing table shall be reduced by 10 dBA for receiving property within Class A EDNAs.

(c) At any hour of the day or night the applicable noise limitations in (a) and (b) above may be exceeded for any receiving property by no more than:

- (i) 5 dBA for a total of 15 minutes in any one-hour period; or
- (ii) 10 dBA for a total of 5 minutes in any one-hour period; or
- (iii) 15 dBA for a total of 1.5 minutes in any one-hour period.

[Order 74-32, § 173-60-040, filed 4/22/75, effective 9/1/75.]

WAC 173-60-050 Exemptions. (1) The following shall be exempt from the provisions of WAC 173-60-040 between the hours of 7:00 a.m. and 10:00 p.m.:

(a) Sounds originating from residential property relating to temporary projects for the maintenance or repair of homes, grounds and appurtenances.

(b) Sounds created by the discharge of firearms on authorized shooting ranges.

(c) Sounds created by blasting.

(d) Sounds created by aircraft engine testing and maintenance not related to flight operations: *Provided*, That aircraft testing and maintenance shall be conducted at remote sites whenever possible.

(e) Sounds created by the installation or repair of essential utility services.

(2) The following shall be exempt from the provisions of WAC 173-60-040 (2)(b):

(a) Noise from electrical substations and existing stationary equipment used in the conveyance of water, waste water, and natural gas by a utility.

(b) Noise from existing industrial installations which exceed the standards contained in these regulations and which, over the previous three years, have consistently operated in excess of 15 hours per day as a consequence of process necessity and/or demonstrated routine normal operation. Changes in working hours, which would affect exemptions under this regulation, require approval of the department.

(3) The following shall be exempt from the provisions of WAC 173-60-040, except insofar as such provisions relate to the reception of noise within Class A EDNAs between the hours of 10:00 p.m. and 7:00 a.m.

(a) Sounds originating from temporary construction sites as a result of construction activity.

(b) Sounds originating from forest harvesting and silvicultural activity.

(4) The following shall be exempt from all provisions of WAC 173-60-040:

(a) Sounds created by motor vehicles when regulated by chapter 173-62 WAC.

(b) Sounds originating from aircraft in flight and sounds that originate at airports which are directly related to flight operations.

(c) Sounds created by surface carriers engaged in interstate commerce by railroad.

(d) Sounds created by warning devices not operating continuously for more than five minutes, or bells, chimes, and carillons.

(e) Sounds created by safety and protective devices where noise suppression would defeat the intent of the device or is not economically feasible.

(f) Sounds created by emergency equipment and work necessary in the interests of law enforcement or for health safety or welfare of the community.

(g) Sounds originating from motor vehicle racing events at existing authorized facilities.

(h) Sounds originating from officially sanctioned parades and other public events.

(i) Sounds emitted from petroleum refinery boilers during startup of said boilers: *Provided*, That the startup operation is performed during daytime hours whenever possible.

(j) Sounds created by the discharge of firearms in the course of hunting.

(k) Sounds caused by natural phenomena and unamplified human voices.

(l) Sounds created by motor vehicles, licensed or unlicensed, when operated off public highways EXCEPT when such sounds are received in Class A EDNAs.

(m) Sounds originating from existing natural gas transmission and distribution facilities. However, in circumstances where such sounds impact EDNA Class A environments and complaints are received, the director or his designee may take action to abate by application of EDNA Class C source limits to the facility under the requirements of WAC 173-60-050(5).

(6) Nothing in these exemptions is intended to preclude the department from requiring installation of the best available noise abatement technology consistent with economic feasibility. The establishment of any such requirement shall be subject to the provisions of the Administrative Procedure Act, chapter 34.04 RCW.

[Statutory Authority: Chapter 70.107 RCW. 94-12-001 (Order 92-41), § 173-60-050, filed 5/18/94, effective 6/18/94; 83-15-046 (Order DE 82-42), § 173-60-050, filed 7/19/83; Order DE 77-1, § 173-60-050, filed 6/2/77; Order 75-18, § 173-60-050, filed 8/1/75; Order 74-32, § 173-60-050, filed 4/22/75, effective 9/1/75.]

WAC 173-60-060 Nuisance regulations not prohibited. Nothing in this chapter or the exemptions provided herein, shall be construed as preventing local government from regulating noise from any source as a nuisance. Local resolutions, ordinances, rules or regulations regulating noise on such a basis shall not be deemed inconsistent with this chapter by the department.

[Order 74-32, § 173-60-060, filed 4/22/75, effective 9/1/75.]

WAC 173-60-070 Future regulations. It is the intention of the department to establish use standards and/or performance standards for the following sources of noise exempted or partially exempted from the requirements of this chapter within two years after adequate legislative funding is made available to conduct studies providing the necessary data.

(1) Sounds created by aircraft engine testing and maintenance not related to flight operations, through the adoption of a new chapter 173-64 WAC.

(2) Sounds created by construction equipment and emanating from construction sites, through the adoption of a new chapter 173-66 WAC.

(3) Sounds created by motor vehicle racing events, through the adoption of a new chapter 173-63 WAC.

(4) Sounds created by the operation of equipment or facilities of surface carriers engaged in commerce by railroad, to the extent consistent with federal law and regulations through the adoption of a new chapter 173-72 WAC.

[Statutory Authority: Chapter 70.107 RCW. 94-12-001 (Order 92-41), § 173-60-070, filed 5/18/94, effective 6/18/94; Order DE 77-1, § 173-60-070, filed 6/1/77; Order 74-32, § 173-60-070, filed 4/22/75, effective 9/1/75.]

WAC 173-60-080 Variances and implementation schedules. (1) Variances may be granted to any person from any particular requirement of this chapter, if findings are made that immediate compliance with such requirement cannot be achieved because of special circumstances rendering immediate compliance unreasonable in light of economic or physical factors, encroachment [encroachment] upon an existing noise source, or because of nonavailability of feasible technology or control methods. Any such variance or renewal thereof shall be granted only for the minimum time period found to be necessary under the facts and circumstances.

(2) An implementation schedule for achieving compliance with this chapter shall be incorporated into any variance issued.

(3) Variances shall be issued only upon application in writing and after providing such information as may be

requested. No variance shall be issued for a period of more than 30 days except upon due notice to the public with opportunity to comment. Public hearings may be held, when substantial public interest is shown, at the discretion of the issuing agency.

(4) Sources of noise, subject to this chapter, upon which construction begins after the effective date hereof shall immediately comply with the requirements of this chapter, except in extraordinary circumstances where overriding considerations of public interest dictate the issuance of a variance.

[Order 74-32, § 173-60-080, filed 4/22/75, effective 9/1/75.]

WAC 173-60-090 Enforcement policy. Noise measurement for the purposes of enforcing the provisions of WAC 173-60-040 shall be measured in dBA with a sound level meter with the point of measurement being at any point within the receiving property. Such enforcement shall be undertaken only upon receipt of a complaint made by a person who resides, owns property, or is employed in the area affected by the noise complained of, EXCEPT for parks, recreational areas, and wildlife sanctuaries. For enforcement purposes pursuant to RCW 70.107.050, each day, defined as the 24-hour period beginning at 12:01 a.m., in which violation of the noise control regulations (chapter 173-60 WAC) occurs, shall constitute a separate violation.

[Order DE 76-5, § 173-60-090, filed 2/5/76; Order 74-32, § 173-60-090, filed 4/22/75, effective 9/1/75.]

WAC 173-60-100 Appeals. Any person aggrieved by any decision of the department in relation to the enforcement of the maximum permissible noise levels provided for herein, the granting or denial of a variance or the approval or disapproval of a local resolution or ordinance for noise abatement and control may appeal to the pollution control hearings board pursuant to chapter 43.21B RCW under the procedures of chapter 371-08 WAC.

[Order 74-32, § 173-60-100, filed 4/22/75, effective 9/1/75.]

WAC 173-60-110 Cooperation with local government. (1) The department conceives the function of noise abatement and control to be primarily the role of local government and intends actively to encourage local government to adopt measures for noise abatement and control. Wherever such measures are made effective and are being actively enforced, the department does not intend to engage directly in enforcement activities.

(2) No ordinance or resolution of any local government which imposes noise control requirements differing from those adopted by the department shall be effective unless and until approved by the director. If approval is denied, the department, following submission of such local ordinance or resolution to the department, shall deliver its statement or order of denial, designating in detail the specific provision(s) found to be objectionable and the precise grounds upon which the denial is based, and shall submit to the local government, the department's suggested modification.

(1999 Ed.)

(3) The department shall encourage all local governments enforcing noise ordinances pursuant to this chapter to consider noise criteria and land use planning and zoning.

[Statutory Authority: Chapter 70.107 RCW. 87-06-056 (Order 86-40), § 173-60-110, filed 3/4/87; Order 74-32, § 173-60-110, filed 4/22/75, effective 9/1/75.]

WAC 173-60-120 Effective date. This chapter shall become effective on September 1, 1975. It is the intention of the department to periodically review the provisions hereof as new information becomes available for the purpose of making amendments as appropriate.

[Order 74-32, § 173-60-120, filed 4/22/75, effective 9/1/75.]

Chapter 173-62 WAC MOTOR VEHICLE NOISE PERFORMANCE STANDARDS

WAC

173-62-010	Authority and purpose.
173-62-020	Definitions.
173-62-030	Standards.
173-62-040	Exemptions.
173-62-050	Implementation schedules.
173-62-060	Enforcement.
173-62-070	Effective date.

WAC 173-62-010 Authority and purpose. (1) Under RCW 70.107.030(5) of the Noise Control Act of 1974 (chapter 183, Laws of 1974), the legislature directed the department of ecology, in exercising rule-making authority to give first priority to the adoption of motor vehicle noise performance standards. The purpose of this chapter is to carry out that legislative directive through the adoption of noise emission standards for new motor vehicles and noise emission standards for the operation of motor vehicles on public highways.

(2) Local needs. The standards established in this chapter provide several methods of evaluating motor vehicle noise levels. Nothing in these rules is meant to require enforcement agencies or local governments to adopt or use every standard in this chapter to determine a violation. Specific local needs shall dictate the standard(s) which may be adopted or used.

[Statutory Authority: Chapter 70.107 RCW. 80-14-041 (Order DE 80-29), § 173-62-010, filed 9/30/80; Order DE 74-33, § 173-62-010, filed 1/30/75, effective 7/1/75.]

WAC 173-62-020 Definitions. As used in this chapter:

(1) "dBA" means the sound level in decibels measured using the "A" weighting network on a sound level meter as specified in the American National Standard Specification for Sound Level Meters S1.4-1971. A decibel is a unit of sound, based on a logarithmic scale, of the ratio of the magnitude of a particular sound pressure to a standard reference pressure of 20 micropascals;

(2) "Department" means the department of ecology;

(3) "Director" means director of the department of ecology;

(4) "Gross vehicle weight rating (GVWR)" means the value specified by the manufacturer as the loaded weight of a single vehicle;

(5) "In-use" motor vehicle is any motor vehicle which is used on a public highway, except farm vehicles as defined under RCW 46.04.181;

(6) "Motor vehicle" means any vehicle which is self-propelled, used primarily for transporting persons or property upon public highways and required to be licensed under RCW 46.16.010 (aircraft, water craft and vehicles used exclusively on stationary rails or tracks are not motor vehicles as that term is used herein);

(7) "Motorcycle" means any motor vehicle having a saddle for the use of the rider and designed to travel on not more than three wheels in contact with the ground, except farm tractors;

(8) "Muffler" means a device consisting of a series of chambers or other mechanical designs for the purpose of receiving exhaust gas from an internal combustion engine and effective in reducing noise to comply with the standards of this chapter;

(9) "New motor vehicle" means a motor vehicle manufactured after December 31, 1975, whose equitable or legal title has never been transferred to a person who, in good faith, purchases the new motor vehicle for purposes other than resale;

(10) "Off-highway vehicle" means any self-propelled vehicle not used primarily for transporting persons or property upon public highways nor required to be licensed under RCW 46.16.010;

(11) "Person" means any individual, corporation, partnership, association, governmental body, state agency or other entity whatsoever;

(12) "Public highway" means the entire width between the boundary lines of every way publicly maintained by the department of highways or any county or city when any part thereof is generally open to the use of the public for purposes of vehicular travel as a matter of right;

(13) "Sound level" means a weighted sound pressure level measured by use of a sound level meter using the "A" weighting network and reported as dBA.

[Statutory Authority: Chapter 70.107 RCW. 80-14-041 (Order DE 80-29), § 173-62-020, filed 9/30/80; Order DE 75-17, § 173-62-020, filed 8/11/75; Order DE 74-33, § 173-62-020, filed 1/30/75, effective 7/1/75.]

WAC 173-62-030 Standards. (1) No person shall operate any motor vehicle or any combination of such vehicles upon any public highway under any conditions of grade, load, acceleration or deceleration in such a manner as to exceed the maximum permissible sound levels for the category of vehicle in Table I, as measured at a distance of 50 feet (15.2 meters) from the center of the lane of travel within the speed limits specified, under procedures established by the state commission on equipment in chapter 204-56 WAC, "procedures for measuring motor vehicle sound levels."

[Title 173 WAC—p. 184]

Table I
IN-USE MOTOR VEHICLE NOISE PERFORMANCE STANDARDS
Measured @ 50 feet (15.2 meters)

Vehicle Category (type)	Effective Date	Maximum Sound Level, dBA Speed Zones		
		45 mph (72 kph) or less	Over 45 mph (72 kph)	Stationary Test
Motorcycles	July 1, 1980	78	82	N/A
Automobiles, light trucks and all other motor vehicles 10,000 pounds (4536 kg) GVWR or less	July 1, 1980	72 35 mph (56 kph) or less	78 Over 35 mph (56 kph)	N/A
All motor vehicles over 10,000 pounds (4536 kg) GVWR	June 1, 1977 1986 and after	86 Reserved	90 Reserved	86 Reserved

(2) Every motor vehicle operated upon the public highways shall at all times be equipped with an exhaust system and a muffler in good working order and constant operation to prevent excessive or unusual noise.

(3) No person shall operate a motor vehicle in such a manner as to cause or allow to be emitted squealing, screeching or other such noise from the tires in contact with the ground because of rapid acceleration or excessive speed around corners or other such reason, except that noise resulting from emergency braking to avoid imminent danger shall be exempt from this provision.

(4) No person shall operate any motor vehicle upon any public highway if the vehicle exhaust system exceeds the maximum permissible sound levels of Table II for the category and year of vehicle, as measured at a distance of twenty inches (0.5 meter) from the exhaust outlet under procedures established by the state commission on equipment in chapter 204-56 WAC, "procedures for measuring motor vehicle sound levels."

(5) No person shall sell or offer for sale a NEW MOTOR VEHICLE except an off-highway vehicle, which produces a maximum noise exceeding the noise levels in Table III at a distance of 50 feet (15.2 meters) under acceleration test procedures established by the state commission on equipment in chapter 204-56 WAC, "procedures for measuring motor vehicle sound levels."

Table II
IN-USE MOTOR VEHICLE EXHAUST SYSTEM NOISE
PERFORMANCE STANDARDS
Measured @ 20 inches (0.5 meters)

Vehicle Category (type)	Model Year	Maximum Sound Level, dBA
Motorcycles	before 1986 1986 and after	99 (reserved)
Automobiles, light trucks and all other motor vehicles 10,000 pounds (4536 kg) GVWR or less	before 1986 1986 and after	95 (reserved)

(1999 Ed.)

Table III
MAXIMUM SOUND LEVELS FOR NEW MOTOR VEHICLES
Measured @ 50 feet (15.2 meters)

Vehicle Category (type)	Date of Manufacture	Maximum Sound Level, dBA
Any motor vehicle over 10,000 pounds (4536 kg) GVWR excluding buses	before January 1, 1978	86
	after January 1, 1978	83
	after January 1, 1982	80
All buses over 10,000 pounds (4536 kg) GVWR	after January 1, 1980	85
	after January 1, 1983	83
	after January 1, 1986	80
Motorcycles	after January 1, 1976	83
	after January 1, 1986	80
Automobiles, light trucks and all other motor vehicles 10,000 pounds (4536 kg) GVWR or less	after January 1, 1976	80

[Statutory Authority: Chapter 70.107 RCW, 80-14-041 (Order DE 80-29), § 173-62-030, filed 9/30/80; Order DE 77-2, § 173-62-030, filed 6/1/77; Order DE 75-17, § 173-62-030, filed 8/11/75; Order DE 74-33, § 173-62-030, filed 1/30/75, effective 7/1/75.]

WAC 173-62-040 Exemptions. The provisions of this chapter shall not apply to noise caused by auxiliary equipment on motor vehicles used for highway maintenance, nor to noise caused in the performance of emergency work for the immediate safety, health or welfare of the community or of individuals of the community, or to restore property to a safe condition following a public calamity.

[Order DE 75-17, § 173-62-040, filed 8/11/75; Order DE 74-33, § 173-62-040, filed 1/30/75, effective 7/1/75.]

WAC 173-62-050 Implementation schedules. (1) **Conditions of issuance.** The department may approve and issue to any person, an implementation schedule for meeting any particular requirement of this chapter, if it finds that immediate compliance with such requirement cannot be achieved because of conditions beyond the control of such person or because of special circumstances rendering immediate compliance unreasonable in light of economic or physical factors or because of the nonavailability of feasible technology or control methods.

(2) **Requesting procedure.** Implementation schedules shall be issued only upon application in writing to the department. Such application shall state in a concise manner the facts to show cause why such schedule should be approved. Any aggrieved person may appeal the department's decision on an application to the pollution control hearings board pursuant to chapter 43.21B RCW.

[Order DE 74-33, § 173-62-050, filed 1/30/75, effective 7/1/75.]

WAC 173-62-060 Enforcement. (1) Measurements shall be made with a sound level meter meeting Type 1, S1A, 2 or S2A requirements as specified in the American National Standards Specifications for Sound Level Meters S1.4-1971 as required under measurement procedures established in

(1999 Ed.)

chapter 204-56 WAC, "procedures for measuring motor vehicle sound levels."

(2) Violation of any in-use motor vehicle noise standard set forth in this chapter shall be a traffic infraction, enforced by such authorities and in such manner as violations of chapter 46.37 RCW.

(3) Law enforcement personnel selected to measure vehicle sound levels shall have received training in the techniques of sound measurement and the operation of sound measuring instruments.

(4) Any enforcement officer who by use of the initial inspection procedures of chapter 204-56 WAC suspects that a motor vehicle may be in violation of the standards of this chapter may require the operator to have the vehicle presented for sound level measurement. Measurements of a motor vehicle may be performed at off-road sites to determine compliance with the in-use standards.

(5) Any operator who fails to comply with the directive to present the vehicle to a sound level measurement test shall be in violation of this chapter.

(6) Any seller, importer, or manufacturer who sells or offers for sale a motor vehicle which violates the standards in WAC 173-62-030 shall be subject to a civil penalty not to exceed one hundred dollars as established in RCW 70.107.050. Every motor vehicle sold or offered for sale shall constitute a separate violation.

[Statutory Authority: Chapter 70.107 RCW, 80-14-041 (Order DE 80-29), § 173-62-060, filed 9/30/80; Order DE 74-33, § 173-62-060, filed 1/30/75, effective 7/1/75.]

WAC 173-62-070 Effective date. This chapter shall become effective July 1, 1975.

[Order DE 74-33, § 173-62-070, filed 1/30/75, effective 7/1/75.]

Chapter 173-80 WAC

LIMITATIONS ON USE OF REFERENDUM 39 GRANT FUNDS FOR WATER POLLUTION ABATEMENT

WAC

173-80-010	Purpose and scope.
173-80-020	Definitions.
173-80-030	Limitations on the use of funds.
173-80-040	Provision of guidelines.
173-80-050	Wastewater treatment works grants—Priority rating and other provisions.
173-80-060	Lake restoration project grants—General eligibility requirements and priority rating.
173-80-070	Agricultural wastes project grants—General eligibility requirements and priority rating.
173-80-080	Limiting the use of existing Referendum 39 regulations and funds.

WAC 173-80-010 Purpose and scope. The purpose of this chapter is to set forth limitations on the allocation and uses of monies administered by the department of ecology for purposes of providing grants and loans for wastewater treatment facilities, agricultural pollution abatement facilities, and lake restoration projects pursuant to chapter 43.99F RCW (Referendum 39). To derive the most benefit for the state in protecting the health and safety of the people it is necessary to establish criteria for the use of funds made available by Referendum 39. This chapter will outline (1) limitations

on the allocation and uses of the funds, (2) the criteria to be considered for determining who will receive funds, and (3) the process to be followed for distributing the funds.

[Statutory Authority: RCW 43.21A.080. 82-05-011 (Order DE 81-50), § 173-80-010, filed 2/5/82.]

WAC 173-80-020 Definitions. (1) "Department" means the Washington state department of ecology.

(2) "Wastewater treatment works construction program" (hereinafter referred to as the wastewater treatment program) means the state/local program of grants and loans under chapter 43.99F RCW (Referendum 39) to public entities for the purpose of planning, designing, constructing, or upgrading treatment works.

(3) "Agricultural wastes grants program" means the program of grants and loans administered by the department for the planning, design and construction of publicly owned or operated agricultural pollution control facilities.

(4) "Lake restoration grants program" means the program of state grants and loans administered by the department for the planning, design and implementation of lake restoration projects.

(5) "Director" means the director of the Washington state department of ecology or his or her authorized designee.

(6) "Management of wastes" means the control, collection, transport, treatment, and disposal of nonradioactive solid and nonradioactive liquid waste materials.

(7) "Renewable energy" means, but is not limited to, the production of steam, hot water for steam heat, electricity, cogeneration, gas, fuel through incineration of wastes, refuse-derived fuel processes, pyrolysis, hydrolysis or bioconversion, and energy savings through material recovery from waste source separation and/or recycling.

(8) "Energy savings as a result of the management of the wastes" means but is not limited to the capital cost associated with an energy efficient treatment or transport process chosen over a process more commonly used in standard engineering practice which is more energy intensive.

(9) "Project priority list" means the annual list of rated and ranked projects for which state grant assistance is expected during the year for which the list is issued.

(10) "Priority rating system" means the process and criteria used by the department of ecology to rate and rank projects in the state that are considered eligible for assistance under chapter 43.99F RCW.

[Statutory Authority: RCW 43.21A.080. 82-05-011 (Order DE 81-50), § 173-80-020, filed 2/5/82.]

WAC 173-80-030 Limitations on the use of funds. (1) The following water program projects shall be eligible for state grants, loans, or combination of grants and loans in an amount not to exceed seventy-five percent of the total eligible cost of the project as determined by the department and subject to the special provisions contained in this chapter.

(a) Wastewater treatment projects.

(b) Lake restoration projects.

(c) Agricultural pollution control projects.

(2) Loans may be authorized by the director, provided:

(a) The loan repayment period does not exceed five years.

[Title 173 WAC—p. 186]

(b) The cumulative total of all loans authorized during any biennium does not exceed ten percent of the cumulative total of funds appropriated by the legislature for that biennium, excluding any special appropriation authorized by WAC 173-80-050(6).

(c) The director considers and documents why it is in the best interest of the state's citizens to provide a loan.

(d) The director considers and documents how the loan will be repaid.

(3) The wastewater treatment program will establish an accounting procedure to identify the money which is spent on projects that are capable of producing renewable energy or energy savings as a result of the management of the wastes.

[Statutory Authority: RCW 43.21A.080. 82-05-011 (Order DE 81-50), § 173-80-030, filed 2/5/82.]

WAC 173-80-040 Provision of guidelines. The department will publish guidelines which establish procedures for awarding grants and eligibility criteria for each Referendum 39 grant program identified in WAC 173-80-030(1). These guidelines will describe the grant application, review, and award process and will be available prior to the first grant award.

[Statutory Authority: RCW 43.21A.080. 82-05-011 (Order DE 81-50), § 173-80-040, filed 2/5/82.]

WAC 173-80-050 Wastewater treatment works grants—Priority rating and other provisions. (1) In instances where applications for wastewater treatment works grant funds exceed the amount currently available to the department, the director will establish a project priority list using published priority rating criteria which consider, but are not limited to, the following:

(a) Water quality impacts caused by existing circumstances.

(b) Public health impacts caused by existing circumstances.

(c) The prior local effort expended toward correcting the existing or similar wastewater problems.

(d) The cost-benefit relationship of the proposed project.

(e) Problem prevention aspects of the proposed project.

(2) In instances where a priority list is required, the director will ensure that:

(a) A project priority list is developed on an annual basis.

(b) The priority list be readily available to the public for review and comment thirty days prior to its approval by the director.

(c) Comments received during any review period are considered and responded to before a final list is approved by the director.

(d) An approved list is available on or about forty-five days after the close of the application period.

(3) The department may use funds authorized by chapter 43.99F RCW as fifteen percent grants to wastewater treatment projects for public entities who have received a federal grant under Title II of Public Law 97-117 prior to October 1, 1982, or a written guarantee from the department, prior to the effective date of this chapter, that such a grant will be available when a federal grant is received. New phases of those continuing construction wastewater treatment projects begun

(1999 Ed.)

prior to October 1, 1982, are also eligible for a fifteen percent grant. Funds are to be awarded under this authority only if funds provided by chapter 43.83A RCW (Referendum Bill No. 26) are not available.

(4) Prior to December 31, 1982, the department may award a grant for seventy-five percent of the eligible costs for completion of any wastewater treatment facility that began construction under the federal wastewater treatment program prior to October 1, 1981, and is not scheduled to receive a federal grant prior to federal fiscal year 1983.

(5) Wastewater treatment program projects, except those allowed by WAC 173-80-050(4), shall not receive grants exceeding fifty percent of the eligible costs of the project.

(6) The director may enter into a single lump sum design and construction contract with a grantee whose project exceeds a total cost of \$100 million and requires more than three years to design and construct, providing that all the following conditions are met:

(a) The project appears on the current project priority list within the range fundable with remaining, unobligated monies authorized by chapter 43.99F RCW.

(b) The contract contains provisions limiting the total amount of state funding to fifty percent of the eligible costs or an agreed upon figure (whichever is less), establishing cash flow agreements, and any other provisions the director deems necessary to protect the financial interests of the state.

(c) The legislature appropriates the necessary funds.

(d) The grantee agrees to a one-time grant, including limited increases at time of bid, and will not thereafter seek any further funds under the provisions of chapter 43.99F RCW.

[Statutory Authority: RCW 43.21A.080, 82-05-011 (Order DE 81-50), § 173-80-050, filed 2/5/82.]

WAC 173-80-060 Lake restoration project grants—General eligibility requirements and priority rating. (1) General eligibility requirements include:

(a) The lake must have a documented water quality problem which is resulting in impairment of beneficial uses;

(b) The proposed project must be sponsored by a public body as defined in chapter 43.99F RCW;

(c) The project sponsor must be able to provide at least ten percent of the total project cost unless a lower share is specifically authorized by the director; and

(d) Public access must be provided which is sufficient to allow the general public the same opportunity to enjoy the lake's recreational benefits as that enjoyed by residents living immediately adjacent to the lake.

(2) When applications for grant funds exceed the amount currently available to the department, the director will establish a lake restoration project priority list using rating criteria which consider, but are not limited to, the following:

(a) Water quality improvements to be achieved

(b) Increased or enhanced lake utilization

(c) Restoration potential

(d) Public health impacts to be corrected

(3) When a lake restoration project priority list is required, the director will ensure that the priority list is readily available to the public for review and comment thirty days prior to its approval by the director.

(1999 Ed.)

[Statutory Authority: RCW 43.21A.080, 82-05-011 (Order DE 81-50), § 173-80-060, filed 2/5/82.]

WAC 173-80-070 Agricultural wastes project grants—General eligibility requirements and priority rating. (1) General eligibility requirements include:

(a) The project sponsor must be a public body as defined in chapter 43.99F RCW;

(b) Eligible project elements must benefit the public and be utilized by more than one member of the sponsoring group or agency;

(c) The project must directly benefit the quality of the receiving water; and

(d) The project sponsor must provide at least ten percent of the grant eligible costs unless a lesser amount is authorized by the director.

(2) Project rating—When applications for grant funds exceed the amount currently available to the department, the director will establish an agricultural wastes project priority list using criteria which includes, but are not limited to:

(a) Water quality improvements to be achieved

(b) Improved efficiency in water quantity utilization

(c) Resource conservation potential

(d) Reduction in impairment of beneficial uses

(3) When an agricultural waste project priority list is required, the director will ensure that the priority list is readily available to the public for review and comment thirty days prior to its approval by the director.

[Statutory Authority: RCW 43.21A.080, 82-05-011 (Order DE 81-50), § 173-80-070, filed 2/5/82.]

WAC 173-80-080 Limiting the use of existing Referendum 39 regulations and funds. This chapter is not applicable to the allocation and uses of moneys administered by the department of ecology pursuant to chapter 3, Laws of 1986.

[Statutory Authority: 1986 c 3 § 4, 86-19-041 (Order DE 86-26), § 173-80-080, filed 9/12/86.]

Chapter 173-95A WAC

USES AND LIMITATIONS OF CENTENNIAL CLEAN WATER FUNDS

WAC

173-95A-010	Purpose and scope.
173-95A-020	Definitions.
173-95A-030	Determining a public health need.
173-95A-040	Determining a substantial environmental degradation.
173-95A-050	Awarding grant and loan funds.

WAC 173-95A-010 Purpose and scope. This chapter is intended to address critical or emergent public health needs or environmental problems in jurisdictions that are not in compliance with the Growth Management Act. It implements an exception to the prohibition of counties, cities, and towns that are not in compliance with the Growth Management Act (chapter 36.70A RCW) from receiving grant or loan funds for water pollution control facilities. The exception is provided in limited circumstances, where necessary to address a public health need or substantial environmental degradation.

[Statutory Authority: RCW 70.146.070 and 36.70A.040, 97-24-096 (Order 97-31), § 173-95A-010, filed 12/3/97, effective 1/3/98.]

WAC 173-95A-020 Definitions. (1) "Compliance with the Growth Management Act" means that:

(a) A county, city, or town that is required or chooses to plan under RCW 36.70A.040 has adopted a comprehensive plan and development regulations in conformance with the requirements of chapter 36.70A RCW, after it is required that the comprehensive plan and development regulations be adopted; and

(b) The county, city, or town has not been found out of compliance by a growth management hearings board; or

(c) A growth management hearings board has found a county, city, or town in compliance with the requirements of chapter 36.70A RCW, after previously finding the county, city, or town was not in compliance.

(2) "Department" means the department of ecology.

(3) "Public health need" means that a situation exists where:

(a) There is a documented potential for:

(i) Contaminating a source of drinking water; or

(ii) Failure of existing wastewater system or systems resulting in contamination being present on the surface of the ground in such quantities and locations as to create a potential for public contact; or

(iii) Contamination of a commercial or recreational shellfish bed as to create a critical public health risk associated with consumption of the shellfish; or

(iv) Contamination of surface water so as to create a critical public health risk associated with recreational use; and

(b) The problem generally involves a serviceable area including, but not limited to, a subdivision, town, city, or county, or an area serviced by on-site sewage disposal systems; and

(c) The problem cannot be corrected through more efficient operation and maintenance of an existing wastewater disposal system or systems.

(4) "Substantial environmental degradation" means that:

(a) There is a situation causing real, documented, critical environmental contamination that:

(i) Contributes to violations of the state's water quality standards; or

(ii) Interferes with beneficial uses of the waters of the state; and

(b) The problem generally involves a serviceable area including, but not limited to, a subdivision, town, city, or county, or an area serviced by on-site sewage disposal systems; and

(c) The problem cannot be corrected through more efficient operation and maintenance of an existing wastewater disposal system or systems.

(5) "Water pollution control facility" or "facilities" means any facilities or systems for the control, collection, storage, treatment, disposal, or recycling of wastewater, including but not limited to sanitary sewage, storm water, residential, commercial, industrial, and agricultural wastes, which are causing water quality degradation due to concentrations of conventional, nonconventional, or toxic pollutants. Water pollution control facilities include all equipment, utilities, structures, real property, and interests in and improvements on real property necessary for or incidental to such purpose. Water pollution control facilities also include

such facilities, equipment, and collection systems as are necessary to protect federally designated sole source aquifers.

[Statutory Authority: RCW 70.146.070 and 36.70A.040. 97-24-096 (Order 97-31), § 173-95A-020, filed 12/3/97, effective 1/3/98.]

WAC 173-95A-030 Determining a public health need. For the purposes of this chapter, a determination of a public health need related to a grant or loan must be requested by the public official who signed the grant or loan application. The request needs to be in the form of a letter, with supporting documentation, to the secretary of the Washington state department of health. The secretary or his or her designee reviews the documentation and determines whether a public health need exists. A determination of a public health need must be documented in a letter signed by the secretary or his or her designee and addressed to the same public official.

[Statutory Authority: RCW 70.146.070 and 36.70A.040. 97-24-096 (Order 97-31), § 173-95A-030, filed 12/3/97, effective 1/3/98.]

WAC 173-95A-040 Determining a substantial environmental degradation. For the purposes of this chapter, a determination of a substantial environmental degradation related to a grant or loan must be requested by the public official who signed the grant or loan application. The request needs to be in the form of a letter, with supporting documentation, to the director of the department. The director or his or her designee reviews the documentation and determines whether a substantial environmental degradation exists. A determination of a substantial environmental degradation must be documented in a letter signed by the director or his or her designee and addressed to the same public official.

[Statutory Authority: RCW 70.146.070 and 36.70A.040. 97-24-096 (Order 97-31), § 173-95A-040, filed 12/3/97, effective 1/3/98.]

WAC 173-95A-050 Awarding grant and loan funds. A county, city or town that has been offered a grant or loan for a water pollution control facility project may not receive grant or loan funds while the county, city, or town is not in compliance with the Growth Management Act unless:

(1) A letter of determination showing that a public health need exists has been provided by the Washington state department of health; or a letter of determination showing that a substantial environmental degradation exists has been provided by the department; and

(2) The county, city or town has provided documentation to the department that actions or measures are being implemented to address the public health need or substantial environmental degradation; and

(3) The department has determined that the project is designed to address only the public health need or substantial environmental degradation described in the documentation, and does not address unrelated needs including but not limited to provisions for additional growth.

[Statutory Authority: RCW 70.146.070 and 36.70A.040. 97-24-096 (Order 97-31), § 173-95A-050, filed 12/3/97, effective 1/3/98.]

Chapter 173-98 WAC

USES AND LIMITATIONS OF THE WATER POLLUTION CONTROL REVOLVING FUND

WAC

173-98-010	What is the purpose of this chapter?
173-98-020	What are the definitions of key terms?
173-98-030	How, and under what conditions, can money from the state water pollution control revolving fund be used?
173-98-040	Where can I obtain more detail about the application, review, and issuance processes for funds from state water pollution control revolving fund?
173-98-050	What are the limitations on the use of funds and how are the funds categorized?
173-98-060	What is the step process for planning facilities and activities projects?
173-98-070	What other laws, regulations, or requirements must recipients comply with?
173-98-080	Indemnification.
173-98-090	How do I make sure my project is included in the intended use plan?
173-98-100	How do recipients comply with the state environmental review process?
173-98-110	What are the repayment options and schedules?
173-98-120	General provisions.

WAC 173-98-010 What is the purpose of this chapter? The purpose of this chapter is to set forth limitations on the allocation and uses of moneys administered by the department of ecology from a special fund within the state treasury known as the state water pollution control revolving fund (SRF), as authorized by chapter 90.50A RCW. This fund provides financial assistance to applicants throughout the state of Washington who need such assistance to meet high priority water quality management needs.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-010, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-010, filed 8/29/89, effective 9/29/89.]

WAC 173-98-020 What are the definitions of key terms? Unless the context clearly requires otherwise, the definitions in this section apply throughout this chapter.

(1) "Act" means the Federal Water Pollution Control Act (33 U.S.C. 4661 et seq.).

(2) "Applicant" means a public body requesting financial assistance for water pollution control facilities projects authorized in section 212 of the act. "Applicant" can also mean an entity other than a public body which requests financial assistance authorized by sections 319 and 320 of the act. An entity must be financially stable and clearly have the capacity to repay their loans.

(3) "Approvable" means:

- All major department comments on the draft document (i.e., facilities plan or plans and specifications) have been addressed.
- Preliminary State Environmental Policy Act (SEPA) review checklists have been prepared for the project or the project is in compliance with SEPA.
- The SRF State Environmental Review Process (SERP) review checklists have been prepared for the project or the project is in compliance with SERP. Only the final written department approval remains.

(4) "Construction" means the erection, installation, expansion, or improvement of water pollution control facilities or activities.

(5) "Cost-effective alternative" means that alternative with the lowest present worth or equivalent annual value that achieves the requirements of the project while recognizing the environmental and other nonmonetary considerations.

(6) "Coverage requirement" means annual net revenue which, after the payment of senior lien obligations and together with utility local improvement district assessments (if applicable), is at least equal to one hundred twenty percent of annual debt service on the loan and any other obligations on a parity therewith.

(7) "Defeasance" means the setting aside in escrow or other special fund or account of sufficient investments and money dedicated to pay all principal of and interest on all or a portion of an obligation as it comes due.

(8) "Department" means the Washington state department of ecology.

(9) "Design" means the plans and specifications for water pollution control facilities or activities.

(10) "Director" means the director of the Washington state department of ecology or his or her authorized designee.

(11) "The effective date of the loan agreement" means the date the loan agreement is signed by the department's water quality program manager.

(12) "EPA" means the United States Environmental Protection Agency.

(13) "Existing residential need" means work required on the recipient's water pollution control facilities for the existing residential population in order to meet the recipient's National Pollution Discharge Elimination System or state waste discharge permit.

(14) "Facilities plan" means plans and studies necessary for treatment works to comply with enforceable requirements of the act and with state statutes. Facilities plans must include a systematic evaluation of alternatives that are feasible in light of the unique demographic, environmental or ecological, topographic, hydrologic and institutional characteristics of the area. Facilities plans must also demonstrate that the selected alternative is cost-effective.

(15) "Federal capitalization grant" means a federal grant awarded by EPA to the state as seed money to help establish the state water pollution control revolving fund.

(16) "Financial assistance" means each of the four types of assistance specified in WAC 173-98-030 (1)(b) through (f) and other assistance authorized by Title VI of the act and chapter 90.50A RCW.

(17) "SRF loan agreement" means a legal contract between a recipient and the state, enforceable under state law, and specifying the terms and schedules under which assistance is provided.

(18) "Fund" means the state water pollution control revolving fund.

(19) "General obligation debt" means an obligation of the recipient secured by annual ad valorem taxes levied by the recipient and by the full faith, credit, and resources of the recipient.

(20) "Initiation of operation" means the actual date the water pollution control facilities initiates operation and the entity begins using the facilities for its intended purpose. This date may occur prior to final inspection and will be deter-

mined by the department after consultation with the recipient. This date may be the same or earlier than the date of project completion.

(21) "Intended use plan (IUP)" means a plan identifying the intended uses by the department of the amount of funds available for financial assistance from the state water pollution control revolving fund (SRF) for that fiscal year as described in section 606(c) of the act. The projects on the IUP will be ranked by environmental and financial need.

(22) "Nonpoint source water pollution" means pollution that enters any waters of the state from any dispersed water-based or land-use activities, including, but not limited to:

(a) Atmospheric deposition, surface water runoff from agricultural lands, urban areas, forest lands, subsurface or underground sources; and

(b) Discharges from boats or other marine vessels.

(23) "Plans and specifications" means the construction contract documents and supporting engineering documents prepared in sufficient detail to allow contractors to bid on and construct water pollution control facilities. "Plans and specifications" and "design" may be used interchangeably.

(24) "Project" means the scope of work for which financial assistance is issued.

(25) "Project completion" means the date the project is determined by the department as being complete.

(26) "Public body" means the state of Washington or any agency, county, city or town, other political subdivision, municipal corporation or quasi-municipal corporation, and those Indian tribes recognized as such by the federal government at the time the SRF loan agreement is signed.

(27) "Public health emergency" means a situation declared by the Washington state department of health in which illness or exposure known to cause illness is occurring or is imminent.

(28) "Recipient" means an applicant for financial assistance which has signed an SRF loan agreement.

(29) "Reserve account" means, for a loan that constitutes revenue-secured debt, the account of that name created in the loan fund to secure the payment of the principal of and interest on the loan.

(30) "Revenue-secured debt" means an obligation of the recipient secured by a pledge of the revenue of a utility and one not of a general obligation of the recipient.

(31) "Senior lien obligations" means all revenue bonds and other obligations of the recipient outstanding on the date of execution of this agreement (or subsequently issued on a parity therewith, including refunding obligations) or issued after the date of execution of this agreement having a claim or lien on the gross revenue of the utility prior and superior to the claim or lien of the loan, subject only to maintenance and operation expense.

(32) "Severe public health hazard" means a situation declared by the state department of health and the department in which the potential for illness exists, even if the illness is not currently occurring or imminent. For the purposes of this chapter there must be contamination of drinking water or contamination must be present on the surface of the ground in such quantities and locations to create a potential for public contact. The problem must generally involve a serviceable area including, but not limited to, a subdivision, town, city,

or county. Also, the problem must be one which cannot be corrected through more efficient operation and maintenance of the wastewater disposal system(s).

(33) "State water pollution control revolving fund (SRF)" means the water pollution control revolving fund established by RCW 90.50A.020.

(34) "Water pollution" means such contamination, or other alteration of the physical, chemical, or biological properties of any waters of the state, including, but not limited to, change in:

(a) Temperature;

(b) Taste;

(c) Color;

(d) Turbidity; or

(e) Odor.

It also means a discharge of any liquid, gaseous, solid, radioactive, or other substance into any waters of the state that will or is likely to create a nuisance or render those waters harmful, detrimental, or injurious to the public health, safety, or welfare, or injurious to domestic, commercial, industrial, agricultural, recreational, or other legitimate beneficial uses, or to livestock, wild animals, birds, fish, or other aquatic life.

(35) "Water pollution control activities" means actions taken by a public body to achieve the following purposes:

(a) To control nonpoint sources of water pollution;

(b) To develop and implement a comprehensive conservation and management plan for estuaries; and

(c) To maintain, improve, or protect water quality through the use of water pollution control facilities, management programs, or other means.

(36) "Water pollution control facilities" means any facilities or systems for the control, collection, storage, treatment, disposal, or recycling of wastewater. Wastewater includes, but is not limited to, sanitary sewage, storm water, combined sewer overflows, residential, commercial, industrial, and agricultural wastes, which are causing water quality degradation due to concentrations of conventional, nonconventional, or toxic pollutants. Water pollution control facilities include all equipment, utilities, structures, real property integral to the treatment process, and interests in and improvements on real property necessary for or incidental to such purpose. Water pollution control facilities also include facilities, equipment, and collection systems which are necessary to protect federally designated sole source aquifers.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-020, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-020, filed 8/29/89, effective 9/29/89.]

WAC 173-98-030 How, and under what conditions, can money from the state water pollution control revolving fund be used? (1) Uses of the money. The state water pollution control revolving fund (SRF) may be used for the following purposes:

(a) To accept and retain funds from capitalization grants provided by the federal government, state matching funds appropriated in accordance with chapter 90.50A RCW, payments of principal and interest, and any other funds earned or deposited;

(b) To make loans to applicants in order to finance the planning, design, and/or the construction of water pollution control facilities, make loans to applicants for the implementation of nonpoint source pollution control management programs (which includes planning and implementing elements of the nonpoint source pollution assessment and management program), and make loans to applicants for the development and implementation of a comprehensive estuary conservation and management plan, subject to the requirements of the act;

(c) To provide loans for up to twenty years reserve capacity for water pollution control facilities;

(d) To buy or refinance the debt obligations incurred by applicants after March 7, 1985, for the construction of water pollution control facilities. (March 7, 1985, was the date that the amendments adding Title VI to the act were first considered by Congress. Any refinancing agreements must be for construction initiated after that date according to federal and state law);

(e) To guarantee or purchase insurance for local obligations where such an action would improve credit market access or reduce interest rates;

(f) As a source of revenue or security for the payment of principal and interest on revenue or general obligation bonds issued by the state, if the proceeds of those bonds will be deposited in the fund; and

(g) To finance the reasonable costs incurred by the department in the administration of the account as authorized by the act and chapter 90.50A RCW.

(2) Policies for establishing the terms of financial assistance. Recipients' interest rates will be based on the average market interest rate. The average market interest rate will be based on the daily market rate published in the *Bond Buyer's Index* for tax exempt municipal bonds. The average market rate will be calculated three months before the SRF funding cycle begins using the daily market interest rate for those months. The average market interest rate will be recalculated three months before the Draft IUP is issued, based on the daily market interest rate for those months. If that interest rate is at least 0.1 percent below the previously calculated average market interest rate, recipients' interest rates will be based on the lower average market interest rate rounded to the nearest 0.1 percent. Recipients will not receive an interest rate higher than the interest rate established at the beginning of the funding cycle.

Loan terms and interest rates are as follows:

Repayment Period	Project Duration	Interest Rate
Up to five years:	Projects must be completed in less than two years from the effective date of the SRF loan agreement to project completion.	Zero percent interest rate.
Up to five years:	Projects that take two years or more to complete from the effective date of the SRF loan agreement to project completion.	Forty percent of the average market rate.
More than 5 but less than 15 years:	Not applicable.	Sixty percent of the average market rate.

(1999 Ed.)

Repayment Period	Project Duration	Interest Rate
15 to 20 years:	Not applicable.	Seventy-five percent of the average market rate.

(3) Financial hardship assistance for facilities construction.

(a) Financial hardship assistance may be available to loan recipients for the existing residential need portion of a water pollution control facilities construction project if the project will cause a residential sewer user charge in excess of 1.5 percent of the median household income. Median household income is based on census data. Median household income data is updated yearly based on inflation. If median household income data is not available for a community the department will allow a local government to conduct a scientific survey to determine the median household income.

(b) The need for hardship assistance is calculated on water pollution control facilities construction costs associated with existing residential need at the time an application for funding is received by the department. The analysis does not include costs for growth. For example, if an applicant applies for ten million dollars to finance facilities construction costs, where six million dollars is for existing residential need and the remaining four million dollars is for growth, the hardship analysis would be based on the six million dollars for existing residential need.

(c) If the department determines that financial hardship exists, it may structure loan agreements with terms to help keep residential user charges below the financial hardship level for the existing residential need, if possible. Hardship terms may include lengthening the repayment period to a maximum of twenty years, lowering the interest rate, or a combination of a lower interest rate and an extended term.

(d) For some facilities projects, financial hardship cannot be established using residential user fees as a percent of median household income. In these situations, financial hardship determinations will be made on a case-by-case basis.

(e) If an applicant is requesting financial hardship assistance, it should submit a completed financial hardship analysis form with its application for financial assistance.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-030, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-030, filed 8/29/89, effective 9/29/89.]

WAC 173-98-040 Where can I obtain more detail about the application, review, and issuance processes for funds from state water pollution control revolving fund? The department publishes guidelines which describe in greater detail the financial assistance application, review and issuance processes, the terms of assistance, and other elements of this program.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-040, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-040, filed 8/29/89, effective 9/29/89.]

WAC 173-98-050 What are the limitations on the use of funds and how are the funds categorized? (1) The fund may be used to provide financial assistance to applicants for

[Title 173 WAC—p. 191]

the construction of water pollution control facilities which are identified in the intended use plan and activities eligible for assistance under sections 319 and 320 of the act.

(2) Unless the demand for funding is limited SRF loan agreements are subject to the following funding category limitations:

(a) Not more than eighty percent of the fund will be available for the construction of facilities as established under section 212 of the act and subject to the requirements of that act. Those projects will be under the water pollution control facilities category.

(b) Not more than ten percent of the fund will be available for the implementation of a program established under section 319 of the act for the management of nonpoint sources of pollution, and subject to the requirements of that act. Those projects will be under the nonpoint source category.

(c) Not more than ten percent of the fund will be available for the development and implementation of a comprehensive conservation and management plan under section 320 of the act relating to the National Estuary Program, and subject to the requirements of that act. Those projects will be under the comprehensive estuary conservation and management category (estuary category).

(d) Not more than fifty percent of the fund in each category will be available to any one applicant.

(3) In accordance with federal law, loan offers identified on the final IUP will be effective for up to one year from the date of the offer or until the issuance of the next year's final IUP. All SRF loan offers that do not result in a signed SRF loan agreement within the effective offer period are automatically terminated. Funds reserved for SRF loan agreements that are not signed within the effective period may be carried over and made available for the next year's funding cycle.

(4) The fund may not be used for activities primarily directed toward water resources or water pollution control activities or facilities or portions of those facilities that are primarily intended to control, transport, treat, dispose, or otherwise manage commercial, institutional, or industrial wastewater or other water pollution control needs from those sites. Costs associated with commercial, institutional, or industrial pretreatment are not eligible for funding. However, commercial, institutional, or industrial wastewater flows attributable to a public body's water pollution control facilities which are determined by the department to be "small" may be allowed. Small flows are commercial, institutional, or industrial flows that comprise less than five percent individually or thirty percent collectively of the total flow.

(5) The fund may not be used to make direct loans to applicants to support the nonfederal share of eligible portions of projects receiving assistance under Title II of the act. The fund may be used to finance portions of such projects which were determined to be ineligible for federal assistance but which are eligible under the SRF program.

(6) Noneligible project costs include, but are not limited to, the following:

(a) Acts of nature: Projects related to acts of nature that alter the natural environment, thereby causing water quality problems;

(b) Aquatic plant control for aesthetic reasons, navigational improvements, or other purposes unrelated to water quality;

(c) Engineering reports;

(d) Facilities that propose to meet or maintain primary treatment of domestic sewage;

(e) Flood control: Projects primarily designed to provide flood control;

(f) Lake implementation projects where there is no public access;

(g) Reclamation of abandoned mines or if used in the mining process;

(h) State and federal agency water pollution control programs that are part of the agency's mission, goals, or statutory responsibilities;

(i) Scientific research unrelated to a specific project;

(j) Sewers: Side sewer laterals or individual pump stations on private residential property, or other appurtenances where the facilities are not owned and maintained by a public body;

(k) Solid and hazardous waste facilities;

(l) Storm water activities and facilities associated exclusively with flood control.

(7) Noneligible project component costs include, but are not limited to, the following:

(a) Bond costs for debt issuance;

(b) Employee training not related to or identified in an SRF loan agreement;

(c) Equipment required for site and building maintenance;

(d) Facilities components:

(i) Abandonment of existing structures;

(ii) Bonus or acceleration payments to contractors to meet contractual completion dates for construction;

(iii) Capacity in excess of twenty years;

(iv) Construction claims and associated costs determined to be nonmeritorious;

(v) Construction claims, meritorious, in excess of the maximum allowable loan amount;

(vi) Corrective action plans for the one-year performance certification program;

(vii) Cost-plus-a-percentage-of-cost contracts (also known as multiplier contracts);

(viii) Demolition of structures that are not interfering with proposed construction;

(ix) Replacement parts, for an initial set of spare parts for equipment that is critical for facilities to operate in compliance with discharge permit requirements;

(e) Fines and penalties due to violations of or failures to comply with federal, state, or local laws;

(f) Interest on bonds, interim financing, and associated costs to finance projects;

(g) Lake implementation projects where there is no public access;

(h) Land acquisition for siting of wastewater treatment plants, sewer rights of way, and easements, and associated costs;

(i) Landscaping for aesthetic reasons;

(j) Legal expenses other than those associated with development of local ordinances for water quality protection

and improvement or associated with the use of a bond counsel in developing a loan agreement;

(k) Lobbying or expenses associated with lobbying;

(l) Monitoring equipment used by an industry for sampling and analyzing industrial discharges to municipal water pollution control facilities;

(m) Office equipment;

(n) Operating expenses of local government, such as the salaries and expenses of a mayor, city council member, and/or city attorney;

(o) Overtime differential paid to employees of local government to complete administrative or force account work;

(p) Personal injury compensation or damages arising out of the project, whether determined by adjudication, arbitration, negotiation, or other means;

(q) Preparation of SRF loan applications;

(r) Previously funded objectives financed with an SRF loan;

(s) Rework costs;

(t) Routine or ongoing operation and maintenance costs;

(u) Seminar and conference fees not identified in an SRF loan agreement;

(v) Vehicle purchase or lease except those vehicles that are integral to a treatment process e.g., sludge truck.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-050, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-050, filed 8/29/89, effective 9/29/89.]

WAC 173-98-060 What is the step process for planning facilities and activities projects? (1) The step process for facilities. To be eligible for an SRF loan, facilities projects must proceed according to a systematic method known as the "step process." Before a public body with a facilities project is eligible to apply for funds, all previous steps must be approved or approvable by the department in order to help ensure that funds are well spent on projects proceeding towards a successful and viable outcome. Funding for site-specific facilities planning (Step 1) or design (Step 2) does not guarantee the awarding of future loans for construction (Step 3). The loan agreement will not be signed until all previous steps have been completed and approved by the department.

(a) Planning (Step 1). Step 1 involves the preparation of a site-specific facilities plan that identifies and prioritizes the cost-effective alternatives for addressing a water pollution control problem with or without state and federal funding. If there is an existing engineering report, prepared with or without department funding, it must be upgraded for SRF eligibility if it does not meet the definition of a facilities plan.

(b) Design (Step 2). Step 2 includes the preparation of plans and specifications for use in construction. These must be based on the preferred cost-effective alternative identified in the facilities plan.

(i) Facilities plan must be approved or deemed approvable by the department before an application for design can be considered for funding. Site-specific facilities planning documents not funded by a department grant or loan must also be approved or approvable by the department before an application for design can be considered.

(ii) Applications for Step 2 loans will be accepted and considered for funding if it can be documented by the applicant that Step 1 planning is approved within ninety days after the close of the application period.

(iii) Due to specific loan review criteria, a facilities plan approved by the department for purposes other than securing a loan will not be accepted for design purposes.

(iv) A facilities plan approved by the department more than two years prior to the close of the SRF application period must contain evidence of department review to ensure the document reflects current conditions.

(c) Construction (Step 3). Step 3 includes the actual building of facilities based on the approved design.

(i) Design must be approved or deemed approvable by the department before an application for construction can be considered for funding.

(ii) Applications for Step 3 loans will be accepted and considered for funding if it can be documented by the applicant that Step 2 design is approved within ninety days after the close of the application period.

(d) Design and construction (Step 4). In some cases, design and construction may be combined into one loan award. Applications for Step 4 loans will be accepted and considered for funding if it can be demonstrated that Step 2 design can be completed and approved by the department within one year of the date the final IUP is made public. The SRF loan share of the total eligible project under Step 4 cannot exceed fifty percent of the amount available in the appropriate funding category, or one million dollars, whichever is less.

(e) Step compliance and step deviations. There is one situation in which a deviation from the step process can be allowed:

(i) If the Washington state department of health has declared a public health emergency and if the proposed project would remedy this situation.

(ii) In this situation, the department will accept applications for funding consideration that do not follow the step process. However, no loan agreement will be signed until all previous steps have been completed and approved by the department. This deviation from the step process will only allow an application to be considered for funding. It does not allow a loan to be awarded until all step requirements have been satisfied.

(iii) If a deviation is approved, the applicant may deviate by only one step. For instance, the department could accept an application for design if planning was not completed and approved, or an application for construction if design was not completed and approved. However, the department may not accept an application for construction if planning was not completed and approved.

(2) The step process for activities. In most cases, the step process for activities is not required. However, those applications proposing to implement a specific project identified in a completed comprehensive plan are given additional consideration in the evaluation process. Agricultural best management practices that involve improvements on private property, or lake projects, must follow the step process.

(a) Planning (Step 1) involves the identification of problems and evaluation of cost-effective alternatives, based on

environmental and economic considerations, for correcting and preventing water quality problems. Specific activities may include planning for watershed management, ground water management areas, lake restoration, and water quality assessment and other related activities.

(b) Implementation (Step 2) includes the actual implementation of the project based on the approved planning document.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-060, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-060, filed 8/29/89, effective 9/29/89.]

WAC 173-98-070 What other laws, regulations, or requirements must recipients comply with? (1)(a) All recipients shall comply with all applicable federal, state, and local laws, orders, regulations, and permits. Applications must not be inconsistent with pertinent adopted water quality plans including, but not limited to, plans under sections 208, 303(e), 319, and 320 of the act.

(b) The Puget Sound water quality management plan constitutes the comprehensive conservation and management plan required in section 320 (b)(4) of the act. Plans must not be inconsistent with shoreline master programs, ground water management programs and storm water plans, combined sewer overflow (CSO) reduction plans and county or city comprehensive sewer plans.

(c) In accordance with the SRF loan agreement, the applicant shall provide assurances that the necessary permits required by authorities having jurisdiction over the project have been secured. Copies must be available to the department, upon request.

(2) Recipients shall fully comply with all federal, state, and local laws and regulations related to procurement, discrimination, labor, job safety, and drug-free environments. The recipient shall also comply with the state and federal minority-and-women-owned businesses regulations.

(3) If an SRF loan is provided for water pollution control facilities, recipients shall submit a declaration of construction of water pollution control facilities to the department within thirty days of project, phase, or segment completion.

(4) Recipients must maintain accounting records in accordance with "generally accepted government accounting standards." These standards are defined as, but not limited to, those contained in the United States General Accounting Office (GAO) publication "Standards for Audit of Governmental Organizations, Programs, Activities, and Functions." For example, charges must be properly supported, related to eligible costs, and documented by appropriate records. These accounts must be maintained as separate accounts.

(5) Accounting irregularities may result in an immediate stoppage of payment until irregularities are resolved. The director may require immediate repayment of misused loan funds.

(6) According to RCW 90.50A.060, in the event of loan default, the state of Washington may withhold any amounts otherwise due to the recipient from the state and direct that such moneys be applied to the indebtedness and deposited into the SRF.

(7) Appeals of SRF loan agreement decisions will be processed in accordance with the water quality financial

assistance appeals procedure. The only decisions which can be appealed are written decisions by the department made during the effective SRF loan agreement period. Appeals must be filed in writing to the department within forty-five days from the date of the disputed decision. Following the final decision of a dispute, the department and the recipient shall proceed with the project in accordance with the decision rendered. Administrative or legal costs and other expenses incurred as part of an appeal will not be eligible for reimbursement.

(8) The department, or at the department's discretion another authorized auditor, will audit the SRF loan agreement and records.

(9) Recipients shall maintain comprehensive insurance coverage on the project for an amount equal to the funds disbursed.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-070, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-070, filed 8/29/89, effective 9/29/89.]

WAC 173-98-080 Indemnification. (1) The department shall in no way be held responsible for payment of salaries, consultant's fees, and other overhead costs related to an SRF loan agreement issued to a recipient.

(2) To the extent that the Constitution and laws of the state of Washington permit, the recipient shall indemnify and hold the department harmless from and against any liability for any or all injuries to persons or property arising out of an SRF loan agreement except for such damage, claim, or liability resulting from the negligent act or omission of the department.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-080, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-080, filed 8/29/89, effective 9/29/89.]

WAC 173-98-090 How do I make sure my project is included in the intended use plan? (1) Applicants must apply for SRF financial assistance in order for their projects to be included on the IUP. Projects must be on the IUP in order to receive SRF financial assistance.

(2) Projects in all three categories will be ranked according to environmental and financial need. Projects in each category which have the highest environmental and financial need will be given priority for assistance under the SRF program. Because funds must be used in a timely manner to ensure that all available federal funding is received by the state, readiness to proceed is also used in establishing the priority of projects.

(3) Applications for financial assistance in the water pollution control facilities category (WAC 173-98-050 (2)(a)) must address problems such as public health emergencies, severe public health hazards, the need to provide secondary or advanced treatment, the need to improve and protect water quality, reduction of combined sewer overflows, and other environmental needs.

(4) Applications for financial assistance in the nonpoint source category (WAC 173-98-050 (2)(b)) must address the remedies and prevention of water quality degradation associated with nonpoint source water pollution and must not be

inconsistent with needs identified in the department's non-point source pollution assessment and management program.

(5) Applications for financial assistance in the comprehensive estuary conservation and management category (estuary category) (WAC 173-98-050 (2)(c)) must meet applicable environmental needs outlined above and must meet needs identified in the Puget Sound water quality management plan or the respective plans for other federally designated estuaries in the state of Washington.

(6) Financial need would normally focus on the need to maintain user charges and fees at affordable levels. Both the priority process and the terms of the SRF loan will be directed toward this objective. Unless the provisions of water pollution control facilities or activities has caused a financial hardship, refinancing of completed projects or segments would generally be low priority.

(7) Applicants must fully describe the environmental and the financial need for the project.

(8) The department will prepare the draft IUP prior to the award of each federal capitalization grant from EPA or in the absence of a federal capitalization grant before principal and interest repayments to the SRF are offered. The IUP will generally list projects in the order that projects may be offered financial assistance.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-090, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-090, filed 8/29/89, effective 9/29/89.]

WAC 173-98-100 How do recipients comply with the state environmental review process? (1) All recipients which receive SRF loans must meet the provisions of the State Environmental Policy Act (SEPA), chapter 43.21C RCW, and the SEPA rules, chapter 197-11 WAC. Additional provisions are currently needed by federal law under Title VI of the act to satisfy the state's responsibility to help ensure that recipients comply with the National Environmental Policy Act (NEPA) and other applicable environmental laws, regulations, and executive orders. The lead agency (WAC 197-11-050(2)) responsible for SEPA compliance for each project under the SRF program shall also comply with the following additional provisions. When a categorical exclusion, finding of no significant impact, or a record of decision has been issued under NEPA for the same project scope of work, no additional environmental documentation is required. Applicants will need to adopt the federal environmental documentation to meet their responsibilities as required by SEPA rules WAC 197-11-600, 197-11-610, and 197-11-630. If federal environmental documentation has not been submitted for approval to the appropriate federal agency, applicants and designated lead agencies must:

(a) Consult with the department before determining that the project is categorically exempt from SEPA and obtain concurrence that the project meets the criteria for a categorical exemption (WAC 197-11-305) and give public notice of the categorical exemption by publishing a notice in a newspaper of area-wide circulation. This notice shall include the locations where the public may review the facilities plan and other environmental information.

(b) Consult with the department prior to issuing a threshold determination (WAC 197-11-330), and submit a copy of

the environmental checklist (WAC 197-11-315) and a recommended threshold determination to the department.

(c) Obtain written concurrence from the director with the recommended threshold determination as to whether a determination of nonsignificance (DNS) (WAC 197-11-340) or an environmental impact statement (EIS) is to be issued prior to issuing the actual document.

(d) Issue the threshold determination, determination of nonsignificance (DNS) or determination of significance (DS) (WAC 197-11-360) and submit copies to the department; two copies shall be sent to the department's environmental review section and one copy to the regional water quality program (WQ) of the department. The director must concur in writing with the findings of the checklist and DNS if a DNS is issued.

(e) Give public notice of the threshold determination by publishing a notice in a newspaper of area-wide circulation. This notice shall include the locations where the public may review the threshold determination, facilities plan, and other environmental information.

(f) Distribute copies of the threshold determination and supporting documents to other affected local, state, and federal agencies, Indian tribes, and the public.

(g) When a DS is issued, the lead agency will develop the final scope of elements to be addressed in the environmental impact statement (EIS) and obtain written concurrence from the director. The department shall be consulted throughout the EIS process.

(h) Distribute copies of the draft and final EIS to the department; two copies shall be sent to both the environmental review section and the department's water quality program.

(i) Give public notice of the draft and final EIS by publishing notices in a newspaper of area-wide circulation. Notices shall include the locations where the public may review the draft and final EIS or obtain copies.

(j) Distribute copies of the draft and final EIS to other affected local, state, and federal agencies, Indian tribes, and the public.

(k) The director must concur in writing with the finding of the final EIS.

(2) The lead agency shall issue a notice of action for the final EIS regarding the preferred alternative in accordance with RCW 43.21C.080, WAC 197-11-680, and 197-11-990.

(3) A cost-effectiveness analysis will be required for all SRF projects. Planning must include a comparison of the total cost, i.e., capital, operation and maintenance, and replacement costs of the project with other alternatives, including the no action alternative. The comparison of the total costs, e.g., total present worth or annual equivalent costs of projects for the planning period, must be included. Cost-effective analyses must also include nonmonetary cost of the project, i.e., the environmental impact, resource utilization, implementability, etc. This analysis must be included in the planning document and must be summarized in the EIS or DNS. Financial assistance under the SRF program will be offered to the cost-effective solution to the water pollution control problem.

(4) All mitigation measures committed to in the environmental checklist or state EIS, or in the finding of no signifi-

cance impact/environmental assessment or record of decision/federal EIS (for federally approved projects) will become SRF loan agreement conditions. Applicants must complete all mitigation measures required. Failure to abide by these conditions will result in withholding of payments and may result in immediate repayment of the loan.

(5) The applicant must comply with the requirements of applicable environmental laws, regulations, and executive orders. Concurrence from the director will be based on best available information provided by the applicant. The department is not responsible for concurrence based on erroneous information.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-100, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-100, filed 8/29/89, effective 9/29/89.]

WAC 173-98-110 What are the repayment options and schedules? (1) General provisions.

When the scope of work identified in the SRF loan agreement has been fully completed and/or the initiation of operation date has been determined:

(a) The department and recipient will execute a final SRF loan agreement amendment which details the final loan amount. This amount will include the principal from disbursements made to recipients and accrued interest. Interest will accrue on each disbursement as it is paid to the recipient.

(b) The department will prepare according to the SRF loan agreement, a repayment schedule which fully amortize the final loan amount within twenty years of project completion. The first repayment of principal and interest will be due no later than one year after the initiation of operation date. Equal payments will be due every six months after this first payment. Loan balances may be repaid or additional principal payments may be made at any time without penalty.

(c) If any amount of the final loan amount or any other amounts owed to the department remains unpaid after it becomes due and payable, the department may assess a late charge. The late charge shall be additional interest at the rate of one percent per month, or fraction thereof, starting on the date the debt becomes past due and until it is paid in full.

(d) If the due date for any semiannual payment falls on a Saturday, Sunday, or designated holiday for Washington state agencies, the payment shall be due on the next business day for Washington state agencies.

(2) Phased or segmented project. Where a project has been phased or segmented, the general provisions for repayment shall apply to the completion of individual phases or segments.

(3) More than five years to complete project. When a project approved by the department takes longer than five years to complete, loan repayment must begin within five years of the first disbursement for the project, unless the director determines that the fund is fiscally sound without this repayment schedule. Repayments for these loans must follow the general provisions as outlined in subsection (1)(b) of this section.

(4) Security for loan repayment. Loans shall be secured by a general obligation pledge or a revenue pledge of the recipient. The obligation of the recipient to make loan repayments from the sources identified in its SRF loan agreement

shall be absolute and unconditional, and shall not be subject to diminution by setoff, counterclaim, or abatement of any kind.

(a) General obligation. When repayment of a loan is secured by a general obligation pledge, the recipient shall pledge for so long as the loan is outstanding, to include in its budget and levy taxes annually within the constitutional and statutory tax limitations provided by law without a vote of its electors, on all of the taxable property within its boundaries in an amount sufficient, together with other money legally available and to be used for loan repayment, to pay when due the principal of and interest on the loan, and the full faith, credit, and resources of the recipient shall be pledged irrevocably for the annual levy and collection of those taxes and the prompt payment of the principal of and interest on the loan.

(b) Revenue obligation. Repayment of a loan may be secured by an irrevocable pledge of the net revenues of the recipient's utility and, in appropriate cases, utility local improvement district assessments. In such cases:

(i) Lien position. Repayment of a loan shall constitute a lien and charge (A) upon the net revenues of the recipient's utility prior and superior to any other charges whatsoever, except that the lien and charge shall be junior and subordinate to the lien and charge of any senior lien obligations and, (B) if applicable, upon utility local improvement district assessments prior and superior to any other charges whatsoever.

(ii) Coverage requirement. For so long as the loan is outstanding, the recipient shall establish, maintain, and collect such rates and charges for utility service which will produce net revenue which, together with utility local improvement district assessments in the utility local improvement district deposited in the loan fund, shall be at least equal to the coverage requirement. "Coverage requirement" means annual net revenue which, after the payment of senior lien obligations and together with utility local improvement district assessments (if applicable), is at least equal to one hundred twenty percent of annual debt service on the loan and any other obligations on a parity therewith.

(iii) Reserve requirement. For loans that are revenue-secured debt with terms greater than five years, the recipient must accumulate a reserve for the loan equivalent to at least the average annual debt service on the loan during the first five years of the repayment period of the loan. This amount shall be deposited in a reserve account in the loan fund in approximately equal annual payments commencing within one year after the initiation of operation or the project completion date, whichever comes first. "Reserve account" means, for a loan that constitutes revenue-secured debt, an account of that name created in the loan fund to secure the payment of the principal of and interest on the loan. The amount on deposit in the reserve account may be applied by the recipient (A) to make, in part or in full, the final repayment to the department of the loan amount or, (B) if not so applied, for any other lawful purpose of the recipient once the loan amount, plus interest and any other amounts owing to the department hereunder, have been paid in full.

(5) Repayment from other than pledged sources. A recipient may repay any portion of its loan from any legally

available funds other than those pledged in its SRF loan agreement to repayment.

(6) No defeasance or advance refunding. So long as the department holds a loan, the recipient shall not be entitled to, and shall not effect, its economic defeasance or advance refunding.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-110, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-110, filed 8/29/89, effective 9/29/89.]

WAC 173-98-120 General provisions. (1) Sale of facilities to private enterprises. Recipients may sell facilities for which the SRF loan was provided to private enterprises; however, the SRF loan agreement must be terminated in accordance with the terms of the agreement and the assistance repaid to the SRF immediately upon sale.

(2) Refinancing. The refinancing of existing debt obligations shall be limited to water pollution control facilities where project construction began after March 7, 1985. Applicants requesting refinancing must meet all the requirements contained in the act. They must be on the IUP before assistance will be offered and must be eligible to receive such assistance.

(3) Self certification. The department may authorize a recipient to certify compliance with selected program requirements. The recipient must request such certification authority and document that it has the capability and resources, that it is in the best interest of the state, and that the request is consistent with state and federal laws and regulations. Concurrences required in the environmental review process cannot be delegated to recipients.

[Statutory Authority: RCW 43.21.080 and chapters 34.05 and 90.50A RCW. 98-24-036 (Order 98-10), § 173-98-120, filed 11/24/98, effective 12/25/98. Statutory Authority: Chapter 90.50A RCW. 89-18-019 (Order 89-34), § 173-98-120, filed 8/29/89, effective 9/29/89.]

Chapter 173-100 WAC GROUND WATER MANAGEMENT AREAS AND PROGRAMS

WAC

173-100-010	Purpose.
173-100-020	Authority.
173-100-030	Overview.
173-100-040	Definitions.
173-100-050	Probable ground water management areas.
173-100-060	General schedule.
173-100-070	Designation of ground water management areas for program planning purposes.
173-100-080	Lead agency responsibilities.
173-100-090	Ground water advisory committee.
173-100-100	Ground water management program content.
173-100-110	SEPA review.
173-100-120	Hearings and implementation.
173-100-130	Designation of ground water areas.
173-100-140	Intergovernmental agreements.
173-100-150	Appeals.
173-100-160	Regulation review.

WAC 173-100-010 Purpose. The purpose of this chapter is to establish guidelines, criteria, and procedures for the designation of ground water management areas, subareas or zones and to set forth a process for the development of ground water management programs for such areas, subareas, or zones, in order to protect ground water quality, to assure ground water quantity, and to provide for efficient manage-

ment of water resources for meeting future needs while recognizing existing water rights. The intent of this chapter is to forge a partnership between a diversity of local, state, tribal and federal interests in cooperatively protecting the state's ground water resources.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-010, filed 12/20/85.]

WAC 173-100-020 Authority. This chapter is promulgated by the department of ecology pursuant to RCW 90.44.400, 90.44.410, 90.44.420, 90.44.430 and 90.44.440.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-020, filed 12/20/85.]

WAC 173-100-030 Overview. This regulation establishes a process for the identification and designation of ground water management areas and for the development of comprehensive ground water management programs. From a general schedule of probable ground water management areas, the department of ecology in cooperation with local government will designate specific ground water management areas, subareas, or depth zones within such areas and will appoint a lead agency to develop a ground water management program and an advisory committee to oversee the development of the program for each designated area. Following completion of the program and a public hearing to be held by the department of ecology, the program must be certified to be consistent with the intent of this chapter. The program will then be implemented through state regulations and local ordinances. The programs must thereafter be periodically reviewed.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-030, filed 12/20/85.]

WAC 173-100-040 Definitions. For the purposes of this chapter the following definitions shall apply:

(1) "Aquifer" means a geologic formation, group of formations or part of a formation capable of yielding a significant amount of ground water to wells or springs.

(2) "Department" means the Washington state department of ecology.

(3) "Ground water" means all waters that exist beneath the land surface or beneath the bed of any stream, lake or reservoir, or other body of surface water, whatever may be the geological formation or structure in which such water stands or flows, percolates or otherwise moves.

(4) "Ground water advisory committee" means a committee appointed by the department to assist in the development of a ground water management program.

(5) "Ground water area or subarea" means a geographic area designated pursuant to RCW 90.44.130.

(6) "Ground water management area" means a specific geographic area or subarea designated pursuant to this chapter for which a ground water management program is required.

(7) "Ground water management program" means a comprehensive program designed to protect ground water quality, to assure ground water quantity and to provide for efficient management of water resources while recognizing existing ground water rights and meeting future needs consistent with local and state objectives, policies and authorities within a

designated ground water management area or subarea and developed pursuant to this chapter.

(8) "Ground water management zone" means any depth or stratigraphic zone separately designated by the department in cooperation with local government for ground water management purposes within a ground water management area. Ground water management zones may consist of a specific geologic formation or formations or other reasonable bounds determined by the department consistent with the purposes of this chapter.

(9) "Ground water right" means an authorization to use ground water established pursuant to chapter 90.44 RCW, state common or statutory law existing prior to the enactment of chapter 90.44 RCW, or federal law.

(10) "Ground water user group" means an established association of holders of ground water rights located within a proposed or designated ground water management area.

(11) "Lead agency" means the agency appointed by the department to coordinate and undertake the activities necessary for the development of a ground water management program. Either the department or an agency of local government may be the lead agency.

(12) "Local government" means any county, city, town, or any other entity having its own incorporated government for local affairs including, but not limited to, a metropolitan municipal corporation, public utility district, water district, irrigation district, and/or sewer district.

(13) "Local government legislative authority" means the city or town council, board of county commissioners, special district commission, or that body assigned such duties by a city, county or district charter as enacting ordinances, passing resolutions, and appropriating funds for expenditure.

(14) "Probable ground water management area" means a specific geographic area identified by the department, in cooperation with other state agencies, local government and ground water user groups, as a candidate area for designation as a ground water management area pursuant to this chapter.

[Statutory Authority: RCW 90.44.400, 86-02-004 (Order DE 85-24), § 173-100-040, filed 12/20/85.]

WAC 173-100-050 Probable ground water management areas. The department in cooperation with local government and ground water user groups shall identify probable ground water management areas.

(1) Probable ground water management areas may be proposed for identification at any time by the department upon its own motion or at the request of other state agencies, local government or ground water user groups.

(2) Probable ground water management area boundaries shall be delineated so as to enclose one or more distinct bodies of public ground water as nearly as known facts permit. Probable ground water management subareas shall be delineated so as to enclose all or any part of a distinct body of public ground water. Boundaries shall be based on hydrogeologic properties such as limits to lateral extent of aquifers, major perennial rivers, and regional ground water divides or as deemed appropriate by the department to most effectively accomplish the purposes of this chapter.

(3) The criteria to guide identification of probable ground water management areas shall include, but not be limited to, the following:

(a) Geographic areas where ground water quality is threatened;

(b) Aquifers that are declining due to restricted recharge or over-utilization;

(c) Aquifers in which over-appropriation may have occurred and adjudication of water rights has not yet been completed;

(d) Aquifers reserved or being considered for water supply reservation under chapter 90.54 RCW for future beneficial uses;

(e) Aquifers identified as the primary source of supply for public water supply systems;

(f) Aquifers underlying a critical water supply service area where the coordinated water system plan established pursuant to chapter 70.116 RCW has identified a need for a ground water management program;

(g) Aquifers designated as sole source aquifers by the federal Environmental Protection Agency;

(h) Geographic areas where the ground water is susceptible to contamination or degradation resulting from land use activities;

(i) Aquifers threatened by seawater intrusion; or

(j) Aquifers from which major ground water withdrawals have been proposed or appear imminent.

(4) The state agency, local government or ground water user group requesting probable ground water management area identification shall provide sufficient information for the department to determine if the area should be so identified. The department and other affected state and local governments and user groups may cooperate in preparing the request for identification.

(a) The request for identification shall be presented in a concise, factual report form and shall consider the guidelines and criteria set forth in subsections (2) and (3) of this section as they relate to the proposed area. It shall also contain: (i) Supporting data as to the need for such identification; (ii) a general description of and rationale for the proposed ground water management area boundary; (iii) goals and objectives for the proposed ground water management area; (iv) an estimated cost of developing the ground water management program and potential funding sources; (v) recommendations for agencies, organizations and groups to be represented on the ground water management area advisory committee; and (vi) a recommendation for the lead agency, taking into consideration the responsibilities contained in WAC 173-100-080.

(b) The recommendation for lead agency shall first be submitted to the county or counties with jurisdiction for written concurrence. Such written concurrence shall be included with the information required in (a) of this subsection. If such concurrence cannot be obtained, the department shall attempt to mediate an agreement between the parties.

(c) The agency or ground water user group initiating the request for identification shall hold at least one public meeting for the purpose of receiving comments from the public, affected local, state and tribal agencies and ground water user groups.

(d) Upon completion, the request for identification shall be submitted to the department and other affected state and local agencies and ground water user groups for their review and comment. Comments shall be submitted to the department.

(5) If the department is proposing an area for identification, the department shall prepare a report containing the information in subsection (4)(a) of this section, hold a public meeting, and submit the report to affected state and local agencies and ground water user groups for their review and comment.

(6) Based upon review of the request for identification together with any comments received and a finding that the proposed area meets the guidelines and criteria of subsections (2) and (3) of this section, the department shall identify the proposed area as a probable ground water management area, establish the general planning boundaries and appoint a lead agency. When a probable ground water management area is included within only one county and that county indicates its desire to assume lead agency status, the department shall appoint the county as lead agency. The department shall notify affected state and local agencies, ground water user groups, tribal governments and local news media of such identification.

[Statutory Authority: Chapters 43.27A and 90.44 RCW. 88-13-037 (Order 88-11), § 173-100-050, filed 6/9/88. Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-050, filed 12/20/85.]

WAC 173-100-060 General schedule. The department shall establish a general schedule for the designation of specific ground water management areas. The general schedule shall guide the department in the designation of specific ground water management areas and in the allocation of the department's available water resources funding and staffing.

(1) The general schedule for designation of ground water management areas shall identify the relative priority of each of the probable ground water management areas. The relative priority of the probable ground water management areas shall be based upon:

(a) The availability of local or state agency resources to develop and implement a ground water management program;

(b) The significance, severity or urgency of the problems or potential problems described in the request for identification submitted for each area, with the highest priority given to areas where the water quality is imminently threatened;

(2) The department shall revise the general schedule as needed to comply with the intent of this chapter. After each revision the general schedule shall be published in the news media and the Washington State Register. A public hearing will be held in June of each year to receive public comment on the general schedule.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-060, filed 12/20/85.]

WAC 173-100-070 Designation of ground water management areas for program planning purposes. The department shall designate ground water management areas by order of the department in accordance with the general schedule. The department shall hold a public hearing within the county or counties containing the probable ground water

management area prior to such designation. The order shall be issued to the lead agency as well as the agency or ground water user group originally requesting identification of the areas, with copies sent to other affected state agencies, local governments, tribal governments and those parties recommended for ground water advisory committee membership. Copies of the order shall be published by the department in newspapers of general circulation within the area. The order shall contain a general description of the planning boundary for the ground water management area and shall state that the department, in cooperation with the lead agency and local government, intends to appoint a ground water advisory committee to oversee the development of a ground water management program for the area.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-070, filed 12/20/85.]

WAC 173-100-080 Lead agency responsibilities. The lead agency shall be responsible for coordinating and undertaking the activities necessary for development of the ground water management program. These activities shall include collecting data and conducting studies related to hydrogeology, water quality, water use, land use, and population projections; scheduling and coordinating advisory committee meetings; presenting draft materials to the committee for review; responding to comments from the committee; coordinating SEPA review; executing inter-local agreements or other contracts; and other duties as may be necessary. The lead agency shall also prepare a work plan, schedule, and budget for the development of the program that shows the responsibilities and roles of each of the advisory committee members as agreed upon by the committee. Data collection, data analysis and other elements of the program development may be delegated by the lead agency to other advisory committee members.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-080, filed 12/20/85.]

WAC 173-100-090 Ground water advisory committee. (1) The ground water advisory committee shall be responsible for overseeing the development of the ground water management program; reviewing the work plan, schedule and budget for the development of the program; assuring that the program is technically and functionally sound; verifying that the program is consistent with this chapter and with the respective authorities of the affected agencies; and formulating and implementing a public involvement plan.

(2) The membership of each ground water advisory committee shall represent a broad spectrum of the public in order to ensure that the ground water is protected and utilized for the greatest benefit to the people of the state. The committee shall include, but not be limited to, representation from the following groups:

(a) Local government legislative authorities within the designated area;

(b) Planning agencies having jurisdiction within the designated area;

(c) Health agencies having jurisdiction within the designated area;

(d) Ground water user groups within the designated area, including domestic well owners;

- (e) The department;
- (f) Department of social and health services;
- (g) Other local, state, and federal agencies as determined to be appropriate by the department;
- (h) Tribal governments, where a ground water management program may affect tribal waters;
- (i) Public and special interest groups such as agricultural, well drilling, forestry, environmental, business and/or industrial groups within the area, as determined to be appropriate by the department.

(3) The department shall appoint, by letter, members and alternates to the ground water advisory committee after seeking nominations from the groups listed above. Members and alternates shall serve until the ground water management program for the area is certified. The department may appoint replacement members or alternates upon request of the appointee or the ground water advisory committee.

(4) The lead agency shall hold the first meeting of the ground water advisory committee within sixty days of the appointment of the committee. Public notice shall be given for each meeting. The lead agency shall chair the first meeting, during which the advisory committee shall determine, by general agreement, rules for conducting business, including voting procedures, and the chairperson of the advisory committee.

[Statutory Authority: RCW 90.44.400, 86-02-004 (Order DE 85-24), § 173-100-090, filed 12/20/85.]

WAC 173-100-100 Ground water management program content. The program for each ground water management area will be tailored to the specific conditions of the area. The following guidelines on program content are intended to serve as a general framework for the program, to be adapted to the particular needs of each area. Each program shall include, as appropriate, the following:

- (1) An area characterization section comprised of:
 - (a) A delineation of the ground water area, subarea or depth zone boundaries and the rationale for those boundaries;
 - (b) A map showing the jurisdictional boundaries of all state, local, tribal, and federal governments within the ground water management area;
 - (c) Land and water use management authorities, policies, goals and responsibilities of state, local, tribal, and federal governments that may affect the area's ground water quality and quantity;
 - (d) A general description of the locale, including a brief description of the topography, geology, climate, population, land use, water use and water resources;
 - (e) A description of the area's hydrogeology, including the delineation of aquifers, aquitards, hydrogeologic cross-sections, porosity and horizontal and vertical permeability estimates, direction and quantity of ground water flow, water-table contour and potentiometric maps by aquifer, locations of wells, perennial streams and springs, the locations of aquifer recharge and discharge areas, and the distribution and quantity of natural and man-induced aquifer recharge and discharge;
 - (f) Characterization of the historical and existing ground water quality;

(g) Estimates of the historical and current rates of ground water use and purposes of such use within the area;

(h) Projections of ground water supply needs and rates of withdrawal based upon alternative population and land use projections;

(i) References including sources of data, methods and accuracy of measurements, quality control used in data collection and measurement programs, and documentation for and construction details of any computer models used.

(2) A problem definition section that discusses land and water use activities potentially affecting the ground water quality or quantity of the area. These activities may include but are not limited to:

- Commercial, municipal, and industrial discharges
- Underground or surface storage of harmful materials in containers susceptible to leakage
- Accidental spills
- Waste disposal, including liquid, solid, and hazardous waste
- Storm water disposal
- Mining activities
- Application and storage of roadway deicing chemicals
- Agricultural activities
- Artificial recharge of the aquifer by injection wells, seepage ponds, land spreading, or irrigation
- Aquifer over-utilization causing seawater intrusion, other contamination, water table declines or depletion of surface waters
- Improperly constructed or abandoned wells
- Confined animal feeding activities

The discussion should define the extent of the ground water problems caused or potentially caused by each activity, including effects which may extend across ground water management area boundaries, supported by as much documentation as possible. The section should analyze historical trends in water quality in terms of their likely causes, document declining water table levels and other water use conflicts, establish the relationship between water withdrawal distribution and rates and water level changes within each aquifer or zone, and predict the likelihood of future problems and conflicts if no action is taken. The discussion should also identify land and water use management policies that affect ground water quality and quantity in the area. Areas where insufficient data exists to define the nature and extent of existing or potential ground water problems shall be documented.

(3) A section identifying water quantity and quality goals and objectives for the area which (a) recognize existing and future uses of the aquifer, (b) are in accordance with water quality standards of the department, the department of social and health services, and the federal environmental protection agency, and (c) recognize annual variations in aquifer recharge and other significant hydrogeologic factors;

(4) An alternatives section outlining various land and water use management strategies for reaching the program's goals and objectives that address each of the ground water problems discussed in the problem definition section. If necessary, alternative data collection and analysis programs shall be defined to enable better characterization of the ground water and potential quality and quantity problems.

Each of the alternative strategies shall be evaluated in terms of feasibility, effectiveness, cost, time and difficulty to implement, and degree of consistency with local comprehensive plans and water management programs such as the coordinated water system plan, the water supply reservation program, and others. The alternative management strategies shall address water conservation, conflicts with existing water rights and minimum instream flow requirements, programs to resolve such conflicts, and long-term policies and construction practices necessary to protect existing water rights and subsequent facilities installed in accordance with the ground water management area program and/or other water right procedures.

(5) A recommendations section containing those management strategies chosen from the alternatives section that are recommended for implementation. The rationale for choosing these strategies as opposed to the other alternatives identified shall be given;

(6) An implementation section comprised of:

(a) A detailed work plan for implementing each aspect of the ground water management strategies as presented in the recommendations section. For each recommended management action, the parties responsible for initiating the action and a schedule for implementation shall be identified. Where possible, the implementation plan should include specifically worded statements such as model ordinances, recommended governmental policy statements, interagency agreements, proposed legislative changes, and proposed amendments to local comprehensive plans, coordinated water system plans, basin management programs, and others as appropriate;

(b) A monitoring system for evaluating the effectiveness of the program;

(c) A process for the periodic review and revision of the ground water management program.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-100, filed 12/20/85.]

WAC 173-100-110 SEPA review. The proposed ground water management program shall be subject to review pursuant to the State Environmental Policy Act, chapter 43.21C RCW, as required under the applicable implementing regulations.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-110, filed 12/20/85.]

WAC 173-100-120 Hearings and implementation. (1) Upon completion of the ground water area management program, the department shall hold a public hearing within the designated ground water management area for the purpose of taking public testimony on the proposed program. Local governments are encouraged to hold joint hearings with the department to hear testimony on the proposed management program. Following the public hearing, the department and each affected local government shall prepare findings on the ground water management program within ninety days. This period may be extended by the department for an additional ninety days. The findings shall evaluate the program's technical soundness, economic feasibility, and consistency with the intent of this chapter and other federal, state and local laws. The findings shall identify any revisions necessary before the

(1999 Ed.)

program can be certified and shall contain a statement of the agency's concurrence, indicating its intent to adopt implementing policies, ordinances and programs if required, or a statement of nonconcurrence with the program if such be the case.

(2) The lead agency will consolidate the findings and present them to the advisory committee. Statements of nonconcurrence shall be resolved by the committee and the program revised if necessary.

(3) The program shall then be submitted by the ground water advisory committee to the department which shall certify that the program is consistent with the intent of this chapter.

(4) Following such certification, state agencies and affected local governments shall adopt or amend regulations, ordinances, and/or programs for implementing those provisions of the ground water management program which are within their respective jurisdictional authorities.

(5) The department, the department of social and health services and affected local governments shall be guided by the adopted program when reviewing and considering approval of all studies, plans and facilities that may utilize or impact the implementation of the ground water management program.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-120, filed 12/20/85.]

WAC 173-100-130 Designation of ground water areas. The procedures provided in RCW 90.44.130 may be utilized by the department to designate ground water areas, subareas, or zones for the purposes described therein either in conjunction with the procedures of this chapter or independently thereof.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-130, filed 12/20/85.]

WAC 173-100-140 Intergovernmental agreements. In order to fully implement this chapter, the department may negotiate and enter into cooperative agreements with Indian tribal governments, adjacent states and Canadian governmental agencies when a ground water management area is contiguous with or affects lands under their jurisdiction. Such cooperative agreements shall not affect the jurisdiction over any civil or criminal matters that may be exercised by any party to such an agreement. Intergovernmental agreements shall further the purposes of this chapter, and shall serve to establish a framework for intergovernmental coordination, minimize duplication, and efficiently utilize program resources to protect ground water resources.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-140, filed 12/20/85.]

WAC 173-100-150 Appeals. All final written decisions of the department pertaining to designation of ground water management areas, certification of ground water management programs, permits, regulatory orders, and related decisions pursuant to this chapter shall be subject to review by the pollution control hearings board under chapter 43.21B RCW.

[Statutory Authority: RCW 90.44.400. 86-02-004 (Order DE 85-24), § 173-100-150, filed 12/20/85.]

WAC 173-100-160 Regulation review. The department of ecology shall initiate a review of the rules established in this chapter whenever new information, changing conditions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapters 43.27A and 90.44 RCW. 88-13-037 (Order 88-11), § 173-100-160, filed 6/9/88.]

Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW.
---------------	--

WAC 173-124-010 Background. (1) On March 1, 1969, the department of water resources promulgated WAC 508-14-010 to curtail further ground water development in a defined area of the Columbia Basin, referred to as the "Quincy Basin," pending the outcome of detailed ground water investigations to determine if further appropriation of public ground waters in this area should be allowed.

(2) The extensive investigation program was to be completed no later than December 31, 1972, and thereafter procedures would be developed to insure proper allocation and management of the Quincy Basin ground water resource.

(3) Since the effective date of WAC 508-14-010, all applications to appropriate ground water in the defined Quincy Basin have been held in abeyance pending the outcome of the ground water investigations.

(4) As part of the investigation program a digital ground water model has been developed to analyze ground water conditions in most of the Columbia Basin including the Quincy Basin.

(5) Through use of this ground water model it has been possible to define with reasonable accuracy the extent of a practical ground water management unit in the Quincy Basin area.

[Order 72-24, § 173-124-010, filed 1/15/73.]

WAC 173-124-020 Purpose. The purpose of this regulation is to establish areal boundaries and depth zones for the Quincy ground water subarea as the initial step toward development of a proper ground water management program for this part of the Columbia Basin.

[Order 72-24, § 173-124-020, filed 1/15/73.]

[Title 173 WAC—p. 202]

WAC 173-124-030 Authority. This regulation is promulgated by the department of ecology under authority and procedures provided in chapters 43.21A, 90.03, and 90.44 RCW and after giving notice as provided in chapter 34.04 RCW.

[Order 72-24, § 173-124-030, filed 1/15/73.]

WAC 173-124-040 Subarea definition. "Quincy ground water subarea" shall mean those lands lying within the Columbia Basin described as follows:

Township (North)	Range (East)	Sections
17	23	1 thru 4, 11 and 12
17	24	1 thru 16
17	25	1 thru 18 and 24
17	26	1 thru 24
17	27	1 thru 24
17	28	1 thru 20
17	29	1 thru 12 and 14 thru 18
17	30	*1 thru 8, 12, and that part of 9, 10, 11, 13 and 14 lying to the right of the center line of the east low canal
17	31	*7 and that part of 5, 6, 8, 17 and 18 lying to the right of the center line of the east low canal
18	22	1, 12, and 13
18	23	1 thru 36
18	24	1 thru 36
18	25	1 thru 36
18	26	1 thru 36
18	27	1 thru 36
18	28	1 thru 36
18	29	1 thru 36
18	30	*3 thru 10, 15 thru 24, 26 thru 36 and that part of 2, 11, 13, 14 and 25 lying to the right of the center line of the east low canal
18	31	*That part of 17, 18, 19, 30, and 31 lying to the right of the center line of the east low canal
19	23	1 thru 5 and 8 thru 17, 20 thru 29 and 31 thru 36
19	24	1 thru 36
19	25	1 thru 36
19	26	1 thru 36
19	27	1 thru 36
19	28	1 thru 36
19	29	*5 thru 8, 17 thru 21, 28 thru 33, and that part of 4, 9, 15, 16, 22, 23, 27, 34, 35 and 36 lying to the right of the center line of the east low canal
19	30	*That part of 28 and 31 thru 35 lying to the right of the center line of the east low canal
20	23	1 thru 5 and 8 thru 17, 20 thru 29 and 32 thru 36
20	24	1 thru 36
20	25	1 thru 36
20	26	1 thru 36
20	27	1 thru 36
20	28	1 thru 36
20	29	*19, 20, 29 thru 32, and that part of 6, 7, 16, 17, 18, 21, 28, and 33 lying to the right of the center line of the east low canal
21	23	25 thru 28 and 32 thru 36
21	24	25 thru 36
21	25	24 thru 36
21	26	1 thru 4, 9 thru 16 and 19 thru 36
21	27	1 thru 36

Township (North)	Range (East)	Sections
21	28	*5 thru 9, 13 thru 36 and that part of 3, 4, 9, 10, 11 and 12 lying to the right of the center line of the east low canal
21	29	*That part of 7, 8, 17, 18, 19, 30, and 31 lying to the right of the center line of the east low canal
22	26	2, 10 thru 16, 21 thru 28 and 33 thru 36
22	27	1 thru 4 and 7 thru 36
22	28	*1 thru 11, 31 and that part of 18, 19, 29, 30, 32, and 33 lying to the right of the center line of the east low canal
23	27	34 thru 36
23	28	31 thru 36

* Right and left sides are determined by looking in the downstream direction or direction of flow.

[Order 72-24, § 173-124-040, filed 1/15/73.]

WAC 173-124-050 Subarea zone definition. (1) "Quincy unconsolidated zone" shall mean those rock units in the Quincy ground water subarea lying between ground surface and the top of the uppermost basalt flow.

(2) "Quincy basalt zone" shall mean those rock units in the Quincy ground water subarea consisting of basalt flows of tertiary age.

[Order 72-24, § 173-124-050, filed 1/15/73.]

WAC 173-124-060 Subarea map. "Quincy ground water subarea" shall include those lands that lie within the heavy outline shown on the following map:

QUINCY GROUND WATER SUBAREA

[Order 72-24, § 173-124-060, filed 1/15/73.]

WAC 173-124-070 Subarea, zone, and unit distinctions. The Quincy unconsolidated zone and the Quincy basalt zone, defined at WAC 173-124-050, are separate and distinct depth zones, as that term is used in chapter 90.44 RCW. The (1999 Ed.)

Quincy unconsolidated zone and the Quincy basalt zone are different than the Quincy shallow management unit and the Quincy deep management unit, which are defined at WAC 173-134-020.

The horizontal boundaries of the Quincy depth zones and the Quincy management units are identical to the exterior

boundaries of the Quincy ground water subarea, and no Quincy depth zone or management unit extends beyond those boundaries, for comprehensive water management purposes. Neither does any depth zone of the Odessa ground water subarea, as defined at chapter 173-130 WAC, extend beyond the exterior boundaries of the Odessa ground water subarea, as those are defined and indicated at chapter 173-128 WAC. The bodies of ground water contained within the exterior boundaries of the Quincy ground water subarea are considered to be separate and distinct from the bodies of ground water contained within the exterior boundaries of the Odessa ground water subarea, which is significantly different than the Quincy ground water subarea in various respects.

This regulation is adopted to clarify the differences between the Quincy ground water subarea and the Odessa ground water subarea, and the differences among depth zones and management units. This regulation merely restates what the department of ecology consistently has understood to be the meaning and effect of this chapter and related chapters, notwithstanding any other understanding by the public or any other agency or board, federal or state.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-124-070, filed 6/9/88.]

WAC 173-124-080 Regulation review. The department of ecology shall initiate a review of the rules established in this chapter whenever new information, changing conditions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-124-080, filed 6/9/88.]

WAC 173-128A-010 Authority. This regulation is promulgated by the department of ecology under authority and procedures provided in chapters 34.04, 43.21A, 90.03, and 90.44 RCW.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-14-041 (Order DE 82-23), § 173-128A-010, filed 6/30/82. Formerly WAC 173-128-030.]

WAC 173-128A-020 Background. (1) Since 1967, the segment of the Columbia basin ground water system centered around the community of Odessa has experienced a steady decline in ground water levels.

(2) Spurred by local concern and foreseeable management problems, the department of water resources (now department of ecology) closed an area of approximately 1,100 square miles to the drilling of large producing water wells and initiated a detailed investigation of ground water conditions in the Odessa basin.

(3) As a result of this investigation, a digital ground water model of the Odessa basin was developed and used in 1974 and 1975 to predict the effect of additional ground water withdrawals on existing water level declines.

(4) In 1975, the department expanded its ground water monitoring program and discontinued use of the predictive model.

(5) The expanded monitoring program, with additional data on the actual effects of pumping, included wells south of the subarea which showed ground water declines similar in magnitude to those inside the subarea.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-14-041 (Order DE 82-23), § 173-128A-020, filed 6/30/82. Formerly WAC 173-128-010.]

WAC 173-128A-030 Purpose. The purpose of this regulation is to expand the boundaries of the Odessa ground water subarea as originally set forth in chapter 173-128 WAC.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-14-041 (Order DE 82-23), § 173-128A-030, filed 6/30/82. Formerly WAC 173-128-020.]

WAC 173-128A-040 Subarea definition. "Odessa ground water subarea" shall mean those lands lying within the Columbia Basin described as follows:

Township (North)	Range (East)	Sections
13	31	1 thru 12
13	32	1 thru 12
14	31	*1 thru 6, 8 thru 17, 19 thru 36, and that part of 7 and 18 lying to the left of the center line of the East Low Canal
14	32	*1 thru 36
15	30	*1, and that part of 2, 11, 12 lying to the left of the center line of the East Low Canal
15	31	*1 thru 29, 32 thru 36, and that part of 30 and 31 lying to the left of the center line of the East Low Canal
15	32	1 thru 36
15	33	1 thru 36
16	30	*1 thru 4, 10 thru 14, 23 thru 25, 36, and that part of 5, 6, 8, 9, 15, 16, 21, 22, 26, 27, 28, 34, and 35 lying to the left of the center line of the East Low Canal
16	31	1 thru 36
6	32	1 thru 36
16	33	1 thru 36
16	34	1 thru 22
16	35	1 thru 18
16	36	6 and 7
17	30	*15, 16, 21 thru 28, 33 thru 36, and that part of 8 thru 11, 13, 14, 17, 20, 29, 31, and 32 lying to the left of the center line of the East Low Canal
17	31	*1 thru 4, 9 thru 16, 19 thru 36, and that part of 5, 6, 8, 17 and 18 lying to the left of the center line of the East Low Canal
17	32	1 thru 36
17	33	1 thru 36
17	34	1 thru 36
17	35	1 thru 36
17	36	5 thru 8, 17 thru 20, 30 and 31

Township (North)	Range (East)	Sections
18	30	*1, 12 and that part of 2, 11, 13, and 14 lying to the left of the center line of the East Low Canal
18	31	*1 thru 16, 20 thru 29, 32 thru 36, and that part of 17, 18, 19, 30, and 31 lying to the left of the center line of the East Low Canal
18	32	1 thru 36
18	33	1 thru 36
18	34	1 thru 36
18	35	1 thru 36
18	36	4 thru 9, 16 thru 21, and 28 thru 33
19	29	*1 thru 3, 10 thru 14, 24, 25, and that part of 3, 4, 9, 10, 15, 16, 22, 23, 26, 27, 34, 35, and 36 lying to the left of the center line of the East Low Canal
19	30	*1 thru 27, 29, 30, 36 and that part of 28 and 31 thru 35 lying to the left of the center line of the East Low Canal
19	31	1 thru 36
19	32	1 thru 36
19	33	1 thru 36
19	34	1 thru 36
19	35	1 thru 36
19	36	3 thru 10, 15 thru 22 and 27 thru 33
20	29	*1 thru 5, 8 thru 15, 22 thru 27, 34 thru 36 and that part of 6, 7, 16, 17, 18, 21, 28 and 33 lying to the left of the center line of the East Low Canal
20	30	1 thru 36
20	31	1 thru 36
20	32	1 thru 36
20	33	1 thru 36
20	34	1 thru 36
20	35	1 thru 36
20	36	4 thru 9, 16 thru 21, and 28 thru 33
21	28	*1, 2, and that part of 3, 4, 10, 11 and 12 lying to the left of the center line of the East Low Canal
21	29	*1 thru 6, 9 thru 16, 20 thru 29, 32 thru 36 and that part of 7, 8, 17, 18, 19, 30 and 31 lying to the left of the center line of the East Low Canal
21	30	1 thru 36
21	31	1 thru 36
21	32	1 thru 36
21	33	1 thru 36
21	34	1 thru 36
21	35	1 thru 36
21	36	5 thru 8, 16 thru 21, and 28 thru 33
22	28	*12 thru 17, 20 thru 28, 34 thru 36 and that part of 18, 19, 29, 30, 32 and 33 lying to the left of the center line of the East Low Canal
22	29	1 thru 36
22	30	1 thru 36
22	31	1 thru 36
22	32	1 thru 36
22	33	1 thru 36
22	34	1 thru 36
22	35	1 thru 36
22	36	30 and 31
23	29	13, 20 thru 29, and 32 thru 36
23	30	12 thru 36
23	31	7 thru 36
23	32	7 thru 36
23	33	7 thru 36
23	34	7 thru 9 and 13 thru 36
23	35	15 thru 23 and 25 thru 36

* Right and left sides are determined by looking in the downstream or flow direction.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2), 82-14-041 (Order DE 82-23), § 173-128A-040, filed 6/30/82. Formerly WAC 173-128-040.]

WAC 173-128A-050 Subarea map. "Odessa ground water subarea" shall include those lands that lie within the heavy outline shown on the following map:

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2), 82-14-041 (Order DE 82-23), § 173-128A-050, filed 6/30/82. Formerly WAC 173-128-050.]

WAC 173-128A-060 Regulation review. The department of ecology shall initiate a review of the rules established in this chapter whenever new information, changing conditions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-128A-060, filed 6/9/88.]

Chapter 173-130A WAC ODESSA GROUND WATER SUBAREA MANAGEMENT POLICY

WAC

173-130A-010	Authority.

173-130A-220	Regulation review.

WAC 173-130A-010 Authority. This regulation is promulgated by the department of ecology under authority and procedures provided in chapters 34.04, 43.21A. 90.03 and 90.44 RCW.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-010, filed 8/4/82. Formerly WAC 173-130-020.]

WAC 173-130A-020 Background. The Odessa ground water subarea was established and the boundaries set forth in chapter 173-128A WAC.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-020, filed 8/4/82. Formerly WAC 173-130-010.]

WAC 173-130A-030 Definitions. For the purposes of this chapter, the following definitions shall be used:

(1) "Water table" shall mean the surface formed by mapping the altitude at which water stands in wells.

(2) "Priority" shall mean the date of receipt by the department of ecology or its predecessor of an acceptable application to appropriate public ground water.

(3) "Department" shall mean the department of ecology.

(4) "Bore hole information" shall include data required to determine the extent and nature of subsurface geologic and hydrologic properties. Examples of bore hole information includes data contained on a completed department water well report form, all or a portion of a suite of geophysical logs such as resistivity, flow, caliper, and television video scanning.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-030, filed 8/4/82. Formerly WAC 173-130-030.]

WAC 173-130A-040 Purpose. The purpose of this regulation is to provide a procedure for managing ground water within the Odessa ground water subarea to insure the maintenance of a safe sustaining yield from the ground water body within a reasonable and feasible pumping lift.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-040, filed 8/4/82. Formerly WAC 173-130-040.]

WAC 173-130A-050 Exemptions. The following shall not be subject to this management regulation:

(1) Wells from which the withdrawal is less than 5,000 gallons per day;

[Title 173 WAC—p. 206]

(2) Wells drilled under prior authorization which were defined as "Zone C" wells in WAC 173-130-030(3), now repealed.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-050, filed 8/4/82.]

WAC 173-130A-060 Rate of decline in water level to be controlled. The rate of decline in the water level will be limited to a total amount of thirty feet in three consecutive years. In the case of a new well, the base time shall commence in the spring following the first season of irrigation use.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-060, filed 8/4/82. Formerly WAC 173-130-060.]

WAC 173-130A-070 Maximum lowering of the water table. These regulations will be used to prevent the spring static water table, as measured prior to commencement of pumping for irrigation, from lowering more than three hundred feet below the altitude of the static water level as it existed in the spring of 1967.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-070, filed 8/4/82. Formerly WAC 173-130-070.]

WAC 173-130A-080 Regulation of withdrawal of ground water. (1) Upon complaint from a water right holder that the water level in the associated well or wells is being drawn down at a rate in excess of thirty feet in three years as set forth in WAC 173-130A-060 as a primary result of pumping by subsequent appropriators, the department shall evaluate the complaint and take appropriate regulatory action, to the extent practicable, to protect the rights of the prior appropriator.

(2) Whenever the department has reason to believe that the provision of WAC 173-130A-070 is going to be violated, regulatory action to limit withdrawals in the affected area will be initiated according to the procedure outlined in WAC 173-130A-090. Such regulation shall conform to the priority of the pertinent, valid rights and shall prevail on an annual basis until the condition no longer exists, unless the aggregate withdrawal is decreased by mutual agreement of the affected water right holders pursuant to RCW 90.44.180.

(3) The department shall take regulatory action, to the extent necessary, to assure compliance with water right conditions.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-080, filed 8/4/82. Formerly WAC 173-130-080.]

WAC 173-130A-090 Notice of regulation. (1) Notice of regulation shall be provided to each water right holder within the area identified pursuant to WAC 173-130A-080(2) by certified mail on or before May 1 of each year when regulation of withdrawals is contemplated for the next calendar year. Said notice shall also provide for a public meeting within thirty days to be held in the affected area to discuss proposed regulatory action.

(2) Within sixty days following this public meeting, departmental orders will be sent to those water right holders to be regulated.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-090, filed 8/4/82. Formerly WAC 173-130-090.]

WAC 173-130A-100 Applications for withdrawal of ground water. All applications for permits to appropriate ground water from within the Odessa ground water subarea shall be analyzed in order of priority to determine the calculated effect that the requested rate and volume of withdrawal will have on existing ground water declines. No permit will be issued for withdrawals which calculations show will cause the conditions of WAC 173-130A-060 or 173-130A-070 to be exceeded at any location within the subarea.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-100, filed 8/4/82. Formerly WAC 173-130-140.]

WAC 173-130A-110 Distance of wells from East Low Canal. No well may be drilled closer than one-quarter mile to the centerline of the East Low Canal.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-110, filed 8/4/82. Formerly WAC 173-130-170.]

WAC 173-130A-120 Ground water mound—Columbia Basin project interests. Irrigation of Columbia Basin project lands lying westerly of the East Low Canal and canal leakage have caused development of a ground water mound lying generally under the canal. The retention of existing water levels under the canal is necessary to maintain the present water table gradient toward the Potholes Reservoir to allow the recapture and utilization of artificially stored ground water (see order of the department of ecology, under Docket No. 74-772, dated the 8th day of January, 1975). All applications for permit within the following described area will be evaluated on a case-by-case basis consistent with this chapter. Additionally, the potential effects of the proposed appropriation on existing rights including protection of the ground water mound will be determined. All new permits will be conditioned to assure retention of the existing water levels under the East Low Canal.

<u>Twp N</u>	<u>Rge E</u>	<u>Section</u>
17	30	15, 16, 23, 24 and all those portions of 9 through 11, 13 and 14 lying southerly of the East Low Canal.
	31	3, 4, 9 through 11, 14 through 16, 19 through 23, and those portions of 5, 6, 8, and 17 lying easterly of the East Low Canal.
18	30	1, 12, and all those portions of 2, 11, 13 and 14 lying easterly of East Low Canal.

<u>Twp N</u>	<u>Rge E</u>	<u>Section</u>
	31	4 through 10, 15, 16, 21, 22, 27 through 29, 32 through 34, and all those portions of 17 through 20, 30 and 31 lying northerly and easterly of the East Low Canal.
19	29	1 through 3, 10 through 14, 24 through 26, and all those portions of 4, 9, 15, 16, 22, 23, 27, and 34 through 36 lying easterly and northerly of the East Low Canal.
	30	19 through 23, 25 through 27, 29, 30, 36, and all those portions of 28, 31 through 35 lying northerly and easterly of the East Low Canal.
	31	30 and 31
20	29	27, 35, and all those portions of 21, 28, 33 and 34 lying easterly of the East Low Canal.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-120, filed 8/4/82.]

WAC 173-130A-130 Irrigation season. The irrigation season for withdrawal of ground water in the Odessa ground water subarea shall be from February 1 to November 30, each year. However, the department recognizes that conditions will vary from year to year, making application of water to the land necessary during December and/or January in some years. Permission to withdraw ground water during December and January may be granted by the department upon showing of a need by individual permit or certificate holders and if not inconsistent with the regulatory program of this chapter.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-130, filed 8/4/82. Formerly WAC 173-130-195.]

WAC 173-130A-140 Airlines. An airline and pressure gauge shall be installed and maintained in operating condition on all new or reworked wells and equipped with a standard tire valve, placed in an accessible location. The airline shall extend from land surface to the top of the pump bowls. The total length of the airline and any changes in length shall be reported to the department.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-140, filed 8/4/82.]

WAC 173-130A-150 Water duty. The duty of water issued in permits for agricultural irrigation shall be not more than 2.5 acre feet per acre per calendar year.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-150, filed 8/4/82.]

WAC 173-130A-160 Development schedule. All new permits issued will require beginning of construction of the authorized well(s) within two years after permit issuance. Beginning of construction means that the well drilling has been started and is being actively pursued toward completion. No extensions of time will be granted to this schedule. Violation of this requirement will result in cancellation of the related permits.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-160, filed 8/4/82.]

WAC 173-130A-170 Casing and sealing. In order to protect existing shallow domestic and stock water wells, and springs, casing and sealing requirements will be determined on a case-by-case basis and included as a provision on all new permits issued. New permits will also be conditioned to prohibit cascading water in wells in accordance with chapter 173-160 WAC (Minimum standards for construction and maintenance of water wells). Sealing of required casing shall consist of filling the annular space between casing and well bore with cement grout placed by pumping from the bottom of the casing to land surface. Alternative methods to provide the same protection afforded by casing and sealing may be submitted to the department for review and shall only be used if approved in writing by the department prior to well completion.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-170, filed 8/4/82.]

WAC 173-130A-180 Reworking wells. Any well which is reworked shall be constructed to comply with the casing and sealing provisions of WAC 173-130A-170. Reworking shall include, but not be limited to, reaming to enlarge well diameter or deepening.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-180, filed 8/4/82. Formerly WAC 173-130-155.]

WAC 173-130A-190 Bore hole information. It shall be the responsibility of the owner of all new or reworked wells drilled in the Odessa ground water subarea to provide the department of ecology with such logs as the department may reasonably require.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-190, filed 8/4/82. Formerly WAC 173-130-160.]

WAC 173-130A-200 Acreage expansion program. (1) Water right certificate holders who wish to expand their authorized irrigated acreage while not increasing actual historic withdrawal rates in gallons per minute or acre feet per year, within the maximum limits of their water right, may submit a request in writing to the department at least four months prior to initiation of irrigation. Such request shall include documentation substantiating actual quantities applied to a beneficial use within authorized acreage for a minimum of the three previous consecutive irrigation seasons. This documentation shall consist of accurate flow meter readings, electrical consumption which has been converted to

[Title 173 WAC—p. 208]

actual acre footage withdrawn, or any other data acceptable to the department.

(2) The acreage expansion, if authorized, will allow the certificate holder to apply the average of the quantity of water beneficially used during the past three consecutive years to more land.

(3) Where the acreage expansion program is continuous from year to year, the initial documentation of beneficial use of water shall apply to each subsequent year.

(4) New wells will not be permitted to be drilled as part of this program. Every well authorized for use under this program must be equipped with an accurately operating flow meter before acreage expansion can be implemented.

(5) By December 31 of each year, the water user shall submit in writing to the department a statement of the total water used, in acre feet, under the acreage expansion program for the completed irrigation season.

(6) The acreage expansion program will be administered as a temporary change through an annual letter of authorization. No permanent amendment or change in any water right certificate shall be issued as part of this program.

The penalty for noncompliance with the provisions of this section shall include, but not be limited to, termination from the acreage expansion program for one calendar year.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-200, filed 8/4/82.]

WAC 173-130A-210 General implementation. The department recognizes the uncertainties associated with ground water occurrence and water well construction, both being dependent in large part on the geologic and hydrologic characteristics of the aquifer materials underlying a specific proposed well site. Therefore, the department shall endeavor to implement this chapter in a reasonable and practical manner consistent with its purpose.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-210, filed 8/4/82.]

WAC 173-130A-215 Enforcement. In enforcement of this chapter, the department of ecology may impose such sanctions as are appropriate under authorities vested in it, including but not limited to the issuance of regulatory orders under RCW 43.27A.190 and civil penalties under RCW 90.03.600.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-130A-215, filed 6/9/88.]

WAC 173-130A-217 Appeals. All final written decisions of the department of ecology pertaining to permits, regulatory orders, and related decisions made pursuant to this chapter shall be subject to review by the pollution control hearings board in accordance with chapter 43.21B RCW.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-130A-217, filed 6/9/88.]

WAC 173-130A-220 Regulation review. The department of ecology shall initiate a review of the rules established in this chapter whenever new information, changing condi-

(1999 Ed.)

tions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-130A-220, filed 6/9/88. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130 and 90.54.040(2). 82-16-103 (Order DE 82-27), § 173-130A-220, filed 8/4/82. Formerly WAC 173-130-200.]

Chapter 173-132 WAC

DUCK LAKE GROUND WATER MANAGEMENT SUBAREA

WAC

173-132-010	Background.
173-132-020	Purpose.
173-132-030	Authority.
173-132-040	Subarea definition.
173-132-050	Subarea map.
173-132-060	Regulation review.

WAC 173-132-010 Background. (1) Through well data collected since 1958 and refraction seismic surveys conducted in 1970 and 1971, the department of ecology has identified a semiclosed ground water basin in the area of Duck Lake in Okanogan County, Washington.

(2) The principal aquifer in this area consists of glacial and fluvial sands and gravels that lie unconformably over metamorphic and igneous bedrock.

(3) Natural recharge to the aquifer occurs primarily through ground water migration from Johnson Creek Valley which lies northwest of the Duck Lake basin.

(4) The aquifer is also artificially recharged through waters diverted to Duck Lake from Salmon and Johnson creeks by the Okanogan irrigation district and from waters incidental to irrigation of project lands.

(5) Since the basin retains substantial quantities of artificially stored ground water, in accordance with chapter 90.44 RCW it has been recommended that the Duck Lake aquifer be designated as a ground water subarea.

[Order DE 74-24, § 173-132-010, filed 10/18/74.]

WAC 173-132-020 Purpose. The purpose of this regulation is to establish areal boundaries for the Duck Lake ground water subarea as the initial step toward development of an appropriate ground water management program for this area.

[Order DE 74-24, § 173-132-020, filed 10/18/74.]

WAC 173-132-030 Authority. This regulation is promulgated by the department of ecology under authorities and procedures provided in chapters 43.21A, 90.03 and 90.44 RCW and after giving notice as provided in chapter 34.04 RCW.

[Order DE 74-24, § 173-132-030, filed 10/18/74.]

WAC 173-132-040 Subarea definition. "Duck Lake ground water subarea" shall mean those lands lying within Okanogan County described as follows:

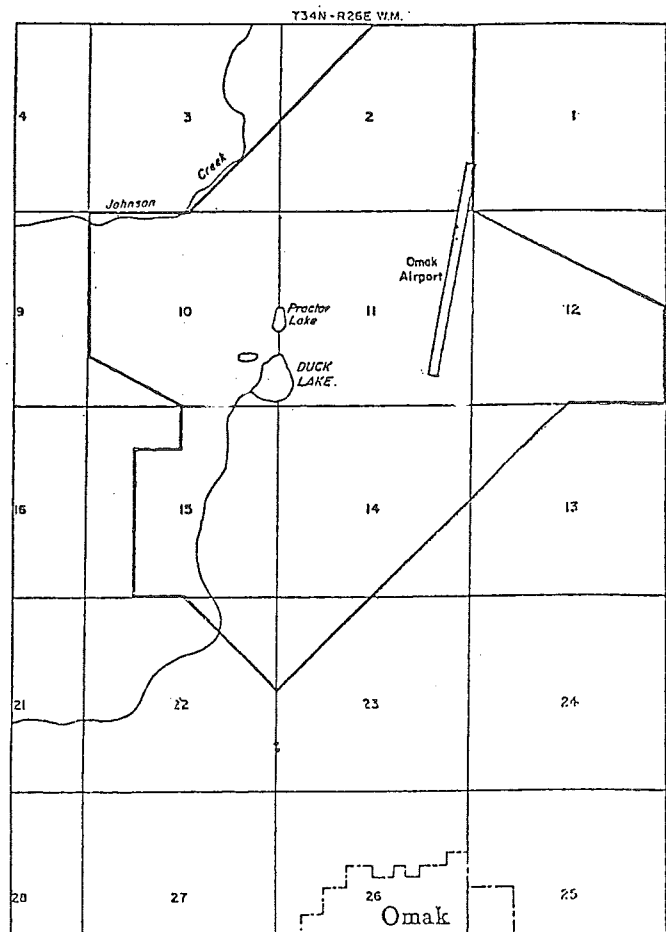

Beginning at the west quarter corner of Sec. 23; thence northeast through the north quarter corner of Sec. 23 and the east quarter corner of Sec. 14 to the

north quarter corner of Sec. 13; thence east to the northeast corner of Sec. 13; thence north to the east quarter corner of Sec. 12; thence northwest to the southeast corner of Sec. 2; thence northwest to the center of the northwest quarter of Sec. 2; thence southwest through the west quarter corner of Sec. 2 to the south quarter corner of Sec. 3; thence west to the southwest corner of Sec. 3; thence south along the west line of Sec. 10 to the "bedrock" exposure which lies approximately 1,300 feet north from the southwest corner of Sec. 10; thence southeasterly along the "bedrock" to the south quarter corner of Sec. 10; thence south 1,320 feet; thence west 1,320 feet to the center of the northwest quarter of Sec. 15; thence south 3,960 feet to the south line of Sec. 15; thence east to the south quarter corner of Sec. 15; thence southeast to the point of beginning; ALL in T. 34 N., R. 26 E.W.M., Okanogan County.

[Order DE 77-3, § 173-132-040, filed 4/21/77; Order DE 74-24, § 173-132-040, filed 10/18/74.]

WAC 173-132-050 Subarea map. "Duck Lake ground water subarea" shall include those lands that lie within the heavy outline shown on the following map:

DUCK LAKE GROUND WATER SUBAREA

[Order DE 74-24, § 173-132-050, filed 10/18/74.]

WAC 173-132-060 Regulation review. The department of ecology shall initiate a review of the rules established

in this chapter whenever new information, changing conditions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-132-060, filed 6/9/88.]

Chapter 173-134A WAC QUINCY GROUND WATER SUBAREA MANAGEMENT POLICY

WAC

173-134A-010	Authority.

173-134A-165	Enforcement.
173-134A-170	Appeals.

WAC 173-134A-010 Authority. This chapter is promulgated by the department of ecology under authority and procedures provided in chapters 34.04, 43.21A, 90.03, and 90.44 RCW.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-010, filed 6/1/83. Formerly chapter 173-134 WAC.]

WAC 173-134A-020 Background. The Quincy ground water subarea was duly established and the boundaries were set forth in chapter 173-124 WAC on January 15, 1973. Management rules for the Quincy subarea were then adopted on January 9, 1975, as chapter 173-134 WAC and amended on July 26, 1979.

The department has managed the ground waters within the Quincy subarea since that time in accordance with those rules.

The following information is provided as a background to assist in understanding this chapter.

By the end of the 1973 irrigation season (in October), there were approximately 3,493,142 acre-feet of imported waters stored underground in the Quincy ground water subarea. These imported waters are derived from the activities of the bureau and the Columbia Basin project. Most of the imported water is located in the shallow management unit where it comeslingles with naturally occurring public ground waters.

The general pattern of flow of ground water in the shallow management unit is toward Potholes Reservoir, a facility of the Columbia Basin project.

By order of the department of ecology, under Docket No. 74-772, dated the 8th day of January, 1975, declarations of artificially stored waters of the United States Bureau of Rec-

lamation were accepted for the Quincy subarea and zones. There are no other accepted declarations relating to the Quincy subarea and zones.

Based on the best information available to the department in 1983, all waters naturally supplied to the Quincy Basin ground water system have been allocated to permits or certificates under state law. Of the aggregate thus allocated, it appears that because of nonuse, small additional amounts of such water can be appropriated without overdraft.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-020, filed 6/1/83. Formerly WAC 173-134-030.]

WAC 173-134A-030 Purpose. The purpose of this chapter is to set forth rules of the department of ecology for the administration of all ground waters within the Quincy ground water subarea, including among others, commingled public ground waters and artificially stored ground waters. This chapter replaces chapter 173-134 WAC. The rules established herein set forth the regulatory and management program for these waters and all such waters shall be authorized for withdrawal and otherwise regulated in accordance with the provisions hereof. This state program is designated to protect both the public interest and private rights and interests in such waters and shall be implemented in a spirit of cooperation with affected persons and entities, public and private, including the holder of a declaration accepted by the department pursuant to RCW 90.44.130.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-030, filed 6/1/83. Formerly WAC 173-134-010.]

WAC 173-134A-040 Definitions. For purposes of this chapter, the following definitions shall apply:

(1) "Artificially stored ground waters" means waters beneath the land surface within an area, subarea, or zone which are the subject of the declaration by the bureau and accepted by the department of ecology.

(2) "Bureau" means the United States Department of the Interior, Bureau of Reclamation.

(3) "Critical management area" means a specified locality within the Quincy subarea where depletion of ground waters, including interference with surface waters, necessitates the implementation of special ground water restrictions to ensure protection to rights and interests in said waters as set forth in this chapter.

(4) "Deep management unit" means all ground waters underlying the shallow management unit.

(5) "Department" means the department of ecology.

(6) "Ground waters" means all waters that exist beneath the land surface or beneath the bed of any stream, lake, or reservoir, or other body of surface water within the boundaries of the Quincy ground water subarea.

(7) "Public ground waters" means all ground waters in the Quincy ground water subarea other than artificially stored ground water.

(8) "Quincy ground water subarea," and "Quincy subarea" mean the subarea established pursuant to RCW 90.44.130 and set forth in chapter 173-124 WAC.

(9) "Shallow management unit" means the ground water hydraulically continuous between land surface and a depth of 200 feet into the Quincy basalt zone and includes all of the Quincy unconsolidated zone.

It is noted that the definitions of (1) and (7) hereof are not intended to be identical with the definitions in RCW 90.44.035.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-040, filed 6/1/83. Formerly WAC 173-134-020.]

WAC 173-134A-050 Management and regulation.

All public and artificially stored ground water of the Quincy subarea shall be managed and regulated by the department of ecology in accordance with this chapter.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-050, filed 6/1/83. Formerly WAC 173-134-040.]

WAC 173-134A-060 Withdrawal of waters of deep management unit. All withdrawals of waters of the deep management unit will be controlled by the prior appropriation provisions of RCW 90.44.050 and 90.44.060 and related code sections. The total authorized withdrawals under state permits or certificates from the deep management unit shall not exceed 97,901 acre-feet per year, unless the department should determine otherwise through further studies.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-060, filed 6/1/83. Formerly WAC 173-134-050.]

WAC 173-134A-070 Public ground water permit amendments. The department may approve amendments to public ground water permits for lands located within the Quincy subarea, including changes in points of withdrawal, purpose, and places of use, only if it believes, after investigation, that the activities proposed in the amendment or amendments will not:

- (1) Impair existing rights;
- (2) Prove detrimental to the public interest;
- (3) Cause the tapping of a different body of ground water (as defined herein or as determined by the department);
- (4) Adversely affect the comprehensive scheme of water management adopted for the Quincy subarea.

In addition, with regard to holders of permits or certificates for the use of public ground waters in the Quincy subarea, said permits and certificates shall represent "a valid right to withdraw public ground waters," as that term is used in RCW 90.44.100, only to the extent of beneficial use actually made under the permit or certificate.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-070, filed 6/1/83. Formerly WAC 173-134-055.]

WAC 173-134A-080 Regulation of waters of the shallow management unit—Permit requirements. Waters of the shallow management unit shall be subject to the following:

- (1) Applications for withdrawal of public ground waters shall be processed in accordance with the provisions of chapters 90.44 and 90.03 RCW.

(1999 Ed.)

The total quantity of withdrawals of public waters, whether authorized by permits and certificates issued under RCW 90.44.050, 90.44.060 or otherwise, shall not exceed 58,000 acre-feet per year. It appears there may be relatively small amounts of public waters (in the range of not more than 4,000 acre-feet annually) available for appropriation in the shallow management unit. Such small amounts are reserved for withdrawal for domestic and group domestic uses.

(2) No withdrawal of, or construction of any works for the withdrawal of artificially stored ground waters shall be commenced by any person without obtaining permission of the department of ecology. Permission shall be obtained through the issuance of a permit as provided in chapter 173-136 WAC. Application for a permit shall be on a form furnished by the department. In relation to ruling upon any such application, the following shall apply:

(a) Each permit shall be conditioned to ensure that no withdrawal will interfere with the furnishing of adequate supplies of water to the Potholes Reservoir facility of the bureau to satisfy existing and future project needs of the bureau.

(b) Each permit shall be conditioned to ensure that no interference with rights established under state law, previously or in the future, to withdraw public waters or artificially stored ground waters shall be allowed. Rights described herein shall include rights to the (1) maintenance of certain ground water levels to ensure availability and (2) protection of the use ability of certain withdrawal facilities.

(c) To the maximum extent possible, consistent with rights and interest in the ground waters of the Quincy subarea; wildlife, recreation, and other values associated with the general public interest in the ground water in the subarea shall be protected and permits issued hereunder shall be so conditioned.

(d) Permits shall be conditioned such that the well depth shall be no greater than 200 feet into the basalt (the shallow management unit). However, when the total production from the authorized well(s), completed within the shallow management unit does not produce the quantity of water authorized under the permit in gallons per minute, the permittee may apply to the department of ecology for an exemption to the well depth limitation imposed by these regulations. Such an exemption will be granted if reasonable efforts have been made to develop water in the shallow management unit and the proposed deepening will not adversely affect existing rights in the deep management unit. The depth of the well(s) in any event shall not penetrate the top of the Grand Ronde Basalt unit. When an exemption is granted, the department will advise the permittee of the depth to the top of the Grand Ronde Basalt unit at the specific well site(s). The authorized wells must be of adequate diameter and casing wall thickness to accommodate a pump of sufficient capacity to produce the permitted quantity in gallons per minute. Notwithstanding the definitions in WAC 173-134A-040, withdrawals of water subject to exemptions shall be considered as artificially stored ground water.

(e) Each permit shall be conditioned to provide that failure of the permittee to comply with the terms of an executed agreement as described in WAC 173-134A-130 shall constitute grounds for the department to terminate a permit issued under this subsection.

[Title 173 WAC—p. 211]

(f) Applications for permits shall be processed in order of their priority, based on the date of receipt of an application by the department of ecology.

(g) Permits granted herein shall pertain to a specific point(s) of withdrawal, and purpose, and place of use. No assignment of such permits can be made without written approval of the department.

The department may approve amendments to permits granted herein regarding changes in point of withdrawal, purpose, and place of use, if it believes, after investigation, that the amendment will comply with WAC 173-134A-070 (1) through (4). Application for amendments provided herein shall be made on forms provided by the department.

Permits for the use of artificially stored ground waters may be amended as to places of use and purpose only to the extent that waters actually have been placed to beneficial use pursuant to the terms of said permits.

(h) No permit shall authorize the withdrawal of waters for agricultural irrigation use for more acres than authorized by federal reclamation law.

(i) Permits issued hereunder shall have no expressed termination date provided, however, the permit shall be modifiable and terminable by the department at any time for good cause in order to accomplish the water management and regulation program of this chapter. Modifications and terminations as provided herein shall be effectuated through the issuance of regulatory orders as described in WAC 173-134A-090.

All permits provided for in chapter 173-136 WAC shall contain development schedules requiring that water be put to beneficial use within a three-year period from the date of issuance. Any permit under which development has not been completed may be perfected to the extent of beneficial use, and cancellation proceedings will be initiated on the remaining undeveloped portion.

(j) By applying for and obtaining a permit hereunder, an applicant expressly waives all other claims of rights to withdraw ground waters of the Quincy subarea for irrigation uses, except as such rights are (1) embodied in a permit or certificate pertaining to public ground waters issued previously by the department of ecology or one of its predecessors or (2) based upon rights established prior to the enactment of chapter 90.44 RCW and are the subject of a claim filed with the department of ecology pursuant to RCW 90.14.041.

(k) There shall be no fee for filing an application for a permit authorized for withdrawal of artificially stored ground waters under this subsection. Said application shall include the names and signatures of all legal owners of the lands proposed for irrigation.

(l) Withdrawals of artificially stored waters authorized by permit under this section shall be limited to a maximum cumulative total of no more than 177,000 acre-feet for each calendar year.

Withdrawals from wells presently drilled into both the shallow and deep management units, covered by an application filed with the department or a license to withdraw water issued by the bureau between May 12, 1967, and February 14, 1974, and which are also subject of a permit issued under this subsection (2), shall be considered as withdrawals from the shallow management unit.

(m) The duty of water for agricultural irrigation uses shall be not more than 3.5 acre-feet for each acre for each calendar year.

(n) No applications for permits submitted pursuant to WAC 173-134A-080(2) shall be approved for withdrawals of artificially stored ground waters from wells located on lands adjacent to bureau waterways and on lands underlain by ground water that hydraulically responds to changes in the water level of the Potholes Reservoir, which specifically are those lands described in amended department of ecology Order No. 75-54, second amendment, entered on February 3, 1986.

[Statutory Authority: RCW 43.21A.060. 86-04-057 (Order DE 86-01), § 173-134A-080, filed 2/4/86. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-080, filed 6/1/83. Formerly WAC 173-134-060.]

WAC 173-134A-085 Applicability. The total withdrawal limitations of WAC 173-134A-060 and 173-134A-080 shall apply only to that geographical area within the Quincy ground water subarea that was described in the declaration of ownership of artificially stored waters by the United States Bureau of Reclamation accepted by order of the department under Docket Number 74-772 dated January 8, 1975.

[Statutory Authority: RCW 43.21A.060. 86-04-057 (Order DE 86-01), § 173-134A-085, filed 2/4/86.]

WAC 173-134A-090 Responsibility for water management—Designation of critical management areas. (1) The department of ecology shall be responsible for the water management and regulation program applicable to the comingled waters provided in this chapter, including the authorization of withdrawals of artificially stored ground waters and regulation of the same. The department shall, in order to ensure compliance with the water regulation and administration programs of this chapter, issue regulatory orders. Such orders shall be issued pursuant to RCW 43.27A.190 through 43.27A.210 and shall be subject to review as provided in chapter 43.21B RCW, before the pollution control hearings board.

(2) In times of shortage of water available to satisfy all ground water withdrawals authorized under WAC 173-134A-080(2), the department shall reduce withdrawals, through issuance of regulatory orders, in order of the priority date of the permit, with the latest priority being regulated first. In relation thereto, the department may designate critical management areas within the Quincy subarea based upon any of the following:

(a) Where there is an inadequate supply of water to the Potholes Reservoir and the Potholes canal system;

(b) When there is a shortage of water to satisfy ground water withdrawals authorized under WAC 173-134A-080(2);

(c) Where existing wildlife, recreational, and other values associated with the general public interest are or will be detrimentally affected on a significant scale, or

(d) Where necessary to protect rights to withdraw public waters. Designation of critical management areas shall be made through issuance of regulatory orders which shall define the areas and specify if the regulatory period is per-

manent or not. During this management period, the department shall determine the allowable limits of withdrawal of artificially stored ground water within the critical management area.

(3) As part of its enforcement program, the department shall terminate permits, through the issuance of regulatory orders, when permittees fail to comply with the terms of an executed agreement as provided in WAC 173-134A-130.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-090, filed 6/1/83. Formerly WAC 173-134-070.]

WAC 173-134A-100 Establishment of a technical committee. (1) For the purpose of advising the department in the implementation of this chapter, there is established a technical committee consisting of one permanent member and one alternate member each from the bureau and the department assisted by other technical advisors (e.g. irrigation districts, municipalities) as the permanent members consider necessary.

(2) The role of the committee shall relate generally to providing advice pertaining to ground and surface water conditions and management in the Quincy subarea.

(3) The committee shall meet as necessary when called by a permanent member of the committee. Telephone conference calls may constitute a committee meeting.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-100, filed 6/1/83. Formerly WAC 173-134-080.]

WAC 173-134A-110 Request for protection of interest. Whenever the bureau believes its interest in the ground waters of the Quincy subarea are not being adequately protected, it may request the department to issue regulatory orders or take other appropriate management and regulatory actions designed to protect such interest. If the department concludes the requested action is not warranted in the administration of this chapter, the department shall issue an order denying the request.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-110, filed 6/1/83. Formerly WAC 173-134-085.]

WAC 173-134A-120 Exemptions. (1) The permit program of WAC 173-134A-080(2) shall not relate to (a) agricultural drains or (b) withdrawals of artificially stored ground waters performed for the purpose of removing excess waters injurious to private or project lands, to bureau canals or wasteways or other similar facilities; provided that no activities pertaining to (b) above will be conducted without first notifying the department and requesting its comment within a reasonable time.

(2) The permit program of WAC 173-134A-080(2) shall not relate to withdrawals by public entities of artificially stored ground waters performed as a necessary incident of the operation of an essential public service activity, such as a solid waste disposal facility or the fighting of fires. The public entity shall not construct facilities for making such withdrawals or engage in such withdrawals without first notifying the department and requesting comments from the department

regarding the intended action. This subsection shall not relate to other than essential public services and shall not pertain to the supplying of water for general municipal uses pertaining to satisfaction of industrial and domestic needs.

(3) No permit shall be required under WAC 173-134A-080(2) for withdrawals of artificially stored ground waters of less than 5,000 gallons per day for stockwatering purposes, for watering of a lawn or of a noncommercial garden not exceeding one-half acre in area, for single or group domestic uses, or for an industrial purpose as prescribed in RCW 90.44.050 pertaining to the withdrawal of public ground waters.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-120, filed 6/1/83. Formerly WAC 173-134-090.]

WAC 173-134A-130 Agreements. (1) No use of water under a permit issued pursuant to WAC 173-134A-080(2) shall take place until the recipient of such permit shall enter into an agreement with the bureau, on a form and in a content, approved and previously agreed to by the bureau and the department, pertaining to withdrawal of artificially stored ground waters. The agreement shall relate to reasonable charges for withdrawal of artificially stored ground waters and other pertinent provisions necessary to comply with federal law and ensure payment of such charges. Use of water before the permittee enters into an agreement with the bureau shall cause the permit to be terminated by the department.

(2) The bureau shall not enter into an agreement, as provided in WAC 173-134A-130(1), until a copy of a permit issued by the department pursuant to WAC 173-134A-080(2) is received by the bureau. Thereafter, upon presentation of a request the bureau shall enter into an agreement with eligible persons having state permits as described in WAC 173-134A-130(1).

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-130, filed 6/1/83. Formerly WAC 173-134-100.]

WAC 173-134A-140 Existing laws and rights. (1) Nothing in this chapter, including any permit issued pursuant hereto, shall authorize the use of waters in a manner which injures the property of others.

(2) Nothing in this chapter purports or is intended to modify any rights of an irrigation district created under a water delivery and "repayment" contract between the United States and irrigation districts located within the Columbia Basin project.

(3) Nothing herein shall modify the rights of the United States to make use of the courts to protect its interests.

(4) Nothing in this chapter is intended to require the bureau to obtain a permit for recapture of ground water for project purposes by wasteways and drains, including Pot-holes Reservoir, which water is covered by an accepted declaration of right to withdraw artificially stored ground water pursuant to RCW 90.44.130.

(5) Nothing in this chapter purports to regulate the administration and operation of Columbia Basin project facilities.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-140, filed 6/1/83. Formerly chapter 173-134 WAC.]

WAC 173-134A-150 Regulation review. The department of ecology shall initiate a review of the rules established in this chapter whenever new information, changing conditions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-134A-150, filed 6/9/88. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-150, filed 6/1/83. Formerly chapter 173-134 WAC.]

WAC 173-134A-160 Relinquishments—Public ground water. To the extent the department identifies ground water rights that have reverted to the state pursuant to RCW 90.14.130, et seq.; it, in its discretion, may issue public ground water permits not exceeding those quantities. Public ground water made available due to relinquishment of water rights shall be subject to appropriation, reservation, or withdrawal in accordance with the applicable state water laws.

[Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-160, filed 6/1/83.]

WAC 173-134A-165 Enforcement. In enforcement of this chapter, the department of ecology may impose such sanctions as are appropriate under authorities vested in it, including but not limited to the issuance of regulatory orders under RCW 43.27A.190 and civil penalties under RCW 90.03.600.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-134A-165, filed 6/9/88.]

WAC 173-134A-170 Appeals. All final written decisions of the department of ecology pertaining to permits, regulatory orders, and related decisions, made pursuant to this chapter shall be subject to review by the pollution control hearings board in accordance with chapter 43.21B RCW.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-134A-170, filed 6/9/88. Statutory Authority: RCW 43.21A.060, 43.21A.080, 43.27A.090, 90.44.130, 90.54.040(2) and chapter 90.03 RCW. 83-12-060 (Order DE 83-10), § 173-134A-170, filed 6/1/83.]

WAC 173-136-010 Purpose of chapter. The purpose of this chapter is to establish a permit system as a part of a comprehensive state water management and regulatory control program pertaining to the withdrawal and use of ground waters consisting of commingled artificially stored ground waters and public waters located in areas, subareas, and zones designated pursuant to RCW 90.44.130. The permit system established in this chapter relates only to the withdrawal and use of artificially stored ground waters of such ground waters.

[Order 74-36, § 173-136-010, filed 1/9/75.]

WAC 173-136-020 Definitions—This chapter. Definitions. For purposes of this chapter the following definitions shall apply. (It is noted that the (2) and (6) hereof are not intended to be identical with definitions contained in RCW 90.44.035.)

(1) "Area, subarea, or zone" means a ground water area, subarea, or zone designated by the department of ecology pursuant to RCW 90.44.130(3), which contains commingled artificially stored and public ground waters.

(2) "Artificially stored ground waters" mean water beneath the land surface within an area, subarea, or zone(s) which are the subject of a declaration accepted by the department of ecology pursuant to RCW 90.44.130(6).

(3) "Department" means the department of ecology.

(4) "Ground waters" means all waters beneath the land surface of an area, subarea, or zone.

(5) "Person" means individual, public, or private corporation, municipality, county, partnership, association, federal, or state agency or body, or any other entity whatsoever.

(6) "Public ground waters" means all ground waters within an area, subarea, or zone other than artificially stored ground waters.

[Order 74-36, § 173-136-020, filed 1/9/75.]

WAC 173-136-030 Permit to withdraw. No person, unless expressly exempted by a specific management regulation of the department adopted for an area or subarea, may withdraw any artificially stored ground waters for beneficial use from any area, subarea, or zone without first obtaining a permit from the department of ecology as hereinafter provided. An application for a permit shall be submitted on a form provided by the department. The application shall contain the following information:

- (1) Name
- (2) Address
- (3) Point of withdrawal
- (4) Place of use
- (5) Purpose of use
- (6) Time of use

(6a) Amounts of withdrawal, including both maximum rate and the total volume each calendar year

(7) The area, subarea, and zone from which the waters are to be withdrawn.

[Order 74-36, § 173-136-030, filed 1/9/75.]

WAC 173-136-040 Criteria for ruling upon application for permits. (1) The criteria for ruling on an application for a permit are as follows. An application shall be approved if:

(a) Artificially stored waters are available for withdrawal; and

(b) The public interest will not be detrimentally affected; and

(c) Rights to withdraw public water will not be impaired; and

(d) The interests of the holder embodied [embodied] in a declaration accepted by the department pursuant to RCW 90.44.130(6) will not be impaired.

(e) The withdrawal and use proposed in the application can be performed consistent with the provision of the chapter of the Washington Administrative Code containing the water management and regulation regulations for the specific ground water area, subarea, or zone to which the application relates.

(2) Prior to issuance of a permit to withdraw artificially stored ground water, the department shall consult with the holder of a declaration accepted by the department pursuant to RCW 90.44.130.

[Order 74-36, § 173-136-040, filed 1/9/75.]

WAC 173-136-050 Public notice of application and public hearings—When required. (1) Public notices of applications filed with the department shall be required by the department only when it appears to the department that the public interest will be served. When a notice is required the applicant shall be responsible for its publication in a form, manner, and frequency as determined by the department unless otherwise specified.

(2) Public hearings on such applications shall be required by the department only when it appears to the department that the public interest will be served.

[Order 74-36, § 173-136-050, filed 1/9/75.]

WAC 173-136-060 Permits—Priorities and conditions of right of withdrawal. Every permit issued pursuant to this chapter shall be:

(1) Conditioned to insure the protection of public interest and values and of the rights of withdrawal and use established in public waters and artificially stored ground waters both prior and subsequent to the issuance of such a permit.

(2) Conditioned to comply with the provisions of the chapter of the Washington Administrative Code containing the water management and regulation regulations for the specific ground water area, subarea, or zone to which the application relates.

(3) Conditioned to provide for inspection, monitoring, entry, and reporting of data by or to the department and the

(1999 Ed.)

holder of an accepted declaration as required by the department.

(4) Conditioned to provide that a permit shall be subject to termination or modification for failure to comply with any agreement, approved by the department, between the permittee and the holder of a declaration accepted by the department of ecology pursuant to RCW 90.44.130.

(5) Subject to termination or modification, through issuance of supplemental orders of the department, for good cause, including but not limited to:

(a) Violation of a permit condition;

(b) Obtaining a permit by misrepresentation or failure to fully disclose all relevant facts;

(c) The receipt of new facts or information dictate the same.

[Order 74-36, § 173-136-060, filed 1/9/75.]

WAC 173-136-070 Permits do not establish or embody water rights. Permits issued pursuant to this chapter do not establish or embody water rights as provided in RCW 90.44.050 and 90.44.060.

[Order 74-36, § 173-136-070, filed 1/9/75.]

WAC 173-136-080 Permits shall be transmitted to the holder of a declaration. A copy of each permit issued by the department under this chapter shall be transmitted, at the time of issuance, to the holder of a declaration accepted by the department pursuant to RCW 90.44.130 pertaining to artificially stored ground water.

[Order 74-36, § 173-136-080, filed 1/9/75.]

WAC 173-136-090 Failure to obtain permit—Unlawful. Failure to comply with the provisions of this chapter, including failure to obtain a permit as required herein and violation of a condition of such a permit, shall constitute a basis for the imposition of civil and criminal sanctions contained in applicable state statutes.

[Order 74-36, § 173-136-090, filed 1/9/75.]

WAC 173-136-095 Enforcement. In enforcement of this chapter, the department of ecology may impose such sanctions as are appropriate under authorities vested in it, including but not limited to the issuance of regulatory orders under RCW 43.27A.190 and civil penalties under RCW 90.03.600.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-136-095, filed 6/9/88.]

WAC 173-136-100 Appeals. All final written decisions of the department of ecology pertaining to permits, regulatory orders, and related decisions made pursuant to this chapter shall be subject to review by the pollution control hearings board in accordance with chapter 43.21B RCW.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-136-100, filed 6/9/88; Order 74-36, § 173-136-100, filed 1/9/75.]

WAC 173-136-110 Regulation review. The department of ecology shall initiate a review of the rules established

[Title 173 WAC—p. 215]

in this chapter whenever new information, changing conditions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-136-110, filed 6/9/88.]

173-145-150	Equipment rental. [Statutory Authority: Chapter 86.26 RCW. 85-14-002 (Order DE 85-10), § 173-145-150, filed 6/21/85.] Repealed by 87-04-022 (Order 86-36), filed 1/28/87. Statutory Authority: Chapter 86.26 RCW.
-------------	---

WAC 173-145-010 Authority and purpose. RCW 86.26.050 provides that counties and other municipal corporations responsible for flood control maintenance may apply to the department of ecology for financial assistance for the preparation of comprehensive flood control management plans and for flood control maintenance projects. The purpose of such plans is described in RCW 86.26.105. The department shall determine priorities and allocate available funds from the flood control assistance account program (FCAAP) among those counties applying for assistance, and shall adopt regulations establishing the criteria by which such allocations shall be made. Such criteria shall be based upon proposals which are likely to bring about public benefits commensurate with the amount of state funds allocated thereto. This chapter describes the manner in which ecology will implement the provisions of the act.

[Statutory Authority: Chapter 86.26 RCW. 87-04-022 (Order 86-36), § 173-145-010, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-010, filed 6/21/85.]

WAC 173-145-020 Definitions. For the purposes of this chapter, the following definitions shall be used:

(1) "Applicant." An eligible municipal corporation seeking matching funds for flood control maintenance work.

(2) "Appropriate local authority." A county, city, or town having planning and land use jurisdiction within a given area which is covered by the comprehensive flood control management plan.

[Title 173 WAC—p. 216]

(3) "Certification." Certification is the written confirmation between ecology and the appropriate local authority and the county engineer which verifies the understanding as to what the comprehensive flood control management plan will contain, the timing and anticipated product, and a reporting schedule that will allow for ecology review and input during the plan development.

(4) "Comprehensive flood control management plan (CFCMP)." A document which determines the need for flood control work, considers alternatives to in-stream flood control work, identifies and considers potential impacts of in-stream flood control work on the state's in-stream resources, and identifies the river's meander belt or floodway, as described in WAC 173-145-040.

(5) "County engineer." The appointed public works director, county engineer, or the person designated to act for the county engineer.

(6) "Eligible municipal corporation." Counties, cities, towns, conservation districts, flood control zone districts, or any special districts subject to flood conditions.

(7) "Emergency fund." That portion of the biennial appropriation allocated to the flood control assistance account which is set aside for emergency projects.

(8) "Emergency project." Flood control work necessary for reasons declared by the appropriate local authority and as authorized and approved by ecology which must be done immediately to protect lives or property.

(9) "Flood compatible land uses." Those uses of the land within the river's meander belt or floodway which comply with the minimum state, federal, and local flood plain management regulation requirements.

(10) "Flood plain management activities." Activities described in WAC 173-145-050 performed by local governments through ordinances or other means to reduce the damaging effects of flooding.

(11) "Floodway." The channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base (one hundred year frequency) flood without cumulatively increasing the water surface elevation more than a designated height.

(12) "Maintenance project." The work necessary to preserve or restore the natural condition or to restore man-made flood control facilities to their former condition using in-kind replacement materials or acceptable alternatives. This work is necessary due to anticipated or actual damage or destruction from flooding by action of erosion, stream flow, sheet runoff, or other damages by the sea or other bodies of water.

(13) "Meander belt." That portion of the flood plain, that can be identified by the evidence of present and previous meanders. This shall include the present stream channel. Where there is no identified floodway, that area which is floodprone and has similar topographic characteristics to present and historic stream channels shall be considered as a meander belt.

(14) "Public benefit." Benefit to the health, safety, or general welfare of the citizens of the state or community at large which results from a flood control project or plan, or some benefit by which their rights or liabilities are affected such as an effect on public property or facilities owned or maintained by an eligible municipal corporation.

(15) "Special district." A district as defined in chapter 85.38 RCW which is either a diking district; a drainage district; a diking, drainage, and/or sewerage improvement district; an intercounty diking and drainage district; a consolidated diking district, drainage district, diking improvement district, and/or drainage improvement district; or a flood control district.

[Statutory Authority: Chapter 86.26 RCW. 87-04-022 (Order 86-36), § 173-145-020, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-020, filed 6/21/85.]

WAC 173-145-030 Eligibility criteria for FCAAP funds. Criteria to be used in determining eligibility for FCAAP funds are as follows:

(1) Eligible municipal corporation. The applicant must be an eligible municipal corporation as defined in WAC 173-145-020(6).

(2) Public benefit. The applicant must demonstrate that their comprehensive flood control management plans and flood control maintenance projects shall further the general public and state interest as differentiated from a private interest and that they shall bring about public benefits commensurate with FCAAP funds provided.

(3) Comprehensive flood control management plan. The requirements of WAC 173-145-040 must be complied with by the appropriate local authority with flood control jurisdiction over the area where the proposed project is located.

(4) Flood plain management activities. The appropriate local authority within whose jurisdiction projects are located shall be engaging in approved flood plain management activities as described in WAC 173-145-050.

(5) Budget report. Any eligible municipal corporation seeking FCAAP funds shall submit its annual budget for flood control purposes to the county engineer within thirty calendar days after its final adoption. The county engineer shall then forward the budget report for eligible municipal corporations and for the county to ecology. The information will provide the basis for preparation of a preliminary plan for the most beneficial and orderly allocation of FCAAP funds. Soil conservation districts shall be exempt from the provisions of this section.

[Statutory Authority: Chapter 86.26 RCW. 87-04-022 (Order 86-36), § 173-145-030, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-030, filed 6/21/85.]

WAC 173-145-040 Comprehensive flood control management plan (CFCMP). The county engineer of the county within which the maintenance project is located must certify that the CFCMP has been completed and adopted by the appropriate local authority or is being prepared. Comprehensive flood control management plans, and any revisions to the plans, must be approved by ecology, in consultation with the department of fisheries and game. The (CFCMP) must be completed and adopted within three years of the date that it is certified as being prepared. If, after the three-year period has elapsed, such a plan has not been completed and adopted, grants for flood control maintenance projects shall not be made to the county for projects by the appropriate local authority until the CFCMP is completed and adopted by the appropriate local authority. During the three-year period,

(1999 Ed.)

projects within a drainage area, designated as the CFCMP study area, may be funded as part of a phased project plan, provided preliminary studies for the CFCMP have been conducted to identify the one-hundred-year frequency flood plain problem areas, and factors contributing to flooding; and provided that the proposed projects have been prioritized to achieve the greatest efficiency in flood control for the overall CFCMP study area. These limitations on grants shall not preclude allocations for emergency purposes made pursuant to RCW 86.26.060. The appropriate local authority may require the applicant to fully or partially fund the preparation of the CFCMP. The plan must include:

- (1) Determination of the need for flood control work.
 - (a) Description of the watershed.
 - (b) Identification of types of watershed flood problems.
 - (c) Location and identification of specific problem areas.
 - (d) Description of flood damage history.
 - (e) Description of potential flood damages.
 - (f) Short-term and long-term goals and objectives for the planning area.
 - (g) Description of regulations which apply within the watershed, including but not limited to local shoreline management master programs, and zoning, subdivision, and flood hazard ordinances.
 - (h) Determination of instream flood control work being consistent with applicable policies and regulations.
- (2) Alternative flood control work.
 - (a) Description of potential measures of instream flood control work.
 - (b) Description of alternatives to instream flood control work.
- (3) Identification and consideration of potential impacts of instream flood control work on the following instream uses and resources.
 - (a) Fish resources.
 - (b) Wildlife resources.
 - (c) Scenic, aesthetic, and historic resources.
 - (d) Navigation.
 - (e) Water quality.
 - (f) Hydrology.
 - (g) Existing recreation.
 - (h) Other.
- (4) Area of coverage for the comprehensive plan shall include, as a minimum, the area of the one-hundred-year frequency flood plain within a reach of the watershed of sufficient length to ensure that a comprehensive evaluation can be made of the flood problems for a specific reach of the watershed. The plan may or may not include an entire watershed. Comprehensive plans shall also include flood hazard areas not subject to riverine flooding such as areas subject to coastal flooding, flash flooding, or flooding from inadequate drainage. Either the meander belt or floodway shall be identified on aerial photographs or maps which will be included with the plan.
- (5) Conclusion and proposed solution(s). The CFCMP shall be finalized by the following action from the appropriate local authority:
 - (a) Evaluation of problems and needs;
 - (b) Evaluation of alternative solutions;

(c) Recommended corrective action(s) with proposed impact resolution measures for resource losses; and
 (d) Corrective action priority.

(6) A certification from the state department of community development that the local emergency management organization is administering an acceptable comprehensive emergency operations plan.

[Statutory Authority: Chapter 86.26 RCW. 87-04-022 (Order 86-36), § 173-145-040, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-040, filed 6/21/85.]

WAC 173-145-050 Flood plain management activities. Local jurisdictions within which flood control maintenance projects are located, must be engaging in flood plain management activities. Pursuant to chapter 86.26 RCW the director of the department of ecology must approve the flood plain management activities of the county, city, or town having jurisdiction over the area where the project will be located. To be eligible for FCAAP funding the local jurisdiction shall be required to:

(1) Participate in the National Flood Insurance Program (NFIP) and meet all of the NFIP requirements.

(2) Restrict land uses within the meander belt or floodway of rivers to only flood compatible uses. Where applicable, adopted shoreline management master programs will be considered a minimum land use measure.

[Statutory Authority: Chapter 86.26 RCW. 87-04-022 (Order 86-36), § 173-145-050, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-050, filed 6/21/85.]

WAC 173-145-060 FCAAP project application process. The project application process for the eligible municipal corporations' applications shall include the following in the general sequence given.

(1) The applicant shall prepare the project application to comply with the provisions of chapter 86.26 RCW and this chapter. The application shall be made on a form furnished by ecology. A complete application shall include the following:

(a) A written description of the project containing the following as a minimum: Name of applicant, name of affected water body, project summary, location, amount of local match, and proposed local funding source;

(b) A detailed cost estimate identifying major project elements;

(c) A map to identify water body names, stream river mile, section-township-range;

(d) Construction plans; and

(e) A description of the project benefits which describe how the project will mitigate flood damages and describe development which exists on adjacent and nearby lands which are protected by the facility.

(2) The applicant shall review the preliminary project proposal with the county engineer, the Washington departments of fisheries or game and the department of natural resources and any affected Indian tribes.

(3) The applicant shall submit a prioritized list of project applications to the county engineer.

(4) The county engineer shall submit a prioritized list of all project applications within the county to ecology.

[Title 173 WAC—p. 218]

(5) The county engineer shall furnish evidence to ecology that the comprehensive flood control management plan described in WAC 173-145-040 is being prepared or is completed and adopted by the appropriate local authority or and the flood plain management activities described in WAC 173-145-050 are being implemented.

[Statutory Authority: Chapter 86.26 RCW. 87-04-022 (Order 86-36), § 173-145-060, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-060, filed 6/21/85.]

WAC 173-145-070 FCAAP project approval process. The project approval process for the eligible municipal corporations' applications shall include the following in the general sequence given.

(1) Ecology will review all projects for compliance with the requirements pursuant to this chapter and chapter 86.26 RCW.

(2) Ecology shall consult with the state departments of fisheries and game in the development of a project priority list. The state department of natural resources, affected Indian tribes, and other affected parties may review and comment on the proposed project plans prior to approval.

(3) Thirty days public notice shall be given that the project priority list will be the subject of a public hearing. Notice of this hearing shall appear in the State Register pursuant to chapter 34.08 RCW.

(4) The project priority list will be available at the flood plain management section of the department of ecology, at least fifteen days prior to the public hearing.

(5) The public comments will be reviewed and ecology shall approve the project priority list as proposed or as revised in accordance with public comments.

(6) Ecology shall prepare and finalize the written agreements with the counties.

(7) The counties shall prepare and finalize the written agreements with the involved eligible municipal corporations within the county.

(8) The construction plans and specifications shall be prepared by the applicant for approval by the county engineer prior to submission to ecology for review and approval of each project for compliance with all requirements.

(9) The applicant shall acquire the necessary federal, state, and local permits or authorizations along with any other permission required to complete the project.

[Statutory Authority: Chapter 86.26 RCW. 87-04-022 (Order 86-36), § 173-145-070, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-070, filed 6/21/85.]

WAC 173-145-080 Criteria for allocation of funds. The priority given to projects by ecology, the counties, and other eligible municipal corporations shall involve consideration of the following criteria:

(1) The relationship of public benefits to total project costs.

(2) The priority which has already been established by each county.

(3) Intensity of local flood control management problems, including but not limited to their inter-relationships with:

(a) Population affected;

- (b) Property and related development affected;
 - (c) Land management and zoning;
 - (d) Existing flood control management practices.
- (4) Where the CFCMP is completed and adopted, the following will be considered:
- (a) Consistency with the plan or plan recommendations;
 - (b) Priority of project as identified in the plan;
 - (c) Implementation of plan or plan recommendations;
 - (d) Potential impacts of instream uses and resources;
- (5) Where a CFCMP is being developed or has not been initiated, the following will be considered:
- (a) Evidence of multijurisdictional cooperation necessary for development of a comprehensive county or multi-county comprehensive flood control management plan (CFCMP);
 - (b) Availability of qualified personnel or resources for planning purposes;
 - (c) Availability of qualified personnel or resources for project construction purposes;
 - (d) Other planning efforts undertaken or proposed within the planning jurisdiction and their relationship to flood control management;
 - (e) Ability to make rapid progress toward development of a comprehensive flood control management plan;
 - (f) Existing and proposed participation of community groups, private industry, professional organizations, the general public, and others toward the development and implementation of the proposed comprehensive flood control management plan.

[Statutory Authority: Chapter 86.26 RCW, 87-04-022 (Order 86-36), § 173-145-080, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-080, filed 6/21/85.]

WAC 173-145-090 Flood control assistance account funding and matching requirements. The flood control assistance account is established at four million dollars at the beginning of each biennium. The following criteria shall be used for allocating FCAAP funds:

- (1) The amount of FCAAP funding for any project, except emergency projects described in WAC 173-145-100, shall not exceed fifty percent of the total project cost, including planning and design costs.
- (2) The amount of FCAAP funds to prepare a CFCMP shall not exceed seventy-five percent of the full planning costs.
- (3) The amount of FCAAP funds available for all non-emergency projects and CFCMP's in any county shall not exceed five hundred thousand dollars per biennium.
- (4) In addition to the limits in subsection (3) of this section, an agency formed under chapter 86.13 RCW shall be allowed up to one hundred thousand dollars in FCAAP funds per biennium.

- (5) In those areas where a designated CFCMP area extends into two or more jurisdictions, costs for a CFCMP may be shared by the involved local authorities.

[Statutory Authority: Chapter 86.26 RCW, 87-04-022 (Order 86-36), § 173-145-090, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-090, filed 6/21/85.]

(1999 Ed.)

WAC 173-145-100 Emergency fund administration.

Funds shall be available for flood control projects in response to unusual, unforeseeable, and emergent flood conditions and shall be allocated in amounts adequate for the preservation of life and property. The following criteria shall be the basis of allocating the emergency funds:

- (1) Appropriations from the FCAAP fund for emergency projects will require the declaration of an emergency by the appropriate local authority.
- (2) Application for emergency funds must be made on the same form used for nonemergency fund applications.
- (3) Payment of FCAAP funds for emergency projects will be based on project construction costs. Flood fighting costs may be included.
- (4) Payment for emergency work shall be allocated on a first-come first-serve basis and shall not be based on any priority system.

- (5) At the discretion of ecology, emergency funds may be made available for use on nonemergency projects.

- (6) The maximum amount of emergency funds initially available for any one county is one hundred fifty thousand dollars per biennium. If the total available emergency funds are not needed by other counties and the amount of emergency funds needed in a county exceeds one hundred fifty thousand dollars the county can request additional emergency funds.

- (7) The flood control assistance account contribution shall not exceed eighty percent of the eligible project cost of an emergency project.

- (8) Emergency funds will only be made available to projects which have been given approval for matching funds by the department of ecology prior to construction work being performed.

[Statutory Authority: Chapter 86.26 RCW, 87-04-022 (Order 86-36), § 173-145-100, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-100, filed 6/21/85.]

WAC 173-145-110 Multiyear projects. Approval for eligibility by ecology will only be required once for a project which continues more than one biennium, but funding for each subsequent biennium is subject to further FCAAP appropriation by the legislature.

[Statutory Authority: Chapter 86.26 RCW, 87-04-022 (Order 86-36), § 173-145-110, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-110, filed 6/21/85.]

WAC 173-145-120 Work standards for all FCAAP projects. All work which is funded from the flood control assistance account shall conform to the standards and specifications of the county engineer.

[Statutory Authority: Chapter 86.26 RCW, 87-04-022 (Order 86-36), § 173-145-120, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-120, filed 6/21/85.]

WAC 173-145-130 Project construction monitoring. The following are the responsibilities and criteria for project construction monitoring and final approval:

- (1) County engineer responsibilities. Associated with responsibility for project plan approval and supervision of the project work, the county engineer shall provide inspection to

[Title 173 WAC—p. 219]

assure that all project work is conducted and completed according to the construction plans and specifications.

(2) Ecology's responsibilities. The authorized representative of the department of ecology shall have the right to enter at all reasonable times in or upon any property, public or private, for the purpose of monitoring and inspecting the project work as necessary to assure compliance with the terms of the appropriate written agreement. The authorized representative of the department of ecology is the contract officer and shall be identified in the written agreement. The county engineer will be informed prior to any inspection for purposes of construction monitoring and guidance by any representative of ecology other than the contract officer. Representatives of ecology may observe the construction process without prior notification of the county engineer.

(3) Final inspection and approval. Upon completion of the work, a final detailed inspection shall be made by the county engineer along with representatives from ecology and the applicant. Results of the final inspection shall be displayed in a written report prepared by ecology and, when appropriate, on "as built" construction plans. "As built" construction plans shall be submitted to ecology within thirty days after the final project inspection.

[Statutory Authority: Chapter 86.26 RCW, 87-04-022 (Order 86-36), § 173-145-130, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-130, filed 6/21/85.]

WAC 173-145-140 Written agreements. Written agreements will be prepared by ecology as a means to reimburse eligible municipal corporations for work done on approved eligible projects or for development of CFCMP's. Written agreements, billing, and payment shall comply with ecology's standard requirements for grants and contracts. Notification is required when written agreements will not be accepted or executed to allow ecology the opportunity to award prioritized, unfunded projects.

[Statutory Authority: Chapter 86.26 RCW, 87-04-022 (Order 86-36), § 173-145-140, filed 1/28/87; 85-14-002 (Order DE 85-10), § 173-145-140, filed 6/21/85.]

WAC 173-145-155 Approval of changes to written agreements. All flood control maintenance and comprehensive flood control management planning (CFCMP) projects subject to the provisions of this regulation shall be conducted in accordance with the plans, specifications, and conditions approved by ecology. Any contemplated changes during construction or planning process which are significant deviations from conditions of the approved agreement, shall first be submitted to ecology for approval. Any changes to the total cost of the project following execution of the written agreement must be submitted to ecology for approval prior to construction or plan completion.

[Statutory Authority: Chapter 86.26 RCW, 87-04-022 (Order 86-36), § 173-145-155, filed 1/28/87.]

Chapter 173-150 WAC

PROTECTION OF WITHDRAWAL FACILITIES ASSOCIATED WITH GROUND WATER RIGHTS

WAC

173-150-010 Purpose.

[Title 173 WAC—p. 220]

173-150-020	Authority.
173-150-030	Definitions.
173-150-040	Reasonable or feasible pumping lift.
173-150-050	Establishment of new rights—Interference considerations.
173-150-060	Impairment of water right.
173-150-070	Notification of impairment of right.
173-150-080	Procedures for correction of impairment.
173-150-090	Voluntary agreements.
173-150-100	Water quality.
173-150-110	Saltwater intrusion and ground water contamination.
173-150-120	Applicability.
173-150-125	Enforcement.
173-150-130	Appeals.
173-150-135	Regulation review.
173-150-140	Existing laws and regulations not affected.

WAC 173-150-010 Purpose. The purpose of this chapter is to establish and set forth the policies and procedures of the department of ecology in regard to the protection of the availability of ground water as it pertains to the water withdrawal facilities of holders of ground water rights.

[Statutory Authority: Chapter 90.44 RCW, 85-12-017 (Order 84-44), § 173-150-010, filed 5/29/85.]

WAC 173-150-020 Authority. This chapter is promulgated by the department of ecology pursuant to chapters 43.21A, 90.44, 90.54 and 18.104 RCW.

[Statutory Authority: Chapter 90.44 RCW, 85-12-017 (Order 84-44), § 173-150-020, filed 5/29/85.]

WAC 173-150-030 Definitions. For the purposes of this chapter the following definitions shall apply:

(1) "Department" means the Washington state department of ecology.

(2) "Ground water right" means an authorization to use ground water established pursuant to chapter 90.44 RCW, state common or statutory law existing prior to the enactment of chapter 90.44 RCW, or federal law.

(3) "Withdrawal facilities" means and includes any well, infiltration trench or other excavation that is drilled, cored, bored, washed, driven, dug, jetted or otherwise constructed, together with the casing, screen, pump, pump column, motor and related equipment, which is used for the withdrawal of ground water.

(4) "Aquifer" means any geologic formation that will yield water to a well or other withdrawal works in sufficient quantity for beneficial use.

(5) "Ground water" means all waters that exist beneath the land surface or beneath the bed of any stream, lake or reservoir, or other body of surface water, whatever may be the geological formation or structure in which such water stands or flows, percolates or otherwise moves.

(6) "Contamination" means an impairment of the beneficial use of ground water arising from the modification of the quality thereof by the introduction of organisms, chemical, organic or radioactive material or of heated or cooled water.

(7) "Significant modification" means the deepening or reaming of a well, lowering the pump bowls by adding lengths of pump column, adding water quality treatment devices, or other similar modifications, where the total cost or value of such modifications exceeds (1) \$500.00 for domestic, stock or other water withdrawal facilities with-

drawing less than 5,000 gallons per day, or (2) \$2500.00 for all other facilities.

(8) "Qualifying withdrawal facilities" means those withdrawal facilities which in the opinion of the department constitute a reasonable development of the aquifer. A reasonable development must satisfy the following requirements:

(a) The withdrawal facilities must be constructed in accordance with chapter 18.104 RCW (Water Well Construction Act) and chapter 173-160 WAC (Minimum standards for construction and maintenance of water wells) and the water right permit provisions, if any, or the applicable state laws and the regulations of the department which were in effect at the time of construction of the facilities.

(b) The withdrawal facilities must have a depth of aquifer penetration which will allow the withdrawal of water from a reasonable or feasible pumping lift;

(c) The withdrawal facilities must be able to accommodate a reasonable variation in seasonal pumping water levels;

(d) The withdrawal facilities, including the pumping facilities, must be properly sized to the ability of the aquifer to produce water.

[Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-030, filed 5/29/85.]

WAC 173-150-040 Reasonable or feasible pumping lift. For the purposes of this chapter, reasonable or feasible pumping lift shall be determined by the department taking into account the following factors, among others:

(1) The geohydraulic characteristics of the aquifer;

(2) The state of construction technology of water withdrawal facilities;

(3) Historic considerations in regards to the construction, maintenance and use of water withdrawal facilities within the vicinity;

(4) The ground water area or subarea management program for the vicinity, if one exists.

[Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-040, filed 5/29/85.]

WAC 173-150-050 Establishment of new rights—Interference considerations. If the department determines that a proposed appropriation of ground water would cause a lowering of the water levels below a reasonable or feasible pumping lift in any withdrawal facilities of an existing ground water right holder or that approval of the proposed appropriation would impair any existing water rights or would otherwise be detrimental to the public welfare, the application shall be rejected. If, however, the application is to be rejected because of conflict with existing rights, and the applicant thereafter indicates that such existing rights will be acquired by the applicant by purchase, gift or condemnation under RCW 90.03.040, the department may issue an interim conditional ruling and defer final decision on the application for a reasonable period of time to be specified by the department in the interim ruling.

[Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-050, filed 5/29/85.]

WAC 173-150-060 Impairment of water right. For the purposes of this chapter, a ground water right which per-

(1999 Ed.)

tains to qualifying withdrawal facilities, shall be deemed to be impaired whenever:

(1) There is an interruption or an interference in the availability of water to said facilities, or a contamination of such water, caused by the withdrawal of ground water by a junior water right holder or holders; and

(2) Significant modification is required to be made to said facilities in order to allow the senior ground water right to be exercised.

[Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-060, filed 5/29/85.]

WAC 173-150-070 Notification of impairment of right. Any senior ground water right holder who believes that his water right has been impaired may notify the department of such impairment and request the assistance of the department to protect the availability of water to his qualifying withdrawal facilities. Such notification and request for assistance must be in writing and must contain the following information:

(1) Name, address and signature of the senior water right holder;

(2) Description of the water right, including the water right number if one exists; the quantities of water permitted and the quantities of water historically withdrawn; the priority date of the water right; the location of the withdrawal facilities; a description of the withdrawal facilities including well depth, casing, pump size and depth and historic water levels, and any recent changes made to the withdrawal facilities or the use of such facilities, especially in relation to WAC 173-150-030(8); the name of the water well contractor and a copy of the water well report of the construction of the withdrawal facilities, if available;

(3) Description of the alleged impairment of the senior water right, the date of the beginning of impairment, the degree of impairment and any steps taken by the senior water right holder to alleviate the impairment;

(4) Location and description of the junior water withdrawal facilities together with the name of the user thereof, if known, which in the opinion of the senior water right holder are the cause of the impairment;

(5) Any other pertinent information which may reasonably be required by the department.

[Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-070, filed 5/29/85.]

WAC 173-150-080 Procedures for correction of impairment. Upon notification to the department of the impairment of a ground water right as provided in WAC 173-150-070 or on the department's own motion, the department may, when appropriate, notify the water right holders of the alleged impairment and of its intention to make investigations concerning the matter. The department may conduct aquifer or pump tests and make investigations of the withdrawal works, geology, hydrology, water quality, historic water use or other factors which may influence the local aquifers, and may make a written report of its findings. If it is determined that ground water withdrawals by a junior water right holder or holders have caused the impairment, the

department may, through regulatory orders, take one or more of the following actions:

(1) Bar or regulate the withdrawals of the junior appropriator(s) in a fashion which will preclude future impairment of the senior right;

(2) Bar or regulate the ground water withdrawals of the most junior water right holders in order of priority of right if the aggregate withdrawals exceed the maximum amount set by the department for the area, subarea or zone pursuant to the procedures of RCW 90.44.180;

(3) Require the well owner(s), including the senior water right holder, to rehabilitate or abandon the well(s) in accordance with chapter 173-160 WAC in the case of impairment caused by the failure of wells to meet the well construction standards or the requirements of water right permit or certificate provisions, if any;

(4) Rescind authorizations for additional junior withdrawal facilities and/or reduce the authorized withdrawal rates, as appropriate, where the department finds that an appropriation by a junior right holder is the cause of the impairment and where the said junior ground water right holder has not yet completed construction of the authorized withdrawal facilities. The department shall include a provision concerning the possibility of such rescissions as a condition on ground water permits with multiple points of withdrawal.

[Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-080, filed 5/29/85.]

WAC 173-150-090 Voluntary agreements. (1) Notwithstanding the provisions of WAC 173-150-080, should the senior and junior water right holders reach a voluntary agreement which satisfies the concerns stated in the notification of impairment, the department, if it determines that the public interest is fully protected thereby, shall not regulate the withdrawals by the junior water right holder under this regulation.

(2) If such an agreement includes provisions for the delivery of water from another water withdrawal facility to the holder of the senior water right, said agreement shall not take effect until all requirements of RCW 90.44.100 are satisfied or, if a new right to withdraw water is required to be established, a permit is issued pursuant to RCW 90.44.050.

[Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-090, filed 5/29/85.]

WAC 173-150-100 Water quality. As a general rule, an element of a ground water right is the right to use waters of quality appropriate to the beneficial use. In addition to the protection of the availability of ground water to the water withdrawal facilities of ground water right holders, it shall be the policy of the department to protect the quality of the ground waters of the state and in relation thereto to discourage any withdrawal facilities construction methods, water use or disposal practices which would contaminate or otherwise reduce the quality of the ground waters or impair the beneficial uses of ground waters of the state.

[Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-100, filed 5/29/85.]

[Title 173 WAC—p. 222]

WAC 173-150-110 Saltwater intrusion and ground water contamination. In addition to the procedures outlined in WAC 173-150-080, the department may regulate or control saltwater intrusion conditions caused by withdrawals from a freshwater aquifer or ground water contamination caused by improper well construction techniques or other causes, through other means, including artificial recharge projects, the importation of additional water from other sources, or any other means deemed by the department to be reasonable, feasible and appropriate.

[Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-110, filed 5/29/85.]

WAC 173-150-120 Applicability. The provisions of this chapter shall apply to all ground water rights and ground water users under state jurisdiction, except that WAC 173-150-080 shall apply only to permits issued or other ground water rights established subsequent to the effective date of this chapter, or to withdrawal facilities which are the subject of an application for change of water right filed pursuant to RCW 90.44.100 subsequent to the effective date of this chapter. Cases of impairment caused by facilities or ground water rights which are not subject to this chapter shall be subject to existing state laws and regulations.

[Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-120, filed 5/29/85.]

WAC 173-150-125 Enforcement. In enforcement of this chapter, the department of ecology may impose such sanctions as are appropriate under authorities vested in it, including but not limited to the issuance of regulatory orders under RCW 43.27A.190 and civil penalties under RCW 90.03.600.

[Statutory Authority: Chapters 18.104, 43.21A, 43.27A, 90.44 and 90.54 RCW. 88-13-037 (Order 88-11), § 173-150-125, filed 6/9/88.]

WAC 173-150-130 Appeals. All final written decisions of the department of ecology pertaining to permits, regulatory orders, and related decisions made pursuant to this chapter shall be subject to review by the pollution control hearings board in accordance with chapter 43.21B RCW.

[Statutory Authority: Chapters 18.104, 43.21A, 43.27A, 90.44 and 90.54 RCW. 88-13-037 (Order 88-11), § 173-150-130, filed 6/9/88. Statutory Authority: Chapter 90.44 RCW. 85-12-017 (Order 84-44), § 173-150-130, filed 5/29/85.]

WAC 173-150-135 Regulation review. The department of ecology shall initiate a review of the rules established in this chapter whenever new information, changing conditions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapters 18.104, 43.21A, 43.27A, 90.44 and 90.54 RCW. 88-13-037 (Order 88-11), § 173-150-135, filed 6/9/88.]

WAC 173-150-140 Existing laws and regulations not affected. Nothing in this chapter shall be construed to in any manner limit the authority of the department to administer and enforce the existing water resources laws of the state, including but not limited to chapters 18.104, 90.03, 90.36,

(1999 Ed.)

90.44, 90.48 and 90.54 RCW, and regulations promulgated thereunder.

[Statutory Authority: Chapter 90.44 RCW, 85-12-017 (Order 84-44), § 173-150-140, filed 5/29/85.]

Chapter 173-152 WAC

WATER RIGHTS

WAC

173-152-010	Purpose.
173-152-020	Definitions.
173-152-030	Organization and management of work load.
173-152-040	Basin assessments.
173-152-050	Criteria for priority processing of competing applications.
173-152-060	Exceptions.

WAC 173-152-010 Purpose. This rule establishes the framework under which the department can provide for the organization of its work, prioritize basins to be assessed, conduct basin assessments, prioritize investigations of water right applications by geographic areas, and establish criteria for priority processing of applications for new water rights and applications for change or transfer of existing water rights.

[Statutory Authority: RCW 43.21A.064(8) and 43.27A.090(11). 98-06-042 (Order 97-14), § 173-152-010, filed 2/27/98, effective 3/30/98.]

WAC 173-152-020 Definitions. For the purposes of this chapter the following definitions apply:

- (1) "Department" means the department of ecology.
- (2) "Public water system" means a water supply system as defined in RCW 70.119A.020.
- (3) "Applications to change or transfer" means applications made under RCW 90.03.380 or 90.44.100.
- (4) "Competing applications" means all existing applications for water right from the same water source, whether for a new water right or for a change or transfer of an existing water right.

(5) "Same water source" or "source of water" means an aquifer or surface water body, including a stream, stream system, lake, or reservoir and any spring water or underground water that is part of or tributary to the surface water body or aquifer, that the department determines to be an independent water body for the purposes of water right administration.

[Statutory Authority: RCW 43.21A.064(8) and 43.27A.090(11). 98-06-042 (Order 97-14), § 173-152-020, filed 2/27/98, effective 3/30/98.]

WAC 173-152-030 Organization and management of work load. (1) The department may establish regions and maintain regional offices or field offices for the purposes of maximizing the efficiency of its work. Regional offices and their geographic jurisdictions as of the effective date of this rule are as follows:

- (a) Northwest regional office serving Island, King, Kitsap, San Juan, Skagit, Snohomish, and Whatcom counties;
- (b) Southwest regional office serving Clallam, Clark, Cowlitz, Grays Harbor, Jefferson, Lewis, Mason, Pacific, Pierce, Skamania, Thurston, and Wahkiakum counties;
- (c) Central regional office serving Benton, Chelan, Douglas, Kittitas, Klickitat, Okanogan, and Yakima counties; and

(1999 Ed.)

(d) Eastern regional office serving Adams, Asotin, Columbia, Ferry, Franklin, Garfield, Grant, Lincoln, Pend Oreille, Spokane, Stevens, Walla Walla, and Whitman counties.

(2) The department will make decisions on new water right applications and applications for change or transfer of an existing water right within a region or within a regional or field office's geographic area in the order the application was received except as provided for in subsection (3) of this section and WAC 173-152-050.

(3) The department may, based on the criteria identified in subsection (4) of this section, conduct an investigation and make decisions on one or more water right applications for the use of water from the same water source. Within a regional office, more than one water source may be investigated at a time. When numerous applications for water from the same water source are being investigated, the decisions will be made in the order in which the applications were received. Each application will be considered individually under the requirements of chapters 90.03 and 90.44 RCW.

(4) Criteria for selecting a water source include, but are not limited to:

(a) The number and age of pending applications, and the quantities of water requested;

(b) The ability to efficiently investigate applications because of the availability of data related to water supply and future needs, streamflow needs for instream values, and hydrogeology of the basin;

(c) The ability of the department to support implementation of local land use plans or implementation of water resource plans;

(d) The projected population and economic growth in the area; and/or

(e) The completion of an initial basin assessment as provided for in WAC 173-152-040(5).

[Statutory Authority: RCW 43.21A.064(8) and 43.27A.090(11). 98-06-042 (Order 97-14), § 173-152-030, filed 2/27/98, effective 3/30/98.]

WAC 173-152-040 Basin assessments. (1) The department may conduct assessments to assemble and correlate information related to water use, water availability, the quantity of water allocated to existing rights, claims, instream flow, and the hydrology of a basin to use in making decisions on future water resource allocation and use. The department may also enter into agreements or contracts with public or private parties to conduct assessments. Geographic areas or same water sources within a regional office service area will be identified or considered for assessment in cooperation with federal, state, tribal, and local jurisdictions and other interested parties. In determining a basin or same water source to assess, the department's consideration may include, but is not limited to, the following factors:

(a) The number and age of pending applications, and the quantities of water requested;

(b) The projected population, growth and off-stream needs for water in the area;

(c) Known water quality problems;

(d) Existence of distressed or endangered fish stocks;

(e) Risk of impairment to senior rights (including instream flow rights);

(f) Availability of data related to water supply and future need, streamflow needs for instream values, and hydrogeology of the basin;

(g) The number of claims to water rights submitted pursuant to chapter 90.14 RCW; and

(h) The ability of the department to support local land use activities.

(2) Multiple basin assessments may be conducted within a region at the same time. When the department determines it is in the public interest to conduct a basin assessment, it will:

(a) Publish notice of the intent to conduct a basin assessment once a week, for two consecutive weeks in a newspaper of general circulation within the geographic area;

(b) Hold in abeyance decisions on all competing water right applications in the basin after publication of a notice to initiate a basin assessment and until the initial basin assessment is complete and published except for applications prioritized pursuant to WAC 173-152-050; and

(c) Make decisions on competing applications after the initial basin assessment is complete and published to the extent sufficient information is available.

(3) Initial basin or water source assessments will be conducted to assemble the following existing information:

(a) Physical characterization of the watershed related to:

(i) Climatic impacts to water resources;

(ii) Geology;

(iii) Streamflow trends;

(iv) Ground water elevation trends and the contribution of ground water to streamflows; and

(v) Surface and ground water quality in the basin or water source.

(b) Out-of-stream water use characterization related to:

(i) Water rights, federal rights, and claims to water rights;

(ii) Estimated use of water pursuant to water rights and claims to water rights;

(iii) Water use pursuant to RCW 90.44.050;

(iv) Extent of unauthorized water use; and

(v) Potential future demands for out-of-stream water use in the basin.

(c) Instream water use characterization related to:

(i) National Pollution Discharge Elimination System permits and the need for instream flow for pollution assimilation;

(ii) Fish stocks and habitat requirements;

(iii) Wildlife habitat requirements;

(iv) Recreational requirements; and

(v) Water rights and claims to water rights.

(4) Upon completion and publication of the initial basin assessment, the department in consultation with the public and federal, state, tribal, local jurisdictions and interested parties will evaluate the basin assessment. The evaluation will assess the data, analysis, and presentation of information in the basin assessment in terms of quality, adequacy, and utility to make decisions on future water resource allocation and use.

(5) The department will make decisions on competing applications for water from a source of water within the basin where sufficient information for water resource allocation exists. If the department determines that the information

assembled and correlated is not sufficient, the department may withdraw the water source from appropriation pursuant to RCW 90.54.050(2). The department in consultation with the public, federal, state, tribal, local jurisdictions and interested parties will design and conduct additional investigations, to the extent resources allow, to obtain the information necessary to make future decisions on water allocation and use.

(6) The information obtained and compiled during an initial basin assessment of the water resources in a basin or water source will be contained in an open file technical report at the regional or field office.

[Statutory Authority: RCW 43.21A.064(8) and 43.27A.090(11). 98-06-042 (Order 97-14), § 173-152-040, filed 2/27/98, effective 3/30/98.]

WAC 173-152-050 Criteria for priority processing of competing applications.

(1) An application may be processed prior to competing applications if the application resolves or alleviates a public health or safety emergency caused by a failing public water supply system currently providing potable water to existing users. Inadequate water rights for a public water system to serve existing hook-ups or to accommodate future population growth or other future uses do not constitute a public health or safety emergency. The application must be filed specifically to correct the actual or anticipated cause(s) of the public water system failure. To be considered a failing public water system, the system must meet one or more of the following conditions:

(a) The department, upon notification by and in consultation with the department of health or local health authority, determines a public water system has failed, or is in danger of failing within one year, to meet state board of health standards for the delivery of potable water to existing users in adequate quantity or quality to meet basic human drinking, cooking and sanitation needs;

(b) The current water source has failed or will fail so that the public water system is or will become incapable of exercising its existing water right to meet existing needs for drinking, cooking and sanitation purposes after all reasonable conservation efforts have been implemented; or

(c) A change in source is required to meet drinking water quality standards and avoid unreasonable treatment costs, or the state department of health determines that the existing source of supply is unacceptable for human use.

(2) An application may be processed prior to competing applications if the department determines:

(a) Immediate action is necessary for preservation of public health or safety; or

(b) The proposed water use is nonconsumptive and if approved would substantially enhance or protect the quality of the natural environment.

(3) An application for change or transfer to an existing water right may be processed prior to competing applications provided one or more of the following criteria are satisfied:

(a) The change or transfer if approved would substantially enhance the quality of the natural environment; or

(b) The change or transfer if approved would result in providing public water supplies to meet general needs of the public for regional areas;

(c) The change or transfer was filed by water right holders participating in an adjudication, and a decision is needed expeditiously to ensure that orders or decrees of the superior court will be representative of the current water use situation.

(4) Within each regional office, the department shall process applications satisfying the criteria in subsections (1) through (3) of this section in the following priority:

(a) Public health and safety emergencies under subsection (1) of this section;

(b) Preservation of other public health and safety concerns under subsection (2)(a) of this section;

(c) Transfers or changes under subsection (3)(a) of this section;

(d) Transfers or changes under subsection (3)(b) of this section;

(e) Transfers or changes under subsection (3)(c) of this section; and

(f) Nonconsumptive uses under subsection (2)(b) of this section.

[Statutory Authority: RCW 43.21A.064(8) and 43.27A.090(11). 98-06-042 (Order 97-14), § 173-152-050, filed 2/27/98, effective 3/30/98.]

WAC 173-152-060 Exceptions. Nothing in this chapter precludes the department from processing applications or requests filed for temporary permits, preliminary permits or for emergent or emergency circumstances under RCW 43.83B.410, 90.03.383(7), or 90.03.390 and/or where the law provides a specific process for evaluation of an application and issuance of a decision.

[Statutory Authority: RCW 43.21A.064(8) and 43.27A.090(11). 98-06-042 (Order 97-14), § 173-152-060, filed 2/27/98, effective 3/30/98.]

Chapter 173-154 WAC

PROTECTION OF UPPER AQUIFER ZONES

WAC

173-154-010	Background.
173-154-020	Purpose.
173-154-030	Authority.
173-154-040	Definitions.
173-154-050	Protection of upper aquifer zones.
173-154-060	Inspections and tests.
173-154-070	Rehabilitation of withdrawal facilities.
173-154-080	Deepening of withdrawal facilities.
173-154-090	Applicability.
173-154-095	Enforcement.
173-154-100	Appeals.
173-154-105	Regulation review.
173-154-110	Existing laws and regulations not affected.

WAC 173-154-010 Background. In many parts of the state ground water aquifers exist at various depths below land surface. Such aquifers or groups of such aquifers may demonstrate a natural hydraulic separation to a significant degree over local or regional areas as evidenced, in part, by differing hydraulic heads and variable responses to pumping stress. The upper aquifer or upper aquifer zone often will not yield water in sufficient or sustainable quantities for uses which require a large volume of water. Therefore, they have often been traditionally used for domestic water supplies, stockwatering and other uses that require only minimal water supplies and for which it is not cost effective to tap deeper aquifers. Further, the uppermost aquifers also commonly contribute to

spring and stream flows. In some cases, the withdrawal of water from the lower aquifers causes the depletion of the upper aquifers through cascading waters or simultaneous withdrawals from both upper and lower aquifers, and in such cases, poor quality waters from one zone can also contaminate a different aquifer zone.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-010, filed 5/29/85.]

WAC 173-154-020 Purpose. The purpose of this chapter is to establish and set forth the policies and procedures of the department of ecology in regard to the protection of the occurrence and availability of ground water within the upper aquifers or upper aquifer zones where there are multiple aquifer systems. Consistent therewith, the department shall manage the state's ground water resources in a manner that protects, to the extent practicable, the upper aquifers of multiple aquifer systems from depletions, excessive water level declines or reductions in water quality, and which recognizes that the highest and best use of the waters of limited capacity aquifers may be for domestic, stockwater and other similar uses and for the preservation of spring and stream flows.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-020, filed 5/29/85.]

WAC 173-154-030 Authority. This chapter is promulgated by the department of ecology pursuant to chapters 18.104, 43.21A, 90.44 and 90.54 RCW.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-030, filed 5/29/85.]

WAC 173-154-040 Definitions. For the purposes of this chapter the following definitions shall apply:

(1) "Department" means the Washington state department of ecology.

(2) "Ground water right" means an authorization to use ground water established pursuant to chapter 90.44 RCW, state common or statutory law existing prior to the enactment of chapter 90.44 RCW, or federal law.

(3) "Withdrawal facilities" means and includes any well, infiltration trench or other excavation that is drilled, cored, bored, washed, driven, dug, jetted or otherwise constructed, together with the casing, screen, pump, pump column, motor and related equipment which is used for the withdrawal of ground water.

(4) "Aquifer" means any geologic formation that will yield water to a well or other withdrawal facilities in sufficient quantity for beneficial use.

(5) "Ground water" means all waters that exist beneath the land surface or beneath the bed of any stream, lake or reservoir, or other body of surface water, whatever may be the geological formation or structure in which such water stands or flows, percolates or otherwise moves.

(6) "Multiple aquifer system" means any geologic formation(s) which contains distinct aquifers at different depths that exhibit a significant degree of local or regional hydraulic separation.

(7) "Upper aquifer zone" means all aquifers within a multiple aquifer system lying between the land surface and a depth or geologic formation, as determined by the department

consistent with the purposes of this chapter, or as set forth in the ground water subarea management program for the area, if one exists.

(8) "Lower aquifer zone" means any aquifers occurring at a depth below the upper aquifer zone, as determined by the department, or as set forth in the ground water subarea management program for the area, if one exists.

(9) "Cascading waters" means any ground waters which fall or flow through a well or other withdrawal facilities, from one ground water aquifer to another.

(10) "Rehabilitation of withdrawal facilities" means the work necessary to reconstruct or modify existing withdrawal facilities in order to bring them into conformance with applicable laws, regulations, permit or certificate provisions and orders of the department.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-040, filed 5/29/85.]

WAC 173-154-050 Protection of upper aquifer zones.

In any multiple aquifer system, where the department determines that the uppermost aquifers or upper aquifer zone will not sustain large volume ground water withdrawals without exceeding the safe sustaining yield or causing (1) adverse effects to existing water rights, (2) an unreasonable drop in the water table, (3) permanent damage to the aquifer through depletion of the aquifer or zone, (4) an impairment of the beneficial use of the ground waters arising from a modification of the water quality, or (5) depletions of spring or stream flows, the department shall require new or additional large volume withdrawals to be restricted to a lower aquifer zone. Permits for withdrawals of water from such lower aquifer zones may specify an approved manner of construction of the withdrawal facilities, including but not limited to, a minimum and maximum well depth, specific casing and sealing requirements, and the construction of monitoring wells for the purpose of periodic measurements in areas where the aquifers cannot be readily monitored through the use of existing wells.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-050, filed 5/29/85.]

WAC 173-154-060 Inspections and tests. The department may require inspections and/or tests of withdrawal facilities prior to their use in order to ensure compliance with any construction requirements imposed by the department pursuant to this chapter. Such inspections and tests shall be performed at the expense of the holder of the permit, except that there shall be no charge for any portions of such tests or inspections which are performed by department employees. If it is the determination of the department that the facilities are not properly constructed or that the facilities may adversely affect the upper aquifers or upper aquifer zone, the department may (1) require further construction and/or testing of the facilities, or (2) require abandonment of the facilities in accordance with chapter 173-160 WAC, or (3) revoke the permit.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-060, filed 5/29/85.]

[Title 173 WAC—p. 226]

WAC 173-154-070 Rehabilitation of withdrawal facilities. The department may require the rehabilitation of existing withdrawal facilities if it finds that the facilities were not constructed or are presently not in accordance with the permit provisions, if any, or the applicable laws and regulations of the department which were in effect at the time of construction of the facilities, and that the withdrawal of waters from such facilities will adversely affect the upper aquifers or upper aquifer zone. The department shall allow a reasonable period for completion of such rehabilitation.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-070, filed 5/29/85.]

WAC 173-154-080 Deepening of withdrawal facilities. At any time that the holder of a valid ground water right proposes to deepen a withdrawal facility, the modification of the facility shall be made in such a manner as to preclude the occurrence of cascading waters. Such a facility shall not be deepened to tap a different body of public ground water, or a different aquifer zone where such zones have been determined by the department, without further appropriate authorization from the department.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-080, filed 5/29/85.]

WAC 173-154-090 Applicability. The provisions of this chapter shall apply to all ground water rights under state jurisdiction, except that WAC 173-154-050 and 173-154-060 shall apply only to permits issued or other ground water rights established subsequent to the effective date of this chapter and to withdrawal facilities which are the subject of an application for change of water right filed pursuant to RCW 90.44.100 subsequent to the effective date of this chapter.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-090, filed 5/29/85.]

WAC 173-154-095 Enforcement. In enforcement of this chapter, the department of ecology may impose such sanctions as are appropriate under authorities vested in it, including but not limited to the issuance of regulatory orders under RCW 43.27A.190 and civil penalties under RCW 90.03.600.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-154-095, filed 6/9/88.]

WAC 173-154-100 Appeals. All final written decisions of the department of ecology pertaining to permits, regulatory orders, and related decisions made pursuant to this chapter shall be subject to review by the pollution control hearings board in accordance with chapter 43.21B RCW.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-154-100, filed 6/9/88. Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-100, filed 5/29/85.]

WAC 173-154-105 Regulation review. The department of ecology shall initiate a review of the rules established in this chapter whenever new information, changing condi-

(1999 Ed.)

tions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-154-105, filed 6/9/88.]

WAC 173-154-110 Existing laws and regulations not affected. Nothing in this chapter shall be construed to limit in any manner the authority of the department to administer and enforce the existing water resources laws of the state, including but not limited to chapters 18.104, 90.03, 90.36, 90.44, 90.48 and 90.54 RCW, and regulations promulgated thereunder.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-110, filed 5/29/85.]

173-158-110	State assumption of regulatory authority. [Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-110, filed 5/4/88.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.

WAC 173-158-010 Authority. This chapter is adopted pursuant to chapter 86.16 RCW as amended during the 1989 legislative session.

Note: Copies of all statutes, regulations, and other documents cited or referred to in this chapter may be viewed at the Department of Ecology, Mailstop PV-11, Olympia, Washington 98504.

[Statutory Authority: RCW 86.16.061, 90-21-089, § 173-158-010, filed 10/19/90, effective 11/19/90. Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-010, filed 5/4/88.]

WAC 173-158-020 Purpose. Chapter 86.16 RCW establishes state-wide authority for flood plain management through the adoption and administration by local governments of regulatory programs which are compliant with the minimum standards of the National Flood Insurance Program

(1999 Ed.)

(NFIP). Chapter 86.16 RCW also directs the department of ecology to establish minimum state requirements for flood plain management which equal the NFIP minimum standards; to provide technical assistance and information to local governments related to administration of their flood plain management ordinances and the NFIP; to provide assistance to local governments in identifying the location of the one hundred year (base) flood plain; and allows for the issuance of regulatory orders.

[Statutory Authority: RCW 86.16.061, 90-21-089, § 173-158-020, filed 10/19/90, effective 11/19/90. Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-020, filed 5/4/88.]

WAC 173-158-030 Definitions. For the purposes of this chapter the following definitions shall apply:

(1) "Base flood" means the flood having a one percent chance of being equalled or exceeded in any given year. Also referred to as the "one hundred year flood."

(2) "Best available information" means in the absence of official flood insurance rate map data, communities can use data from other federal, state, or other sources provided this data has either been generated using technically defensible methods or is based on reasonable historical analysis and experience.

(3) "Designated floodway" means the regulatory floodway which has been delineated on the flood insurance rate map (FIRM) or the flood boundary/floodway map (FBFM) of a community's flood insurance study and is included in the community's flood damage prevention ordinance.

(4) "Flood or flooding" means a general and temporary condition of partial or complete inundation of normally dry land areas from:

(a) The overflow of inland or tidal waters; and/or

(b) The unusual and rapid accumulation of runoff of surface waters from any source.

(5) "Flood insurance rate map (FIRM)" means the official map on which the federal insurance administration has delineated both the areas of special flood hazard and the risk premium zones applicable to the community.

(6) "Floodway" means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than one foot.

(7) "New construction" means structures for which the "start of construction" commenced on or after the effective date of the local ordinance.

(8) "Person" means an individual, partnership, corporation, association, organization, cooperative, public or municipal corporation, or any agency of the state or local governmental unit however designated.

(9) "Special flood hazard area" means an area subject to a base or one hundred year flood; areas of special flood hazard are shown on a flood hazard boundary map or flood insurance rate map as Zone A, AO, A1-30, AE, A99, AH, VO, V1-30, VE, or V.

(10) "Structure" means a walled and roofed building, including a gas or liquid storage tank that is principally above ground. Manufactured homes are considered structures.

(11) "Start of construction" includes substantial improvement, and means the date the building permit was

tions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapters 43.21A, 43.27A, 90.03 and 90.44 RCW. 88-13-037 (Order 88-11), § 173-154-105, filed 6/9/88.]

WAC 173-154-110 Existing laws and regulations not affected. Nothing in this chapter shall be construed to limit in any manner the authority of the department to administer and enforce the existing water resources laws of the state, including but not limited to chapters 18.104, 90.03, 90.36, 90.44, 90.48 and 90.54 RCW, and regulations promulgated thereunder.

[Statutory Authority: Chapters 90.44 and 90.54 RCW. 85-12-018 (Order 84-45), § 173-154-110, filed 5/29/85.]

DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

173-158-060	Additional state requirements. [Statutory Authority: RCW 86.16.061, 89-07-022 and 90-06-059 (Order 88-57 and 88-57A), § 173-158-060, filed 3/7/89 and 3/6/90, effective 4/6/90. Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-060, filed 5/4/88.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.
173-158-100	Local compliance schedule. [Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-100, filed 5/4/88.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.
173-158-110	State assumption of regulatory authority. [Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-110, filed 5/4/88.] Repealed by 90-21-089, filed 10/19/90, effective 11/19/90. Statutory Authority: RCW 86.16.061.

WAC 173-158-010 Authority. This chapter is adopted pursuant to chapter 86.16 RCW as amended during the 1989 legislative session.

Note: Copies of all statutes, regulations, and other documents cited or referred to in this chapter may be viewed at the Department of Ecology, Mailstop PV-11, Olympia, Washington 98504.

[Statutory Authority: RCW 86.16.061, 90-21-089, § 173-158-010, filed 10/19/90, effective 11/19/90. Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-010, filed 5/4/88.]

WAC 173-158-020 Purpose. Chapter 86.16 RCW establishes state-wide authority for flood plain management through the adoption and administration by local governments of regulatory programs which are compliant with the minimum standards of the National Flood Insurance Program

(1999 Ed.)

(NFIP). Chapter 86.16 RCW also directs the department of ecology to establish minimum state requirements for flood plain management which equal the NFIP minimum standards; to provide technical assistance and information to local governments related to administration of their flood plain management ordinances and the NFIP; to provide assistance to local governments in identifying the location of the one hundred year (base) flood plain; and allows for the issuance of regulatory orders.

[Statutory Authority: RCW 86.16.061, 90-21-089, § 173-158-020, filed 10/19/90, effective 11/19/90. Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-020, filed 5/4/88.]

WAC 173-158-030 Definitions. For the purposes of this chapter the following definitions shall apply:

(1) "Base flood" means the flood having a one percent chance of being equalled or exceeded in any given year. Also referred to as the "one hundred year flood."

(2) "Best available information" means in the absence of official flood insurance rate map data, communities can use data from other federal, state, or other sources provided this data has either been generated using technically defensible methods or is based on reasonable historical analysis and experience.

(3) "Designated floodway" means the regulatory floodway which has been delineated on the flood insurance rate map (FIRM) or the flood boundary/floodway map (FBFM) of a community's flood insurance study and is included in the community's flood damage prevention ordinance.

(4) "Flood or flooding" means a general and temporary condition of partial or complete inundation of normally dry land areas from:

(a) The overflow of inland or tidal waters; and/or

(b) The unusual and rapid accumulation of runoff of surface waters from any source.

(5) "Flood insurance rate map (FIRM)" means the official map on which the federal insurance administration has delineated both the areas of special flood hazard and the risk premium zones applicable to the community.

(6) "Floodway" means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than one foot.

(7) "New construction" means structures for which the "start of construction" commenced on or after the effective date of the local ordinance.

(8) "Person" means an individual, partnership, corporation, association, organization, cooperative, public or municipal corporation, or any agency of the state or local governmental unit however designated.

(9) "Special flood hazard area" means an area subject to a base or one hundred year flood; areas of special flood hazard are shown on a flood hazard boundary map or flood insurance rate map as Zone A, AO, A1-30, AE, A99, AH, VO, V1-30, VE, or V.

(10) "Structure" means a walled and roofed building, including a gas or liquid storage tank that is principally above ground. Manufactured homes are considered structures.

(11) "Start of construction" includes substantial improvement, and means the date the building permit was

issued, provided the actual start of construction, repair, reconstruction, placement, or other improvement was within one hundred eighty days of the permit date. The actual start means either the first placement of permanent construction of a structure on a site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading, or filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footings, piers, or foundation or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or not part of the main structure.

(12) "Substantial improvement" means any repair, reconstruction, or improvement of a structure, the cost of which equals or exceeds fifty percent of the market value of the structure either:

- (a) Before the improvement or repair is started; or
- (b) If the structure has been damaged and is being restored, before the damage occurred. For the purposes of this definition "substantial improvement" is considered to occur when the first alteration of any wall, ceiling, floor, or other structural part of the building commences, whether or not that alteration affects the external dimensions of the structure.

The term does not, however, include either:

- (i) Any project for improvement of a structure to comply with existing state or local health, sanitary, or safety code specifications which are solely necessary to assure safe living conditions; or
- (ii) Any alteration of a structure listed on the National Register of Historic Places or a state inventory of historic places.

(13) "Variance" means a grant of relief from the requirements of this chapter which permits construction in a manner that would otherwise be prohibited by this chapter.

(14) "Wetlands" means lands transitional between terrestrial and aquatic systems where the water table is usually at or near the surface or the land is covered by shallow water. Wetlands have one or more of the following three attributes: (a) At least periodically, the land supports predominantly hydrophytes; (b) the substrate is predominantly undrained hydric soil; and (c) the substrate is nonsoils and is saturated with water or covered by shallow water at some time during the growing season of each year.

[Statutory Authority: RCW 86.16.061. 90-21-089, § 173-158-030, filed 10/19/90, effective 11/19/90; 89-07-022 and 90-06-059 (Order 88-57 and 88-57A), § 173-158-030, filed 3/7/89 and 3/6/90, effective 4/6/90. Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-030, filed 5/4/88.]

WAC 173-158-040 Regulatory area. The minimum regulatory area for state and local flood plain management regulations shall be those areas subject to a base (one hundred year) flood and designated as special flood hazard areas on the most recent maps provided by the Federal Emergency Management Agency (FEMA) for the National Flood Insurance Program (NFIP). Best available information shall be used if these maps are not available or sufficient as determined by the Federal Emergency Management Agency.

[Title 173 WAC—p. 228]

[Statutory Authority: RCW 86.16.061. 90-21-089, § 173-158-040, filed 10/19/90, effective 11/19/90. Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-040, filed 5/4/88.]

WAC 173-158-045 Technical assistance. The department of ecology shall provide technical assistance to local governments in the administration of their flood plain management ordinances. The department shall also assist counties, cities, and towns in identifying the location of the one hundred year flood plain, and petitioning the federal government to alter its designations of where the one hundred year flood plain is located if the federally recognized location of the one hundred year flood plain is found to be inaccurate.

[Statutory Authority: RCW 86.16.061. 90-21-089, § 173-158-045, filed 10/19/90, effective 11/19/90.]

WAC 173-158-050 Criteria for land management and use. The standards and definitions contained in 44 CFR, Parts 59 and 60 for the National Flood Insurance Program are adopted as the minimum state standards by reference.

[Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-050, filed 5/4/88.]

WAC 173-158-064 Additional state requirements. State requirements may be established for specific flood plains that exceed the minimum federal requirements of the NFIP, in accordance with RCW 86.16.031(8) and the following:

- (1) A written request must be submitted to the department of ecology by the affected county, city, or town to initiate the process.
- (2) The location of the one hundred year flood plain must be reexamined by the affected community and the department of ecology, and has been certified by the department as being accurate for the affected areas.
- (3) The department of ecology shall negotiate with the affected community to determine the content of proposed additional requirements.
- (4) The department of ecology shall notify the public of related public meetings and public hearings.
- (5) The department of ecology must find that the proposed increased requirements are necessary due to local circumstances and general public safety.
- (6) The area where the additional requirements apply is to be clearly identified.
- (7) Additional state requirements shall be established as needed in accordance with the required state rule-making procedures.

[Statutory Authority: RCW 86.16.061. 90-21-089, § 173-158-064, filed 10/19/90, effective 11/19/90.]

WAC 173-158-070 Additional floodway requirements. The following additional state requirements are established in accordance with RCW 86.16.041.

- (1) Special flood hazard areas with designated floodways. In addition to those NFIP requirements for designated floodways, communities with designated floodways shall restrict land uses within such areas to include the prohibition of construction or reconstruction of residential structures except for: (a) Repairs, reconstruction, or improvements to a

(1999 Ed.)

structure which do not increase the ground floor area; and (b) repairs, reconstruction, or improvements to a structure the cost of which does not exceed fifty percent of the market value of the structure either (i) before the repair, reconstruction, or improvement is started, or (ii) if the structure has been damaged, and is being restored, before the damage occurred. Work done on structures to comply with existing health, sanitary, or safety codes or to structures identified as historic places shall not be included in the fifty percent determination in (b) of this subsection.

(2) Special flood hazard areas without designated floodways. When a regulatory floodway for a stream has not been designated, the community may require that applicants for new construction and substantial improvements reasonably utilize the best available information from a federal, state, or other source to consider the cumulative effect of existing, proposed, and anticipated future development and determine that the increase in the water surface elevation of the base flood will not be more than one foot at any point in the community. Building and development near streams without a designated floodway shall comply with the requirements of 44 CFR 60.3 (b)(3) and (4), and (c)(10) of the NFIP regulations.

[Statutory Authority: RCW 86.16.061. 90-21-089, § 173-158-070, filed 10/19/90, effective 11/19/90. Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-070, filed 5/4/88.]

WAC 173-158-080 Wetlands management. Wetlands are areas of great natural productivity and hydrological utility, providing natural flood control, flood desynchronization, and flow stabilization of rivers and streams. The unrestricted use and development of wetlands will destroy many of these beneficial qualities which directly affect human health and safety during flood events. The piecemeal alteration and destruction of wetlands through draining, dredging, filling and other means has an adverse cumulative impact on their ability to reduce flood damages.

Communities should, to the maximum extent possible, seek to avoid the short and long term adverse impacts associated with the destruction or modification of wetlands, especially those activities which limit or disrupt the ability of the wetland to ameliorate flooding impacts. Proposals for development within special flood hazard areas (base floodplains) should be reviewed for their possible impacts on wetlands located within the floodplain. Communities should ensure that development activities in or around wetlands do not negatively affect public safety, health, and welfare by disrupting the wetlands' ability to reduce flood and storm hazards.

Communities may request technical assistance from the department of ecology in identifying wetland areas. Existing wetland map information from the National Wetlands Inventory (NWI) can be used in conjunction with the community's FIRM to prepare an overlay zone indicating critical wetland areas deserving special attention. Local wetlands management strategies can also be developed which will preserve these valuable areas.

[Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-080, filed 5/4/88.]

(1999 Ed.)

WAC 173-158-084 Submittal of local ordinances.

Communities shall submit to the department of ecology and to the federal Emergency Management Agency (FEMA) regional office newly adopted or amended flood damage prevention ordinances to incorporate the requirements of chapter 86.16 RCW and this chapter. Such ordinances or amendments shall take effect thirty days from filing with the department unless the department disapproves such ordinance or amendment, in writing, within that time period. The department may disapprove any ordinance or amendment which does not comply with the requirements of the NFIP, or WAC 173-158-040, 173-158-064, or 173-158-070. The department will provide guidance and assistance to communities in preparation and review of draft ordinances upon request by the community.

[Statutory Authority: RCW 86.16.061. 90-21-089, § 173-158-084, filed 10/19/90, effective 11/19/90.]

WAC 173-158-086 Local option to exceed minimum requirements. In accordance with RCW 86.16.045 a county, city, or town may adopt flood plain management ordinances or requirements that exceed the minimum federal requirements of the National Flood Insurance Program and the state requirements of this chapter without following the procedures provided in RCW 86.16.031(8) and WAC 173-158-064.

[Statutory Authority: RCW 86.16.061. 90-21-089, § 173-158-086, filed 10/19/90, effective 11/19/90.]

WAC 173-158-090 Penalties and enforcement. (1)

The attorney general or the attorney for the local government shall bring such injunctive, declaratory, or other actions as are necessary to ensure compliance with this chapter.

(2) Any person who fails to comply with this chapter shall also be subject to a civil penalty not to exceed one thousand dollars for each violation. Each violation or each day of noncompliance shall constitute a separate violation.

(3) The penalty provided for in this section shall be imposed by a notice in writing, either by certified mail with return receipt requested or by personal service, to the person incurring the same from the department or local government, describing the violation with reasonable particularity and ordering the act or acts constituting the violation or violations to cease and desist or, in appropriate cases, requiring necessary corrective action to be taken within a specific and reasonable time.

(4) Any penalty imposed pursuant to this section by the department shall be subject to review by the pollution control hearings board. Any penalty imposed pursuant to this section by local government shall be subject to review by the local government legislative authority. Any penalty jointly imposed by the department and local government shall be appealed to the pollution control hearings board.

[Statutory Authority: Chapter 86.16 RCW. 88-10-058 (Order 88-6), § 173-158-090, filed 5/4/88.]

WAC 173-158-120 Variances. The variance procedure contained in 44 CFR, Part 60.6 and the local flood damage prevention ordinance shall apply to this chapter unless an activity or use is expressly prohibited therein.

[Statutory Authority: RCW 86.16.061, 90-21-089, § 173-158-120, filed 10/19/90, effective 11/19/90. Statutory Authority: Chapter 86.16 RCW, 88-10-058 (Order 88-6), § 173-158-120, filed 5/4/88.]

MINIMUM STANDARDS FOR CONSTRUCTION AND MAINTENANCE OF WELLS

WAC

REQUIREMENTS THAT APPLY TO ALL WELLS

173-160-010	What is the purpose of this regulation?
173-160-030	When will this regulation be reviewed?
173-160-040	How does this regulation relate to other authorities?
173-160-050	What are the department's enforcement options?
173-160-061	May I appeal the department's decision?
173-160-071	May I appeal decisions made by delegated authorities?

PART ONE—GENERAL REQUIREMENTS FOR WATER WELL CONSTRUCTION

173-160-101	What are the general standards that apply to all water wells?	173-160-020	General. [Statutory Authority: Chapter 18.104 RCW, 88-08-070 (Order 88-58), § 173-160-020, filed 4/6/88; Order 73-6, § 173-160-020, filed 4/30/73.] Repealed by 98-13-112 (Order 98-05), filed 6/17/98, effective 7/18/98. Statutory Authority: Chapter 18.104 RCW.
173-160-106	How do I apply for a variance on a water well?	173-160-055	Well construction notification (start card). [Statutory Authority: Chapter 18.104 RCW, 88-08-070 (Order 88-58), § 173-160-055, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
173-160-111	What are the definitions of specific words as used in this chapter?	173-160-060	Location of well site and access requirements. [Order 73-6, § 173-160-060, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
173-160-121	What should I know about drilling wells that require water right permits?	173-160-065	Design and construction. [Statutory Authority: Chapter 18.104 RCW, 88-08-070 (Order 88-58), § 173-160-065, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
173-160-131	What should the well owner know about water metering?	173-160-070	Design and construction. [Order 73-6, § 173-160-070, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
173-160-141	What are the requirements regarding water well reports?	173-160-075	Design and construction—Sealing of casing—General. [Statutory Authority: Chapter 18.104 RCW, 88-08-070 (Order 88-58), § 173-160-075, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
173-160-151	Does the department require prior notice and fees for well constructing, reconstructing, or decommissioning a water well?	173-160-080	Design and construction—Casing. [Order 73-6, § 173-160-080, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
173-160-161	How shall each water well be planned and constructed?	173-160-085	Capping. [Statutory Authority: Chapter 18.104 RCW, 88-08-070 (Order 88-58), § 173-160-085, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
173-160-171	What are the requirements for the location of the well site and access to the well?	173-160-090	Design and construction—Well completion—General. [Statutory Authority: RCW 18.104.040(4), 79-02-010 (Order DE 78-22), § 173-160-090, filed 1/10/79; Order 73-6, § 173-160-090, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
173-160-181	What are the requirements for preserving the natural barriers to ground water movement between aquifers?	173-160-09001	Recommended well diameters. [Statutory Authority: RCW 18.104.040(4), 79-02-010 (Order DE 78-22), § 173-160-09001, filed 1/10/79.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
173-160-191	What are the design and construction requirements for completing wells?	173-160-095	Relationship to other authorities. [Statutory Authority: Chapter 18.104 RCW, 88-08-070 (Order 88-58), § 173-160-095, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
173-160-201	What are the casing and liner requirements?	173-160-100	Design and construction—Sealing materials. [Statutory Authority: RCW 18.104.040(4), 79-02-010 (Order DE 78-22), § 173-160-100, filed 1/10/79; Order 73-6, § 173-160-100, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
173-160-211	What are the recommended well diameters?	173-160-105	Comparable construction standards. [Statutory Authority: Chapter 18.104 RCW, 88-08-070 (Order 88-58), § 173-160-105, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
173-160-221	What are the standards for sealing materials?	173-160-110	Design and construction—Sealing of casing—General. [Order 73-6, § 173-160-110, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
173-160-231	What are the standards for surface seals?	173-160-115	Enforcement. [Statutory Authority: Chapter 18.104 RCW, 88-08-070 (Order 88-58), § 173-160-115, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
173-160-241	What are the requirements for formation sealing?		
173-160-251	What are the special sealing standards for artesian wells?		
173-160-261	How do I seal dug wells?		
173-160-271	What are the special sealing standards for driven wells, jetted wells, and dewatering wells?		
173-160-281	What are the construction standards for artificial gravel-packed wells?		
173-160-291	What are the standards for the upper terminal of water wells?		
173-160-301	What are the requirements for temporary capping?		
173-160-311	What are the well tagging requirements?		
173-160-321	How do I test a well?		
173-160-331	How do I make sure my equipment and the water well are free of contaminants?		
173-160-341	How do I ensure the quality of drilling water?		
173-160-351	What are the standards for pump installation?		
173-160-361	Who may supervise the use of explosives?		
173-160-371	What are the standards for chemical conditioning?		
173-160-381	What are the standards for decommissioning a well?		
173-160-390	Artificial recharge of ground water bodies.		

PART TWO—GENERAL REQUIREMENTS FOR RESOURCE PROTECTION WELL CONSTRUCTION AND GEOTECHNICAL SOIL BORINGS

173-160-400	What are the minimum standards for resource protection wells and geotechnical soil borings?
173-160-406	How do I apply for a variance on a resource protection well?
173-160-410	What are the specific definitions for words in this chapter?
173-160-420	What are the general construction requirements for resource protection wells?
173-160-430	What are the minimum casing standards?
173-160-440	What are the equipment cleaning standards?
173-160-450	What are the well sealing requirements?

- 173-160-120 Design and construction—Sealing of consolidated formations. [Order 73-6, § 173-160-120, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-125 Appeals. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-125, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-130 Sealing of unconsolidated formations without significant clay beds. [Order 73-6, § 173-160-130, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-135 Regulation review. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-135, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-140 Sealing of unconsolidated formations with clay beds. [Order 73-6, § 173-160-140, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-150 Special sealing standards for artesian wells. [Order 73-6, § 173-160-150, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-160 Artificial gravel-packed wells—General. [Order 73-6, § 173-160-160, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-170 Sealing of artificial gravel-packed wells. [Order 73-6, § 173-160-170, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-180 Sealing of dug wells. [Order 73-6, § 173-160-180, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-190 Special standards for driven or jetted wells. [Order 73-6, § 173-160-190, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-200 Upper terminal of well. [Statutory Authority: RCW 18.104.040(4), 79-02-010 (Order DE 78-22), § 173-160-200, filed 1/10/79; Order 73-6, § 173-160-200, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-205 Location of well site and access requirements. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-205, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-210 Capping. [Order 73-6, § 173-160-210, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-215 Design and construction—Well completion—General. [Statutory Authority: Chapter 18.104 RCW. 89-15-017 and 90-07-016 (Orders 89-4 and 89-4A), § 173-160-215, filed 7/12/89 and 3/13/90, effective 8/12/89 and 4/13/90; 88-08-070 (Order 88-58), § 173-160-215, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-220 Testing of well. [Order 73-6, § 173-160-220, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-225 Design and construction—Casing. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-225, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-230 Testing of well—Access port or pressure gage. [Order 73-6, § 173-160-230, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-235 Recommended well diameters. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-235, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-240 Disinfection. [Order 73-6, § 173-160-240, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-245 Design and construction—Sealing materials. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-245, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-250 Quality of drilling water. [Order 73-6, § 173-160-250, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-255 Design and construction—Sealing of consolidated formations. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-255, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-260 Pump installation. [Order 73-6, § 173-160-260, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-265 Sealing of unconsolidated formations without significant clay beds. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-265, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-270 Explosives. [Order 73-6, § 173-160-270, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-275 Sealing of unconsolidated formations with clay beds. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-275, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-280 Chemical conditioning. [Order 73-6, § 173-160-280, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-285 Special sealing standards for artesian wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-285, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-290 Abandonment or destruction of wells. [Statutory Authority: RCW 18.104.040(4), 79-02-010 (Order DE 78-22), § 173-160-290, filed 1/10/79; Order 73-6, § 173-160-290, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-295 Artificial gravel-packed wells—General. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-295, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-300 Abandonment or destruction of wells—Abandonment or destruction of drilled or jetted wells. [Order 73-6, § 173-160-300, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-305 Sealing of artificial gravel-packed wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-305, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-310 Abandonment or destruction of wells—Abandonment or destruction of gravel-packed wells. [Order 73-6, § 173-160-310, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-315 Sealing of dug wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-315, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-320 Abandonment or destruction of wells—Abandonment or destruction of artesian wells. [Order 73-6, § 173-160-320, filed 4/30/73.] Repealed by 88-08-070 (Order 88-

- 58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-325 Special standards for driven or jetted wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-325, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-330 Abandonment or destruction of wells—Abandonment or destruction of dug wells. [Order 73-6, § 173-160-330, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-335 Upper terminal of well. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-335, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-340 Abandonment or destruction of wells—Plugging of test wells. [Order 73-6, § 173-160-340, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-345 Testing of well. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-345, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-350 Artificial recharge of ground water bodies. [Order 73-6, § 173-160-350, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-355 Testing of well—Access port or pressure gage. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-355, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-360 Special exemptions. [Order 73-6, § 173-160-360, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-365 Disinfection. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-365, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-370 Relationship to other authorities. [Order 73-6, § 173-160-370, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-375 Quality of drilling water. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-375, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-380 Comparable construction standards. [Order 73-6, § 173-160-380, filed 4/30/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
- 173-160-385 Pump installation. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-385, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-395 Explosives. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-395, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-405 Chemical conditioning. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-405, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-415 Abandonment of wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-415, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-425 Abandonment of wells—Abandonment of drilled or jetted wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-425, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-435 Abandonment of wells—Abandonment of gravel-packed wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-435, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-445 Abandonment of wells—Abandonment of artesian wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-445, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-455 Abandonment of wells—Abandonment of dug wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-455, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-465 Abandonment of wells—Plugging of test wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-465, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-475 Artificial recharge of ground-water bodies. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-475, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-500 Design and construction—General. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-500, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-510 Design and construction—Surface protective measures. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-510, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-520 Design and construction—Casing. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-520, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-530 Design and construction—Cleaning. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-530, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-540 Design and construction—Well screen, filter pack, and development. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-540, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-550 Design and construction—Well seals. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-550, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
- 173-160-560 Abandonment of resource protection wells. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-560, filed 4/6/88.] Repealed by 98-08-032 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.

REQUIREMENTS THAT APPLY TO ALL WELLS

WAC 173-160-010 What is the purpose of this regulation? (1) These regulations are adopted under chapter 18.104 RCW, to establish minimum standards for the construction and decommissioning of all wells in the state of Washington.

(2) The following are excluded from these regulations:

(a) Any excavation that is not intended to locate, divert, artificially recharge, observe, monitor, dewater, or withdraw ground water for agricultural, municipal, industrial, domestic, or commercial use except resource protection wells and geotechnical soil borings.

(b) Any excavation for the purpose of obtaining or prospecting for oil, natural gas, minerals, products of mining, quarrying, inserting media to repressure oil or natural gas bearing formations, storing petroleum, natural gas, or other products, as provided in chapter 78.52 RCW.

(c) Injection wells regulated in chapter 173-218 WAC.

(d) Infiltration or exfiltration galleries, trenches, ponds, pits, and sumps.

(3) Under chapter 90.48 RCW, those excavations excluded in subsection (2)(a) through (d) of this section shall be constructed, maintained, and decommissioned to ensure protection of the ground water resource and to prevent the contamination and waste of that resource.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-010, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-010, filed 4/6/88; Order 73-6, § 173-160-010, filed 4/30/73.]

WAC 173-160-030 When will this regulation be reviewed? (1) The department of ecology shall initiate review of the rules established in this chapter:

(a) When new information, changing conditions, or statutory modifications make it necessary to consider revisions; or

(b) When statutes require the review of this regulation, whichever comes first.

(2) The technical advisory group (TAG) established under chapter 18.104 RCW shall assist the department in the development and revision of rules.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-030, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-030, filed 4/6/88; Order 73-6, § 173-160-030, filed 4/30/73.]

WAC 173-160-040 How does this regulation relate to other authorities? (1) Nothing in these regulations may be construed to waive any legal requirements of other state agencies or local governmental entities relating to well construction, nor may it preclude the adoption of more stringent minimum well construction standards by local government.

(2) Well contractors shall be familiar with all state and local well construction requirements for their job sites prior to initiating construction.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-040, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapters 34.05, 90.54, 18.104, 90.03 and 90.44 RCW. 91-23-093 (Order 91-27), § 173-160-040, filed 11/19/91, effective 12/20/91. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-040, filed 4/6/88; Order 73-6, § 173-160-040, filed 4/30/73.]

WAC 173-160-050 What are the department's enforcement options? The department may impose the sanctions that are appropriate under authorities vested in it, including:

(1999 Ed.)

(1) The issuance of regulatory orders under RCW 43.27A.190;

(2) Civil penalties under RCW 90.03.600 and 18.104.155; and

(3) Criminal penalties under RCW 18.104.160.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-050, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-050, filed 4/6/88; Order 73-6, § 173-160-050, filed 4/30/73.]

WAC 173-160-061 May I appeal the department's decision? (1) Yes. All final, written decisions of the department of ecology pertaining to permits, regulatory orders, and related decisions made under this chapter are subject to review by the pollution control hearings board in accordance with chapter 43.21B RCW.

(2) If you wish to appeal a decision of the department of ecology, you must appeal it before that board.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-061, filed 3/23/98, effective 4/23/98.]

WAC 173-160-071 May I appeal decisions made by delegated authorities? (1) Yes. Any person who feels aggrieved by a decision made by a local health district or county under delegated authority may appeal the decision to the department of ecology.

(2) The appeal must be made within thirty days of receipt of the decision.

(3) An appeal to the department shall contain at least the following information:

(a) Name, address, and phone number of appealing party;

(b) Copy of the decision under appeal;

(c) A clear statement of what issues are disputed;

(d) A clear statement of what relief the appellant is seeking.

(4) The department will consider the appeal, and either affirm, reverse, or modify the decision of the delegated authority. A written response shall be provided to the applicant and the delegated authority within thirty days of the department's receipt of the appeal.

(5) The department's decision is subject to review by the pollution control hearings board, in accordance with chapter 43.21B RCW.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-071, filed 3/23/98, effective 4/23/98.]

PART ONE—GENERAL REQUIREMENTS FOR WATER WELL CONSTRUCTION

WAC 173-160-101 What are the general standards that apply to all water wells? The following minimum standards apply to all water wells constructed and decommissioned in the state of Washington. It is the responsibility and liability of the water well operator who constructs the well, the property owner, and the water well contractor, to take whatever measures are necessary to guard against waste and contamination of the ground water resources.

(1) It is necessary in some cases to construct and decommission wells with additional requirements beyond the min-

[Title 173 WAC—p. 233]

imum standards. Additional requirements may be necessary when the well is constructed or decommissioned in, or adjacent to a known, or potential source of contamination. Examples of sources, or potential sources of contamination are found in the well siting section, WAC 173-160-171.

(2) Nothing in these regulations limits the department's authority to approve comparable alternative specifications for well construction as technology in the industry develops, or new and comparable methods of construction become known to the department.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-101, filed 3/23/98, effective 4/23/98.]

WAC 173-160-106 How do I apply for a variance on a water well? (1) When strict compliance with the requirements and standards of this chapter are impractical, any person may request a variance to the department from a regulation or regulations. The application for variance must propose a comparable alternative specification that will provide equal or greater human health and resource protection than the minimum standards. Application for a variance shall be made in writing and approved prior to the construction or decommissioning of the well.

(2) The variance application shall contain at least the following information:

- (a) Name, address, and phone number of the person requesting the variance;
- (b) Address of well site;
- (c) 1/4, 1/4, section, township, range;
- (d) The specific regulation(s) that cannot be followed;
- (e) The comparable alternative specification;
- (f) Justification for the request.

(3) The variance application will be evaluated, and a response will be given within fourteen days. In a public health emergency or other exceptional circumstance, verbal notification for a variance may be given. An emergency usually consists of a well failure resulting in a dry well or an unusable well. Driller convenience does not constitute an emergency.

(4) The emergency variance recipient must immediately follow up with a written notification to the department so that a permanent record is made of the variance.

(5) Local health districts or counties with delegated authority may grant variances under the provision chapter 18.104 delegated authority.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-106, filed 3/23/98, effective 4/23/98.]

WAC 173-160-111 What are the definitions of specific words as used in this chapter? (1) "Abandoned well" means a well that is unused, unmaintained, and is in such disrepair as to be unusable.

(2) "Access port" is a 1/2- to 2-inch tapped hole or tube equipped with a screw cap, which provides access to the inner casing, for measurement of the depth to water surface. An access port also means a removable cap.

(3) "Annular space" is the space between the surface or outer casing and the inner casing, or the space between the wall of the drilled hole and the casing.

(4) "Aquifer" is a geologic formation, group of formations, or part of a formation capable of yielding a significant amount of ground water to wells or springs.

(5) "Artesian well" is a well tapping an aquifer bounded above and below by confining or impermeable rock or soil layers, or rock or soil layers of distinctly lower permeability than the aquifer itself. The water will rise in the well above the point of initial penetration (above the bottom of the confining or impermeable layer overlying the aquifer). This term includes both flowing and nonflowing wells.

(6) "Artificial gravel pack" is a mixture of gravel or sand placed in the annular space around the liner, perforated pipe, or well screen. A gravel pack is used to reduce the movement of finer material into the well and provide lateral support to the screen in unstable formations.

(7) "Artificial recharge" is the addition of water to an aquifer by activities of man, such as irrigation or induced infiltration from streams, or injection through wells, trenches, pits, and ponds.

(8) "Bentonite" is a mixture of swelling clay minerals, predominantly sodium montmorillonite.

(9) "Capped well" is a well that is not in use and has a watertight seal or cap installed on top of the casing.

(10) "Casing" is a pipe, generally made of metal or plastic, which is installed in the bore hole to maintain the opening.

(11) "Consolidated formation" means any geologic formation in which the earth materials have become firm and cohesive through natural rock forming processes. Such rocks commonly found in Washington include basalt, granite, sandstone, shale, conglomerate, and limestone. An uncased bore hole will normally remain open in these formations.

(12) "Constructing a well" or "construct a well" means:

- (a) Boring, digging, drilling, or excavating a well;
- (b) Installing casing, sheeting, lining, or well screens, in a well; or
- (c) Drilling a geotechnical soil boring.

"Constructing a well" or "construct a well" includes the alteration of an existing well.

(13) "Contamination" has the meaning provided in RCW 90.48.020.

(14) "Curbing" is a liner or pipe made of concrete, precast tile or steel installed in dug wells to provide an annular space between the well bore and the liner or pipe for sealing.

(15) "Decommissioning" means to fill or plug a well so that it will not produce water, serve as a channel for movement of water or pollution, or allow the entry of pollutants into the well or aquifer(s).

(16) "Department" means the department of ecology.

(17) "Dewatering well" means a cased or lined excavation or boring that is intended to withdraw or divert ground water for the purpose of facilitating construction, stabilizing a land slide, or protecting an aquifer.

(18) "Director" means director of the department of ecology.

(19) "Disinfection" or "disinfecting" is the use of chlorine, or other disinfecting agent or process approved by the department, in sufficient concentration and contact time adequate to inactivate coliform or other indicator organisms.

(20) "Domestic water supply" is any water supply which serves a family residence(s).

(21) "Draw down" is the measured difference between the static ground water level and the ground water level induced by pumping.

(22) "Drilled well" is a well in which the hole is usually excavated by mechanical means such as rotary, cable tool, or auger drilling equipment.

(23) "Driven well" is a well constructed by joining a "drive point" to a length of pipe, then driving the assembly into the ground.

(24) "Dug well" is a well generally excavated with hand tools or by mechanical methods. The side walls may be supported by material other than standard weight steel casing.

(25) "Filter pack" means clean, well rounded, smooth, uniform, sand or gravel, which is placed in the annulus of the well between the bore hole wall and the liner, perforated pipe, or well screen to prevent formation material from entering the well.

(26) "Formation" means an assemblage of earth materials grouped together into a unit that is convenient for description or mapping.

(27) "Ground water" means and includes ground waters as defined in RCW 90.40.035.

(28) "Grout" is a fluid mixture of cement, bentonite, and water used to seal the annular space around or between well casings, or to decommission wells.

(29) "Impermeable" is a descriptive term for earth materials which have a texture or structure that does not permit fluids to perceptibly move into or through its pores or interstices.

(30) "Liner" means any device inserted into a larger casing, screen, or bore hole as a means of maintaining the structural integrity of the well.

(31) "Permeability" is a measure of the ease of which liquids or gas move through a porous material.

(a) For water, this is usually expressed in units of centimeters per second or feet per day. Hydraulic conductivity is a term for water permeability.

(b) Soils and synthetic liners with a water permeability of 1×10^{-7} cm/sec or less may be considered impermeable.

(32) "Pollution" has the meaning provided in RCW 90.48.020.

(33) "Pressure grouting" is a method of forcing grout into specific portions of a well for sealing purposes.

(34) "PTFE" means polytetrafluoroethylene casing materials such as teflon. The use of the term teflon is not an endorsement for any specific PTFE product.

(35) "Public water supply" is any water supply intended or used for human consumption or other domestic uses, including source, treatment, storage, transmission and distribution facilities where water is furnished to any community, collection or number of individuals, available to the public for human consumption or domestic use, excluding water supplies serving one single-family residence and a system with four or fewer connections, all of which serve residences on the same farm.

(36) "PVC" means polyvinyl chloride, a type of thermoplastic casing.

(37) "Static water level" is the vertical distance from the surface of the ground to the water level in a well when the water level is not affected by withdrawal of ground water.

(38) "Temporary surface casing" is a length of casing (at least four inches larger in diameter than the nominal size of the permanent casing) which is temporarily installed during well construction to maintain the annular space.

(39) "Test well" is a well (either cased or uncased), constructed to determine the quantity of water available for beneficial uses, identifying underlying rock formations (lithology), and to locate optimum zones to be screened or perforated. If a test well is constructed with the intent to withdraw water for beneficial use, it must be constructed in accordance with the minimum standards for water supply wells, otherwise they shall be constructed in accordance with the minimum standards for resource protection wells. A water right permit, preliminary permit, or temporary permit shall be obtained prior to constructing a test well unless the anticipated use of water is exempt as provided in RCW 90.44.050. A "test well" is a type of "water well."

(40) "Tremie tube" is a small diameter pipe used to place grout, filter pack material, or other well construction materials in a well.

(41) "Turbidity" means the clarity of water expressed as nephelometric turbidity units (NTU) and measured with a calibrated turbidimeter.

(42) "Unconsolidated formation" means any naturally occurring, loosely cemented, or poorly consolidated earth material including such materials as uncompacted gravel, sand, silt and clay.

Alluvium, soil, and overburden are terms frequently used to describe such formations.

(43) "Water well" means any excavation that is constructed when the intended use of the well is for the location, diversion, artificial recharge, observation, monitoring, dewatering or withdrawal of ground water for agricultural, municipal, industrial, domestic, or commercial use.

(44) "Water well contractor" means any person, firm, partnership, copartnership, corporation, association, or other entity, licensed and bonded under chapter 18.27 RCW, engaged in the business of constructing water wells.

(45) "Well alteration(s)" include(s): Deepening, hydrofracturing or other operations intended to increase well yields, or change the characteristics of the well. Well alteration does not include general maintenance, cleaning, sanitation, and pump replacement.

(46) "Well completion" means that construction has progressed to a point at which the drilling equipment has been removed from the site, or a point at which the well can be put to its intended use.

(47) "Well driller(s)" or "driller(s)" is synonymous with "operator(s)."

(48) "Well" means water wells, resources protection wells, instrumentation wells, dewatering wells, and geotechnical soil borings. Well does not mean an excavation made for the purpose of obtaining or prospecting for oil or natural gas, geothermal resources, minerals, or products of mining, or quarrying, or for inserting media to repressure oil or natural gas bearing formations, or for storing petroleum, natural gas, or other products.

[Statutory Authority: Chapter 18.104 RCW. 98-18-104 (Order 98-17), § 173-160-111, filed 9/2/98, effective 10/3/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-111, filed 3/23/98, effective 4/23/98.]

Reviser's note: The brackets and enclosed material in the text of the above section occurred in the copy filed by the agency.

WAC 173-160-121 What should I know about drilling wells that require water right permits? (1) Unless a ground water withdrawal is exempt from the permit requirements under RCW 90.44.050, a well cannot be drilled without the well owner first obtaining a water permit from the department authorizing the use of water from the well.

(2) The licensed operator must have a copy of the water right permit or certificate on site at all times.

(3) Every well that requires a permit shall be constructed to meet the provisions of that permit. Provisions may include:

- (a) Limitations on zones of completion.
- (b) Special sealing requirements.
- (c) Special casing and liner requirements.
- (d) Other specific construction and testing details.

(4) As provided in WAC 173-548-050, no water well may be constructed for any purpose in subbasins closed in the Methow water resources regulation:

(a) Including those exempted from permitting under RCW 90.44.050;

(b) Unless written approval has been obtained from the department prior to beginning well construction.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-121, filed 3/23/98, effective 4/23/98.]

WAC 173-160-131 What should the well owner know about water metering? The department may require water users to measure the quantity of water withdrawn from wells, to record water use, and/or to report the water use information to the department. Until the department develops specific metering and reporting requirements, these requirements may be provided for in individual water permits or as otherwise ordered by the department for specific wells and ground water use.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-131, filed 3/23/98, effective 4/23/98.]

WAC 173-160-141 What are the requirements regarding water well reports? (1) Anyone who constructs a well is required to submit a complete report on the construction, alteration, or decommissioning of the well to the department within thirty days after completion of a well, or after the drilling equipment has left the site.

(a) This applies to all water wells.

(b) The water well report must be made on a form provided by the department, or a reasonable facsimile of the form, as approved by the department.

(2) Where applicable the water well report must include, at least, the following information:

(a) Owner name; operator/trainee name; operator/trainee license number; contractor registration number, drilling company name;

(b) Tax parcel number;

(c) Well location address;

(d) Location of the well to at least 1/4, 1/4 section or smallest legal subdivision;

(e) Unique well identification tag number;

(f) Construction date;

(g) Start notification number;

(h) Intended use of well;

(i) The well depth, diameter, and general specifications of each well;

(j) Total depth of casing;

(k) Well head elevation;

(l) Drilling method;

(m) Seal material, seal location and type of placement used;

(n) Filter pack location; filter pack material used;

(o) The thickness and character of each bed, stratum or formation penetrated by each well, including identification of each water bearing zone;

(p) Casing gauge, diameter, stickup, type of material, and length, also of each screened interval or perforated zone in the casing;

(q) The tested capacity of each well in gallons per minute, and the test duration and draw down of the water level at the end of the capacity test;

(r) Recovery data;

(s) For each nonflowing well, the depth to the static water level, as measured below the land surface;

(t) For each flowing well, the shut-in pressure measured above the land surface, or in pounds per square inch at the land surface; and

(u) Such additional factual information as may be required by the department.

(3) The well report must show the license number and signature of the person who constructed the well. If this is an unlicensed person, exempted under RCW 18.104.180(2), the report shall show the license number and signature of the licensed operator who witnessed the drilling. Water well reports for wells constructed by trainees shall have the signature and license number of the trainee and the licensed operator.

(4) If a well report is missing, a new report may be generated. This report shall contain all physical components of the well and report all available information in accordance with this section. The report shall be signed by the individual collecting the physical information of the well.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-141, filed 3/23/98, effective 4/23/98.]

WAC 173-160-151 Does the department require prior notice and fees for well constructing, reconstructing, or decommissioning a water well? (1) Yes. The property owner, owner's agent, or water well operator shall notify the department of their intent to begin well construction, reconstruction-alteration, or decommissioning procedures at least seventy-two hours before starting work.

(2) The notice of intent is submitted on forms provided by the department and must contain the following:

(a) Well owner name;

(b) Well location; street address; county name, 1/4, 1/4 section, township, and range, and tax parcel number;

(c) Proposed use; (if the intended withdrawal requires a water right, the permit or certificate shall be attached to the notice of intent);

(d) Approximate start and completion dates;

(e) Contractor registration number;

(f) Operator/trainee name and license number; and

(g) Drilling company name.

(3) In an emergency, a public health emergency, or in exceptional instances, the department may allow verbal notification to the appropriate regional office, with a start card written notification follow-up and payment of fee submitted within twenty-four hours. An emergency situation may consist of a failing well, or water quality issues which could result in a public health or safety concern.

(4) The notice must be accompanied by the following fees which apply to all newly constructed or altered wells:

(a) The fee for one new water well, other than a dewatering well, with a top casing diameter of less than twelve inches is one hundred dollars.

(b) The fee for one new water well, other than a dewatering well, with a top casing diameter of twelve inches or greater is two hundred dollars.

(c) The combined fee for construction and decommissioning of a dewatering well system shall be forty dollars for each two hundred horizontal lineal feet, or portion of horizontal lineal feet, of the dewatering well system.

(d) There is no fee for decommissioning a water well.

(5) If drilling results in an unusable well (dry hole), there is no additional fee for a second attempt, provided:

(a) A subsequent attempt at constructing a new well is made immediately; and

(b) The unusable well(s) is properly decommissioned before drilling equipment leaves the well site; and

(c) The department is notified of all decommissionings; and

(d) A well report describing the decommissioning process is submitted to the department in accordance with this chapter.

(6) A new notice of intent and fee shall be required on all follow-up construction after the drilling equipment has left the drill site.

(7) A refund shall be made on any well that has not been constructed provided, a written request is made by the person who paid the fee and is submitted to the department within twelve months from the date the notice and fee were received by the department. A copy of the notice of intent receipt must accompany the request.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-151, filed 3/23/98, effective 4/23/98.]

WAC 173-160-161 How shall each water well be planned and constructed? Every well must be planned and constructed so that it is:

(1) Adapted to those geologic and ground water conditions known to exist at the well site to insure utilization of any natural protection available;

(2) Not a conduit for contaminating the ground water nor a means of wasting water;

(3) Capable of yielding, where obtainable, the quantity of water necessary to satisfy the requirements the user has

stated are needed and for which the well water is intended to be used.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-161, filed 3/23/98, effective 4/23/98.]

WAC 173-160-171 What are the requirements for the location of the well site and access to the well? (1) The proposed water well shall be located on high ground that is not in the floodway.

(2) It shall be protected from a one hundred year flood and from any surface or subsurface drainage capable of impairing the quality of the ground water supply.

(3) All wells shall not be located within certain minimum distances of known or potential sources of contamination.

(a) Some examples of sources or potential sources of contamination include:

(i) Septic systems, including proposed and reserve sites under a valid septic design: *Provided*, That the design has been approved for installation by a health authority;

(ii) Manure, sewage, and industrial lagoons;

(iii) Landfills;

(iv) Hazardous waste sites;

(v) Sea-salt water intrusion areas;

(vi) Chemical and petroleum storage areas;

(vii) Pipelines used to convey materials with contamination potential;

(viii) Livestock barns and livestock feed lots.

(b) Minimum set-back distances for water wells other than for public water supply are:

(i) Five feet from any building projection. Water wells shall not be located in garages or inhabited dwellings.

(ii) Fifty feet from a septic tank, septic holding tank, septic containment vessel, septic pump chamber, and septic distribution box.

(iii) Fifty feet from building sewers, collection and non-perforated distribution lines.

(iv) One hundred feet from the edge of a drainfield, proposed drainfield which has been approved by a health authority, and reserve drainfield areas.

(v) One hundred feet from all other sources or potential sources of contamination except for solid waste landfills.

(vi) One thousand feet from the property boundary of a solid waste landfill.

(c) All public water supply wells shall be located by the department of health or the local health authority.

(i) Before construction begins, site approval must be obtained from the department of health, or the local health authority.

(ii) The requirements of the state board of health regulation regarding public water supplies shall apply.

(iii) This regulation includes requirements for zones of protection, location of the well, accessibility features, and certain construction requirements.

(4) In siting a well, the driller shall consider:

(a) All local and state water well construction regulations, policies, and ordinances;

(b) Permeability of the soil or rock;

(c) Adjacent land uses;

(d) Local ground water conditions; and

(e) End use of the well.

(5) When a well is located in an area of known or potential contamination, the water well casing and seal shall be impervious to the contaminants.

(6) Before construction, the water well operator should strongly emphasize to the well owner, the importance of retaining good accessibility to the well to permit future inspection, maintenance, supplementary construction, and decommissioning.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-171, filed 3/23/98, effective 4/23/98.]

WAC 173-160-181 What are the requirements for preserving the natural barriers to ground water movement between aquifers? (1) In constructing a water well, care shall be taken to preserve the natural barriers to ground water movement between aquifers.

(2) Care shall be taken to seal aquifers or strata penetrated during drilling operations which might impair water quality or result in cascading water.

(3) Water wells may not interconnect aquifers.

(4) All sealing must be permanent and prevent movement of surface, or ground water into the annular space between the permanent casing and the bore hole.

(5) Sealing shall prevent the upward movement of artesian waters within the annular space around the well casing and prevent the contamination or wasting of ground water.

(6) Sealing shall prevent the movement of ground water either upward or downward from zones that were cased off.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-181, filed 3/23/98, effective 4/23/98.]

WAC 173-160-191 What are the design and construction requirements for completing wells? (1) You may complete wells with screens, perforated liners or pipe, or open bottom completion. The well driller or designer shall advise the owner or the owner's representative of the most appropriate method of completion.

(2) All well components must be of sufficient strength to withstand the normal forces to which they are subjected during and after construction.

(3) Water wells must be completed in a manner which prevents the production of untreatable amounts of sand, silt, or turbid water which would render the well unusable.

(4) Open bottom completion is appropriate where the withdrawn waters are essentially free of sand, silt and turbidity.

(5) Perforated pipe completion is suitable for a coarse-grained, permeable aquifer where the withdrawn waters are free of sand, silt or turbidity.

(6) Perforations above the static water level are not permitted.

(7) In place perforations with Star, Mills knife, or similar type perforators are acceptable.

(8) Perforated pipe liners, either saw cut, torch cut, mill slotted, or punched are acceptable.

(9) The use of perforated casing for working casing as the hole is being drilled is prohibited, except in those cases where the contractor can, through personal experience in the particular area of drilling, attest to the sufficiency of the pre-

perforated casing in all respects for the specific well being constructed.

(10) Pipe liners may be of steel, plastic or other suitable corrosion resistant material.

(11) All liners must be of sufficient strength to withstand normal forces exerted upon the liner material during installation and operation.

(12) Liners may be used in a natural development or gravel packed type construction.

(13) The installation of a liner without a gravel pack is prohibited when conditions exist that will result in excessively turbid water.

(14) Well screens and well points must be constructed of compatible corrosion resistant material.

(a) A neoprene, or grout seal shall be fitted to the top of the well screen assembly, if necessary.

(b) The bottom of the well screen shall be plugged or capped.

(c) The use of lead packers is prohibited.

(15) The alignment of the permanent casing or liner shall be sufficiently plumb and straight to allow the installation of screens, liners, pumps, and pump columns without binding or having adverse affects on the operation of the installed pumping equipment.

(a) Alignment of the well casing or bore hole shall not deviate from an alignment that would allow a twenty foot test section of pipe to be inserted to the bottom of the well without binding.

(b) The diameter of the test section of pipe shall be per Table 1 in WAC 173-160-201.

(c) For testing alignment in casing reductions, each section shall be tested separately.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-191, filed 3/23/98, effective 4/23/98.]

WAC 173-160-201 What are the casing and liner requirements? (1) Proper casing must be installed in all water supply wells.

(2) The casing shall withstand normal forces which act upon it during and after installation. It shall be resistant to the corrosive effects of the surrounding formations, earth, and water.

(3) All plastic casing for use in potable water supply wells must be manufactured to conform to National Sanitation Foundation (NSF) Standard 14-84, or the most recent revision.

(4) Unless prior approval is obtained from the department, materials for well casings must be either steel casing as shown in Table 1 or plastic casing as shown in Table 2.

(5) Minimum specifications for steel casing and pipe for water wells are shown in Table 1.

(6) Steel casing larger than twenty inches shall have a minimum wall thickness of 0.375 inches.

TABLE 1
Minimum Specifications for Steel Casing and Pipe

NOMINAL SIZE (inches)	OUTSIDE DIAMETER (inches)	WALL THICKNESS (inches)	WEIGHT PER FOOT (pounds)	TEST SECTION OUTSIDE DIAMETER (inches)
1.25	1.660	0.140	2.27	0.500
1.5	1.900	0.145	2.72	0.750
2.0	2.375	0.154	3.65	1.000

18	18.000	0.375	70.59	16.000
20	20.000	0.375	78.60	18.000
24	24.000	0.375	94.62	20.000
30	30.000	0.375	118.65	24.000

STEEL CASING

(7) All steel casing materials must be new or, in like new condition, and be structurally sound.

(a) Casing that has been exposed to a contaminant shall not be used in well construction unless the contamination can be entirely removed.

(b) When casing lengths are joined together, they must be connected by watertight weld or screw coupled joints.

(i) Welded joints must be at least as thick as the wall thickness of the well casing and be fully penetrating.

(ii) All steel well casing shall meet or exceed the minimum American Society for Testing and Materials (ASTM) A-53 A or B specification for steel pipe.

PLASTIC CASING

(8) Plastic, fiberglass, PVC, SR, ABS, or other type of nonmetallic well casing must be manufactured and installed to conform with ANSI/ASTM F 480-81, Standard Dimension Ratio (SDR) 21 or the most recent revision.

(a) SDR is calculated by dividing the outside diameter of the pipe by the wall thickness.

(b) SDR 21 is the minimum requirement; higher pressure rated pipe may be used.

(c) All plastic casing must be installed only in an oversized drill hole without driving. The oversized hole must be a diameter of at least 4 inches larger than the outside diameter of the plastic casing or coupling hubs, whichever is larger.

(d) All plastic casing must be new or, in like new condition and clearly marked by the manufacturer showing nominal size, type of plastic material, SDR, ASTM designation, and have a National Sanitation Foundation (NSF) seal of approval for use in potable water supplies.

(e) Casing that has been exposed to a contaminant shall not be used in well construction unless the construction can be entirely removed.

(f) Plastic casing joints must be watertight.

(i) Either "bell" type, threaded joints, or coupling hubs are approved.

(ii) Hub couplings must be of materials meeting the specifications for plastic casings as stipulated in subsection (2) of this section.

(iii) If joints are secured with solvent cement, it must be done in accordance with manufacturer's directions.

(g) Table 2 is the manufacturer's recommendations for specifications of plastic casing.

TABLE 2
Minimum Specifications for Plastic Casing

NOMINAL CASING DIAMETER (inches)	MINIMUM THICKNESS (inches)	SDR
2.0	0.13321	21
2.5	0.13721	21
3.0	0.16721	21
3.5	0.19021	21
4.0	0.21421	21
4.5	0.23621	21
5.0	0.26521	21
6.0	0.31621	21
8.0	0.41021	21
10	0.51121	21
12	0.60621	21

LINER PIPE

(9) Liner pipe must consist of steel, in new or like new condition, free of pits or breaks; or polyvinyl chloride (PVC), CPVC, type 1120, with SDR 21 (Class 200) or greater wall thickness. All PVC must be clearly marked to identify the type, class, and SDR.

(a) Liner pipe must be of sufficient strength to withstand breakage or collapse when the well is pumped and meet ASTM potable water standards.

(b) When installed, liner pipe shall extend or telescope at least two feet into the lower end of the well casing. If more than one string of liner pipe is installed, each string shall extend or telescope at least eight feet into the adjacent larger diameter liner pipe.

(c) Liner pipe may not be permanently fixed to a well casing below land surface.

CONCRETE CURBING

(10) The concrete used to make curbing must consist of clean, hard and durable aggregate with not less than five sacks (ninety-four pounds per sack) of portland cement per cubic yard of concrete.

(a) The maximum diameter of aggregate particles may not exceed 1 1/2 inches, but in any case may not exceed 1/5 the minimum width of the casing thickness.

(b) The ratio of coarse aggregate to fine aggregate (passing No. 4 U.S. Standard Sieve) must be approximately 1 1/2 to 1 by volume, but in any case, may not exceed 2 to 1 nor be less than 1 to 2.

(11) The curbing shall be at least six inches thick and free of voids. The walls shall be poured in one continuous operation.

(12) When concrete tile is used to line a well, the combined total wall thickness and seal shall be a minimum of six inches.

[Statutory Authority: Chapter 18.104 RCW. 98-18-104 (Order 98-17), § 173-160-201, filed 9/2/98, effective 10/3/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-201, filed 3/23/98, effective 4/23/98.]

WAC 173-160-211 What are the recommended well diameters?

TABLE 3
Recommended Well Diameters

Anticipated Well Yield in gpm	Nominal Size of Pump Bowls in inches	Optimum Size of Well Casing in inches
Less than 100	4	6 ID
75 to 175	5	8 ID
150 to 350	6	10 ID
300 to 700	8	12 ID
500 to 1000	10	14 OD
800 to 1800	12	16 OD
1200 to 3000	14	20 OD
2000 to 3800	16	24 OD
3000 to 6000	20	30 OD

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-211, filed 3/23/98, effective 4/23/98.]

WAC 173-160-221 What are the standards for sealing materials? (1) Bentonite sealant:

(a) Bentonite used to prepare slurries for sealing, or decommissioning shall be specifically designed for this purpose. At no time shall grout slurry contain materials that are toxic, polluting, develop odor or color changes, or serve as a micro-bacterial nutrient. All bentonite slurries shall be prepared and installed according to the manufacturer's instructions. All additives must be certified by a recognized certification authority such as NSF. Active solids content (bentonite) shall be twenty percent by weight or greater in all bentonite slurries. The active solids shall be checked by using the following formula:

$$\frac{\text{Weight of bentonite (lbs.)}}{\text{Weight of bentonite (lbs.)} + (\text{gallons of water} \times 8.33 \text{ lbs./gal})} \times 100 = \% \text{ solids}$$

Example: $\frac{105 \text{ lbs. of bentonite}}{105 \text{ lbs. bentonite} + (50 \text{ gallons of water} \times 8.33 \text{ lbs./gal})} \times 100 = 20\% \text{ solids}$

(b) Unhydrated bentonite—pelletized, granulated, powder, or chip bentonite may be used in the construction of seals or in decommissioning of wells. The bentonite material shall be specifically designed for sealing or decommissioning and be within the industry tolerances for dry western sodium bentonite. Polymer additives must be designed and manufactured to meet industry standards to be nondegrading and must not act as a medium which will promote growth of micro-organisms. All unhydrated bentonite used for sealing or decommissioning must be free of organic polymers. Placement of bentonite shall conform to the manufacturer's specifications and result in a seal free of voids or bridges.

(2) Cement sealants:

(a) Neat cement consists of either portland cement types I, II, III, or high-alumina cement mixed with not more than six gallons of potable water per sack of cement (ninety-four pounds per sack).

(b) Neat cement grout consists of neat cement with up to five percent bentonite clay added, by dry weight of the ben-

tonite. Bentonite is added to improve flow qualities and compensate for shrinkage.

(c) Concrete sealants consist of clean, hard and durable aggregate with not less than five sacks (ninety-four pounds per sack) of portland cement per cubic yard of concrete sealant.

(i) The maximum diameter of aggregate particles may not exceed 1 1/2 inches, but in any case may not exceed 1/5 the minimum width of the casing thickness.

(ii) The ratio of coarse aggregate to fine aggregate (passing No. 4 U.S. Standard Sieve) must be approximately 1 1/2 to 1 by volume, but in any case, may not exceed 2 to 1 nor be less than 1 to 2.

(d) Expanding agents, such as aluminum powder, may be used at a rate not exceeding 0.075 ounce (1 level teaspoon) per sack (ninety-four pounds per sack) of dry cement. The powder may not contain polishing agents. High-alumina cement and portland cement of any type must not be mixed together.

(3) Sealing methods:

(a) When neat cement or neat cement grout is used in sealing, it shall be placed seventy-two hours before additional drilling takes place, unless special additives are mixed with the neat cement or neat cement grout that cause it to set in a shorter period of time.

(b) All hydrated sealing materials shall be placed by tremmying the mixture from the bottom of the annular space to the surface in one continuous operation.

(4) This section may not preclude the use of new sealant materials which have been approved by the technical advisory group.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-221, filed 3/23/98, effective 4/23/98.]

WAC 173-160-231 What are the standards for surface seals? (1) All water wells constructed shall have a surface seal which seals the annular space between the bore hole and the permanent surface casing.

(a) The seal shall be constructed to prevent surface contaminants from reaching the ground water.

(b) The surface seal must have a minimum diameter of four inches larger than the nominal size of the surface casing, to include the outside diameter of the bell, in bell and hub couplings.

(c) The surface seal must extend from land surface to a minimum depth of eighteen feet. Except, when the minimum surface seal requirements for driven, jetted, and some dug wells are less than eighteen feet. See the appropriate section for these wells for a detailed description of their sealing requirements.

(2) Sealing material must be placed in an open annular space that is a minimum of four inches greater in diameter than the nominal size of the permanent casing.

(3) The completed surface seal must fully surround the permanent casing, must be evenly distributed, free of voids, and extend to undisturbed or recompacted soil.

(4) After the permanent casing has been set in final position, the annular space shall be filled to land surface with bentonite or cement grout or neat cement. Leaving voids for

future installation of equipment such as a pitless adapter is prohibited.

(5) A temporary casing with a minimum length of eighteen feet and a minimum nominal diameter of four inches greater than the permanent casing shall be used in all unconsolidated formations such as in gravels, sands, or other unstable conditions when the use of drilling fluid or other means of keeping the bore hole open are not employed.

(6) Whenever reconstruction involves permanent surface casing movement; or the existing surface seal is damaged; or a surface seal never existed; the driller shall repair, replace, or install a minimum of eighteen feet of surface seal around the permanent casing.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-231, filed 3/23/98, effective 4/23/98.]

WAC 173-160-241 What are the requirements for formation sealing? (1) Unconsolidated formation sealing - Without significant clay beds or other confining formations - Drilled wells that penetrate an aquifer overlain by unconsolidated formations such as sand and gravel without significant clay beds (at least six feet thick) or other confining formations shall be sealed in accordance with the surface sealing requirements of WAC 173-160-231. See Figure 1.

(2) Unconsolidated formation sealing - With significant clay beds or other significant confining formations - Drilled wells that penetrate an aquifer overlain by clay or other confining formations that are at least six feet thick, shall be sealed to prevent movement of water or contamination in the annular space between the permanent casing and the clay or other confining formation(s). One of the following methods shall be used to seal the annular space:

(a) A drill hole at least four inches greater in diameter than the nominal size of the permanent well casing shall extend from the land surface into the clay bed or other confining formation located directly above the aquifer to be developed. The annular space shall be filled with bentonite (slurry or unhydrated), cement grout, or neat cement to form a watertight seal between the casing and all significant confining formations encountered during drilling. If bentonite slurry, cement grout, or neat cement is used to seal the annular space it must be placed by either pumping or tremming the seal material from the lowest clay bed or other confining formation of significance encountered, to land surface. The drill hole shall be kept open through the use of a temporary casing or any other drilling method that stabilizes the bore hole wall. See Figure 1.

(b) An upper drill hole at least four inches greater in diameter than the nominal size of the permanent well casing shall extend to a minimum of eighteen feet from land surface. A temporary casing or other means of maintaining an open bore hole shall be utilized. All temporary casing will have an outside diameter of a minimum of four inches larger than the permanent casing (for example, a ten-inch temporary casing for a six-inch permanent casing). The upper drill hole shall always contain a minimum of nine feet of sealant throughout the advancement of the permanent casing. Except, if the temporary casing is removed or not utilized, the upper drill hole shall be kept full of sealant. See Figure 1.

(1999 Ed.)

(3) Consolidated formations - In drilled wells that penetrate an aquifer, either within or overlain by a consolidated formation, sealing of the casing shall conform with one of the following procedures.

(a) Procedure one - An upper drill hole at least four inches greater in diameter than the nominal size of the permanent well casing shall extend from land surface into a sound, unfractured, consolidated formation. Unperforated permanent casing shall be installed to extend to this same depth, and the lower part of the casing shall be driven and sealed into the consolidated formation to establish a watertight seal between the formation and the casing. The remainder of the annular space to land surface shall be filled with cement grout, neat cement, or bentonite.

(i) If the consolidated formation is encountered at a depth less than eighteen feet from land surface, the upper drill hole and permanent casing shall extend to a minimum of eighteen feet from land surface. See Figure 2.

(ii) If cement grout, neat cement, or bentonite slurry is placed by pumping to seal the entire annulus from the bottom up to land surface, the upper drill hole may be a minimum of two inches larger than the outside diameter of the permanent casing.

(b) Procedure two - An upper drill hole at least four inches greater in diameter than the nominal size of the permanent casing extends from land surface to a depth of at least eighteen feet. An unperforated permanent casing shall be driven into the consolidated formation and sealed in a manner that establishes a watertight seal between the formation and the casing. Throughout the driving of the well casing to the consolidated formation, the annular space between the upper drill hole and the permanent casing shall be kept at least one-half full with unhydrated bentonite, or bentonite slurry. The remainder of the annular space to land surface shall be filled with cement grout, neat cement, or bentonite. See Figure 2.

(c) If temporary surface casing is used in either procedure (a) or (b) of this subsection, the casing must be a minimum of eighteen feet long and at least four inches larger in diameter than the permanent casing. If a consolidated formation is encountered within the first eighteen feet, the temporary casing may terminate at the interface of the consolidated formation. Withdrawal of the temporary casing must take place simultaneously with proper sealing of the annular space to land surface.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-241, filed 3/23/98, effective 4/23/98.]

WAC 173-160-251 What are the special sealing standards for artesian wells? (1) When flowing artesian conditions are known or suspected, the operator shall have a written sealing plan prepared prior to initiation of construction. The plan shall identify the type of sealing material that will be used and the method for sealing. The plan shall also contain at least one alternative construction method for sealing and an emergency contingency section which will identify steps to be taken if the ground water flow cannot be controlled.

(2) When artesian water is encountered in the well, an unperforated well casing shall extend into the confining strata.

[Title 173 WAC—p. 241]

tum overlying the artesian zone. The casing shall be sealed into the confining stratum to prevent surface and subsurface leakage from the artesian zone. If the well flows at land surface, it must be equipped with a control valve so that flow can be completely stopped.

(3) The well shall be completed with seals, packers or grout that eliminates leakage around the well casing. The driller shall not move the drilling rig from the well site until leakage is completely stopped, unless authority for temporary removal is granted by the department, or when loss of life or property is imminent.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-251, filed 3/23/98, effective 4/23/98.]

WAC 173-160-261 How do I seal dug wells? The surface seal of all dug wells shall be constructed to effectively seal the annular space between the undisturbed native material of the upper well hole and the well curbing, which may consist of (concrete tile, steel pipe or liner). The seal depth shall be at least eighteen feet from land to surface or to within three feet of the bottom in dug wells that are less than twenty-one feet in depth. Dug wells may be sealed with cement, neat cement, bentonite, or cement grout. A cap shall be placed on all dug wells. Except during maintenance, the cap shall remain in place. The cap shall prevent entry of pollutants, insects, and mammals into the well. See Figure 3.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-261, filed 3/23/98, effective 4/23/98.]

WAC 173-160-271 What are the special sealing standards for driven wells, jetted wells, and dewatering wells? (1) Driven wells - An upper hole at least four inches greater in diameter than the permanent casing shall extend a minimum of six feet below land surface. The annular space between the upper oversized drill hole and the permanent casing must be kept at least one-half full with bentonite or bentonite slurry throughout all driving of the pipe. The remaining annular space to land surface shall be filled with cement grout, neat cement, or bentonite. See Figure 4.

(2) Jetted wells - The surface seal in jetted wells shall be constructed to seal the annular space between the permanent casing and undisturbed native soil. An upper hole at least four inches greater in diameter than the permanent casing shall extend a minimum of six feet below land surface.

(3) Dewatering wells:

(a) Permanent dewatering wells shall be sealed to a depth of eighteen feet or within three feet of the bottom of the well for wells less than twenty-one feet deep. The minimum annular space requirements, sealing material, and decommissioning procedures of this chapter apply to all permanent dewatering wells.

(b) Temporary dewatering wells - Dewatering wells that are in place less than eighteen months and are less than eighteen feet deep are exempt from the sealing requirements of this chapter. Temporary wells that are installed over eighteen months and that are deeper than eighteen feet, must have a minimum of eighteen feet of surface seal and meet the minimum annular space requirements and sealing materials authorized under this chapter.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-271, filed 3/23/98, effective 4/23/98.]

WAC 173-160-281 What are the construction standards for artificial gravel-packed wells? In gravel-packed wells, the gravel mixture shall be placed around the screen so that bridging or size separation does not occur. The gravel pack must be clean, and chemically stable. All gravel and water used must be disinfected with at least fifty parts per million (ppm) chlorine for a contact time of at least thirty minutes. Rinse water containing chlorine is a pollutant. Chlorine in the rinse water must be allowed to dissipate and the water must be discharged in a safe manner consistent with the intent of the Water Pollution Control Act, chapter 90.48 RCW. See Figure 5.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-281, filed 3/23/98, effective 4/23/98.]

WAC 173-160-291 What are the standards for the upper terminal of water wells? (1) The watertight casing or curbing of any well shall extend at least six inches above the ground surface. Pit completion is prohibited.

(2) Where the site is subject to flooding, the top of the casing must be at least two feet above the estimated water level of a one hundred-year frequency flood.

(3) All wells shall be equipped with an access port that allows for the measurement of the depth to water surface, or with a pressure gage that indicates the shut-in pressure of a flowing artesian well. See Figure 6. The access ports and pressure gages or other openings in the cover are sealed or capped to prevent entrance of surface water or foreign material into the well.

(4) Any vent opening, observation ports or air-line equipment shall extend from the upper end of the well by watertight piping to a point at least six inches above land surface. The terminals of these facilities shall be shielded or sealed to prevent entrance of foreign matter or pollutants.

(5) A pitless adapter, or similar device is permitted on water wells if it is made with fittings approved by the department of health. The connection must be above static water level.

(6) Any person who removes any part of a surface seal to install a pitless adapter shall repair the seal so that it is brought up to land surface.

[Statutory Authority: Chapter 18.104 RCW. 98-18-104 (Order 98-17), § 173-160-291, filed 9/2/98, effective 10/3/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-291, filed 3/23/98, effective 4/23/98.]

WAC 173-160-301 What are the requirements for temporary capping? (1) All wells which are not in use, or are temporarily out of service, must be securely capped so that no contamination can enter the well.

(2) Capping must be affixed by solid welds or equal seal to prevent unauthorized access to the well.

(3) Temporary capping alone will not satisfy the decommissioning requirements of this chapter.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-301, filed 3/23/98, effective 4/23/98.]

WAC 173-160-311 What are the well tagging requirements? (1) It shall be the operator's responsibility to place a well identification tag with a unique identification number on every well that they construct, alter, or reconstruct.

(a) The alpha-numeric number shall be recorded on the drilling report in the space provided.

(b) The operator shall remove the well identification tag on all wells they decommission and shall attach the tag to the decommissioning well report.

(2) It shall be the well owner's responsibility to place a well identification tag with a unique identification number on every well they own.

(a) Upon request, the department shall furnish the well owner with a well tag and tagging instructions.

(b) The well owner shall tag their well(s) and submit a completed tagging report to the department.

(3) The well tag shall be permanently attached to the outer well casing or other prominent well feature and be visible above land surface.

(4) All well identification tags shall be supplied by the department.

(5) It is unlawful for a person to tamper with or remove a well identification tag except during well alteration.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-311, filed 3/23/98, effective 4/23/98.]

WAC 173-160-321 How do I test a well? (1) Well authorized by appropriation permit - Before being put to use, each well shall be test pumped for yield and draw down. Reports of the test pumping shall be submitted as required in chapter 90.44 RCW. The driller shall be familiar with and meet all testing procedures outlined in the water right permit. The well shall be test pumped at rates equal to, or greater than, are expected from the well during its normal usage. The test pump for public water supply wells shall be operated continuously for a minimum of four hours, or longer if required by the department of health. The yield and draw down shall be determined following at least four hours of stabilized water level observation. Periodic water level observation should be made during draw down and subsequent recovery periods. Periods of observation shall be more frequent during the onset of the draw down and may decrease in frequency as the draw down or recovery proceeds toward stabilization. A bailer test is not an acceptable substitute for testing wells under permit or for public water supply wells.

(2) Wells not requiring appropriation permit - Testing of a well that does not require an appropriation permit shall be conducted for a period of at least one hour. The last twenty minutes of the test shall be conducted at a constant rate of withdrawal to achieve a stabilized pumping level. Test pumping under this section can be either by bailer, air lift, or with a pump.

(3) Test data shall be reported to the department on the water well report.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-321, filed 3/23/98, effective 4/23/98.]

(1999 Ed.)

WAC 173-160-331 How do I make sure my equipment and the water well are free of contaminants? (1) All tools, drilling equipment and materials shall be free of contaminants prior to beginning well construction. Contaminants include lubricants, fuel, bacteria that will reduce the well efficiency, and any other item(s) that will be harmful to public health and/or the resource or reduce the life of the water well.

(2) Every new or reconditioned water well, after completion of construction or repair, and before being placed in service, shall be cleared of all foreign materials, and free of contamination.

(3) The well casing shall be swabbed and cleaned to remove oil, grease or joint dope.

(4) All pumping equipment, sand or gravel used in gravel-packed water wells and the well casing shall be thoroughly sluiced with clean water and disinfected. The disinfecting agent shall be safe and not impair the potability of the ground water. All disinfectants shall be used in accordance with manufacturer's recommendations.

(5) Before the well is put to use, the standing water in the well shall be disinfected and flushed to remove all traces of disinfectant. A water sample may then be taken and tested for coliform bacteria or other items required by the state department of health or local health authority. Examples of other test items may include: Nitrates, dissolved solids, sodium, iron, pH, manganese, conductivity, hardness, and turbidity. If testing indicates a presence of coliform bacteria, more stringent disinfecting methods may be required by the department of health or local health authority.

If chlorine is used to disinfect the well water, sufficient chlorine will be added to the standing water to give a residual of fifty ppm free chlorine. The chlorine shall remain in the well for a period of at least twenty-four hours. After twenty-four hours, a minimum of one ppm free chlorine residual shall remain in the water before the well is flushed free of chlorine and a sample taken. Other disinfectants placed in the ground water shall be used in quantities that are safe, nonpolluting, and that are not a detriment to the potability of the ground water. All disinfectants used in ground water shall be used in accordance with manufacturer's recommendations.

(6) Chlorine and other disinfectants can pollute. Allow the chlorine or other disinfectants in the rinse water to dissipate before discharging the water to surface water. This water shall be discharged in a safe manner consistent with the intent of the Water Pollution Control Act, chapter 90.48 RCW.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-331, filed 3/23/98, effective 4/23/98.]

WAC 173-160-341 How do I ensure the quality of drilling water? All water introduced into a well for drilling purposes and for mixing sealing materials shall be obtained from a potable water source and have a chlorine residual of not more than 1 ppm free chlorine.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-341, filed 3/23/98, effective 4/23/98.]

[Title 173 WAC—p. 243]

WAC 173-160-351 What are the standards for pump installation? All pumps and pumping equipment and materials must be free of contamination and shall be installed in a manner consistent with the intent and purposes of these regulations.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-351, filed 3/23/98, effective 4/23/98.]

WAC 173-160-361 Who may supervise the use of explosives? Explosives used for developing or reconditioning any water well must be used under the direct supervision of an individual licensed under chapter 70.74 RCW.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-361, filed 3/23/98, effective 4/23/98.]

WAC 173-160-371 What are the standards for chemical conditioning? The use of detergents, chlorine, acids or other chemicals in wells for the purpose of increasing or restoring yield, shall be used according to manufacturer's recommendations. Except for routine maintenance and cleaning, a well drilling license is required for all chemical conditioning that alters the condition of the water well.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-371, filed 3/23/98, effective 4/23/98.]

WAC 173-160-381 What are the standards for decommissioning a well? Any well which is unusable, abandoned, or whose use has been permanently discontinued, or which is in such disrepair that its continued use is impractical or is an environmental, safety or public health hazard shall be decommissioned. The decommissioning procedure (as prescribed by these regulations) must be recorded and reported as required by the department.

(1) Cased wells. Cased water wells that were not constructed in accordance with these regulations, or wells which are decommissioned to allow the placement of potential sources of contamination within one hundred feet of the well, or for which a drilling report required under WAC 173-160-141 is missing, shall be decommissioned in one of the following ways:

(a) Perforate the casing from the bottom to within five feet of the land surface and pressure grout the casing.

(i) Perforations shall be at least four equidistant cuts per row, and one row per foot. Each cut shall be at least one and one-half inches long.

(ii) Apply enough pressure to force the sealing material through the perforations, filling any voids on the outside of the casing.

(iii) The remainder of the casing shall be filled with cement grout, neat cement, or bentonite slurry.

(b) Withdraw the casing and fill the bore hole with cement grout, neat cement, or bentonite as the casing is being withdrawn.

(2) If it can be verified through a field examination and review of the drilling report that a water supply well was constructed in accordance with these regulations, and it is not being decommissioned to allow the siting of potential sources of contamination within one hundred feet of the well, it shall be decommissioned by the casing removal, or casing perforation methods described in subsection (1)(a) or (b) of this section or by:

(a) Filling the casing from bottom to within five feet of land surface with bentonite, cement grout, or neat cement.

(b) The casing may be cut off at a maximum of five feet below land surface.

(3) Uncased wells - Backfill uncased wells with concrete, cement grout, neat cement, or bentonite.

(4) Dug wells - Remove all debris and obstructions that impede decommissioning or that may contaminate the aquifer from within the dug well. Install clean chlorinated sand or pea gravel to a point two feet above static water level. Fill the remainder of the well with concrete or bentonite to the land surface. Dug wells with static levels below twenty feet from land surface, may be decommissioned by placing chlorinated sand or pea gravel to the static level and then placing alternating layers of sealing material and chlorinated sand or pea gravel to within twenty feet of land surface. The alternating layers of sand or pea gravel must be a maximum of five feet thick. The minimum thickness of the sealing material layers must be five feet. The remainder of the dug well to a maximum of two feet below land surface shall be filled with bentonite, neat cement, cement grout, or concrete. Bentonite slurry shall not be used to decommission dug wells.

(5) Sealing material placed below the static water level shall be piped directly to the point of application or placed by means of a dump bailer or tremie tube. If cement, cement grout, or neat cement is used to seal below the static water level in the well, the material shall be placed from the bottom up by methods that avoid segregation or dilution of the material. When used to place grout, the discharge end of the tremie tube shall be submerged in the grout to avoid breaking the seal while filling the annular space. Sealing material may be hand poured above the static water level, provided the material does not dilute or segregate, and the resulting seal is free of voids.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-381, filed 3/23/98, effective 4/23/98.]

WAC 173-160-390 Artificial recharge of ground water bodies. Approval must be obtained from the department before starting any project related to the artificial recharge of ground water bodies.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-390, filed 3/23/98, effective 4/23/98.]

PART TWO—GENERAL REQUIREMENTS FOR RESOURCE PROTECTION WELL CONSTRUCTION AND GEOTECHNICAL SOIL BORINGS

WAC 173-160-400 What are the minimum standards for resource protection wells and geotechnical soil borings? The following minimum standards shall apply to all resource protection wells and geotechnical soil borings constructed in the state of Washington. It is the responsibility of the resource protection well operator, resource protection well contractor, and the property owner to take whatever measures are necessary to guard against waste and contamination of the ground water resource.

(1) It will be necessary in some cases to construct resource protection wells and geotechnical soil borings with additional requirements beyond the minimum standards.

(2) Nothing in this section limits the department's authority to approve comparable alternative specifications for construction as technology in the industry is developed, or new methods of construction become known to the department.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-400, filed 3/23/98, effective 4/23/98.]

WAC 173-160-406 How do I apply for a variance on a resource protection well? (1) When strict compliance with the requirements and standards of this chapter are impractical, any person may submit a variance request to the department from a regulation or regulations. The application for variance must propose a comparable alternative specification that will provide equal or greater human health and resource protection than the minimum standards. Application for a variance shall be made in writing and approved prior to the construction or decommissioning of the well.

(2) The variance application shall contain at least the following information:

- (a) Name, address, and phone number of the person requesting the variance;
- (b) Address of well site;
- (c) 1/4, 1/4, section, township, range;
- (d) The specific regulation(s) that cannot be followed;
- (e) The comparable alternative specification;
- (f) Justification for the request.

(3) The variance application will be evaluated, and a response will be given within fourteen days. In a public health emergency or other exceptional circumstance, verbal notification for a variance may be given. An emergency usually consists of a drilling situation, which if left unaddressed, could harm the ground water resource. Driller convenience does not constitute an emergency.

(4) The emergency variance recipient must immediately follow up with a written notification to the department so that a permanent record is made of the variance.

(5) Local health districts or counties with delegated authority may grant variances under the provision of chapter 18.104 RCW delegated authority.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-406, filed 3/23/98, effective 4/23/98.]

WAC 173-160-410 What are the specific definitions for words in this chapter? This section specifically defines words associated with resource protection wells and geotechnical soil borings. To find the definitions of other words, see WAC 173-160-111.

(1) "Geotechnical information" means subsurface engineering properties used for the purpose of designing structures such as bridges, buildings, highways, pipelines, or for assessing slope stability samples to ascertain structural properties of the subsurface.

(2) "Geotechnical soil boring" or "boring" means an uncased well drilled for the purpose of obtaining soil samples to ascertain structural properties of the subsurface. Geotechnical soil boring includes auger borings, rotary borings,

cone penetrometer probes and vane shear probes, or any other uncased ground penetration for geotechnical information.

(3) "Instrumentation well" means a well in which pneumatic or electric geotechnical or hydrological instrumentation is permanently or periodically installed to measure or monitor subsurface strength and movement. Instrumentation well includes bore hole extensometers, slope indicators, pneumatic or electric pore pressure transducers, and load cells.

(4) "Lysimeter" means a well used to withdraw soil water or pore samples from subsurface soil or rock above the water table for chemical, physical, or biological testing.

(5) "Monitoring well" means a well designed to obtain a representative ground water sample or designed to measure the water level elevations in either clean or contaminated water or soil.

(6) "Nested well" means the installation of more than one cased resource protection well in one bore hole. This does not preclude casing reductions.

(7) "Observation well" means a well designed to measure the depth to the water or water level elevation in either clean or contaminated water or soil.

(8) "Piezometer" means a well designed to measure water level elevation at a specific depth beneath the water table.

(9) "Remediation well" means a well used to withdraw ground water or inject water, air (for air sparging), or other solutions into the subsurface for the purpose of remediating, cleaning up, or controlling potential or actual ground water contamination.

(10) "Resource protection well" means a cased boring used to determine the existence or migration of pollutants within an underground formation. Resource protection wells include monitoring wells, observation wells, piezometers, spill response wells, vapor extraction wells, and instrumentation wells.

(11) "Resource protection well contractor" means any person, firm, partnership, copartnership, corporation, association, or other entity, licensed and bonded under chapter 18.27 RCW, engaged in the business of constructing resource protection wells or geotechnical soil borings.

(12) "Spill response well" means a well used to capture or recover any spilled or leaked fluid which has the potential to, or has contaminated the ground water.

(13) "Vapor extraction well" means a well used to withdraw gases or vapors from soil, rock, landfill, or ground water for the purpose of remediating soil and/or ground water contamination.

(14) "Well driller" or "driller" means a resource protection well contractor or operator and a water well contractor or operator.

(15) "Well" means water wells, resources protection wells, instrumentation wells, dewatering wells, and geotechnical soil borings. Well does not mean an excavation made for the purpose of obtaining or prospecting for oil or natural gas, geothermal resources, minerals, or products of mining, or quarrying, or for inserting media to repressure oil or natural gas bearing formations, or for storing petroleum, natural gas, or other products.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-410, filed 3/23/98, effective 4/23/98.]

WAC 173-160-420 What are the general construction requirements for resource protection wells? (1) No resource protection well or soil boring excavation may be used for domestic, industrial, municipal, commercial, or agricultural purposes.

(2) No resource protection well or soil boring excavation may interconnect aquifers.

(3) Nested resource protection wells are prohibited.

(4) Cuttings, development water, and other investigation derived waste from resource protection well construction or geotechnical soil borings shall be managed in a manner consistent with the intent and purposes of the Water Pollution Control Act, chapter 90.48 RCW, the Hazardous Waste Management Act, chapter 70.105 RCW, and implementing regulations.

(5) Well tagging:

(a) It shall be the driller's responsibility to place a well identification tag with a unique identification number on every resource protection well that they construct or alter. Uncased geotechnical soil borings are exempt from the tagging requirements of this chapter.

(i) The alpha-numeric number shall be recorded on the drilling report in the space provided.

(ii) The driller shall remove the well identification tag on all resource protection wells they decommission and shall attach the tag to the decommissioning well report.

(b) It shall be the well owner's responsibility to place a well identification tag with a unique identification number on every resource protection well they own and which was completed prior to the effective date of this regulation.

(i) Upon request, the department shall furnish the well owner with a well tag and tagging instructions.

(ii) The well owner shall tag their well(s) and submit a completed tagging report to the department.

(c) The well tag shall be permanently attached to the outer well casing and be visible above land surface for all wells which have been completed above land surface. For wells completed below land surface, the well tag shall be attached to the well casing or to any permanent and protected portion of the vault.

(d) All well identification tags shall be supplied by the department.

(e) It is unlawful for a person to tamper with or remove a well identification tag except during well alteration.

(6) All resource protection wells will be sealed in accordance with this chapter regardless of the method of installation. Except, resource protection wells that are properly decommissioned prior to the removal of any drilling equipment from the well location are exempted from the surface sealing requirements of this chapter. Provided the decommissioning process includes the removal of any conduit, tubing, probe, or other items inserted into the ground.

(7) All geotechnical soil borings shall be decommissioned under the terms of this chapter.

(8) Except as provided in RCW 18.104.180, all construction, alteration, reconstruction, and decommissioning of resource protection wells and geotechnical soil borings shall

be done by an individual licensed under the provisions of chapter 173-162 WAC.

(9) A notice of intent to construct or decommission a resource protection well and a geotechnical soil boring shall be filed with the department a minimum of seventy-two hours prior to initiating construction or decommissioning of the well(s) or boring(s). A fee must accompany each notice of intent to construct a resource protection well. The fee for constructing, altering, or reconstructing each resource protection well is forty dollars. Geotechnical soil borings are **EXEMPT** from all fees. Under some circumstances, it may be necessary to construct more resource protection wells or geotechnical soil borings than originally anticipated. When additional resource protection wells are constructed on a site for which a notice of intent and fee were submitted, a second notice and fee shall be submitted within twenty-four hours after all wells have been completed or as soon as the final number of wells to be constructed is determined, whichever is sooner. When additional geotechnical soil borings are needed, the borings may be completed. A follow-up notice of intent shall be submitted to the department within twenty-four hours after all borings are constructed. Notification to construct multiple wells or geotechnical soil borings within the same quarter/quarter section, township, and range may be submitted on one notice form. A fee of forty dollars per well must be attached to each notice. Example: Six resource protection wells identified on one notice of intent would be submitted along with a two hundred forty dollar fee.

(10) Resource protection well and geotechnical soil boring drilling reports.

(a) Every well contractor is required to submit a complete report on the construction, alteration, or decommissioning of all resource protection wells and geotechnical soil borings they construct. Reports must be submitted to the department within thirty days after completion of construction, alteration, or decommissioning.

(b) This applies to all resource protection wells and geotechnical soil borings.

(c) The resource protection well and geotechnical soil boring report must be made on a form provided by the department, or a reasonable facsimile of the form, as approved by the department.

(d) Where applicable the report shall include the following information:

(i) Owner's name; operator/trainee name; operator/trainee license number; contractor registration number, drilling company name;

(ii) Tax parcel number;

(iii) Well location address;

(iv) Location of the well to at least 1/4, 1/4 section or smallest legal subdivision;

(v) Unique well identification tag number;

(vi) Construction date;

(vii) Start notification number;

(viii) Intended use of well;

(ix) The well depth, diameter, and general specifications of each well;

(x) Total depth of casing;

(xi) Well head elevation;

(xii) Drilling method;

(xiii) Seal material, seal location and type of placement used;

(xiv) Filter pack location; filter pack material used;

(xv) The thickness and character of each bed, stratum or formation penetrated by each well including identification of each water bearing zone;

(xvi) Casing gauge, diameter, stickup, type of material, and length, also of each screened interval or perforated zone in the casing;

(xvii) The depth to the static water level, as measured below the land surface; and

(xviii) Such additional factual information as may be required by the department.

(e) The well report must show the license number and signature of the person who constructed the well. If this is an unlicensed person, exempted under RCW 18.104.180(2), the report shall show the license number and signature of the licensed individual who witnessed the drilling. Resource protection well reports for wells constructed by trainees shall have the signature and license number of the trainee and licensed operator.

What are the surface protection requirements?

(11) All resource protection wells shall be capped and protected using one of the following methods:

(a) If the well is cased with metal and completed above the ground surface, you must attach a watertight cap with a lock to the top of the casing.

(b) If the well is not cased with metal and completed above the land surface, you must install a protective metal casing over and around the well. The protective casing shall extend at least six inches above the top of the well casing and be cemented at least two feet into the ground. A cap with lock shall be attached to the top of the protective casing.

(12) You shall protect the well(s) completed above ground from damage by:

(a) Cementing three metal posts, at least three inches in diameter, in a triangular array around the casing and at least two feet from it. Each post shall extend at least three feet above and below the land surface.

(b) A reinforced concrete pad may be installed to protect against and prevent frost heave. If installed, the concrete pad shall extend to a depth equal to anticipated frost depth. When a concrete pad is used, the well seal may be part of the concrete pad.

(13) If the well is completed below land surface, a watertight cap with a lock shall be attached to the top of the well casing. A metal monument or equivalent shall be installed over and around the well. The monument shall serve as a protective cover and be installed level with the land surface and be equipped with a waterproof seal to prevent the inflow of any water or contaminants. Drains will be provided, when feasible, to keep water out of the well and below the well cap. The cover must be designed to withstand the maximum expected loading.

(14) The protective measures may be waived or modified upon written approval from the department (a variance).

(15) If the well is damaged, the well protection measures and casing shall be repaired to meet the requirements of this chapter. If the well is damaged beyond repair, it shall be decommissioned in accordance with WAC 173-160-460.

[Statutory Authority: Chapter 18.104 RCW. 98-18-104 (Order 98-17), § 173-160-420, filed 9/2/98, effective 10/3/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-420, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-160-420, filed 4/6/88.]

WAC 173-160-430 What are the minimum casing standards? The casing may not effect or interfere with the chemical, physical, radiological, or biological constituents of interest. All resource protection well casing shall conform to ASTM Standards, or at least 304 or 316 stainless steel, PTFE, or Schedule 40 PVC casing.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-430, filed 3/23/98, effective 4/23/98.]

WAC 173-160-440 What are the equipment cleaning standards? (1) When drilling in known or potential areas of contamination, steam clean the drill rig derrick and all drilling equipment on site before and after well construction. If the equipment is used to drill in radioactive areas, you must develop a decontamination plan and the department must approve that plan prior to the equipment being removed from the drill site.

(2) All well construction materials to include casing, screen(s), and filter pack material must be free of contaminants prior to installation.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-440, filed 3/23/98, effective 4/23/98.]

WAC 173-160-450 What are the well sealing requirements? (1) All resource protection wells constructed shall have a continuous seal, which seals the annular space between the bore hole and the permanent casing. The seal shall be constructed to prevent interconnection of separate aquifers penetrated by the well, and shall provide casing stability. The seal shall have a minimum diameter of four inches larger than the nominal size of the permanent casing, and shall extend from land surface to the top of the filter pack. See Figure 7.

(2) After the permanent casing has been set in final position, the filter pack (optional) and sealing material shall be placed in the open bore hole annular space that must be a minimum of four inches greater in diameter than the nominal size of the permanent casing. After installing the filter pack (optional) a layer of bentonite shall be placed on top of the filter pack to maintain separation between the seal material and the screened interval. Insure that placement will not disturb the filter pack. The remaining annular space shall be filled to land surface in a continuous operation with bentonite, neat cement, or cement grout. If a cement/bentonite slurry is used as the sealant, it shall be installed with a tremie tube and pumped from the top of the bentonite plug (above the filter pack) to land surface. Use only potable water to hydrate the mixture.

(3) The completed annular space shall fully surround the permanent casing, be evenly distributed, free of voids, and extend from the permanent casing to undisturbed or recompacted soil.

(4) All sealing materials used shall conform to one of the following minimum requirements:

(a) **Bentonite sealants:**

(i) Bentonite used to prepare slurries for sealing, or decommissioning shall be specifically designed for this purpose. At no time shall grout slurry contain materials that are toxic, polluting, develop odor or color changes, or serve as a micro-bacterial nutrient. All bentonite slurries shall be prepared and installed according to the manufacturer's instructions. All additives must be certified by a recognized certification authority such as NSF. Active solids content (bentonite) shall be twenty percent by weight or greater in all bentonite slurries.

(ii) Unhydrated bentonite—pelletized, granulated, powder, or chip bentonite may be used in the construction of seals or in decommissioning of resource protection wells. The bentonite material shall be specifically designed for sealing or decommissioning and be within the industry tolerances for dry western sodium bentonite. Polymer additives must be designed and manufactured to meet industry standards to be nondegrading and must not act as a medium which will support or promote the growth of micro-organisms. All unhydrated bentonite used for sealing or decommissioning must be free of organic polymers. Placement of bentonite shall conform to the manufacturer's specifications and result in a seal free of voids or bridges.

(b) Cement sealants:

(i) Neat cement consists of either portland cement types I, II, III, or high-alumina cement mixed with not more than six gallons of potable water per sack of cement (ninety-four pounds per sack).

(ii) Neat cement grout consists of neat cement with up to five percent bentonite clay added, by dry weight of the bentonite. Bentonite is to be added to improve flow qualities and compensate for shrinkage.

(iii) Concrete sealants consist of clean, hard and durable aggregate with not less than five sacks (ninety-four pounds per sack) of portland cement per cubic yard of concrete sealant.

(A) The maximum diameter of aggregate particles may not exceed 1 1/2 inches, but in any case may not exceed 1/5 the minimum width of the casing thickness.

(B) The ratio of coarse aggregate to fine aggregate (passing No. 4 U.S. Standard Sieve) must be approximately 1 1/2 to 1 by volume, but in any case, may not exceed 2 to 1 nor be less than 1 to 2.

(iv) Expanding agents, such as aluminum powder, may be used at a rate not exceeding 0.075 ounce (1 level teaspoon) per sack (ninety-four pounds per sack) of dry cement. The powder may not contain polishing agents. High-alumina cement and portland cement of any type must not be mixed together.

(5) This section may not preclude the use of new sealant materials which have been approved by the technical advisory group.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-450, filed 3/23/98, effective 4/23/98.]

WAC 173-160-460 What is the decommissioning process for resource protection wells? (1) Resource protection wells that were not constructed in accordance with these regulations, or for which a drilling report required

under this section is missing, shall be decommissioned in one of the following ways:

(a) Perforate the casing from the bottom to land surface and pressure grout the casing.

(i) Perforations shall be at least four equidistant cuts per row, and one row per foot. Each cut shall be at least one and one-half inches long.

(ii) Apply enough pressure to force the sealing material through the perforations, filling any voids on the outside of the casing.

(iii) The remainder of the casing shall be filled with cement grout, neat cement, or bentonite slurry.

(b) Withdraw the casing and fill the bore hole with cement grout, neat cement, or bentonite as the casing is being withdrawn.

(2) If it can be verified through a field examination and review of the drilling report that the resource protection well was constructed in accordance with these regulations, it shall be decommissioned by:

(a) Filling the casing from bottom to land surface with bentonite, cement grout, or neat cement; and

(b) Placing a cap on the casing.

[Statutory Authority: Chapter 18.104 RCW. 98-18-104 (Order 98-17), § 173-160-460, filed 9/2/98, effective 10/3/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-032 (Order 97-08), § 173-160-460, filed 3/23/98, effective 4/23/98.]

Chapter 173-162 WAC
REGULATION AND LICENSING OF WELL
CONTRACTORS AND OPERATORS

WAC

173-162-010	What is the purpose of these regulations?
173-162-020	To whom do these regulations apply?
173-162-025	What are the reasons for suspending or revoking an operator license?
173-162-030	How are the words and phrases used in this chapter?
173-162-040	How do I comply with licensing requirements?
173-162-050	Who is exempt?
173-162-055	What types of operator licenses are available?
173-162-060	How do you qualify for each license?
173-162-070	What application fees are required?
173-162-075	How often do I need to renew my license?
173-162-080	What are the conditions and cost of renewing a drilling license?
173-162-085	Continuing education.
173-162-090	Examinations—Notification of examinations.
173-162-095	What should I know about the written and on-site examinations?
173-162-100	Examinations—Type of examinations.
173-162-120	Examinations—Notification of examination results.
173-162-130	Licenses—General.
173-162-140	What are the requirements to become an on-site testing advisor?
173-162-190	What are the responsibilities of well contractors and their agents?
173-162-200	What are the department of ecology's enforcement options?
173-162-210	Can I appeal enforcement actions?
173-162-220	Regulation review.

DISPOSITION OF SECTIONS FORMERLY
CODIFIED IN THIS CHAPTER

173-162-110	Examinations—Conducting examinations. [Order DE 73-10, § 173-162-110, filed 6/29/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
173-162-150	Licenses—Conditional license. [Order DE 73-10, § 173-162-150, filed 6/29/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
173-162-160	Temporary authorization. [Order DE 73-10, § 173-162-160, filed 6/29/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.
173-162-170	Retaking examination. [Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-170, filed 4/6/88; Order DE 73-10, § 173-162-170, filed 6/29/73.] Repealed by 98-08-031 (Order 97-08), filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080.
173-162-180	Water well contractors—Identification numbers. [Order DE 73-10, § 173-162-180, filed 6/29/73.] Repealed by 88-08-070 (Order 88-58), filed 4/6/88. Statutory Authority: Chapter 18.104 RCW.

WAC 173-162-010 What is the purpose of these regulations? These regulations are adopted under chapter 18.104 RCW in order to establish procedures for the examination, licensing and regulation of well contractors and operators.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-010, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-010, filed 4/6/88; Order DE 73-10, § 173-162-010, filed 6/29/73.]

WAC 173-162-020 To whom do these regulations apply? These regulations apply to all well contractors and operators who are contracting for well construction or constructing wells in the state of Washington.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-020, filed 3/23/98, effective 4/23/98. Statu-

[Title 173 WAC—p. 256]

tory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-020, filed 4/6/88; Order DE 73-10, § 173-162-020, filed 6/29/73.]

WAC 173-162-025 What are the reasons for suspending or revoking an operator license? (1) In cases other than those relating to the failure of a licensee to renew a license, the director may suspend or revoke a license issued pursuant to this chapter for any of the following reasons:

(a) For fraud or deception in obtaining the license;

(b) For fraud or deception in reporting under RCW 18.104.050;

(c) For violating the provisions of this chapter, or of any lawful rule or regulation of the department or the department of health.

(2) The director shall immediately suspend any license issued under this chapter if the department of social and health services has determined that the holder of the license is not in compliance with the support order or a residential or visitation order issued pursuant to chapter 74.20A RCW. If the person has continued to meet all other requirements for reinstatement during the suspension, reissuance of the license shall be automatic upon the director's receipt of a release issued by the department of social and health services stating that the person is in compliance with the order.

(3) No license shall be suspended for more than six months, except that a suspension under subsection (2) of this section shall continue until the department receives a release issued by the department of social and health services stating that the person is in compliance with the order.

(4) No person whose license is revoked shall be eligible to apply for a license for one year from the effective date of the final order of revocation.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-025, filed 3/23/98, effective 4/23/98.]

WAC 173-162-030 How are the words and phrases used in this chapter? (1) "Abandoned well" means a well that is unused, unmaintained, or is in such disrepair as to be unusable.

(2) "Access port" is a 1/2- to 2-inch tapped hole or tube equipped with a screw cap, which provides access to the inner casing, for measurement of the depth to water surface. An access port also means a removable wellcap.

(3) "Annular space" is the space between the surface or outer casing and the inner casing, or the space between the wall of the drilled hole and the casing.

(4) "Aquifer" is a geologic formation, group of formations, or part of a formation capable of yielding a significant amount of ground water to wells or springs.

(5) "Artesian well" is a well tapping an aquifer bounded above and below by confining or impermeable rock or soil layers, or rock or soil layers of distinctly lower permeability than the aquifer itself. The water will rise in the well above the point of initial penetration (above the bottom of the confining or impermeable layer overlying the aquifer). This term includes both flowing and nonflowing wells.

(6) "Artificial gravel pack" is a mixture of gravel or sand placed in the annular space around the liner, perforated pipe, or well screen. A gravel pack is used to reduce the movement

(1999 Ed.)

of finer material into the well and provide lateral support to the screen in unstable formations.

(7) "Artificial recharge" is the addition of water to an aquifer by activities of man, such as irrigation or induced infiltration from streams, or injection through wells, trenches, pits, and ponds.

(8) "Bentonite" is a mixture of swelling clay minerals, predominantly sodium montmorillonite.

(9) "Capped well" is a well that is not in use and has a watertight seal or cap installed on top of the casing.

(10) "Casing" is a pipe, generally made of metal or plastic, which is installed in the bore hole to maintain the opening.

(11) "Consolidated formation" means any geologic formation in which the earth materials have become firm and cohesive through natural rock forming processes. Such rocks commonly found in Washington include basalt, granite, sandstone, shale, conglomerate, and limestone. An uncased bore hole will normally remain open in these formations.

(12) "Constructing a well" or "construct a well" means:

(a) Boring, digging, drilling, or excavating a well;

(b) Installing casing, sheeting, lining, or well screens, in a well; or

(c) Drilling a geotechnical soil boring.

"Constructing a well" or "construct a well" includes the alteration of an existing well.

(13) "Contamination" has the meaning provided in RCW 90.48.020.

(14) "Continuing education unit" is one credit approved by the department for time spent participating in training or instruction in subject areas approved by the department.

(15) "Curbing" is a liner or pipe made of concrete, precast tile or steel installed in dug wells to provide an annular space between the well bore and the liner or pipe for sealing.

(16) "Decommissioning" means to fill or plug a well so that it will not produce water, serve as a channel for movement of water or pollution, or allow the entry of pollutants into the well or aquifers.

(17) "Department" means the department of ecology.

(18) "Dewatering well" means a cased or lined excavation or boring that is intended to withdraw or divert ground water for the purpose of facilitating construction, stabilizing a land slide, or protecting an aquifer.

(19) "Director" means director of the department of ecology.

(20) "Disinfection" or "disinfecting" is the use of chlorine, or other disinfecting agent or process approved by the department, in sufficient concentration and contact time adequate to inactivate coliform or other indicator organisms.

(21) "Domestic water supply" is any water supply which serves a family residence(s).

(22) "Draw down" is the measured difference between the static ground water level and the ground water level induced by pumping.

(23) "Drilled well" is a well in which the hole is usually excavated by mechanical means such as rotary, cable tool, or auger drilling equipment.

(24) "Driven well" is a well constructed by joining a "drive point" to a length of pipe, then driving the assembly into the ground.

(25) "Dug well" is a well generally excavated with hand tools or by mechanical methods. The side walls may be supported by material other than standard weight steel casing.

(26) "Filter pack" means clean, well rounded, smooth, uniform, sand or gravel, which is placed in the annulus of the well between the bore hole wall and the liner, perforated pipe, or well screen to prevent formation material from entering the well.

(27) "Formation" means an assemblage of earth materials grouped together into a unit that is convenient for description or mapping.

(28) "Geotechnical information" means subsurface engineering properties used for the purpose of designing structures such as bridges, buildings, highways, pipelines, or for assessing slope stability.

(29) "Geotechnical soil boring" or "boring" means an uncased well drilled for the purpose of obtaining soil samples to ascertain structural properties of the subsurface. Geotechnical soil boring includes auger borings, rotary borings, cone penetrometer probes and vane shear probes, or any other uncased ground penetration for geotechnical information.

(30) "Ground water" means and includes ground waters as defined in RCW 90.44.035.

(31) "Grout" is a fluid mixture of cement, bentonite, and water used to seal the annular space around or between well casings, or to decommission wells.

(32) "Impermeable" is a descriptive term for earth materials which have a texture or structure that does not permit fluids to perceptibly move into or through its pores or interstices.

(33) "Instrumentation well" means a well in which pneumatic or electric geotechnical or hydrological instrumentation is permanently or periodically installed to measure or monitor subsurface strength and movement. Instrumentation well includes bore hole extensometers, slope indicators, pneumatic or electric pore pressure transducers, and load cells.

(34) "Liner" means any device inserted into a larger casing, screen, or bore hole as a means of maintaining the structural integrity of the well.

(35) "Lysimeter" means a well used to withdraw soil water or pore samples from subsurface soil or rock above the water table for chemical, physical, or biological testing.

(36) "Monitoring well" means a well designed to obtain a representative ground water sample or designed to measure the water level elevations in either clean or contaminated water or soil.

(37) "Nested well" means the installation of more than one cased resource protection well in one bore hole. This does not preclude casing reductions.

(38) "Observation well" means a well designed to measure the depth to the water or water level elevation in either clean or contaminated water or soil.

(39) "Operator" means a person who:

(a) Is employed by a well contractor;

(b) Is licensed under this chapter; or

(c) Who controls, supervises, or oversees the construction of a well or who operates well construction equipment.

(40) "Permeability" is a measure of the ease of which liquids or gas move through a porous material.

(a) For water, this is usually expressed in units of centimeters per second or feet per day. Hydraulic conductivity is a term for water permeability.

(b) Soils and synthetic liners with a water permeability of 1×10^{-7} cm/sec or less may be considered impermeable.

(41) "Piezometer" means a well designed to measure water level elevation at a specific depth beneath the water table.

(42) "Pollution" has the meaning provided in RCW 90.48.020.

(43) "Pressure grouting" is a method of forcing grout into specific portions of a well for sealing purposes.

(44) "PTFE" means polytetrafluoroethylene casing materials such as teflon. The use of the term teflon is not an endorsement for any specific PTFE product.

(45) "Public water supply" is any water supply intended or used for human consumption or other domestic uses, including source, treatment, storage, transmission and distribution facilities where water is furnished to any community, collection or number of individuals, available to the public for human consumption or domestic use, excluding water supplies serving one single-family residence and a system with four or fewer connections all of which serve residences on the same farm.

(46) "PVC" means polyvinyl chloride a type of thermoplastic casing.

(47) "Remediation well" means a well used to withdraw ground water or inject water, air (for air sparging), or other solutions into the subsurface for the purpose of remediating, cleaning up, or controlling potential or actual ground water contamination.

(48) "Resource protection well" means a cased boring used to determine the existence or migration of pollutants within an underground formation. Resource protection wells include monitoring wells, observation wells, piezometers, spill response wells, vapor extraction wells, and instrumentation wells.

(49) "Resource protection well contractor" means any person, firm, partnership, copartnership, corporation, association, or other entity, licensed and bonded under chapter 18.27 RCW, engaged in the business of constructing resource protection wells or geotechnical soil borings.

(50) "Spill response well" means a well used to capture or recover any spilled or leaked fluid which has the potential to, or has contaminated the ground water.

(51) "Static water level" is the vertical distance from the surface of the ground to the water level in a well when the water level is not affected by withdrawal of ground water.

(52) "Temporary surface casing" is a length of casing (at least four inches larger in diameter than the nominal size of the permanent casing) which is temporarily installed during well construction to maintain the annular space.

(53) "Test well" is a well (either cased or uncased), constructed to determine the quantity of water available for beneficial uses, identifying underlying rock formations (lithology), and to locate optimum zones to be screened or perforated. If a test well is constructed with the intent to withdraw water for beneficial use, it must be constructed in accordance

with the minimum standards for water supply wells, otherwise they shall be constructed in accordance with the minimum standards for resources protection wells. A water right permit, preliminary permit, or temporary permit shall be obtained prior to constructing a test well unless the anticipated use of water is exempt as provided in RCW 90.44.050. A "test well" is a type of "water well."

(54) "Tremie tube" is a small diameter pipe used to place grout, filter pack material, or other well construction materials in a well.

(55) "Turbidity" means the clarity of water expressed as nephelometric turbidity units (NTU) and measured with a calibrated turbidimeter.

(56) "Unconsolidated formation" means any naturally occurring, loosely cemented or poorly consolidated earth material including such materials as uncompacted gravel, sand, silt and clay. Alluvium, soil, and overburden are terms frequently used to describe such formations.

(57) "Vapor extraction well" means a well used to withdraw gases or vapors from soil, rock, landfill, or ground water or allow air or vapor to enter subsurface soil or rock for the purpose of remediating soil and/or ground water contamination.

(58) "Water well" means any excavation that is constructed when the intended use of the well is for the location, diversion, artificial recharge, observation, monitoring, dewatering or withdrawal of ground water.

(59) "Water well contractor" means any person, firm, partnership, copartnership, corporation, association, or other entity, licensed and bonded under chapter 18.27 RCW, engaged in the business of constructing water wells.

(60) "Well alterations" include(s), deepening, hydrofracturing or other operations intended to increase well yields or change the characteristics of the well. Well alterations does not include general maintenance, cleaning, sanitation, and pump replacement.

(61) "Well completion" means that construction has progressed to a point at which the drilling equipment has been removed from the site, or a point at which the well can be put to its intended use.

(62) "Well contractor" means a resource protection well contractor and a water well contractor.

(63) "Well driller(s)" or "driller(s)" is synonymous with "operator(s)."

(64) "Well" means water wells, resources protection wells, instrumentation wells, dewatering wells, and geotechnical soil borings. Well does not mean an excavation made for the purpose of obtaining or prospecting for oil, natural gas, geothermal resources, minerals, or products of mining, or quarrying, or for inserting media to repressure oil or natural gas bearing formations, or for storing petroleum, natural gas, or other products.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-030, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-030, filed 4/6/88; Order DE 73-10, § 173-162-030, filed 6/29/73.]

Reviser's note: RCW 34.05.395 requires the use of underlining and deletion marks to indicate amendments to existing rules, and deems ineffectual changes not filed by the agency in this manner. The bracketed material in the above section does not appear to conform to the statutory requirement.

WAC 173-162-040 How do I comply with licensing requirements? (1) A water well operator license is required for all operators engaged in constructing or decommissioning water wells.

(2) A water well operator training license is required for any trainee engaged in constructing or decommissioning water wells under the training program provisions of this chapter.

(3) A resource protection well operator license is required for all operators engaged in constructing or decommissioning resource protection wells and geotechnical soil borings.

(4) A resource protection well operator training license is required for any trainee engaged in constructing or decommissioning resource protection wells and geotechnical soil borings under the training program provisions of this chapter.

(5) General contractors, engineering firms, designers, consulting firms, or other entities need not have a licensed well operator in its employ: *Provided*, That all well construction and decommissioning associated with their various projects and/or contracts is conducted by a licensed well operator licensed under the provisions of this chapter except as provided in WAC 173-162-050.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-040, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-040, filed 4/6/88; Order DE 73-10, § 173-162-040, filed 6/29/73.]

WAC 173-162-050 Who is exempt? (1) No license under this chapter shall be required of:

(a) Any individual who personally constructs a well on land which is owned or leased by the individual, or in which the individual has a beneficial interest as a contract purchaser and is used by the individual for farm or single-family residential use only. *Provided*, the individual shall construct not more than one well every two years.

(b) An individual, except trainees, who performs labor or services for a well contractor in connection with the construction or decommissioning of a well at the direction and under the direct supervision and control of a licensed operator who is present at the construction site.

(c) A person licensed under the provisions of chapter 18.08 or 18.43 RCW if in the performance of duties covered by those licenses.

(2) An individual who constructs or decommissions a well without a license under this subsection shall comply with all other requirements of this chapter and rules adopted by the department. Those requirements include, but are not limited to:

(a) Well construction and decommissioning standards;

(b) Payment of well construction fees; and

(c) Notification of well construction required by RCW 18.104.048.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-050, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-050, filed 4/6/88; Order DE 73-10, § 173-162-050, filed 6/29/73.]

WAC 173-162-055 What types of operator licenses are available? Five types of drilling licenses are available:

(1) Water well operator training license.

(2) Resource protection well operator training license.

(3) Resource protection well operator license.

(4) Water well operator license.

(5) Conditional licenses for water or resource protection well drilling.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-055, filed 3/23/98, effective 4/23/98.]

WAC 173-162-060 How do you qualify for each license? (1) **Training licenses.**

(a) You are qualified to receive either a water or a resource protection training license if you:

(i) Submit a completed application to the department on forms provided by the department and pay the department a twenty-five dollar application fee; and

(ii) Have completed at least six hundred hours of drilling experience working under the direct supervision of a licensed operator who has held a Washington state water and/or resource protection well drilling license for at least three years; and

(iii) Have obtained six continuing education units as approved by the department; and

(iv) Pass a written examination as provided for in RCW 18.104.080; and

(v) Pass an on-site examination by the department; and

(vi) Present a statement by a person or persons licensed under this chapter, other than a trainee, signed under penalty of perjury as provided in RCW 9A.72.085, verifying that:

(A) The applicant has acquired a minimum of six hundred hours of field experience required under this chapter; and

(B) The operator has assumed liability for any and all well construction activities of the applicant while the applicant was gaining his/her six hundred hours of field experience. The operator shall not be subject to any penalties or orders that may be issued for wells constructed by the applicant that were not the responsibility of the operator to have direct supervision and control over; and

(C) A licensed operator, except a trainee, who will sponsor the trainee, has been identified on the signed statement. The licensed operator who will be sponsoring the trainee, shall assume liability for any and all well construction activities of the trainee accomplished under the operator's control during the period of the trainee's license; and

(vii) In obtaining a statement from a well operator(s) under (a)(vi) of this subsection, an applicant who has gained drilling experience under more than one operator shall submit a statement from each operator. It is not necessary to accumulate all qualifying experience under one operator. Field experience for which a statement of verification and liability cannot be obtained, shall not be used as qualifying experience under this section.

All statements shall be entered on forms provided by the department.

(b) **Terms and conditions of a training license.**

(i) A person with either a resource protection or a water well training license may construct only those types of wells for which they are licensed without being under the direct supervision of a licensed operator provided:

(A) A licensed operator is available by radio, telephone, or other means of communication; and

(B) The licensed operator can reach the drill site within one hour.

(ii) A trainee shall maintain a daily drilling log identifying all work accomplished that day. The log shall remain in the possession of the trainee at all times and shall be reviewed and initialed daily by the responsible licensed operator. The drilling log shall be available for review by department and county officials whose county has received delegated authority as provided in RCW 18.104.043.

(iii) The work documented and initialed in the drilling log may be used in your application for a license under the training program completed, licensing category of this chapter.

(iv) All verifiable work performed by a trainee under the control of a licensed operator may be carried over to subsequent operator(s) who assume liability for the trainee.

(v) A trainee may apply and qualify for only one type (resource protection or water well drilling) of training license at a time.

(2) Water well or resource protection well operator licenses.

A person shall be qualified to receive either a water or resource protection well operator license if you meet the requirements of one of the following categories:

(a) New applicant category.

(i) Applicants who have never held a well operator license and whose qualifying drilling experience was started after the effective date of this regulation qualify if they:

(A) Submit a completed application to the department on forms provided by the department and pay the department a twenty-five dollar application fee; and

(B) Submit proof that they have acquired five thousand four hundred hours of drilling experience under the direct supervision of a licensed well operator; and

(C) Submit proof that they have obtained thirty-two continuing education units; and

(D) Pass a written examination as provided for in RCW 18.104.080.

The department shall evaluate and approve all qualifying experience and educational training. If your qualifying drilling experience under (a)(i)(B) of this subsection is from another state, the department may require an on-site examination.

(ii) Applicants who have never held a well operator license and who have obtained at least twelve months of qualifying drilling experience before the effective date of this regulation qualify to receive a license if they:

(A) Submit a complete application to the department; and

(B) Pay a twenty-five dollar fee; and

(C) Pass a written exam; and

(D) Show proof that they have completed a total of twenty-four months of drilling experience under a licensed operator. Your proof must show that you started working towards a drilling license prior to the effective date of this regulation, and that you have been diligently and continuously working towards obtaining a drilling license since you

started. Proof shall consist of tax records, pay statements, or other documentation showing that you were under the supervision of a licensed operator.

(E) The department shall evaluate and approve all qualifying drilling experience. If your drilling experience under (a)(ii)(D) of this subsection is from another state, the department may require an on-site examination.

(iii) Individuals who have been working towards obtaining a drilling license but have acquired **less than twelve months** of qualifying drilling experience prior to the effective date of this chapter, may apply their education and experience towards the requirements of a training license.

(b) Training program completed category.

Applicants who have held a valid training license will be qualified to receive an operator license if they:

(i) Submit a completed application to the department on forms provided by the department and pay the department a twenty-five dollar application fee; and

(ii) Submit proof that they have worked as a licensed trainee under the provisions of this chapter for at least three thousand six hundred hours; and

(iii) Have obtained fourteen continuing education units while working under the training program.

(c) Licensed experience category.

(i) Applicants who have never held an operator license in Washington state qualify if they:

(A) Submit a completed application to the department on forms provided by the department and pay the department a twenty-five dollar application fee; and

(B) Hold a valid well operator license, or equivalent, in another state and can show proof that the license has been held for a period of at least three years. The department shall evaluate and approve all experience acquired by out-of-state licensed operators; and

(C) Have obtained thirty-two continuing educational units as approved by the department; and

(D) Pass a written examination as provided for in RCW 18.104.080; and

(E) Passed an on-site examination by the department. The on-site examination may be waived by the department.

(F) Proof of licensing under (c)(i)(B) of this subsection shall be submitted with the application for license. Proof of drilling experience may include drilling logs, federal or state tax records; employment records; or other records acceptable to the department.

(ii) Individuals, other than trainees, whose Washington operator license has been suspended, revoked, or whose license has expired may apply for a new license. These individuals qualify to receive a license if:

(A) The terms of the order of suspension or revocation have been met; and

(B) They submit a completed application to the department on forms provided by the department and pay the department a twenty-five dollar application fee; and

(C) They have obtained seven continuing educational units for each year or portion of a year the license has been revoked, suspended, or expired; and

(D) They pass a written examination as provided for in RCW 18.104.080; and

(E) They pass an on-site examination by the department.

(F) The written and/or on-site examination(s) under (c)(ii)(D) and (E) of this subsection may be waived by the department.

(3) Individuals who received an operator license for either water well or resource protection well drilling after the effective date of these regulations are qualified to receive the other license if they:

(a) Currently hold a valid well operator license under one of the categories in subsection (2) of this section. The license must have been issued by the department after the effective date of these regulations; and

(b) Submit a completed application to the department on forms provided by the department and pay a twenty-five dollar application fee; and

(c) Pass a written examination; and

(d) Pass an on-site examination if their field experience was gained in another state. The department may waive the on-site examination.

(e) Submit proof of at least six hundred hours of additional well drilling experience for the other type of license you wish to obtain. **EXAMPLE** - You currently hold a water well operator license that was issued by the department after the effective date of these regulations. You also wish to be licensed to construct resource protection wells. You will qualify to receive the resource protection operator license by making an application, paying the fee, and showing proof of six hundred hours of resource protection well drilling experience, passing a written exam, and passing an on-site exam if your drilling experience was gained in another state. Proof of experience will consist of drilling reports showing you were the operator of record on at least fifteen resource protection wells, or other documentation showing experience approved by the department.

(4) Conditional license.

(a) A conditional license may be issued to a former licensed operator for the sole purpose of authorizing the well operator to comply with an order to correct a problem with a well. The terms of the license shall detail the extent and limitations placed on the well operator. This may include limitations of work to be completed on a specific well, license expiration, and any other limitation set by the department.

(b) A conditional license cannot be issued to a person who has never held an operator license issued under the provisions of this chapter.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-060, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-060, filed 4/6/88; Order DE 73-10, § 173-162-060, filed 6/29/73.]

WAC 173-162-070 What application fees are required? Application fees are twenty-five dollars for each operator or training license.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-070, filed 3/23/98, effective 4/23/98; Order DE 73-10, § 173-162-070, filed 6/29/73.]

WAC 173-162-075 How often do I need to renew my license? (1) Licenses issued under this chapter, except a training license, shall be renewed every two years.

(1999 Ed.)

(2) A training license shall be valid for a period of two years from the time it was originally issued. A training license cannot be renewed. However, a one-time extension may be granted upon show of good cause by the trainee. The limit of the extension shall be no longer than twenty-four months and will be evaluated on a case-by-case basis. A twenty-five dollar fee will be charged for the extension.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-075, filed 3/23/98, effective 4/23/98.]

WAC 173-162-080 What are the conditions and cost of renewing a drilling license? (1) Between the 1993 legislation, Laws of 1997, chapter 387, and the adoption of these regulations implementing the legislation, the well operator licenses issued and renewed by the department met the requirements of the 1993 legislation and may be renewed for either a water well or resource protection well operator license or both as provided in subsection (2) of this section.

(2) A holder of a valid license may renew the license if they:

(a) Submit a completed application on forms provided by the department; and

(b) Except as provided in subsection (3) of this section, show proof that they successfully completed fourteen continuing education units during the past twenty-four months of the license term; and

(c) Pay a twenty-dollar renewal fee for each license they wish to renew.

(3) If you currently hold a valid operator license that was issued prior to the effective date of this regulation, you may renew that license and receive a water well operator license and/or a resource protection well operator license without meeting the requirements for continuing education until you apply for license renewal in the year 2000.

(4) If you fail to submit a completed application for renewal, the license shall expire at the end of its effective term. A complete application includes the submission of the renewal fee and proof of completion of the required continuing education.

(5) If your license has expired, you must apply for a new license as provided in this chapter.

(6) The department may refuse to renew a license if the license is currently suspended or revoked, or the licensee has not complied with an order issued by the department or has not paid a penalty imposed under RCW 18.104.155, unless the order or penalty is under appeal.

(7) Operators shall not construct or decommission a well after their license has expired.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-080, filed 3/23/98, effective 4/23/98; Order DE 73-10, § 173-162-080, filed 6/29/73.]

WAC 173-162-085 Continuing education. Ecology, with the assistance of the technical advisory group created in RCW 18.104.190, shall develop and administer a program for continuing education for the purpose of ensuring continuing professional growth and competency of licensed operators.

(1) What is continuing education?

Continuing education is your opportunity to gain additional knowledge into subjects that directly relate to the drill-

ing profession. It is designed to enhance your drilling skills, keep you informed on technological advances, and keep you informed on current state and local regulations. The ultimate goal is to ensure the highest quality of professional drilling. Continuing education is required of every person applying for an operator license and for every driller renewing an operator license.

(2) How do I obtain the required continuing education credit?

(a) Continuing education may be obtained from a number of sources. The department as well as other state and local agencies may provide continuing education classes. Additionally, private organizations or individuals may also present approved classes for credit.

(b) The primary ways to receive credits will be:

(i) Attend and/or successfully complete classes, courses, workshops, or seminars that have been preapproved for credit; and/or

(ii) Have the class, course, workshop, or seminar you plan on attending or have attended evaluated by the technical advisory group and approved by the department for credit; and/or

(iii) Completion of correspondence courses will be considered and evaluated on a case-by-case basis.

(3) How will credit be assigned?

(a) The technical advisory group shall evaluate all courses, classes, workshops, or seminars and recommend assignment of continuing education credits. Their evaluation shall be reviewed by the department for approval.

(b) The following criteria shall be utilized to evaluate and assign credit:

(i) Course agenda and how well the subject relates to the business, technical, and/or regulatory aspects of well drilling and to the knowledge, skills, and abilities required in the well drilling profession.

(ii) Subject(s) difficulty.

(iii) Instructor qualifications.

(iv) Student course evaluations may be utilized to assign credit to courses.

(c) Course sponsors may have their courses preapproved by submitting a request to the department on forms provided by the department.

(d) Individuals planning on attending or who have attended classes, courses, workshops, or seminars that were not preapproved for credit must request a course evaluation and credit approval through the department on forms provided by the department.

(e) All courses, classes, workshops, or seminars must be open to anyone who wants to attend. This does not preclude a provider from imposing reasonable requirements for attendees such as fees and providing their own safety equipment.

(4) What types of general topics, workshops or seminars will be accepted?

(a) General subject areas include: Occupational health and safety; business and office skills; interpersonal skills; technical aspects associated with drilling; and other subject areas approved by the department.

(b) Workshops, seminars, classes, or courses conducted by professional associations, governmental agencies, private

businesses, and individuals, may be accepted, provided the subject(s) meets the provisions of this chapter.

(5) How do I get credit for participating in a continuing education program?

(a) A person is qualified to receive continuing education credit upon showing proof of attendance at an approved class, course, workshop, or seminar.

(b) Proof includes: Certificates of completion; transcripts; attendance rosters; diplomas; or other documents approved by the department.

(6) General information on continuing education:

(a) Credits received during a renewal period that are in excess of the requirements cannot be used for any succeeding years. EXAMPLE: A driller earning 20 continuing educational credits during their two-year renewal period cannot apply the six credits towards a future renewal.

(b) Credits shall not be assigned to courses, workshops, classes, or seminars attended prior to July 1, 1993.

(c) It is the operator's/trainee's responsibility to track and maintain records of their continuing education credits.

(d) Continuing education units will **not be required to renew** an operator license prior to January 1, 2000.

(e) A person licensed for both water well and a resource protection well construction need only obtain fourteen continuing educational units per renewal period.

(f) A person applying to receive both a water well and resource protection well operator license need only meet the continuing education unit requirements for one license.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-085, filed 3/23/98, effective 4/23/98.]

WAC 173-162-090 Examinations—Notification of examinations. Upon receipt of a properly completed application, the department shall notify the applicant of the date, time and place of the next scheduled examination. All incomplete application forms will be returned for completion. The applicant should notify the department if the examination schedule cannot be met and the reasons therefor.

[Order DE 73-10, § 173-162-090, filed 6/29/73.]

WAC 173-162-095 What should I know about the written and on-site examinations? The written and on-site examinations for licenses issued under this chapter are prepared, administered, and evaluated by the department.

(1) What subjects will the written exam cover? The examinations are prepared to test the knowledge and understanding of the following subjects:

(a) Washington state ground water laws as they relate to constructing and decommissioning wells;

(b) Sanitary standards for constructing wells;

(c) Types of well construction and decommissioning;

(d) Drilling techniques, tools and equipment;

(e) Geology (including soil and rock description) as it relates to well construction;

(f) Rules and regulations of the department relating to constructing a well, test pumping, and equipment maintenance;

(g) Preparation of intent forms, well reports, and requests for variances;

(h) Township and range location system as it relates to location of wells;

(i) Basic ground water hydraulics as it relates to well construction and protection of the resource; and

(j) Rules and regulations of the Washington state department of health relating to source approval and source protection of public drinking water systems.

(2) What subjects will the on-site test cover?

The on-site examination shall test the applicants field skills and knowledge in the following areas:

(a) Safety.

(b) General knowledge of equipment operation.

(c) Equipment maintenance.

(d) Drilling knowledge.

(e) Well development.

(f) Implementation of the construction standards under chapter 173-160 WAC.

(3) When and where are the written examinations given?

(a) Examinations will be held at such a time and place as may be determined by the department, but not later than thirty days after the department accepts the completed application package consisting of:

(i) A completed application form with appropriate fee; and

(ii) Proof of required continuing education; and

(iii) Proof of required drilling experience.

(b) Upon receipt of a completed application package, the department shall notify you of the date, time and place of the next scheduled written examination. You shall notify the department if you cannot meet the examination schedule. Your notice shall include the reason(s) why you cannot meet the schedule.

(c) If your application package is received after an examination has been scheduled and there is either insufficient time for the department to notify you of the time and place of the examination or you are unable to take the examination at the scheduled time, the thirty-day period will start from the scheduled examination date.

(4) When and where are the on-site examinations given?

(a) You must pass the written exam before you can take the on-site exam.

(b) If you are required to take an on-site examination you will receive an authorization form along with the confirmation of your written test results.

(c) Following the receipt of your test results, you will be responsible to select an authorized on-site advisor. The advisor will assist you and the department with coordinating the on-site examination. A list of the on-site advisors will be included with your test results.

(d) You, the advisor, and the department will schedule a mutually agreed upon time and place for the on-site exam. RCW 18.104.080 requires that examinations be held within thirty days after a completed application is filed with the department. If this is not practical, you must notify the department and request an extension to the testing schedule. Your request shall include:

(i) The reason(s) why you cannot meet the schedule.

(ii) Acceptable reasons for rescheduling exams may include: Weather; availability of advisors or department staff; or health problems.

(e) Failure to complete the on-site exam within ninety days may result in having to reapply and reschedule another on-site exam.

(f) You and the on-site advisor will arrange for all the equipment, materials, and location for the on-site examination.

(g) The department must be present during the on-site examination.

(5) When will I be notified of the results of my written and on-site examination?

The department shall notify you of your test results within ten days after each examination.

(6) If I fail an exam, may I take a retest?

(a) If you fail the written or on-site exam, you shall not be entitled to take the examination, or any parts of the examination for a period of thirty days from the date of your original examination.

(b) If you failed to pass the written exam, you are considered a new applicant in all respects.

(c) If you fail the on-site exam, you will be required to arrange a retest after a thirty-day waiting period. You will not be required to retake the written exam.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080, 98-08-031 (Order 97-08), § 173-162-095, filed 3/23/98, effective 4/23/98.]

WAC 173-162-100 Examinations—Type of examinations. The examinations shall be prepared, administered and evaluated by the department. They shall be broken down into sections including a basic general category and specialist categories including but not necessarily limited to cable tool, rotary, driven and dug well construction technology. The examination shall be prepared to test the knowledge and understanding of the following subjects:

(1) Washington ground water laws as they relate to well construction;

(2) Sanitary standards for water well drilling and construction of water wells;

(3) Types of well construction;

(4) Drilling tools and equipment;

(5) Underground geology as it relates to well construction;

(6) Rules and regulations of the department and the department of social and health services relating to well construction;

(7) Preparation of well reports;

(8) Township and range location system as it relates to location of wells; and

(9) Basic ground water hydraulics as it relates to well construction.

[Statutory Authority: Chapter 18.104 RCW, 88-08-070 (Order 88-58), § 173-162-100, filed 4/6/88; Order DE 73-10, § 173-162-100, filed 6/29/73.]

WAC 173-162-120 Examinations—Notification of examination results. The department shall make a determination of the applicant's qualifications for a license within ten days after the examination and notify said applicant of the results within ten days after such determination.

[Order DE 73-10, § 173-162-120, filed 6/29/73.]

WAC 173-162-130 Licenses—General. It is the intent of the department in its implementation of the licensing phase of the Washington Water Well Construction Act to effect a smooth transition of this requirement into the well construction industry without causing undue hardship on individuals and/or businesses whose livelihood is dependent upon continuing work in this field.

[Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-130, filed 4/6/88; Order DE 73-10, § 173-162-130, filed 6/29/73.]

WAC 173-162-140 What are the requirements to become an on-site testing advisor? (1) To qualify to be an on-site testing advisor you must:

(a) Be a Washington state licensed operator in good standing; and

(b) Have held that Washington state operator license for a period of five years; and

(c) Not have been issued an order or penalty under chapter 18.104 RCW, except for failure to renew a license; and

(d) Pass a written evaluation of your drilling expertise and an oral interview provided by the department; and

(e) Enter a written agreement with the department which will describe the scope, duties, and responsibilities of the on-site testing advisor.

(2) All agreements will be evaluated on an annual basis and renewed upon approval of the department.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-140, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-140, filed 4/6/88; Order DE 73-10, § 173-162-140, filed 6/29/73.]

WAC 173-162-190 What are the responsibilities of well contractors and their agents? (1) The well contractor shall be responsible for designating an agent to represent its dealing with the department.

(2) The agent must be a Washington state licensed operator other than a trainee.

(3) The agent shall notify the department of all licensed operators and trainees who are working for the well contractor.

(4) Notification shall be made within ninety days of enactment of this regulation.

(5) After the initial notification, the agent shall notify the department of all terminations and new hires within thirty days.

(6) The well contractor shall notify the department within thirty days of making any change of agent.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-190, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-190, filed 4/6/88; Order DE 73-10, § 173-162-190, filed 6/29/73.]

WAC 173-162-200 What are the department of ecology's enforcement options? In enforcement of this chapter, the department of ecology may impose sanctions that are appropriate under authorities vested in it, including issuance of regulatory orders under RCW 43.27A.190, civil penalties under RCW 90.03.600 and 18.104.155, and criminal penalties under RCW 18.104.160.

[Title 173 WAC—p. 264]

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-200, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-200, filed 4/6/88.]

WAC 173-162-210 Can I appeal enforcement actions? Yes, you can appeal the department of ecology's decision to the pollution control hearings board. All final written decisions of the department of ecology pertaining to permits, regulatory orders, and related decisions made under this chapter shall be subject to review by the pollution control hearings board in accordance with chapter 43.21B RCW.

[Statutory Authority: Chapter 18.104 RCW and RCW 43.21A.080. 98-08-031 (Order 97-08), § 173-162-210, filed 3/23/98, effective 4/23/98. Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-210, filed 4/6/88.]

WAC 173-162-220 Regulation review. The department of ecology shall initiate a review of the rules established in this chapter whenever new information, changing conditions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: Chapter 18.104 RCW. 88-08-070 (Order 88-58), § 173-162-220, filed 4/6/88.]

Chapter 173-166 WAC

EMERGENCY DROUGHT RELIEF

WAC

173-166-010	Purpose.
173-166-020	Authority.
173-166-030	Definitions.
173-166-040	General eligibility rule.
173-166-050	Forecast of drought conditions.
173-166-060	Orders declaring drought conditions.
173-166-070	Emergency drought permits.
173-166-080	Temporary transfers of water rights.
173-166-090	Funding assistance—General criteria.
173-166-100	Funding assistance—Agricultural criteria.
173-166-110	Funding assistance—Fisheries criteria.

173-166-130	Appeals.
173-166-140	Regulation review.

WAC 173-166-010 Purpose. The legislature in 1989 gave permanent drought relief authority to the department of ecology and enabled ecology to issue orders declaring drought emergencies. Chapter 171, Laws of 1989 amends chapter 43.83B RCW (Water supply facilities).

(1) Chapter 171, Laws of 1989 authorizes the Washington state department of ecology (ecology) to assist in alleviating future drought conditions throughout the state, and sets forth the criteria and procedures for implementing the 1989 drought relief legislation.

(2) Ecology has authority under chapter 171, Laws of 1989 to:

(a) Issue emergency permits to withdraw public waters as an alternate source of water supply.

(b) Approve water right transfers between willing parties.

(c) Provide funding assistance for eligible drought projects and measures.

[Statutory Authority: RCW 43.83B.420. 91-03-081 (Order 90-53), § 173-166-010, filed 1/17/91, effective 2/17/91. Statutory Authority: 1977 c 339 § 75. 78-04-019 (Order 78-3), § 173-166-010, filed 3/10/78.]

(1999 Ed.)

WAC 173-166-020 Authority. This regulation is promulgated by the department of ecology under authorities and procedures provided in chapter 171, Laws of 1989 after notification as provided in chapter 34.05 RCW.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-020, filed 1/17/91, effective 2/17/91. Statutory Authority: 1977 c 339 § 75, 78-04-019 (Order 78-3), § 173-166-020, filed 3/10/78.]

WAC 173-166-030 Definitions. As used in this chapter:

- (1) "Ecology" is the department of ecology.
- (2) "Drought conditions" are water supply conditions where a geographical area or a significant part of a geographical area is receiving, or is projected to receive, less than seventy-five percent of normal water supply as the result of natural conditions and the deficiency causes, or is expected to cause, undue hardship to water users within that area.
- (3) "Essential minimum" for the fisheries resource is:
 - (a) That amount of water or flow rate established as a regulation adopted by ecology pursuant to RCW 90.22.020 or 90.54.050;
 - (b) That amount of water or flow placed as a proviso on a water right permit or certificate; or
 - (c) That amount of water or flow established on an interim basis to assure the maintenance of fisheries requirements. Such a determination will be made by ecology, in consultation with, among others, the departments of fisheries and wildlife, any concerned federal agencies and affected Indian tribes.
- (4) "Executive water emergency committee (EWEC)" is a committee, chaired by the governor's office, including members of state, local, and federal agencies which reviews water supply information provided by the water supply availability committee and determines potential effects of water shortages upon the state of Washington. Affected Indian tribes will be invited to participate.
- (5) "Geographical area" is an area within the state of Washington which can be described either by natural or political boundaries and which can be specifically identified in an order declaring a drought emergency. Examples of specific geographical areas include, but are not limited to:
 - (a) The state of Washington.
 - (b) Counties.
 - (c) Water resource inventory areas (WRIAs) as defined in chapter 173-500 WAC.
 - (d) Individual watersheds which constitute only a portion of a WRIA but whose boundaries can be topographically described.
 - (e) Ground water management areas and subareas as defined in chapter 173-100 WAC.
 - (f) Designated sole source aquifers.
 - (g) Combinations of the above areas.
- (6) "Normal water supply" is:
 - (a) For the purpose of the determination of drought conditions, the average amount of water available to a geographical area on an annual basis, based upon evaluation of precipitation, streamflow, snowpack and other hydrological and meteorological factors.
 - (b) For the purpose of eligibility for drought assistance:
 - (i) That amount of water put to beneficial use during the irrigation season for the irrigation of one or more crops, using

reasonably efficient practices, including reasonable conveyance losses, under a valid water right permit or certificate, or a supported registered water right claim; or

(ii) That amount or flow of water required for normal operations of fish hatchery or fish passage facilities. Such facilities, where required by law, must be operating under a valid water right permit or certificate, or under a supported registered water right claim; or

(iii) The median amount or flow of water that is historically required to provide normal instream habitat conditions for the existing fishery population.

(7) "Previously established activities" include:

(a) The irrigation of a specified number of acres, using reasonably efficient practices, under a valid water right permit or certificate, or a supported registered water right claim.

(b) Those fish-management activities presently employed to maintain the fisheries resource. The resource itself must neither be restored nor enhanced by drought relief actions available under the provisions of this chapter.

(c) The delivery of water by public and private entities through existing supply systems to present populations, areas, and/or facilities for purposes that are nonagricultural and nonfishery related.

(8) "Reasonably efficient practices" are those practices including, but not limited to, methods of conveyance, use, and disposal of water which are reasonable and appropriate under the circumstances to bring about water use efficiency as determined by an area-specific application of criteria identified by ecology, which may include, among others:

(a) Customary practices in the area;

(b) Reasonableness of any facilities at the time of installation;

(c) Cost of improvements and impacts of the costs of upgrading facilities on the continued use of water by an appropriator;

(d) Changes in water use practices and technology; and

(e) Impact of alternative water use practices on other water uses and the environment.

(9) "Supported registered water right claim" is a registered water right claim which includes sufficient evidence to satisfy ecology that a valid water right would be confirmed should the claim be adjudicated. Applications made for emergency drought permits, water transfers, or funding assistance under this chapter must incorporate, either by reference or inclusion, necessary information to enable ecology to make an informed determination with respect to the claim. Such information may include, but is not limited to:

(a) Documentation of continuous historical exercise of the claimed right;

(b) Historical maps depicting the historical means of irrigation and the areas covered by the claimed right;

(c) Legal documentation, including any previous court or administrative board decisions, which addresses the historical nature and extent of the claimed right;

(d) "Old-timer" testimony which addresses the historical nature and extent of the claimed right.

(10) "Water supply availability committee (WSAC)" is a committee, with a core membership consisting of ecology, the National Weather Service, the Soil Conservation Service, the U.S. Geological Survey, the U.S. Bureau of Reclamation,

and other federal agencies involved in water supply forecasting, which reviews pertinent hydrological and meteorological information and assesses water supply conditions for the state of Washington.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-030, filed 1/17/91, effective 2/17/91. Statutory Authority: 1977 c 339 § 75, 78-04-019 (Order 78-3), § 173-166-030, filed 3/10/78.]

WAC 173-166-040 General eligibility rule. (1) Applications for emergency drought permits, water transfers, or funding assistance made under this chapter will be processed only for previously established activities in a geographical area or part of a geographical area declared to be suffering from drought conditions. Where required by law, such activities must be conducted under a valid water right permit, certificate, or supported registered water right claim.

(2) Applications will be processed if the water user is receiving, or is projected to receive, less than seventy-five percent of normal water supply for the previously established activity and experiencing undue hardship as a result.

(3) All permits and approvals issued under this chapter will be subject to existing rights.

(4) Water obtained through the issuance of temporary permits, water right transfers, and/or funding assistance for projects or measures must be put to beneficial use in lieu of water which is unavailable because of drought conditions.

(5) All permits and approvals issued under this chapter will be of a temporary nature and will contain an expiration date.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-040, filed 1/17/91, effective 2/17/91. Statutory Authority: 1977 c 339 § 75, 78-04-019 (Order 78-3), § 173-166-040, filed 3/10/78.]

WAC 173-166-050 Forecast of drought conditions.

(1) Whenever it appears to the department of ecology that drought conditions as defined in WAC 173-166-030(2) either exist or are forecast to occur, ecology will consult with the state's water supply availability committee or its successor. Other appropriate sources of water supply information, such as the Columbia River water management group and the U.S. Army Corps of Engineers, may be consulted by the WSAC as needed.

(2) Should the water supply availability committee determine that a geographical area or a part of a geographical area is receiving, or is likely to receive, seventy-five percent or less of its normal water supply, it will advise the executive water emergency committee and the Indian tribes within the area of that fact. The executive water emergency committee will then make a determination as to whether or not undue hardships will occur as a result of the shortage.

(3) Should the executive water emergency committee determine that an area will suffer undue hardship as a result of a reduced water supply, it will submit a recommendation to that effect to the governor for written approval. Affected Indian tribes will be notified at the time such a recommendation is submitted.

(4) Upon securing the written approval of the governor, ecology will then issue an order declaring a geographical area or a significant part of a geographical area to be suffering

from drought conditions and publish that order in a newspaper of general circulation in the area affected by the order.

(5) The determination of drought conditions will be based upon the updated seasonal forecast as applied to the water supply conditions within the designated geographical area or part of a designated geographical area.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-050, filed 1/17/91, effective 2/17/91. Statutory Authority: 1977 c 339 § 75, 78-04-019 (Order 78-3), § 173-166-050, filed 3/10/78.]

WAC 173-166-060 Orders declaring drought conditions.

(1) If the department of ecology determines that a geographical area or part of a geographical area is suffering from drought conditions, it may, upon the advice of the water supply availability committee, with the concurrence of the executive water emergency committee, and the written approval of the governor, issue an order to that effect.

(2) The order declaring drought conditions for a geographical area or part of a geographical area must contain the following elements:

(a) A description of the geographical area or part of a geographical area which is being so designated.

(b) The facts leading to the issuance of the order.

(c) The statutory authority upon which the order is being issued.

(d) The commencement date and termination date of the order. The termination date may be no later than one calendar year from the date the order is issued.

(e) Brief descriptions of the actions which are possible under the order.

(f) Provisions for the termination of withdrawals if essential minimum flows are jeopardized.

(3) Ecology must publish the order declaring a geographical area or a part of a geographical area to be suffering from drought conditions in a newspaper of general circulation in the area affected by the order.

(4) Persons may file written protest as to the contents of the order with ecology. Ecology will have fifteen calendar days from the date of receipt of the protest in which to make a determination as to its validity, using the procedure specified in WAC 173-166-050.

(5) A person who believes that an area should be declared to be suffering from drought conditions may petition ecology for such a declaration. Upon the receipt of such a petition, ecology will have fifteen calendar days from the date of receipt of the petition in which to make a determination as to its validity, using the procedure specified in WAC 173-166-050, and provide a decision to the applicant. The petition should contain the following information:

(a) A description of the geographical area or part of a geographical area which is being requested for designation.

(b) The nature of the relief sought in requesting such a designation.

(c) The facts upon which the petition is based.

(6) Orders declaring areas to be suffering from drought conditions may, with the written approval of the governor, be amended one or more times to change the termination date, provided that the termination date of the order, as amended, is no more than two calendar years from the date the order is first issued.

(7) Orders declaring areas to be suffering from drought conditions may be issued for different areas of the state and sequentially for the same area if drought conditions persist.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-060, filed 1/17/91, effective 2/17/91. Statutory Authority: 1977 c 339 § 75, 78-04-019 (Order 78-3), § 173-166-060, filed 3/10/78.]

WAC 173-166-070 Emergency drought permits.

Ecology may allow water users to obtain water from alternate sources during drought conditions. To accomplish this, ecology may issue emergency drought permits authorizing withdrawals of ground water and surface water, including dead storage in reservoirs. Permits will be processed under the following criteria:

(1) Applicants must be conducting a previously established activity within a geographical area or part of a geographical area declared to be suffering from drought conditions.

(2) An application will be processed if the water user is receiving, or is projected to receive, less than seventy-five percent of normal water supply, as the result of natural drought conditions, for the previously established activity and experiencing, or is expected to experience, undue hardship as a result.

(3) Ecology, plus all state and local agencies with authority to issue permits or other authorizations in connection with emergency actions authorized under the provisions of this chapter, will have fifteen calendar days from the date of receipt of the respective application(s) in which to provide a decision to the applicant. Agencies with authority to review applications for emergency drought permits, such as under RCW 75.20.050, and affected Indian tribes will have fifteen calendar days from the date ecology receives the application in which to provide ecology with an opinion as to any effects of the proposed withdrawal.

(4) Waters authorized to be withdrawn must be used in relation to a previously established activity as defined in this chapter. The permit must not cover irrigation of new lands, restoration or enhancement of the fisheries resource, or a water supply in addition to the normal amount used in the past by individuals, private entities, or public bodies.

(5) Waters to be withdrawn must constitute an alternate (supplemental) water supply to the user's normal source of water.

(6) The withdrawal must not reduce flows or levels below essential minimums necessary to assure the maintenance of fisheries requirements and to protect federal and state interests including, but not limited to, power generation, navigation, water quality, and existing water rights.

(7) Emergency drought permits issued under this chapter will be temporary in nature and must expire no later than the expiration date of the order declaring the area in which the permitted activity is authorized to be suffering from drought conditions.

(8) Priority will be given to domestic and irrigation uses of water for any emergency withdrawals authorized under this chapter.

(9) Emergency drought permits issued under this chapter must contain provisions for termination should the with-

drawal reduce flows or levels below essential minimums as defined in this chapter.

(10) To expedite the issuance of emergency drought permits, ecology is authorized to process the applications and issue the permits without compliance with requirements for:

(a) Notice of newspaper publication.

(b) The State Environmental Policy Act.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-070, filed 1/17/91, effective 2/17/91. Statutory Authority: Chapters 43.83B and 43.27A RCW, 88-13-037 (Order 88-11), § 173-166-070, filed 6/9/88.]

WAC 173-166-080 Temporary transfers of water rights. (1) Ecology may approve emergency water right changes in order to effect a transfer of water between willing parties. Water right changes can include purpose of use, place of use, and point of diversion.

(2) Examples of possible water right transfers include, but are not limited to, the following situations:

(a) A water right holder may choose to reduce irrigated acreage and transfer the unused water to another water right holder whose normal water supply is decreased by drought conditions. The acreage irrigated with transferred water on the second parcel may not exceed the acreage reduction on the first parcel.

(b) A water right holder may transfer a water right from an out-of-stream use to an instream use.

(c) Municipalities or other public bodies may transfer water between one another.

(3) Requests for water right transfers will be processed under the following criteria:

(a) Applicants must be conducting a previously established activity within a geographical area or part of a geographical area declared to be suffering from drought conditions.

(b) An application for a water right transfer will be processed if the recipient water user is receiving, or is projected to receive, less than seventy-five percent of normal water supply, as the result of natural drought conditions, for the previously established activity and experiencing, or is expected to experience, undue hardship as a result.

(c) All approvals by ecology for water right transfers under this chapter will be temporary in nature and will be for the purpose of alleviating drought conditions. These approvals must terminate no later than the expiration date of the order which declares the area to be suffering from drought conditions.

(d) Water right transfers between willing parties may be approved when an emergency exists only if such a transfer will not affect existing rights whatsoever, or reduce flows or levels below essential minimums, or adversely affect federal and state interests including, but not limited to, power generation, navigation, and water quality.

(e) Water rights may be transferred within areas declared to be suffering from drought conditions. Water rights may also be transferred from outside an area declared to be suffering from drought conditions into an area declared to be suffering from drought conditions, provided such a transfer of water is physically possible and is consistent with the provisions of RCW 90.03.380, 90.03.390, and 90.44.100. Water

rights will not be transferred from within an area declared to be suffering from drought conditions to outside that area.

(f) To expedite water transfers during drought conditions, ecology can approve temporary changes in water rights without compliance with requirements for:

- (i) Notice of newspaper publication.
- (ii) The State Environmental Policy Act.

(g) In those cases where temporary water transfers require court approval while general adjudication proceedings are ongoing, ecology will assist the court in coordination, maintaining communications, and providing technical assistance when requested.

(h) The temporary changing of a water right under this chapter will not be admissible as evidence in either supporting or contesting the validity of water claims in a general adjudication of water rights in the state of Washington.

(i) Ecology, plus all state and local agencies with authority to issue permits or other authorizations in connection with emergency actions authorized under the provisions of this chapter, will have fifteen calendar days from the date of receipt of the respective application(s) in which to provide a decision to the applicant. Agencies with authority to review applications for temporary water right transfers, such as under RCW 75.20.050, and affected Indian tribes will have fifteen calendar days from the date ecology receives the application in which to provide ecology with an opinion as to any effects of the proposed transfer.

[Statutory Authority: RCW 43.83B.420. 91-03-081 (Order 90-53), § 173-166-080, filed 1/17/91, effective 2/17/91.]

WAC 173-166-090 Funding assistance—General criteria. Ecology may provide funding assistance to public bodies for projects and measures designed to alleviate drought conditions relating to agricultural and fisheries survival. Funding is available from emergency agricultural water supply funds under RCW 43.83B.300. Funding assistance will be based upon the total funds available at the beginning of the current biennium. General criteria under which funds will be provided:

(1) Public bodies eligible to receive emergency funds are defined in RCW 43.83B.050 as "... the state of Washington, or any agency, political subdivision, taxing district, or municipal corporation thereof, an agency of the federal government, and those Indian tribes now or hereafter recognized as such by the federal government for participation in the federal land and water conservation program and which may constitutionally receive grants or loans from the state of Washington."

(2) The public body applying for emergency funds must be conducting the previously established activity for which they seek funding assistance within an area declared to be suffering from drought conditions as defined in WAC 173-166-030(2).

(3) The public body applying for emergency funds must be receiving, or be projected to receive, less than seventy-five percent of normal water supply, as the result of natural drought conditions, for the previously established activity for which they seek funding assistance and experiencing, or be expected to experience, undue hardship as a result.

(4) Funding assistance will be for planning, acquisition, construction, rehabilitation, and improvement of water supply facilities and for other appropriate measures to assure the survival of irrigated agriculture and the state's fisheries resource.

(5) Funding assistance will be available only for projects or measures undertaken in response to drought conditions which are beyond the normal scope of operations of the public body applying for emergency funds.

(6) No more than ten percent of total available funds will be allocated for nonagricultural drought relief purposes, including the preservation of the state's fisheries during a given biennium.

(7) Funding assistance may be in the form of a loan or a grant or a combination loan and grant.

(8) Loans, grants, or combination loans and grants may be used as matching funds in cases where federal, local, or other funds are also available.

(9) Emergency loans may be approved with a payback period not to exceed fifteen years, with the interest rate to be equal to the final discount rate established for one year U.S. Treasury Bills at the first auction following the beginning of the state fiscal year in which the loan is approved.

(10) Ecology, plus all state and local agencies that are affected by the proposed project or measure, in keeping with the emergency nature of these provisions, will process the respective application(s) and provide a decision(s) to the applicant in an expeditious manner.

(11) To expedite the implementation of drought relief projects and measures, ecology can approve funding assistance without compliance with requirements for:

- (a) Notice of publication.
- (b) The State Environmental Policy Act.

[Statutory Authority: RCW 43.83B.420. 91-03-081 (Order 90-53), § 173-166-090, filed 1/17/91, effective 2/17/91.]

WAC 173-166-100 Funding assistance—Agricultural criteria. (1) Funding assistance to alleviate drought conditions in irrigated agriculture will be provided under the following formula:

(a) No single entity will receive more than ten percent of the total funds available for drought relief.

(b) A loan may be made for up to ninety percent of total eligible project costs.

(c) A combination loan and grant may be made for up to one hundred percent of total eligible project costs.

(d) A grant or the grant portion of a combination loan and grant may be made for twenty percent of total eligible project costs if the public body being provided funds is within a geographical area declared to be suffering from drought conditions as defined in WAC 173-166-030(2).

(e) The grant or grant portion of a combination loan and grant may be made for up to forty percent of total eligible project costs if the public body being provided funds is receiving, or is forecast to receive, fifty percent or less of normal seasonal water supplies.

(f) A grant or the grant portion of a combination loan and grant may be amended to increase the grant up to forty percent of eligible project costs if drought conditions as defined

in this chapter change after a grant has been signed for twenty percent of eligible project costs, provided:

(i) That the grantee qualifies for the higher grant as defined in (e) of this subsection; and

(ii) That the original grant agreement has not been terminated or closed out.

(g) The grant or grant portion of a combination loan and grant, once signed by all parties, may not be reduced despite any subsequent improvement in water supply conditions.

(2) Eligibility conditions for each proposed agricultural project or measure are:

(a) The proposed project or measure must be within an area declared to be suffering from drought conditions as defined in WAC 173-166-030(2).

(b) The public body applying for emergency funds must be receiving, or be projected to receive, less than seventy-five percent of normal water supply and experiencing, or be expected to experience, undue hardship as a result for the previously established activity for which they seek funding assistance.

(c) The proposed project or measure must be for a beneficial use involving a previously established activity or purpose.

(d) The proposed project or measure must assist in alleviating a water shortage.

(e) The public body receiving the loan must satisfy ecology as to its ability to repay the loan and complete the project or measure.

(f) Water derived from the project or measure must be put to beneficial use as a substitute for water not available because of a drought.

(g) Water derived from the project or measure must not be used to irrigate new lands.

(h) The proposed project or measure must not adversely affect existing rights, including both instream and out-of-stream rights.

(i) All required permits and approvals for the proposed project or measure must be obtained by the applicant prior to a loan or grant agreement being signed.

(3) Eligible projects that may be funded for drought relief of irrigated agriculture include, but are not limited to:

(a) Pumps and accessories.

(b) Discharge lines.

(c) Pipelines.

(d) Canals and laterals with control structures.

(e) Liners for leaky pipes and canals.

(f) Diversion structures.

(g) Reregulating reservoirs.

(h) Measuring devices.

(i) Wells with pumps and accessories.

(4) Eligible measures that may be funded include the means for implementing water conservation procedures, acquiring alternate water sources, or transferring water rights, provided that the proposed measure represents an additional cost to the applicant as the result of drought conditions, and not as a substitute for normal water supply costs.

(a) Types of eligible measures for implementing water conservation procedures include, but are not limited to:

(i) Irrigation scheduling programs and activities, including the necessary personnel to accomplish such activities.

(ii) Education programs.

(b) Types of eligible measures for acquiring alternate water sources or transferring water rights include, but are not limited to:

(i) Water leasing fees.

(ii) Repair costs.

(iii) Power costs.

(5) Priority will be given to those proposed agricultural projects and measures which:

(a) Need additional water supplies. Need will be measured by:

(i) The short-term and long-term effects that the water shortage would have on the applicant's crops in the absence of drought relief;

(ii) The capability and reliability of the proposed project or measure to provide an emergency water supply to the applicant;

(iii) The percent of water shortage expected for each applicant.

(b) Are the most effective in achieving long-term reductions (conservation) in water requirements and/or more efficient use of available supplies.

(c) Present no, or minimal, overall environmental impacts, including any detrimental effects to wetlands. Any such impacts should be identified to the best extent possible by the applicant at the time of application.

(6) Preference will be given to those public bodies implementing water conservation plans, water system efficiency improvements, and other drought contingency actions in addition to the funding assistance applied for under this chapter.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-100, filed 1/17/91, effective 2/17/91.]

WAC 173-166-110 Funding assistance—Fisheries criteria. (1) Ecology may provide funding assistance to alleviate drought conditions affecting the state's fisheries resource provided that no other capital budget funds are available for these purposes at the date of application, as verified by the office of financial management. Funding assistance will be based upon the following formula:

(a) A loan may be made for up to ninety percent of total eligible project costs.

(b) A combination loan and grant may be made for up to one hundred percent of total eligible project costs.

(c) A grant or the grant portion of a combination loan and grant may be made for twenty percent of total eligible project costs if the public body being provided funds is within a geographical area declared to be suffering from drought conditions as defined in WAC 173-166-030(2).

(d) The grant or the grant portion of a combination loan and grant may be made for up to forty percent of total eligible project costs if the public body being provided funds is receiving, or is forecast to receive, fifty percent or less of normal seasonal water supplies.

(e) A grant or the grant portion of a combination loan and grant may be amended to increase the grant up to forty percent of eligible project costs if drought conditions as defined in this chapter change after a grant has been signed for twenty percent of eligible project costs, provided:

(i) That the grantee qualifies for the higher grant as defined in (d) of this subsection; and

(ii) That the original grant agreement has not been terminated or closed out.

(f) The grant or grant portion of a combination loan and grant, once signed by all parties, may not be reduced despite any subsequent improvement in water supply conditions.

(g) No more than ten percent of total funds available at the beginning of the current biennium will be allocated for nonagricultural drought relief purposes, including the preservation of the state's fisheries, during that biennium.

(2) Eligibility conditions for each proposed fisheries project are:

(a) The project lies within a geographic area declared to be suffering from drought conditions.

(b) The proposed project must assist in alleviating the water shortage.

(c) Water from the proposed project must be put to beneficial use as a substitute for water not available because of the drought.

(d) Water derived from projects that are provided funding assistance must not be used to restore or enhance the fisheries resource.

(3) Eligible projects that may be funded for the protection of fish culture at hatcheries from drought conditions include, but are not limited to:

(a) Purchase and installation of water-reuse pumps.

(b) Modifying hatchery outlet structures.

(c) Modifying stream channels adjacent to a hatchery to assure passage to the holding pond.

(d) Provision and maintenance of oxygen levels in off-site holding ponds by purchase and installation of bottle gas (using air stones), or oxygen generation systems, or mechanical aeration.

(4) Eligible projects that may be funded to protect instream fish habitat from drought conditions include, but are not limited to:

(a) Augmentation of instream flows through transfers of diversionary surface and ground water rights.

(b) Augmentation of instream flows through temporary withdrawals of ground waters.

(c) Stream channel modification such as trenching, sandbagging, or berming to protect spawning gravels.

(5) Eligible projects that may be funded to optimize fish survival during drought conditions include, but are not limited to:

(a) Capture and relocation of stranded fish.

(b) Stream channel modification such as trenching, sandbagging, or berming to provide migratory channels for fish passage.

(6) The departments of fisheries and wildlife, plus any potentially affected Indian tribes, will be consulted to verify eligibility, needs, and nature of all proposed fisheries projects and measures.

(7) Preference will be given to those public bodies implementing water conservation plans, water system efficiency improvements, and other drought contingency actions in addition to the funding assistance applied for under this chapter.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-110, filed 1/17/91, effective 2/17/91.]

WAC 173-166-120 Requests for drought relief—Contacts—Applications. (1) Information regarding implementation of this chapter, and applications for emergency drought permits, water right transfers, and/or funding assistance can be obtained from the ecology headquarters office, water resources program, or from any of the four ecology regional offices. Ecology regional offices are located in Redmond, Spokane, Tumwater, and Yakima.

(2) Copies of statutes and regulations cited in this chapter may be obtained from the ecology headquarters office in Olympia.

(3) Ecology actions pertaining to the determination of which areas are suffering from drought conditions, the issuance of orders declaring areas to be suffering from drought conditions, plus any actions concerning protests of such declarations or petitions for consideration for such a designation will be conducted by the ecology headquarters office, water resources program.

(4) Ecology actions pertaining to emergency drought permits and water right transfers will be conducted by the appropriate ecology regional office.

(5) The ecology headquarters office, water resources program, will administer funding assistance and manage the drought relief program in accordance with the provisions of this chapter.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-120, filed 1/17/91, effective 2/17/91.]

WAC 173-166-130 Appeals. All final written decisions of the department of ecology made pursuant to this chapter shall be subject to review by the pollution control hearings board in accordance with the provisions of chapter 43.21B RCW.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-130, filed 1/17/91, effective 2/17/91.]

WAC 173-166-140 Regulation review. The department of ecology will initiate a review of the rules established in this chapter whenever new information, changing conditions, or statutory modifications make it necessary to consider revisions.

[Statutory Authority: RCW 43.83B.420, 91-03-081 (Order 90-53), § 173-166-140, filed 1/17/91, effective 2/17/91.]

WAC 173-170-010 Purpose and authority. The purpose of this chapter is to establish requirements for the grant and loan program covering rehabilitation, improvement, and construction of agricultural water supply facilities pursuant to Referendum 38, chapter 43.99E RCW. The department shall provide grants and loans to applicants for water supply facilities for agricultural use alone or in combination with fishery, recreational, or other beneficial uses of water. In this regard, an objective of providing state assistance to public bodies engaged in irrigation shall be to assist those entities in improving their efficiency of water use beyond current levels.

Note: All statutes, rules, or regulations cited in this chapter are available for review at Department of Ecology, Mailstop PV-11, Olympia, WA 98504-8711.

[Statutory Authority: RCW 43.17.060. 90-20-109, § 173-170-010, filed 10/2/90, effective 11/2/90.]

WAC 173-170-020 Definitions. (1) "Department" means the Washington state department of ecology.

(2) "Agreement" means a binding legal document containing all applicable terms and conditions pertaining to loans and/or grants entered into under Referendum 38 which is signed by the program manager for the department's water resources program and by the duly authorized official of the applicant.

(3) "Agricultural water supply facility" means a water supply and distribution system used for agricultural purposes and owned or operated by a public body, including but not limited to all equipment, utilities, structures, real property, and interests in and improvements on real property necessary for or incidental to the acquisition, construction, installation, or use of any such water supply or distribution system.

(4) "Applicant" means the public body making a request for financial assistance under Referendum 38.

(5) "Class A project" means a construction element associated with an agricultural water supply facility which:

(a) Results in improved water use efficiency and/or quantitative water savings as determined by the department; and

(b) Is one or more of the following: (i) Canal and lateral linings; (ii) piped conveyance and distribution system; (iii) consolidation and/or realignment of delivery systems; (iv) flow measuring devices, e.g., flow control devices; (v) entire structures/regulating structures (which are new or replace obsolete ones) including: (A) Checks, (B) checkdrops, (C) siphons, (D) turnouts, (E) flumes, (F) reregulation reservoirs; (vi) multiple use water storage dams and reservoirs; (vii) automation with central control of regulating structures including on-off control of pumping plants in canals and laterals; (viii) new booster pumps for pressurized systems; (ix) project pumping plants;

(c) In the event there are technological advances that increase water use efficiency and/or result in significant water savings that are not described in (a) of this subsection, such project element(s) will be evaluated as a Class A project by the department.

(6) "Class B project" means a construction element associated with an agricultural water supply facility which:

(a) Does not contribute to quantitative water savings as determined by the department; and

(b) Is one or more of the following: (i) In-line water withdrawal pumping plant; (ii) well drilling, well pumps; (iii) diversion dams; (iv) replacement, rehabilitation, or improvement of in-line booster pump(s); (v) rehabilitation or improvement of storage dam(s) or part(s) thereof.

(7) "Emergency project" means a capital improvement construction element to repair, due to natural causes (except drought), water supply, diversion or conveyance facilities, which is necessary to prevent unsafe conditions or ensure the continued delivery or conveyance of water in the agricultural water supply system.

(8) "Financial assistance" means grants and loans as authorized by chapter 43.99E RCW, Referendum 38.

(9) "Fisheries facility" means a construction element associated with an agricultural water supply facility which:

(a) Is identified as an integral element of a project for the construction, rehabilitation, and/or improvement of an agricultural water supply facility; and

(b) Will provide recognized benefits to the anadromous and/or resident fish species of the state.

(10) "Implementation phase" means the acquisition, design, construction, and improvement of agricultural water supply facilities within an irrigation district or a specific area or drainage basin for storing, diverting, transporting, or distributing water to land for irrigation and for protecting and enhancing fisheries, recreational, or other beneficial uses that may be associated with such facilities.

(11) "Local clearinghouse" means the county or regional comprehensive planning agency designated to serve as a coordinating office for certain local areas. A list of clearinghouses is available from the department. The local clearinghouses review proposed projects for conformance to regional plans, ask for comments from other agencies, and relay these remarks back to the applicant. This process helps assure that policies and comprehensive plans of cities, counties, or regions will be followed.

(12) "Payment schedule" means the due dates for loan payments and any interest thereon, as included in the loan agreement.

(13) "Planning phase" means the preparation of a comprehensive water conservation plan which conforms with WAC 173-170-060, which covers the applicant's entire jurisdiction and service area.

(14) "Plans and specifications" means engineering information and calculations to support the project and construction drawings with necessary engineering detail of the project and complete material specifications and standards to support the drawings and project. These will be prepared in sufficient detail and, upon approval by the department, become part of the bid documents which allow contractors to bid on and construct agricultural water supply facilities or attendant fisheries facilities or recreational facilities or a portion thereof.

(15) "Public body" means the state of Washington or any agency, political subdivision, taxing district, or municipal or public corporation thereof; an agency of the federal govern-

ment; and those Indian tribes which may constitutionally receive grants or loans from the state of Washington.

(16) "Recreational facility" means a water and/or water-associated system which:

(a) Is identified as an integral element of an agricultural water supply facility; and

(b) Will provide recognized benefits for human use and recreation through fishing, boating, water skiing, swimming, rafting, picnicking, and/or camping.

(17) "Referendum 38" means the grant and loan financial assistance program and its procedures, which pertain to agricultural water supply facilities alone or in combination with fishery, recreational, or other beneficial uses of water, as authorized in chapter 43.99E RCW.

(18) "Request for financial assistance" means the formal application packet, as described in WAC 173-170-030 and 173-170-060, submitted to the department requesting grant and/or loan funds to accomplish an eligible project.

(19) "Small parcels" means those lands which:

(a) Have been platted or subdivided prior to the enactment of the 1985 amendment to RCW 58.17.310; and

(b) Are entitled to receive irrigation water for noncommercial use; and

(c) Lie wholly within an irrigation district established under state laws prior to July 28, 1985.

(20) "Water use efficiency elements" means those implementation projects or portions thereof which result in reduced operational and conveyance losses and improved delivery of requisite amounts of water to farms within the limits of the pertinent water right permit or certificate.

[Statutory Authority: RCW 43.17.060. 90-20-109, § 173-170-020, filed 10/2/90, effective 11/2/90.]

WAC 173-170-030 Application process—Planning phase. (1) Requests for financial assistance for the planning phase shall be submitted to the department between November 1 of any year and the last day of February of the following year.

(2) The applicant shall submit an application form with the following minimum information:

(a) Who shall prepare the comprehensive plan;

(b) A projected completion date for the comprehensive plan;

(c) A United States Geological Survey Quadrangle or comparable map of the area to be covered by the comprehensive plan.

(3) Requests for loan funding must be accompanied by a resolution executed by the applicant's governing body that they will follow the procedures for indebtedness in chapter 87.03 RCW and establish a reserve account into which funds will be deposited in an amount adequate to provide coverage for principal and interest payments due under the loan agreement, whenever circumstances beyond the applicant's control preclude payments from standard sources.

(4) Within ninety days of receipt of the request for financial assistance, the department will notify the applicant of its preliminary findings regarding eligibility. In all cases the department shall make its final selection of funded projects and notify the applicants no later than May 31 following the application period.

[Title 173 WAC—p. 272]

[Statutory Authority: RCW 43.17.060. 90-20-109, § 173-170-030, filed 10/2/90, effective 11/2/90.]

WAC 173-170-040 Comprehensive water conservation plan—Contents—Funding. The comprehensive water conservation plan, which is the ultimate work product due at the end of the planning phase, will address and provide information on the following topics for the geographical area indicated in the request for financial assistance:

Applicant Organization

(1) Applicant's statutory authority; history of organization management; assessment authority; and operation procedures and management policies.

Land Base and Land Use

(2) Layout map showing:

(a) Boundaries of the applicant's jurisdiction and service area;

(b) Location of: (i) The lands which are assessed by the applicant, and (ii) those lands to which water is delivered in accordance with the water rights or water right claims or otherwise;

(c) Land use information including total acres irrigated over a representative historical period and cropping patterns for each year of a recent five-year period.

Water Supply, Use, and Rights

(3) Layout map showing location of: (a) Natural features (streams, rivers, lakes, ground water aquifers) including those in the watershed(s) where the water supply originates; and (b) all of the applicant's existing water supply facilities inside and out of its service area.

(4) Information on the applicant's and/or pertinent individual's water rights and/or water right claims for irrigation water supply, including ongoing or future water rights or water rights claims, conflicts, and litigation.

(5) Hydrologic water supply data including historical records of surface water availability (natural flows and storage), and ground water pumpages and other pertinent aquifer data on availability for withdrawal for water supply purposes.

(6) Quantities of surface water diverted and/or ground water withdrawn for water supply for each year of a recent five-year period. (Annual and monthly acre-feet and maximum and minimum monthly flows in cfs (surface) and gpm (ground water).)

(7) Identify and assess the hydrological water flow system within the applicant's service area as it pertains to the quantities of water: (a) Diverted or withdrawn, (b) conveyed and distributed, (c) delivered and applied on farm, (d) which recharge the ground water and are returned to the agricultural water supply system, and (e) which comprise return flows for further irrigation downstream within the agricultural water supply system.

(8) Identify the quality of water supply and an assessment of the water quality impacts from use of the agricultural water supply system within the applicant's jurisdiction.

Present Facilities and Operations

(9) Identify and describe the present physical system utilized for the storage, diversion, pumping, conveyance, and distribution of the water supply.

(10) Assess and evaluate the existing water supply system including system efficiencies and energy use.

Water Needs and Adequacy of Water Supply

(11) Forecast future trends of land use.

(12) Estimate irrigation water requirements for the present and anticipated land use and cropping patterns.

(13) Relate the water needs to present water supply available.

Evaluation of Opportunities for Improvements in Water Supply and Distribution System Efficiencies

(14) Identify improvements in water supply and distribution system efficiencies (structural and nonstructural).

(15) Document a system improvements and rehabilitation plan, prepare preliminary designs and cost estimates, and estimate time frame for implementation. Identify location of improvements on layout map.

(16) Quantify the reasonable net water savings that would result from the efficiency improvements.

(17) Identify and describe opportunities for improving irrigation water management.

(18) Quantify any net energy savings that would result from efficiency improvements.

(19) Evaluate the socioeconomic impacts from the efficiency improvements and rehabilitation plan and changes or modifications of the systems operations and management policies. Discuss and quantify the benefits that accrue from the implementation of the improvements and rehabilitation plan.

(20) Assess and evaluate the impacts and benefits of transferring the net water savings to other water uses and resources.

(21) Identify associated wetlands and assess the impacts on them from implementation of the physical system's improvements and rehabilitation plan.

(22) Evaluate the impacts on water quality standards from implementation of the physical system's improvements and rehabilitation plan.

(23) Evaluate other environmental impacts from the efficiency improvements and rehabilitation plan. Develop a plan regarding compliance with the State Environmental Policy Act (SEPA) and the National Environmental Policy Act (NEPA) if applicable.

Financial

(24) Develop a financial program that addresses the implementation of the improvements and rehabilitation plan. The financial program should include, among other elements, a time schedule for completing the comprehensive water conservation plan, a summary of the applicant's current indebtedness and repayment plans, present and future operation, maintenance and energy costs (with and without implementation of the proposed project), and a schedule of assessments to cover planned indebtedness to complete implementation of the comprehensive water conservation plan.

[Statutory Authority: RCW 43.17.060, 90-20-109, § 173-170-040, filed 10/2/90, effective 11/2/90.]

WAC 173-170-050 Planning phase—Funding. (1)

Financial assistance will be available for the planning phase in the form of:

(1999 Ed.)

(a) Grants in the amount of fifty percent of the total eligible phase costs; and

(b) Concurrent loans in the amount of forty percent of the total eligible phase costs.

(2) Loans shall be for a maximum five-year period, repayable at an annual percentage rate which equals the rate for one year federal treasury bills at the first auction following July 1 of the year in which the loan agreement is entered into, discounted by four percent.

(3) Comprehensive water conservation plans must precede the implementation phase for projects approved after the effective date of these rules, with the following exceptions:

(a) Specific project work approved by the department prior to the effective date of these rules; or

(b) Project work that is currently in the implementation phase, when these rules become effective; or

(c) Specific project work that is approved by the department as part of a phased project begun prior to the effective date of these rules.

For these exceptions, work may proceed without an approved comprehensive water conservation plan, provided that the applicant undertakes and completes its plan covering such projects within two years from the effective date of these rules.

(4) Financial assistance for the planning phase, regardless of the form it takes, may not exceed two hundred thousand dollars per applicant. This ceiling shall not be subject to the review contained in WAC 173-170-080(5).

[Statutory Authority: RCW 43.17.060, 90-20-109, § 173-170-050, filed 10/2/90, effective 11/2/90.]

WAC 173-170-060 Application process—Implementation phase. (1) Requests for financial assistance for the implementation phase shall be submitted to the department between November 1 of any year and the last day of February of the following year.

(2) The applicant will submit two preapplication forms to the nearest local clearinghouse; one for the department and one for planning and community affairs. These forms are available from either the department or the clearinghouse.

(3) The applicant shall accompany the request for financial assistance with a copy of the completed comprehensive water conservation plan as approved by the department indicating which part(s) of the plan the proposed project fits under and the location of the proposed project on a United States Geological Survey Quadrangle map or any other comparable and readily available map.

(4) Within ninety days of receipt of the request for financial assistance, the department will notify the applicant of its preliminary findings regarding eligibility as to organization, type of project, purpose(s) of project, and conformance with the objectives of Referendum 38. In all cases the department shall make its final selection of funded projects and notify the applicant no later than May 31 of the year following the close of the current application period.

(5) Requests for loan funding must be accompanied by a resolution executed by the applicant's governing body that they will follow the procedures for indebtedness in chapter 87.03 RCW and establish a reserve account into which funds will be deposited in an amount adequate to provide coverage

for principal and interest payments due under the loan agreement, whenever circumstances beyond the applicant's control preclude payments from standard sources.

[Statutory Authority: RCW 43.17.060. 90-20-109, § 173-170-060, filed 10/2/90, effective 11/2/90.]

WAC 173-170-070 Criteria for approval of requests for financial assistance—Implementation phase. (1)(a) The implementation phase project(s) must be included in a comprehensive water conservation plan approved by the department.

(b) For projects that received approval from the department prior to the effective date of these rules, work may proceed provided the applicant undertakes and completes a comprehensive water conservation plan within two years of the effective date of these rules.

(2) The agricultural water supply facilities must be designed to accomplish the purpose of the planned project. Accepted engineering design principles, criteria, and concepts will be used in the design of the facilities and approved by the department. Cost estimates for the proposed project must be prepared in detail. Plans and specifications must be approved by the department prior to advertising for construction bids.

(3) The State Environmental Policy Act (SEPA) requirements for any proposed actions must be met. The SEPA rules, chapter 197-11 WAC, will be followed to determine the environmental impacts of the proposed project. A copy of the environmental assessment and the final impact statement, if appropriate, must be submitted to the department. If no impact statement has been prepared, a copy of the declaration of nonsignificance in accordance with chapter 197-11 WAC must be submitted to the department.

(4) Documentation showing all lands and land rights required for satisfactory construction, operation, and maintenance of the project have been or can be acquired.

(5) The project will not be in conflict with any applicable federal, state, and local laws, orders, regulations, rules, licenses, and permits.

[Statutory Authority: RCW 43.17.060. 90-20-109, § 173-170-070, filed 10/2/90, effective 11/2/90.]

WAC 173-170-080 Implementation phase—Funding. (1) Implementation phase projects will be categorized by the department as Class A projects or Class B projects in accordance with the definitions for those terms under WAC 173-170-020 (5) and (6).

(2) For projects that received approval from the department prior to the effective date of these rules and where the applicant is working on the comprehensive water conservation plan, financial assistance will be available as follows:

(a) For Class A projects, grants in the amount of twenty-five percent of the total eligible project costs; and concurrent loans in the amount of sixty-five percent of the total eligible project costs.

(b) For Class B projects, grants in the amount of fifteen percent of the total eligible project costs; and concurrent loans in the amount of seventy-five percent of the total eligible project costs.

[Title 173 WAC—p. 274]

(3) Financial assistance for Class A projects subject to a completed comprehensive water conservation plan will be available in the form of:

(a) Grants in the amount of thirty percent of the total eligible project costs; and

(b) Concurrent loans in the amount of sixty percent of the total eligible project costs.

(4) Financial assistance for Class B projects subject to a completed comprehensive water conservation plan will be available in the form of:

(a) Grants in the amount of fifteen percent of the total eligible project costs; and

(b) Concurrent loans in the amount of seventy-five percent of the total eligible project costs.

(5) Financial assistance for implementation phase projects shall be limited to a total of one million five hundred thousand dollars per applicant regardless of the form such financial assistance takes, with the following possibility of increase. This cap shall be subject to review on July 1, 1994. In the event that demand on the Referendum 38 fund is significantly less than anticipated this cap may be adjusted upwards to provide more funding possibilities to applicants already at the upper limit.

(6) Loans shall be available on the following repayment and interest schedule:

(a) Loans for up to a maximum five-year period, repayable with interest at an annual percentage rate which equals the rate for one year federal treasury bills at the first auction following July 1 of the year in which the loan agreement is entered into, discounted by four percent.

(b) Loans for five years through a maximum ten-year period, repayable with interest at an annual percentage rate which equals the rate for one year federal treasury bills at the first auction following July 1 of the year in which the loan agreement is entered into, discounted by two percent.

(c) Loans for ten years through a maximum fifteen-year period, repayable with interest at an annual percentage rate which equals the rate for one year federal treasury bills at the first auction following July 1 of the year in which the loan agreement is entered into, discounted by one percent.

(d) Loans for fifteen years through a maximum twenty-five-year period, repayable with interest at an annual percentage rate which equals the rate for one year federal treasury bills at the first auction following July 1 of the year in which the loan agreement is entered into.

[Statutory Authority: RCW 43.17.060. 90-20-109, § 173-170-080, filed 10/2/90, effective 11/2/90.]

WAC 173-170-090 Emergency projects—Applications—Designation—Funding. (1) Applications for emergency projects may be accepted at any time throughout the year. The application shall indicate:

(a) The nature of the occurrence that caused the need for repairs;

(b) The location of needed repairs;

(c) A project description of the repairs; and

(d) A summary of how the repairs fit within the long-range improvements addressed in the comprehensive water conservation plan.

If the comprehensive water conservation plan has not been completed, a summary of how the repairs fit within proposed long-range improvements.

(2) Upon receipt of the application the department will designate the emergency project as a Class A or Class B project. A decision on whether to fund the emergency project will be made within fifteen days of receipt of the application. The department may agree to the applicant incurring costs prior to an agreement being signed and shall so indicate by letter to the applicant.

(3) Financial assistance for emergency projects shall take the following form:

(a) For Class A projects, grants in the amount of thirty percent of the total eligible project costs; and concurrent loans in the amount of sixty percent of the total eligible project costs; or

(b) For Class B projects, grants in the amount of fifteen percent of the total eligible project costs; and concurrent loans in the amount of seventy-five percent of the total eligible project costs.

[Statutory Authority: RCW 43.17.060. 90-20-109, § 173-170-090, filed 10/2/90, effective 11/2/90.]

WAC 173-170-100 Small parcels—Funding. (1) A small parcel element is that part of an implementation project that provides irrigation water for noncommercial use to small parcels, as defined in WAC 173-170-020(19).

(2) Financial assistance for the small parcel element shall be available in the form of:

(a) Grants in the amount of fifteen percent of the small parcel element's total eligible costs; and

(b) Loans in the amount of fifty percent when unaccompanied by a grant or thirty-five percent in combination with a grant of the small parcel element's total eligible costs.

(3) Financial assistance, whether grant, loan, or a combination grant and loan, may not exceed one hundred thousand dollars for any one applicant.

(4) Total funds available state-wide for small parcel elements is one million dollars. Any moneys unspent out of that fund on July 1, 1995, shall be transferred to the general implementation fund and shall no longer be available for small parcel elements.

[Statutory Authority: RCW 43.17.060. 90-20-109, § 173-170-100, filed 10/2/90, effective 11/2/90.]

WAC 173-170-110 Fisheries and recreational facilities—Funding. (1) A fisheries or recreational facility element is the part of an implementation project that provides public benefits through concomitant use of water within an agricultural water supply facility. Specific elements are defined in WAC 173-170-020 (9) and (16).

(2) Financial assistance for the fisheries and/or recreational element shall be available as grants in the amount of seventy-five percent of the fisheries and/or recreational element's total eligible costs.

(3) Financial assistance for a fisheries and/or recreational element may not exceed five hundred twenty-five thousand dollars for any one applicant, which sum is not part of the cap on funding for the implementation phase, contained in WAC 173-170-080(5).

(1999 Ed.)

[Statutory Authority: RCW 43.17.060. 90-20-109, § 173-170-110, filed 10/2/90, effective 11/2/90.]

WAC 173-170-120 Supplemental guidelines. The department will publish guidelines which will describe in greater detail the financial assistance application, application review and funding issuance processes, the terms of financial assistance, and other elements of this program. These guidelines will also describe recommended methodologies for the completion of the comprehensive water conservation plan.

[Statutory Authority: RCW 43.17.060. 90-20-109, § 173-170-120, filed 10/2/90, effective 11/2/90.]

Chapter 173-175 WAC

DAM SAFETY

WAC

PART ONE GENERAL

173-175-010	Purpose and authority.
173-175-020	Applicability.
173-175-030	Definitions.
173-175-040	Activities that require department review, approval, acceptance, authorization, or notification.
173-175-050	Provision of guidelines.
173-175-060	Change of ownership.
173-175-070	Effective date.

PART TWO CONSTRUCTION PERMIT PROCESS

173-175-100	Construction permit.
173-175-110	Sequence of permitting actions.
173-175-120	Application for construction permit.
173-175-130	Engineering design reports.
173-175-140	Plans and specifications.
173-175-150	Construction permit fee.
173-175-160	Review standards.
173-175-170	Construction inspection plan.
173-175-180	Issuance of construction permit.
173-175-190	Construction change orders.
173-175-200	Department role in construction inspection.
173-175-210	Operation and maintenance plan.
173-175-220	Emergency action plan.
173-175-230	Declaration of construction completion.
173-175-240	Authorization to commence or resume project operation.
173-175-250	Construction records summary.
173-175-260	Exceptions to construction permit process.
173-175-270	Department review response time.

PART THREE CONSTRUCTION PERMIT FEES

173-175-350	Authority for construction permit fees.
173-175-360	Construction permit fees for new project construction.
173-175-370	Construction permit fees for modifications of existing dams.
173-175-380	Maintenance.
173-175-390	Payment of construction permit fees.
173-175-400	Cost of expert opinion.

PART FOUR PROJECT OPERATION

173-175-500	Operation and maintenance.
173-175-510	Inspection.
173-175-520	Emergency action.
173-175-530	Reporting of incidents.

PART FIVE COMPLIANCE AND ENFORCEMENT

173-175-600	Right of entry.
173-175-610	Emergencies.
173-175-620	Enforcement.
173-175-630	Appeals.

DISPOSITION OF SECTIONS FORMERLY
CODIFIED IN THIS CHAPTER

1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.

- 173-175-700 Applicability to projects licensed or exempted by the Federal Energy Regulatory Commission (FERC). [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-700, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-710 Coordination between the department and the Federal Energy Regulatory Commission (FERC). [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-710, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-720 Construction or modification of FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-720, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-730 Construction permit fee for FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-730, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-740 Construction inspection of FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-740, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-750 Construction records reporting for FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-750, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-760 Exceptions to construction permit for FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-760, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-770 Operation of FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-770, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-780 Periodic inspection of FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-780, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-790 Emergency action plans for FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-790, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-800 Right of entry at FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-800, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-810 Enforcement at FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-810, filed 12/16/92, effective 1/16/93.] Repealed by 95-22-030, filed 10/24/95, effective 11/24/95. Statutory Authority: 1995 c 8.
- 173-175-820 Appeals for FERC licensed projects and FERC exempted projects. [Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-820, filed 12/16/92, effective

PART ONE
GENERAL

WAC 173-175-010 Purpose and authority. These regulations provide for the comprehensive regulation and supervision of dams in order to reasonably secure safety to life and property pursuant to chapters 43.21A, 43.27A, 86.16, 90.03, 90.28, and 90.54 RCW. The purposes of these regulations are to:

- (1) Designate the types of dams to which these regulations are applicable;
- (2) Provide for the design, construction, operation, maintenance, and supervision of dams in a manner consistent with accepted engineering practice;
- (3) Establish and administer a program for permitting of construction work for new dams and for modifications of existing dams;
- (4) Establish a fee schedule based on dam size that will reflect the actual cost to the department of engineering review of plans and specifications and for construction inspections;
- (5) Establish the requirements and owner responsibilities for developing and executing plans for operation and maintenance, owner inspection and emergency actions; and
- (6) Encourage owners to establish a program for the periodic inspection of their projects.

[Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-010, filed 6/1/92, effective 7/2/92.]

WAC 173-175-020 Applicability. (1) These regulations are applicable to dams which can impound a volume of ten acre-feet or more of water as measured at the dam crest elevation. The ten acre-feet threshold applies to dams which can impound water on either an intermittent or permanent basis. Only water that can be stored above natural ground level and which could be released by a failure of the dam is considered in assessing the storage volume.

The ten acre-feet threshold applies to any dam which can impound water of any quality, or which contains any substance in combination with sufficient water to exist in a liquid or slurry state at the time of initial containment.

(2) For a dam whose dam height is six feet or less and which meets the conditions of subsection (1) of this section, the department may elect to exempt the dam from these regulations.

The decision by the department to exempt a dam will be made on a case-by-case basis for those dams whose failure is not judged to pose a risk to life and minimal property damage would be expected (downstream hazard class 3).

(3) These regulations do not apply to dams that are, or will be, owned, by an agency of the federal government which has oversight on operation and maintenance and has its own dam safety program for periodic inspection of completed projects. The department will continue to be the state repository for pertinent plans, reports, and other documents related to the safety of federally owned dams.

(4) These regulations do not apply to transportation facilities such as roads, highways, or rail lines which cross water-

courses and exist solely for transportation purposes and which are regulated by other governmental agencies.

Those transportation facilities which cross watercourses and which have been, or will be, modified with the intention of impounding water on an intermittent or permanent basis and which meet the conditions of subsection (1) of this section shall be subject to these regulations.

(5) These regulations do not apply to dikes or levees constructed adjacent to or along a watercourse for protection from natural flooding or for purposes of floodplain management.

(6) These regulations do not apply to concrete or steel water storage tanks.

(7) These regulations do not apply to FERC licensed projects and to FERC exempted projects. The department will continue to maintain a repository for pertinent plans, reports, and other documents related to the safety of FERC licensed and FERC exempted projects.

[Statutory Authority: 1995 c 8, 95-22-030 (Order 94-15), § 173-175-020, filed 10/24/95, effective 11/24/95. Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061, 93-01-090 (Order 92-35), § 173-175-020, filed 12/16/92, effective 1/16/93; 92-12-055 (Order 91-17), § 173-175-020, filed 6/1/92, effective 7/2/92.]

WAC 173-175-030 Definitions. As used in this chapter:

"Acceptance" means acceptance by the department that the proposed plan(s) will satisfactorily address issues associated with proper operation, maintenance, inspection, or emergency action.

"Approval" means approval by the department that the proposed design, and plans and specifications conform to accepted engineering practice and department guidelines.

"Appurtenant works" means such structures as outlet works and associated gates and valves; water conveyance structures such as spillways, channels, fish ladders, tunnels, pipelines, or penstocks; powerhouse sections; and navigation locks, either in the dam or adjacent thereto.

"Authorization" means written acknowledgement from the department to proceed with proposed actions.

"Construction change order" means a revision to the department approved plans and specifications that is initiated during construction.

"Construction permit" means the permit which authorizes construction and that the project's plans and specifications and construction inspection plan have been reviewed and approved by the department.

"Construction permit process" means the sequence of activities specified in WAC 173-175-110 inclusive, beginning with the application for construction permit and ending with the submission of a report summarizing construction records.

"Crest length" means the total horizontal distance measured along the axis of the dam, at the elevation of the top of the dam, between abutments or ends of the dam. Where applicable, this includes the spillway, powerhouse sections, and navigation locks, where they form a continuous part of the impounding structure.

"Critical project element" means an element of a project whose failure could result in the uncontrolled release of the reservoir.

"Dam" means any artificial barrier and/or any controlling works, together with appurtenant works that can or does impound or divert water.

"Dam abutment" means that contact location at either end and beneath the flanks of a dam where the artificial barrier joins or faces against the natural earth or rock foundation material upon which the dam is constructed.

"Dam height" means the vertical distance from the natural bed of the stream or watercourse at the downstream toe of the impounding barrier to the maximum storage elevation. If the dam is not across a stream or watercourse, the height is measured from the lowest elevation of the outside limit of the impounding barrier to the maximum storage elevation.

"Department" means the department of ecology.

"Design step level" means an integer value between one and eight used to designate increasingly stringent design loadings and conditions for design of critical project elements.

"Downstream hazard classification" means a rating to describe the potential for loss of human life and/or property damage if the dam were to fail and release the reservoir onto downstream areas. Downstream hazard classifications of 3, 2 and 1C, 1B, 1A correspond to low, significant, and high downstream hazard classes respectively.

"Emergency condition" means a situation where life and property are at imminent risk and actions are needed within minutes or hours to initiate corrective actions and/or warn the public.

"Enlargement" means any modification of a project that will result in an increase in normal pool height and/or dam height.

"Exigency condition" means a situation where the dam is significantly underdesigned according to generally accepted engineering standards or is in a deteriorated condition and life and property are clearly at risk. Although present conditions do not pose an imminent threat, if adverse conditions were to occur, the situation could quickly become an emergency.

"FERC exempted project" means a project that is classified as exempt by the Federal Energy Regulatory Commission (FERC) under provisions of the Federal Power Act.

"FERC licensed project" means a project whose operation is licensed by the Federal Energy Regulatory Commission (FERC) under provisions of the Federal Power Act.

"Freeboard" means the vertical distance between the dam crest elevation and some reservoir level of interest.

"Hydrograph" means a graphical representation of discharge, stage, or other hydraulic property with respect to time for a particular location on a watercourse.

"Impounding barrier" means the structural element of the dam that has the primary purpose of impounding or diverting water. It may be constructed of natural and/or man-made materials.

"Incident" means the occurrence of any dam-related event where problems or conditions arise which may have posed a threat to the safety or integrity of the project or which may have posed a threat of loss of life or which resulted in loss of life.

"Inflow design flood (IDF)" means the reservoir inflow flood hydrograph used for sizing the spillways and for deter-

mining freeboard. It represents the largest flood that a given project is designed to safely accommodate.

"Maintenance" means those tasks generally accepted as routine in keeping the project and appurtenant works in a serviceable condition.

"Maximum storage elevation" means the maximum attainable water surface elevation of the reservoir pool that could occur during extreme operating conditions. This elevation normally corresponds to the crest elevation of the dam.

"Miscellaneous construction elements" means a variety of construction elements or activities such as, but not limited to: Reservoir linings; parapet walls or low berms for wave containment; minor reconstruction of isolated portions of the impounding barrier; internal drainage improvements; and erosion protection.

"Modification" means any structural alteration of a dam, its reservoir, spillway(s), outlet(s), or other appurtenant works that could significantly influence or affect the project safety.

"Normal pool height" means the vertical distance between the lowest point of the upstream toe of the impounding barrier and the normal storage elevation.

"Normal storage elevation" means the maximum elevation to which the reservoir may rise under normal operating conditions. Where the principal spillway is ungated, the normal storage elevation is usually established by the elevation of the spillway crest.

"100-year floodplain" means the area inundated during the passage of a flood with a peak discharge having a one percent chance of being equalled or exceeded in any given year at a specified location on a watercourse.

"Outlet" means a conduit and/or channel structure for the controlled release of the contents normally impounded by a dam and reservoir.

"Owner" means the person holding lawful title to the dam or any person who owns or proposes to construct a dam.

"Periodic inspection" means a detailed inspection of the dam and appurtenant works conducted on regular intervals and includes, as necessary, associated engineering analyses to confirm the continued safe operation of the project.

"Person" means any individual, firm, association, county, public or municipal or private corporation, agency, or other entity whatsoever.

"Plans and specifications" means the detailed engineering drawings and specifications used to describe the layout, materials, construction methods, etc., for assembling a project or project element. These do not include shop drawings or other drawings prepared by the construction contractor for temporary construction support systems.

"Population at risk" means the number of people who may be present in areas downstream of a dam and could be in danger in the event of a dam failure.

"Project" means a dam and its reservoir either proposed or existing.

"Project engineer" means a professional engineer licensed in Washington, having direct supervision, as defined in WAC 196-24-095, in managing the engineering aspects of the project as representative of the owner.

"Reservoir" means any basin that contains or will contain the water impounded by a dam.

"Reservoir routing" means the procedures used to determine the attenuating effect of reservoir storage on a flood as it passes through a reservoir.

"Rule curve" means the rules and procedures used to regulate reservoir levels and project operation for various reservoir inflows and for both normal and unusual seasonal conditions.

"Significant enlargement" means any modification of an existing dam that results in the dam height or normal pool height being increased by an amount greater than 5.0 feet, and which also represents a ten percent or greater increase in dam height or normal pool height over that which existed prior to the modification.

"Spillway" means a channel structure and/or conduit for the safe release of water or floodwater.

"Stop work order" means an administrative order issued to temporarily halt construction work until a problem can be resolved.

"Substantially complete" means that a plan, action, or project element requires only minor additions to be complete, and in its present state will perform the necessary functions for its intended use.

"Surficial inspection" means a visual inspection conducted to identify obvious defects or changed conditions.

[Statutory Authority: 1995 c 8, 95-22-030 (Order 94-15), § 173-175-030, filed 10/24/95, effective 11/24/95. Statutory Authority: RCW 43.21A.064, [43.21A].080 and 86.16.061, 93-01-090 (Order 92-35), § 173-175-030, filed 12/16/92, effective 1/16/93; 92-12-055 (Order 91-17), § 173-175-030, filed 6/1/92, effective 7/2/92.]

WAC 173-175-040 Activities that require department review, approval, acceptance, authorization, or notification. (1) Activities related to the safety of dams that require review and approval by the department as detailed in this chapter include:

- (a) Construction of a new dam;
- (b) Modification of an existing dam;
- (c) Removal or abandonment of an existing dam;
- (d) Construction change orders for project elements that could have an effect on public safety.

(2) Activities related to the safety of dams that require review and acceptance by the department as detailed in this chapter include:

- (a) Adoption of an operation and maintenance (O&M) plan;
- (b) Adoption of an emergency action plan (EAP);
- (c) Changes to existing operation and maintenance procedures or to an emergency action plan that could have an effect on public safety.

(3) Activities related to the safety of dams that require authorization from the department before proposed actions can proceed include:

- (a) Startup of construction: For a new dam; modifications to an existing dam; or removal or abandonment of an existing dam.

(b) Initial controlled filling of a reservoir following new dam construction and implementation of procedures for normal reservoir operation.

(c) Resumption of normal reservoir operation following dam modifications or emergency action.

(4) Activities related to the safety of dams that require a notification to the department as detailed in this chapter include:

- (a) Change of dam ownership;
- (b) Advance notice of the startup of dam construction;
- (c) Declaration by the project engineer of project completion in accordance with the department approved plans and specifications and construction change orders;
- (d) Advance notice of periodic inspection; and
- (e) The occurrence of an incident at the dam.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-040, filed 6/1/92, effective 7/2/92.]

WAC 173-175-050 Provision of guidelines. The department will develop and maintain *Dam Safety Guidelines* to aid dam owners and project engineers in complying with the department requirements in developing, producing, or conducting:

- (1) Engineering design reports;
- (2) Plans and specifications;
- (3) Construction inspection plans;
- (4) Operation and maintenance plans;
- (5) Periodic inspections; and
- (6) Emergency action plans.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-050, filed 6/1/92, effective 7/2/92.]

WAC 173-175-060 Change of ownership. When a change of ownership of a dam occurs, the new owner shall notify the department within ninety days following the transaction and provide:

- (1) The mailing address and telephone number where the owner can be contacted.
- (2) The name(s) and telephone number(s) of the individual(s) who will be responsible for operation and maintenance of the dam.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-060, filed 6/1/92, effective 7/2/92.]

WAC 173-175-070 Effective date. The effective date of Parts One through Five of this chapter shall be July 1, 1992.

[Statutory Authority: 1995 c 8, 95-22-030 (Order 94-15), § 173-175-070, filed 10/24/95, effective 11/24/95. Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-070, filed 12/16/92, effective 1/16/93; 92-12-055 (Order 91-17), § 173-175-070, filed 6/1/92, effective 7/2/92.]

PART TWO CONSTRUCTION PERMIT PROCESS

WAC 173-175-100 Construction permit. (1) Any person intending to construct or modify any dam shall, before beginning said construction or modification, submit plans and specifications and a construction inspection plan for review and approval by the department.

(2) The approval of these documents will be indicated by the department's plan approval stamp on the cover sheet of the plans signed by the department's professional engineer who had primary responsibility for the engineering review.

(1999 Ed.)

(3) The return of the construction plans to the owner will be accompanied by a construction permit which authorizes construction and which must be prominently displayed at the construction site.

(4) A copy of the department approved plans and specifications shall be maintained at the construction site.

(5) Construction work shall not proceed until the plans, specifications, and construction inspection plan have been approved by the department.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-100, filed 6/1/92, effective 7/2/92.]

WAC 173-175-110 Sequence of permitting actions. The sequence of tasks to be completed by the owner or the project engineer, and the actions taken by the department in permitting dam construction are outlined below. A more complete description of the required tasks, reports, and plans are described in later sections, and additional guidance in meeting department requirements is contained in the department documents titled *Dam Safety Guidelines*. The following outline is listed to give an overview of the normal sequence of actions for construction of a new dam. Subsections (9), (10), and (11) of this section will not be required for modification of an existing dam where the department has previously accepted the project's operation and maintenance plan and emergency action plan.

- (1) Submission of application for construction permit, including initial nonrefundable fee payment.
- (2) Submission of engineering design report(s).
- (3) Submission of plans and specifications.
- (4) Payment of construction permit fee.
- (5) Submission of construction inspection plan.
- (6) Resolution of any outstanding engineering issues.
- (7) Department approves plans and specifications and issues construction permit.
- (8) Construction or modification of dam.
- (9) Submission of operation and maintenance (O&M) plan.
- (10) Submission of emergency action plan (EAP).
- (11) Department accepts O&M plan and EAP.
- (12) Declaration by project engineer that project was constructed or modified in accordance with approved plans and specifications and construction change orders.
- (13) Department concurs with project engineer that project was constructed or modified in accordance with approved plans and specifications and construction change orders.
- (14) Department authorizes filling of reservoir at new dam or resumption of normal operations at existing dam.
- (15) Submission of a report summarizing the construction records.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-110, filed 6/1/92, effective 7/2/92.]

WAC 173-175-120 Application for construction permit. (1) The department shall supply an application form to be used to initiate the process for obtaining the construction permit.

[Title 173 WAC—p. 279]

(2) The application form shall be submitted to the department at the time that the first substantive engineering information becomes available about the proposed project.

(3) An initial, nonrefundable payment which may represent all or a portion of the construction permit fee, shall be included along with the application form. The amount of the initial construction permit fee payment is defined in WAC 173-175-390.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-120, filed 6/1/92, effective 7/2/92.]

WAC 173-175-130 Engineering design reports. (1)

Engineering design reports summarizing the various engineering investigations and pertinent project information are an important element of the project design documents. All pertinent engineering design reports that have been prepared during project formulation shall be submitted for review. The engineering design report(s) must bear the seal and signature of the project engineer.

(2) The engineering design reports shall be sufficiently complete so as to support the development of plans and specifications without substantial change or additional information.

(3) The engineering design report(s) shall be comprehensive in description of the various engineering investigations.

(a) For new project construction, the engineering design report(s) shall include, as a minimum, the items listed in subsection (4) of this section:

(b) For modifications of existing dams, the engineering design report(s) shall include, as a minimum, those items listed in subsection (4) of this section which represent changed conditions from original construction or which address items that have not been previously addressed in prior reports that were submitted to the department.

(4) Contents of engineering design report(s):

(a) A description of the basic purposes of the project, normal operational characteristics and any unique or important design considerations associated with the site or project configuration.

(b) A description of the site geology, seismicity and geotechnical considerations including: A presentation of the findings from subsurface explorations based on test pits and/or boring logs; field tests; laboratory testing and classification of samples; and an identification of the seismotectonic provinces that could generate earthquakes large enough to significantly affect the project site.

(c) A description of the climatic and hydrologic characteristics of the site and tributary watershed including the computation of the inflow design flood and, where applica-

ble, a listing of the input and output data for the computer model used to determine the inflow design flood.

(d) A listing of all sources of inflow to the reservoir.

(e) The size classification of the proposed project as defined by Table 1.

TABLE 1. DAM SIZE CLASSIFICATION

SIZE CLASSIFICATION	DAM HEIGHT
Small Dam	Less than 15 feet
Intermediate Dam	15 feet or greater but less than 50 feet
Large Dam	50 feet or greater

(f) The reservoir operation classification of the proposed project as defined by Table 2.

TABLE 2. RESERVOIR OPERATION CLASSIFICATION

RESERVOIR OPERATION CLASSIFICATION	DETERMINING FACTOR
Permanent Pool or Seasonal Pool Operation	Steady state seepage or saturated flow conditions occur in impounding barrier and foundation at or near normal pool conditions.
Intermittent Operation	Duration of normal high pool condition is insufficient for steady state seepage or saturated flow conditions to develop in impounding barrier and foundation.

(g) An assessment of the consequences of dam failure on downstream areas, including:

(i) An estimation of the magnitude of the dam break flood hydrographs resulting from hypothetical dam failures occurring with the reservoir at normal storage elevation and maximum storage elevation;

(ii) A general description of the areas downstream of the dam that could be affected by floodwater from a dam failure;

(iii) If there is the potential for loss of life, an inundation map delineating the maximum areal extent of flooding that could be produced by a dam failure. Inundation mapping should extend to a point downstream where the inundation from the dam failure is within the 100-year floodplain for the affected watercourse;

(iv) The downstream hazard classification as defined by Table 3, which reflects the current conditions of development in downstream areas. The most serious potential consequences of failure of those listed in columns 3A, 3B, and 3C shall be used to establish the appropriate downstream hazard classification.

TABLE 3. DOWNSTREAM HAZARD CLASSIFICATION

DOWNSTREAM HAZARD POTENTIAL	DOWNSTREAM HAZARD CLASSIFICATION	COLUMN 3A POPULATION AT RISK	COLUMN 3B ECONOMIC LOSS GENERIC DESCRIPTIONS	COLUMN 3C ENVIRONMENTAL DAMAGES
Low	3	0	Minimal. No inhabited structures. Limited agricultural development.	No deleterious materials in reservoir contents
Significant	2	1 to 6	Appreciable. 1 or 2 inhabited structures. Notable agriculture or work sites. Secondary highway and/or rail lines.	Limited water quality degradation from reservoir contents and only short term consequences.

DOWNSTREAM HAZARD POTENTIAL	DOWNSTREAM HAZARD CLASSIFICATION	COLUMN 3A POPULATION AT RISK	COLUMN 3B ECONOMIC LOSS GENERIC DESCRIPTIONS	COLUMN 3C ENVIRONMENTAL DAMAGES
High	1C	7 to 30	Major. 3 to 10 inhabited structures. Low density suburban area with some industry and work sites. Primary highways and rail lines.	Severe water quality degradation potential from reservoir contents and long term effects on aquatic and human life.
High	1B	31-300	Extreme. 11 to 100 inhabited structures. Medium density suburban or urban area with associated industry, property and transportation features.	
High	1A	More than 300	Extreme. More than 100 inhabited structures. Highly developed, densely populated suburban or urban area with associated industry, property, transportation and community life line features.	

(h) Engineering calculations and data supporting the detailed design of project elements. This would include, as a minimum:

(i) The design step levels used in design of the various critical project elements, based on guidance contained in the department's *Dam Safety Guidelines*;

(ii) Stability analyses corroborating the design of the proposed embankment/barrier section under static and seismic loadings and rapid drawdown conditions;

(iii) Calculations for the design of any hydraulic structures, which are subject to high lateral earth pressures, relatively large seismic loads and/or uplift pressures;

(iv) Computations for sizing the principal and emergency spillway, including, where applicable, reservoir routing computations defining the reservoir inflow and outflow design flood hydrographs.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-130, filed 6/1/92, effective 7/2/92.]

WAC 173-175-140 Plans and specifications. (1) Two copies of the plans and specifications, bearing the seal and signature of the project engineer, shall be submitted to the department for engineering review. Upon approval, one copy will be retained by the department and the other copy will be returned to the owner or the project engineer.

(2) For large or complex projects, one copy of the preliminary or intermediate level plans, in addition to the final plans, shall be submitted to the department for review.

(3) To be approved, the plans and specifications must contain sufficient detail to describe the proposed construction work.

(a) The following items, as a minimum, shall be included as part of the construction plans:

(i) Project location and vicinity maps;

(ii) Site map of dam, reservoir area, and appurtenances;

(iii) Sectional view along longitudinal axis of dam and foundation;

(iv) Cross-sectional view of dam at location of maximum height;

(v) Cross-sectional views and profiles of spillway(s), outlet facilities, and other appurtenances;

(1999 Ed.)

(vi) Steel reinforcement placement and bar sizing for concrete construction must be shown in at least one section or profile; and

(vii) The plan for diversion and control of water during construction.

(b) The following items, as a minimum, shall be included as part of the construction specifications:

(i) Type, class, or description of all materials to be used;

(ii) The requirements for fill placement, moisture conditioning, and minimum level of compaction of all earthen zones;

(iii) The requirements, procedures, and minimum standards for concrete construction and/or structural details.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-140, filed 6/1/92, effective 7/2/92.]

WAC 173-175-150 Construction permit fee. There is a fee for the review of plans and specifications and for construction inspections conducted by the department. The amount of the fee and owner requirements for fee payment are contained in WAC 173-175-350 through 173-175-400.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-150, filed 6/1/92, effective 7/2/92.]

WAC 173-175-160 Review standards. The department will review engineering design reports, plans, and specifications and the construction inspection plan to ascertain that the proposed project will be designed and constructed in a manner which will reasonably secure safety to life and property.

(1) The department's review is intended to address issues of safety directly related to the structural stability and integrity of the completed project. The review is not intended to extend to more general issues of safety not directly related to the structural stability and integrity of the project which are the purview of other governmental agencies such as the Washington department of labor and industries (L&I), which administers the Washington Industrial Safety and Health Act (WISHA).

(2) In addition to the above, the department will review documents submitted pursuant to this chapter to ascertain that they conform to accepted engineering and construction practices.

[Title 173 WAC—p. 281]

tice and are in conformance with guidance contained in the department's *Dam Safety Guidelines*.

(3) Those elements of a document(s) which are found not to be in conformance with the above will be identified to the owner or the project engineer and changes may be required as appropriate to conform to accepted engineering practice.

(4) Where differences of opinion arise on the suitability of certain engineering or construction practices and cannot be readily resolved, the burden of proof will rest on the owner and the project engineer to demonstrate the suitability of the proposed plan or action.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-160, filed 6/1/92, effective 7/2/92.]

WAC 173-175-170 Construction inspection plan. (1)

A detailed plan shall be submitted to the department describing how adequate and competent construction inspection will be provided.

(2) The construction inspection plan shall be prepared by a professional engineer and shall bear his/her seal and signature.

(3) The construction inspection plan shall include, as a minimum:

(a) A listing of construction activities related to critical project elements and planned inspection effort including staffing levels, responsibilities, frequency, and duration of site visits;

(b) A description of the quality assurance testing program which describes the type of test, general frequency, acceptable results, handling of deficient materials, and the individual(s) responsible for overseeing the testing;

(c) Description of construction management organization, lines of communication, and responsibilities;

(d) Description of the change order process including who is responsible for coordinating the change order review process with the department;

(e) Description of the technical records handling and the content and frequency of construction progress reports.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-170, filed 6/1/92, effective 7/2/92.]

WAC 173-175-180 Issuance of construction permit.

(1) After the department has determined that the plans and specifications and construction inspection plan conform to accepted engineering practice, these documents will be approved and a construction permit will be issued which authorizes construction to commence.

Construction shall not commence until the construction permit has been issued by the department.

Preliminary work such as mobilization of equipment, stripping and grubbing and other site access and preparation work is allowed prior to receipt of the construction permit, provided no permanent features of the dam are initiated.

(2) Receipt of the construction permit does not relieve the owner of the responsibility to secure all other applicable permits and approvals before proceeding with construction work.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-180, filed 6/1/92, effective 7/2/92.]

[Title 173 WAC—p. 282]

WAC 173-175-190 Construction change orders. (1)

All dam projects subject to the provisions of this regulation shall be constructed in accordance with the plans and specifications approved by the department. Any proposed changes to the department-approved plans which could have an effect on structural integrity or safe operations of the project must first be presented to the department for a determination if an approval is required.

(2) If the department determines that the proposed construction change order represents a significant modification of the approved plans or specifications that could have an effect on structural integrity or safe operations of the project, then approval of the change order will be required.

The department will review the construction change order and provide a response to the project engineer in a timely manner consistent with the complexity and safety concerns of the situation.

(3) If department approval of the proposed construction change order is required, no action can be taken by the owner to make the construction change until approval is given by the department.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-190, filed 6/1/92, effective 7/2/92.]

WAC 173-175-200 Department role in construction inspection. (1)

It will be the department's role during construction to confirm that the project engineer, as representative for the owner, is properly implementing the department approved construction inspection plan.

(2) The department will periodically observe the construction work to independently confirm that conditions assumed in the design stage are valid for field conditions and that construction is proceeding in accordance with the approved plans and specifications.

(3) Changes may be required by the department to be made to the approved plans and specifications to reasonably secure safety to life and property. Reasons for changes may include, but are not limited to the following:

(a) To address unanticipated field conditions;

(b) To correct omissions or errors in the approved plans and specifications;

(c) To correct situations where the construction work clearly is not being performed in a workmanlike manner and does not, in the opinion of the department, meet the performance intent of the specifications.

(4) Where deemed necessary by the department, a stop work order may be issued to temporarily halt construction until a problem can be resolved.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-200, filed 6/1/92, effective 7/2/92.]

WAC 173-175-210 Operation and maintenance plan.

(1) An operation and maintenance (O&M) plan shall be developed and submitted to the department for review and acceptance. The O&M plan shall outline and summarize how the project is to be operated and how the basic elements of monitoring, inspection and maintenance, as listed in WAC 173-175-500(1), are to be accomplished.

The department may issue an acceptance after determining the O&M plan is substantially complete.

(1999 Ed.)

(2) Owners are responsible for incorporating the details of the O&M plan into an O&M manual suitable for use by dam operators. Requirements associated with O&M manuals are listed in WAC 173-175-500.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-210, filed 6/1/92, effective 7/2/92.]

WAC 173-175-220 Emergency action plan. In those cases where a failure of the dam could pose a risk to life based on the current level of development in downstream areas (downstream hazard classes 1A, 1B, 1C, and 2, WAC 173-175-130), an emergency action plan (EAP) shall be developed and submitted to the department for review and acceptance. The purpose of the plan is to establish procedures for responding to unusual or emergency situations and procedures for detecting, evaluating, communicating and initiating notification or warning to individuals who may be at risk in downstream/upstream areas. Requirements associated with EAP's are listed in WAC 173-175-520.

The department may issue an acceptance after determining the EAP is substantially complete.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-220, filed 6/1/92, effective 7/2/92.]

WAC 173-175-230 Declaration of construction completion. Within thirty days following substantial completion of construction or modification of a dam, the project engineer shall submit to the department:

A declaration stating the project was constructed in accordance with the department approved plans and specifications and construction change orders.

The department will provide a declaration form which may be used or altered, as appropriate, by the project engineer.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-230, filed 6/1/92, effective 7/2/92.]

WAC 173-175-240 Authorization to commence or resume project operation. (1) Upon receipt of the project engineer's declaration of construction completion, the department will authorize the owner or the project engineer, as appropriate, to commence or resume normal project operation, provided that:

(a) The department concurs with the project engineer that the project was constructed in accordance with the approved plans and specifications and construction change orders;

(b) The proposed O&M plan is acceptable to the department;

(c) The proposed emergency action plan, if required (see WAC 173-175-220), is acceptable to the department.

(2) If the above conditions are not met, the owner shall not commence or resume normal operation of the project until all outstanding issues or problems are resolved. When outstanding issues or problems are not resolved in a timely manner, the department may:

(a) Order the outlet works to remain fully open and not allow filling of the reservoir;

(b) Restrict reservoir water levels or reservoir operation;

(c) Order the breaching of the impounding barrier;

(1999 Ed.)

(d) Take other measures as appropriate to reasonably secure safety to life and property.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-240, filed 6/1/92, effective 7/2/92.]

WAC 173-175-250 Construction records summary. Within one hundred twenty days following completion of construction or modification of a dam, the project engineer, as representative of the owner, shall submit a report to the department on construction activities which includes:

(1) A summary of results from field testing of materials used in construction. The summary shall identify both representative values and the range of test values;

(2) A discussion of any notable items encountered during construction;

(3) One complete set of drawings describing the as-built condition of the dam.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-250, filed 6/1/92, effective 7/2/92.]

WAC 173-175-260 Exceptions to construction permit process. If the department determines that emergency or exigency conditions exist at a dam and that it is in the best interests of public safety to expedite the construction or modification of a dam, the department may elect to temporarily suspend the normal construction permit process. To allow this exception, the department will issue a written conditional construction permit, which:

(1) May initially be oral;

(2) Will specify the construction activities to be allowed;

(3) May be terminated at a time deemed appropriate by the department;

(4) Shall incorporate, to the extent possible, and not inconsistent with the situation, all applicable requirements of this chapter.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-260, filed 6/1/92, effective 7/2/92.]

WAC 173-175-270 Department review response time. In reviewing the various documents required in the construction permit process, the department shall respond in a timely manner to the owner or project engineer with written review comments, approval, or acceptance as appropriate.

If the department response is anticipated to occur sixty days or more beyond the date of receipt of the document(s), the department shall notify the owner and/or project engineer in writing and advise them of the expected response date.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-270, filed 6/1/92, effective 7/2/92.]

PART THREE CONSTRUCTION PERMIT FEES

WAC 173-175-350 Authority for construction permit fees. It is required by RCW 90.03.470(9) that fees be collected by the department for the examination of plans and specifications. The fee shall be a minimum of ten dollars or the actual cost. In addition, the department is required by RCW 43.21A.064(2) to inspect the construction of all dams. It is required by RCW 90.03.470(8) that fees be collected for

the actual cost to the department for inspection including the expense incident thereto.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-350, filed 6/1/92, effective 7/2/92.]

WAC 173-175-360 Construction permit fees for new project construction. Fees for the review of plans and specifications and for construction inspection for new project construction shall be the amounts shown in Table 4 as determined by the nearest values of dam height and crest length, in feet, which correspond to the project's planned dam height and crest length.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-360, filed 6/1/92, effective 7/2/92.]

WAC 173-175-370 Construction permit fees for modifications of existing dams. (1) Fees for the review of plans and specifications and for construction inspections for project modifications involving significant enlargements shall be the greater of five hundred dollars or the amount determined by those applicable percentages shown in Table 5A of the fees in Table 4. The appropriate Table 4 fee amount is to be determined using the nearest values of dam height and crest length, in feet, which correspond to the overall dimensions of the modified dam.

TABLE 4. CONSTRUCTION PERMIT FEES - NEW PROJECT CONSTRUCTION

DAM HEIGHT (FEET)	DAM CREST LENGTH (FEET)															
	50	100	150	200	250	300	350	400	500	600	700	800	1000	1500	2000	4000

(2) Fees for the review of plans and specifications and for construction inspection for project modifications not involving significant enlargements shall be the greater of five hundred dollars or the amount determined by those applicable percentages shown in Table 5B of the fees in

Table 4. The appropriate Table 4 fee amount is to be determined using the nearest values of dam height and crest length, in feet, which correspond to the overall dimensions of the modified dam.

(3) Fees for the review of plans and specifications and for construction inspection for the removal or partial removal of a dam with safety deficiencies for the purpose of eliminating a public safety hazard shall be the minimum fee of ten dollars.

(4) Fees for the review of plans and specifications and for construction inspection for the planned abandonment and reclamation of dams and reservoir areas used in mining operations shall be the minimum fee of five hundred dollars.

TABLE 5. FEES FOR MODIFICATIONS OF DAMS

MODIFICATION FEE AS PERCENTAGE OF FEE FOR NEW DAM CONSTRUCTION

FEATURES MODIFIED	TABLE 5A MODIFICATIONS INVOLVING SIGNIFICANT ENLARGEMENTS	TABLE 5B MODIFICATIONS NOT INVOLVING SIGNIFICANT ENLARGEMENTS
Spillway(s)	35%	25%
Impounding Barrier	35%	25%
Appurtenant Works and Miscellaneous Construc- tion Elements	10%	10%

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-370, filed 6/1/92, effective 7/2/92.]

WAC 173-175-380 Maintenance. It will not be necessary to submit plans and specifications for review for routine maintenance, normal replacement, or repair of items to keep them in a serviceable condition, seasonal removal, or replacement of stoplogs, or other similar minor operational activities.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-380, filed 6/1/92, effective 7/2/92.]

WAC 173-175-390 Payment of construction permit fees. (1) The amount of the construction permit fee will be determined by the department based upon procedures contained in WAC 173-175-360 and 173-175-370 and information contained in the construction plans.

(a) An initial payment, which may represent all or a portion of the construction permit fee shall be paid in conjunction with the submittal of the construction permit application described in WAC 173-175-120. The amount of the initial payment shall be:

(i) Ten dollars for the removal of a dam with safety deficiencies as described in WAC 173-175-370(3); or

(ii) Five hundred dollars for construction of a new dam or modification of an existing dam or project.

(b) The balance of the fee amount (less the initial payment above) is to be paid following notification by the department of the balance due.

(c) All fees collected are nonrefundable.

(2) No fee shall be required for the review of conceptual plans which describe proposed repairs or improvements to existing dams to correct safety deficiencies. The normal construction permit process will apply at the time plans and specifications are submitted to the department.

(1999 Ed.)

(3) No additional fees shall be required for plan and specification changes and resubmittals required by the department as part of the review process.

(4) No additional fees shall be required for review of construction change orders.

[Statutory Authority: 1995 c 8. 95-22-030 (Order 94-15), § 173-175-390, filed 10/24/95, effective 11/24/95. Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 93-01-090 (Order 92-35), § 173-175-390, filed 12/16/92, effective 1/16/93; 92-12-055 (Order 91-17), § 173-175-390, filed 6/1/92, effective 7/2/92.]

WAC 173-175-400 Cost of expert opinion. In resolving differences of opinion on engineering issues between the department and project engineer or owner, it may be necessary for the department to employ an expert in dam design, analysis or construction.

(1) The expert who is chosen, the assigned tasks, and the estimated cost for the expert's services shall be determined by negotiation between the owner and the department.

(2) The cost associated with employing the expert shall be paid by the owner of the proposed or existing project.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-400, filed 6/1/92, effective 7/2/92.]

PART FOUR PROJECT OPERATION

WAC 173-175-500 Operation and maintenance. (1) The owner shall develop and maintain a current operation and maintenance (O&M) manual.

The manual shall describe procedures for operation of the project under normal and extreme reservoir inflow conditions and provide technical guidance and procedures for monitoring, inspection, and long-term maintenance. Information on the development of the O&M manual is contained in the department's *Dam Safety Guidelines*. The O&M manual shall include, as a minimum, the following items:

(a) Identification of the individual(s) responsible for implementing the plan;

(b) A project data sheet describing the pertinent features of the dam and reservoir, including the spillway(s), outlet works, and appurtenant structures and their locations at the dam site;

(c) The rules and procedures (rule curve) used to regulate reservoir levels and project operation for various reservoir inflows and for both normal and unusual seasonal conditions;

(d) A description of each hydraulic element used to regulate or release water, including information on proper operation and scheduled maintenance;

(e) A listing of the items requiring periodic monitoring, the frequency of monitoring and procedures for monitoring, measurement, and recordkeeping;

(f) A listing of the items requiring periodic maintenance and procedures for conducting and documenting maintenance and recording of problems;

(g) A listing of items to be inspected or test operated, the frequency and procedures for conducting the same and for documenting the findings.

(2) It shall be the duty and responsibility of the owner to, at all times, operate and maintain the dam and all appurtenant works in a safe manner and condition and follow the method

[Title 173 WAC—p. 285]

and schedule of operation of the dam as outlined in the O&M manual.

(3) For dams constructed before July 1, 1992, owners are required to develop an O&M manual by December 31, 1997.

In those cases where a failure of the dam could pose a threat to life (downstream hazard classes 1A, 1B, 1C, and 2), the O&M manual shall be submitted to the department for review and acceptance.

(4) Any proposed changes to the O&M manual which could have an effect on public or project safety must be submitted to the department for review and acceptance before implementation.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-500, filed 6/1/92, effective 7/2/92.]

WAC 173-175-510 Inspection. (1) Owners are required to evaluate the safety of their dam(s) and all appurtenant works and to make modifications, as become necessary, to reasonably secure safety to life and property. To accomplish this, owners are:

(a) Required to conduct annual surficial inspections and to maintain records of their findings, including records of actions taken to correct problem conditions. Copies of such records shall be provided to the department upon request.

The annual surficial inspections may be conducted by the owner or by agent(s) designated by the owner.

(b) Encouraged to implement a program for the periodic inspection of their project(s) on a five-year frequency to be conducted by a professional engineer.

(c) Required to notify the department at least thirty days in advance of when periodic inspections are scheduled to allow department engineers to participate in the inspection.

(d) Required to submit a copy of the engineering report(s) and other documents which contain the findings, conclusions, and recommendations resulting from the periodic inspection within thirty days following the completion of the various documents.

(2) In order to correct safety deficiencies and exigency conditions, owners are required to take actions and make modifications as prescribed by the department to preserve the structural stability and integrity of the project and attain levels of safety in accordance with accepted engineering practice.

(3) The department may elect to conduct periodic inspections of particular projects to reasonably secure safety to life and property.

(a) The department will give at least thirty days advance notice of the date of the periodic inspection and advise the owner of any requirements such as gates or valves that are to be operated during the inspection.

(b) Owners are required to develop an Operation and maintenance manual (WAC 173-175-500) and an Emergency action plan (WAC 173-175-520) within one hundred eighty days following completion of a periodic inspection conducted by the department.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-510, filed 6/1/92, effective 7/2/92.]

WAC 173-175-520 Emergency action. (1) In those cases where a failure of the dam could pose a threat to life

(downstream hazard classes 1A, 1B, 1C, and 2), the owner shall develop and maintain an emergency action plan (EAP) acceptable to the department.

(a) The EAP shall describe procedures for responding to unusual or emergency situations and procedures for detecting, evaluating, communicating, and initiating notification or warning of individuals who may be at risk in downstream and upstream areas. Information on the development of an EAP is contained within the department's *Dam Safety Guidelines*.

(b) It shall be the duty and responsibility of the owner to implement the EAP when conditions warrant and to follow the method and schedule contained within the EAP.

(c) For dams constructed before July 1, 1992, owners are required to develop an EAP and to submit it to the department for review and acceptance by December 31, 1997.

(i) Owners are required to coordinate the development of the EAP with representatives from the local emergency services staff, state department of community development, emergency management division, and appropriate local authorities.

(ii) Copies of the completed EAP must be provided to the state emergency management division, local emergency services office, and to the department.

(2) Any proposed changes to the EAP which could have an affect on public or project safety must be submitted to the department for review and acceptance before implementation.

(3) Owners are required to exercise components of the EAP as needed to confirm the viability of the plan.

(4) The department will coordinate and solicit review comments from the local emergency services office and the state emergency management division on the acceptability of proposed EAPs. Those comments will constitute the primary basis for accepting or requesting modifications to a proposed EAP.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-520, filed 6/1/92, effective 7/2/92.]

WAC 173-175-530 Reporting of incidents. Owners are required to notify the department when incidents occur or when problems or conditions arise which may pose a threat to life or property or a threat to the integrity of the dam.

(1) The owner shall report by telephone to the department on any condition affecting the safety of the project or when an incident has occurred. The initial oral report must be made as soon as practicable after the condition is discovered or following any incident.

(2) A written report may be required by the department within thirty days following the discovery of the condition or after the incident. The report shall describe the condition affecting the safety of the project or the incident which has occurred and shall describe the preliminary plans for correcting the condition and for preventing the recurrence of a similar incident.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-530, filed 6/1/92, effective 7/2/92.]

PART FIVE COMPLIANCE AND ENFORCEMENT

WAC 173-175-600 Right of entry. The department or its duly appointed agent(s) shall have the right to enter at all reasonable times in or upon property, public or private, for the purpose of inspecting and investigating conditions relating to the construction, operation, maintenance or performance of dams. The department shall comply with the owner's reasonable rules for access to the project.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-600, filed 6/1/92, effective 7/2/92.]

WAC 173-175-610 Emergencies. (1) When, in the opinion of the department, an emergency condition exists which poses an imminent threat to life, the department may take such action as necessary to eliminate or mitigate the hazard and potential consequences. The dam owner or the owner's agent(s) may be directed to take actions, and if that failing, the department may take control of the project and take actions, including, but not limited to:

- (a) Altering the operation of the project;
- (b) Lowering the reservoir water level;
- (c) Draining the reservoir;
- (d) Making emergency repairs or modifications to the project;

(e) Enlisting the services of federal, state, or local authorities to make emergency repairs or modifications to the project;

- (f) Breaching the dam.

(2) All costs incurred by the department as a result of taking control of the project will be charged to the owner.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-610, filed 6/1/92, effective 7/2/92.]

WAC 173-175-620 Enforcement. (1) In enforcement of this chapter, the department may impose such sanctions as appropriate under authorities vested in it, including but not limited to, the issuance of regulatory orders under RCW 86.16.081 and 43.27A.190 and civil penalties under RCW 86.16.081 and 90.03.600.

(2) Any dam which is found to be under construction or recently constructed without prior approval of the plans and specifications is in violation of RCW 90.03.350 and will be presumed to be a public nuisance. The owner will not be allowed to fill the reservoir or continue to operate the reservoir until the structural integrity and safety of the facility can be demonstrated to the satisfaction of the department. In addition:

(a) Regulatory orders may be issued to enforce the restriction of reservoir filling and fines may be levied at one hundred dollars per day up to an amount equal to one hundred fifty percent of the amount the owner would have been charged under the construction permit fee schedule listed in this chapter;

(b) Owners are required to submit as-built drawings and all available documentation describing the manner in which the dam or portion thereof was constructed;

(c) If the structural integrity and safety of a dam project cannot be demonstrated or confirmed to the satisfaction of

(1999 Ed.)

the department, the owner shall not commence or resume normal operation of the project until all outstanding issues or problems are resolved to the satisfaction of the department. To accomplish the above, the department may:

(i) Order the outlet works to remain fully open and not allow filling of the reservoir;

(ii) Restrict reservoir water levels or reservoir operation;

(iii) Order the breaching of the impounding barrier;

(iv) Take other measures as appropriate to reasonably assure safety to life and property.

(d) If, in the opinion of the department, the owner is unwilling or incapable of resolving the outstanding safety issues in a timely manner, the department may take action to have the dam abated as prescribed by law under RCW 90.03.350.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-620, filed 6/1/92, effective 7/2/92.]

WAC 173-175-630 Appeals. All final written decisions of the department pertaining to permits, regulatory orders, and related decisions made pursuant to this chapter shall be subject to review by the pollution control hearings board in accordance with chapter 43.21B RCW.

[Statutory Authority: RCW 43.21A.064, [43.21A.]080 and 86.16.061. 92-12-055 (Order 91-17), § 173-175-630, filed 6/1/92, effective 7/2/92.]

Chapter 173-180A WAC

FACILITY OIL-HANDLING OPERATIONS AND DESIGN STANDARDS

WAC

173-180A-010	Purpose.
173-180A-020	Authority.
173-180A-030	Definitions.
173-180A-040	Applicability.
173-180A-050	Compliance schedule.
173-180A-060	Vessel transfer requirements.
173-180A-070	Transmission pipeline transfer requirements.
173-180A-080	Secondary containment requirements for aboveground storage tanks.
173-180A-090	Storage tank requirements.
173-180A-100	Transfer pipeline requirements.
173-180A-110	Inspections.
173-180A-120	Recordkeeping.
173-180A-130	Noncompliance.
173-180A-140	Rule review.
173-180A-150	Severability.

WAC 173-180A-010 Purpose. The purpose of this rule is to establish facility operations and design standards which, when followed, will:

(1) Prevent oil and petroleum spills from occurring;

(2) Ensure that facilities are designed and operated in a manner which will provide the best achievable protection of the public health and the environment;

(3) Provide improved protection of Washington waters and natural resources from the impacts of oil spills caused by improper oil-handling equipment design and operations.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-010, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-020 Authority. RCW 90.56.220 provides statutory authority for developing operations and

design standards and implementing a compliance program established by this chapter.

[Statutory Authority: RCW 90.56.220, 94-10-084, § 173-180A-020, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-030 Definitions. "Appropriate person" means a person designated by the facility as being competent and trained to implement a designated function.

"Best achievable protection" means the highest level of protection that can be achieved through the use of the best achievable technology and those staffing levels, training procedures, and operational methods that provide the greatest degree of protection available. The director's determination of best achievable protection shall be guided by the critical need to protect the state's natural resources and waters, while considering: The additional protection provided by the measures; the technological achievability of the measures; and the cost of the measures.

"Best achievable technology" means the technology that provides the greatest degree of protection taking into consideration: Processes that are being developed, or could feasibly be developed, given overall reasonable expenditures on research and development; and processes that are currently in use. In determining what is best achievable technology, the director shall consider the effectiveness, engineering feasibility, and commercial availability of the technology.

"Board" means the pollution control hearings board.

"Bulk" means material that is stored or transported in a loose, unpackaged liquid, powder, or granular form capable of being conveyed by a pipe, bucket, chute, or belt system.

"Cargo vessel" means a self-propelled ship in commerce, other than a tank vessel or a passenger vessel, greater than three hundred or more gross tons, including but not limited to, commercial fish processing vessels and freighters.

"Covered vessel" means a tank vessel, cargo vessel, or passenger vessel.

"Department" means the department of ecology.

"Directly impact" means without treatment.

"Director" means the director of the department of ecology.

"Discharge" means any spilling, leaking, pumping, pouring, emitting, emptying, or dumping.

"Emergency shutdown" means a deliberate stoppage of equipment or facility operation under circumstances requiring immediate action to prevent or reduce loss of life, injury, oil spills or significant damage to or loss of property or environmental values.

Facility:

"Facility" means any structure, group of structures, equipment, pipeline, or device, other than a vessel, located on or near the navigable waters of the state that transfers oil in the bulk to or from a tank vessel or pipeline, that is used for producing, storing, handling, transferring, processing, or transporting oil in bulk.

A facility does not include any: Railroad car, motor vehicle, or other rolling stock while transporting oil over the highways or rail lines of this state; underground storage tank regulated by the department or a local government under chapter 90.76 RCW; a motor vehicle motor fuel outlet; a facility that is operated as part of an exempt agricultural

activity as provided in RCW 82.04.330; or a marine fuel outlet that does not dispense more than three thousand gallons of fuel to a ship that is not a covered vessel, in a single transaction.

"Facility person in charge" means the person designated under the provisions of 33 CFR 154.710.

"Navigable waters of the state" means those waters of the state, and their adjoining shorelines, that are subject to the ebb and flow of the tide and/or are presently used, have been used in the past, or may be susceptible for use to transport intrastate, interstate, or foreign commerce.

"Immediate threat" means threat which could cause loss of life, reduce safety or adversely impact waters of the state or environment.

"Oil" or "oils" means naturally occurring liquid hydrocarbons at atmospheric temperature and pressure coming from the earth, including condensate and natural gasoline, and any fractionation thereof, including, but not limited to, crude oil, petroleum, gasoline, fuel oil, diesel oil, oil sludge, oil refuse, and oil mixed with wastes other than dredged spoil. Oil does not include any substance listed in Table 302.4 of 40 CFR Part 302 adopted August 14, 1989, under section 101(14) of the federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by P.L. 99-499.

"Offshore facility" means any facility, as defined in this section, located in, on, or under any of the navigable waters of the state, but does not include a facility any part of which is located in, on, or under any land of the state, other than submerged land.

"Onshore facility" means any facility, as defined in this section, any part of which is located in, on, or under any land of the state, other than submerged land, that because of its location, could reasonably be expected to cause substantial harm to the environment by discharging oil into or on the navigable waters of the state or the adjoining shorelines.

Owner or operator:

"Owner or operator" means: In the case of a vessel, any person owning, operating, or chartering by demise, the vessel; in the case of an onshore or offshore facility, any person owning or operating the facility; and in the case of an abandoned vessel or onshore or offshore facility, the person who owned or operated the vessel or facility immediately before its abandonment.

"Operator" does not include any person who owns the land underlying a facility if the person is not involved in the operations of the facility.

"Person" means any political subdivision, government agency, municipality, industry, public or private corporation, copartnership, association, firm, individual, or any other entity whatsoever.

"Pipeline operator" means the operator of a transmission pipeline.

"Process pipelines" means a pipeline used to carry oil within the oil refining/processing units of a facility, process unit to tankage piping and tankage interconnecting piping. Process pipelines do not include pipelines used to transport oil to or from a tank vessel or transmission pipeline.

"Secondary containment" means containment systems which prevent any materials discharged from reaching the waters of the state.

"Ship" means any boat, ship, vessel, barge, or other floating craft of any kind.

"Spill" means an unauthorized discharge of oil which enters waters of the state.

"State" means the state of Washington.

"Storage tank" means all aboveground containers connected to transfer pipelines or any aboveground containers greater than ten thousand gallons (two hundred thirty-eight barrels), including storage and surge tanks, used to store bulk quantities of oil. Storage tanks do not include those tanks regulated by chapter 90.76 RCW, rolling stock, wastewater treatment equipment, process pressurized vessels or other tanks used in the process flow through portions of the facility.

"Tankage interconnecting piping" means buried or aboveground piping used to carry oil between storage tanks.

"Tank vessel" means a ship that is constructed or adapted to carry, or that carries, oil in bulk as cargo or cargo residue, and that:

Operates on the waters of the state; or

Transfers oil in a port or place subject to the jurisdiction of this state.

"Transmission pipeline" means a pipeline whether interstate or intrastate, subject to regulation by the United States Department of Transportation under 49 CFR 195, as amended through December 5, 1991, through which oil moves in transportation, including line pipes, valves, and other appurtenances connected to line pipe, pumping units, and fabricated assemblies associated with pumping units.

"Transfer" means any movement of oil between a tank vessel or transmission pipeline and the facility.

"Transfer pipeline" is a buried or aboveground pipeline used to carry oil between a tank vessel or transmission pipeline and the first valve inside secondary containment at the facility provided that any discharge on the facility side of that first valve will not directly impact waters of the state. A transfer pipeline includes valves, and other appurtenances connected to the pipeline, pumping units, and fabricated assemblies associated with pumping units. A transfer pipeline does not include process pipelines, pipelines carrying ballast or bilge water, transmission pipelines, tank vessel or storage tanks. Instances where the transfer pipeline is not well defined will be determined on a case-by-case basis.

"Vessel person in charge" means the person designated under the provisions of 33 CFR 155.700.

"Waters of the state" include lakes, rivers, ponds, streams, inland waters, underground water, salt waters, estuaries, tidal flats, beaches and land adjoining the seacoast of the state, sewers, and all other surface waters and watercourses within the jurisdiction of the state of Washington.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-030, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-040 Applicability. Onshore and off-shore facilities shall meet the requirements of this section. This rule does not apply to portions of a facility regulated by 49 CFR 195.

(1999 Ed.)

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-040, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-050 Compliance schedule. (1) Facilities must comply with this rule thirty-six months after its effective date. Facilities needing additional time to comply with this rule must obtain written approval from the department extending this date and must submit a proposed compliance schedule to the department within eighteen months of the effective date of this rule subject to the following provisions:

(a) Compliance schedules must include a justification of need for additional time. Facilities shall cite the specific requirements of this rule which will be addressed by the proposed compliance schedule.

(b) Compliance schedules shall contain target dates for the commencement and completion of projects leading to the ultimate compliance with all provisions of this rule.

(c) Only requirements which cannot be met within thirty-six months of the effective date of this rule need to be identified in the compliance schedule.

(d) Compliance schedules which do not meet the definition of best achievable protection will not be approved by the department.

(e) It shall be legal to operate a facility if a proposed compliance schedule has been submitted to the department and the department has not provided the facility with a formal response.

(2) Facilities with approved compliance schedules must:

(a) Meet all requirements of this rule not specifically addressed in the compliance schedule.

(b) Submit a progress report to the department every six months following the compliance schedule approval date.

(c) Meet all compliance schedule dates unless written approval is received from the department.

(3) Facilities commencing construction thirty-six months or later after the adoption date of this rule shall meet the provisions of this rule at the time they commence operation. Facilities under design or construction at the time of the adoption of this rule shall comply with this rule thirty-six months after the adoption date of this rule.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-050, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-060 Vessel transfer requirements.

(1) General requirements.

(a) No person shall conduct an oil transfer operation to or from a tank vessel unless the facility person in charge (FPIC) and the vessel person in charge (VPIC) have:

(i) Conducted a pretransfer conference as described in 33 CFR 156.120(w) as amended on September 4, 1990;

(ii) Ensured that transfer connections have been made as specified in 33 CFR 156.130 as amended on September 4, 1990;

(iii) Completely filled out and signed the declaration of Inspection as required by 33 CFR 156.150 as amended on September 4, 1990.

(iv) Established adequate communication in English between the vessel and the facility and in accordance with 33 CFR 154.560 as amended on September 4, 1990.

[Title 173 WAC—p. 289]

(v) Ensured that the available capacity in the receiving tank(s) is (are) greater than the volume of oil to be transferred and all other tank fill valves which could influence the routing of the transferred oil are properly aligned.

(b) The operator shall verify that the designated storage tanks are receiving oil at the expected rate.

(c) For the purpose of scheduling inspections, the department may require a facility operator to provide a twenty-four hour advance notification with updates to the department of any anticipated transfer of bulk oil by a facility operator. The department shall notify the facility in writing when this procedure will be required.

(d) Transfer operations shall be supervised by the appropriate person in charge in accordance with 33 CFR 156.160 as amended on September 4, 1990.

(e) Each FPIC shall ensure that the means of operating the emergency shutdown is immediately available while oil is being transferred between the facility and the vessel.

(f) Transfer equipment requirements shall meet the conditions of 33 CFR 154.500 through 33 CFR 154.545 as amended on September 4, 1990.

(g) Transfer equipment shall be tested in accordance with procedures identified in 33 CFR 156.170 as amended on September 4, 1990. Transfer hoses shall be tested at intervals not exceeding twelve months in accordance with the procedures identified by the RMA/IP-11-4, *Rubber Manufacturers Association Manual for Maintenance, Testing and Inspection of Hose* dated 1987 or the manufacturer's recommendations for testing.

(h) All transfer operations shall be in accordance with operations manuals approved under chapter 173-180B WAC.

(i) The FPIC shall refuse to initiate or shall cease transfer operations with any vessel which has not provided complete information as required by the declaration of inspection, has refused to correct deficiencies identified by the FPIC during the pretransfer conference, or does not comply with the facility operations manual or facility requirements.

(2) Oil spills.

(a) Any person conducting an oil transfer shall stop the transfer operation whenever oil from any source associated with the transfer is spilled into the water, or discharged onto the facility deck or dock outside secondary containment, or upon the shoreline adjoining the transfer area.

(b) Transfer operations may not resume after a spill until:

(i) Notification has been made in accordance with RCW 90.56.280; and

(ii) The FPIC and the VPIC have determined that there is no longer an immediate threat to waters of the state or public health.

(c) The department may require that transfer operations stopped under subsection (2)(a) of this section may not resume unless authorized by the department.

(3) Suspension of transfer operations for immediate threat.

(a) The director may order a facility to suspend transfer operations if there is a condition requiring immediate action to prevent the discharge or threat of discharge of oil or to protect the public health and safety, and the environment.

(b) An order of suspension may be made effective immediately.

(c) An order of suspension shall specify each condition requiring immediate action.

(d) The transfer operation shall remain suspended until the director has determined that the need for immediate action is no longer necessary and has notified the facility operator of that determination.

(e) The director shall notify the facility operator as soon as possible of the determination that the need for immediate action is no longer necessary.

(f) The facility operator may petition the pollution control board, in writing or in any other manner, to reconsider an order of suspension.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-060, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-070 Transmission pipeline transfer requirements. (1) General requirements.

(a) No person shall conduct an oil transfer operation to or from a transmission pipeline unless the appropriate person and the pipeline operator have:

(i) Conducted pretransfer communications which identify:

(A) Type of oil;

(B) Transfer volume;

(C) Flow rates;

(D) Transfer startup or arrival time;

(ii) Facilities which receive oil from a transmission pipeline must:

(A) Confirm that the proper manifold and valves are open and ready to receive product;

(B) Notify the transmission pipeline operator when a storage tank has less than one foot of oil above the inlet nozzle;

(C) Coordinate arrival time of oil with the pipeline operator;

(D) Confirm the available storage capacity for transfers to a facility;

(E) Ensure that only the designated tank(s) is (are) receiving oil.

(iii) Ensured that proper transfer alignment of the pipeline, valves, manifolds and storage tanks have been made.

(iv) Established adequate communication in English between the facility and pipeline operator.

(b) For the purpose of scheduling inspections, the department may require a twenty-four hour notification to the department in advance of any transfer of bulk oil by a facility operator. The department shall request notification in writing when this procedure is required.

(c) Transfer operations shall be supervised by an appropriate person.

(d) Each facility operator shall ensure that the means of operating or requesting emergency shutdown is immediately available while oil is being transferred between the facility and the pipeline.

(e) If startup, shutdown, and/or emergency shutdown are controlled by the pipeline operator directly using instrumentation and control devices, the accuracy of these devices shall be checked at least annually.

(f) All transfer operations shall be conducted in accordance with operations manuals approved under chapter 173-180B WAC.

(2) Oil spills.

(a) Any person conducting an oil transfer shall stop the transfer operation whenever oil from any source associated with the transfer is spilled into the water or upon the adjoining shoreline in the transfer area.

(b) Transfer operations may not resume after a spill until:

(i) The proper notification has been made in accordance with RCW 90.56.280; and

(ii) All threats to waters of the state and public health no longer exist as determined by the appropriate person.

(c) The department may require that transfer operations stopped under subsection (2)(a) of this section may not resume unless authorized by the department.

(3) Suspension of transfer operations for immediate threat.

(a) The director may order a facility to suspend transfer operations if there is a condition requiring immediate action to prevent the discharge or threat of discharge of oil or to protect the public health and safety, and the environment.

(b) An order of suspension may be made effective immediately.

(c) An order of suspension shall specify each condition requiring immediate action in writing.

(d) The transfer operation shall remain suspended until the director has determined that the need for immediate action is no longer necessary and has notified the facility operator of that determination.

(e) The director shall notify the facility operator as soon as possible of the determination that the need for immediate action is no longer necessary.

(f) The facility operator may petition the pollution control board, in writing or in any other manner, to reconsider an order of suspension.

[Statutory Authority: RCW 90.56.220, 94-10-084, § 173-180A-070, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-080 Secondary containment requirements for aboveground storage tanks. (1) Aboveground oil storage tanks must be located within secondary containment areas. Secondary containment systems must be:

(a) Designed, constructed, maintained and operated to prevent discharged oil from entering waters of the state at any time during use of the tank system;

(b) Capable of containing one hundred percent of the capacity of the largest storage tank within the secondary containment area;

(c) Constructed with materials that are compatible with stored material to be placed in the tank system.

(d) Soil may be used for the secondary containment system, provided that any spill onto the soil will be sufficiently contained, readily recoverable and will be managed in accordance with the provisions under WAC 173-303-145 as amended in December 1993, spills and discharges and any other applicable regulation.

(e) Constructed with sufficient strength and thickness to prevent failure owing to pressure gradients (including static head and external hydrological forces), physical contact with

the fluid stored in the storage tank, climatic conditions, and the stresses of daily operations (including stresses from nearby vehicular traffic);

(f) Placed on a base or foundation capable of providing support to the secondary containment system, resistance to pressure gradients above and below the system, and capable of preventing failure due to settlement, compression or uplift;

(g) Sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked oil and accumulated precipitation must be removed from the secondary containment system in a manner which will provide the best achievable protection of public health and the environment; and

(h) Visually inspected monthly to confirm secondary containment integrity. Items requiring attention as determined by the visual inspection must be documented. Records must be kept on site for a minimum of three years.

(2) The secondary containment system must be maintained to prevent a breach of the dike by controlling burrowing animals and weeds;

(3) The secondary containment system must be maintained free of debris and other materials which may interfere with the effectiveness of the system, including excessive accumulated precipitation.

(4) The facility shall maintain at least one hundred percent of the working capacity of the largest storage tank within the secondary containment area at all times.

(5) All secondary containment pumps, siphons and valves must be properly maintained and kept in good working order.

(6) Drainage of water accumulations from secondary containment areas that discharge directly to the land or waters of the state must be controlled by locally operated, positive shutoff valves or other positive means to prevent a discharge. Valves must be kept closed except when the discharge from the containment system is in compliance with chapter 90.48 RCW, Water pollution control. Valves must be locked closed when the facility is unattended. Necessary measures shall be taken to ensure secondary containment valves are protected from inadvertent opening or vandalism. There shall be some means of readily determining valve status by facility personnel such as a rising stem valve or position indicator.

(7) The owner or operator shall inspect or monitor accumulated water before discharging from secondary containment to ensure that no oil will be discharged to the waters of the state. All water discharges shall comply with state water quality program regulations as described in chapter 90.48 RCW.

(8) The department may require oil containers less than ten thousand gallons (two hundred thirty-eight barrels) capacity to have secondary containment when the container is located less than six hundred feet from navigable waters of the state or a storm water or surface drains which may directly impact navigable waters of the state.

(9) A secondary containment system constructed after the adoption date of this rule shall be installed as follows:

(a) In accordance with the 1993 version of the National Fire Protection Association (NFPA), Flammable and Combustible Code, No. 30, section 2-3.4.3;

(b) Secondary containment systems must be capable of containing one hundred percent of the capacity of the largest storage tank within the secondary containment area;

(c) Secondary containment systems shall be designed to withstand seismic forces;

(d) Drains and other penetrations through secondary containment areas must be minimized consistent with facility operational requirements; and

(e) Secondary containment systems shall be designed and constructed in accordance with sound engineering practice and in conformance with the provisions of this section.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-080, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-090 Storage tank requirements. (1)

Storage tanks constructed after the adoption date of this rule shall meet or exceed the 1993 version of the National Fire Protection Association (NFPA 30) requirements and one of the following design and manufacturing standards:

(a) UL No. 142, Steel Aboveground Tanks for Flammable and Combustible Liquids dated April 1993;

(b) API Standard 650, Welded Steel Tanks for Oil Storage dated November 1988;

(c) API Standard 620, Design and Construction of Large Welded, Low-Pressure Tanks dated June 1990; or

(d) Another standard approved by the department.

(2) The owner or operator shall ensure that the means of preventing storage tank overfill comply with the 1993 version of the National Fire Protection Association (NFPA), Flammable and Combustible Code, No. 30, Chapter 2, Section 2-10.

(3) Storage tanks shall be maintained, repaired and inspected in accordance with the requirements of API 653 dated January 1991 unless the operator proposes an equivalent inspection strategy which is approved by the department.

(4) A record of all inspection results and corrective actions taken must be kept for the service life of the tank and must be available to the department for inspection and copying upon request.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-090, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-100 Transfer pipeline requirements.

(1) Pipelines replaced, relocated or constructed after the adoption date of this rule which are located in areas not controlled by the facility shall be installed in accordance with 49 CFR 195.246 through 49 CFR 195.254 as amended on October 8, 1991, where feasible. Facility control is established by fencing, barriers or other method accepted by the department which protects the pipe right-of-way and limits access to personnel authorized by the facility.

(2) All pipelines shall be protected from third party damage in a reasonable manner and be able to withstand external forces exerted upon them. This shall be done by:

(a) Registering all underground pipelines located in public right-of-way areas in the local one call system if available;

(b) Maintaining accurate maps for all underground piping located outside the facility. The maps shall identify pipe size and location. The approximate depths of pipelines shall

be identified for pipelines which do not comply with 49 CFR 195.248 as amended on October 8, 1991;

(c) Marking all piping located in areas not controlled by the facility in accordance with 49 CFR 195.410 as amended on October 8, 1991;

(d) Providing easement inspections of areas identified by subsection (2)(b) of this section on a weekly basis to determine if there is any uncommon activity occurring which may affect the integrity of the pipeline;

(e) Ensuring that pipelines at each railroad, highway or road crossing are designed and installed to adequately withstand the dynamic forces exerted by anticipated traffic loads.

(3) Pipelines constructed after the adoption date of this rule shall be designed and constructed in accordance with the American Society of Mechanical Engineers (ASME) Standard for pressure piping ASME B31.3 or B31.4 issued March 15, 1993, in effect during the time of construction or any other standard accepted by the Department.

(4) Pipelines must be inspected in accordance with API 570, 1993, Piping Inspection Code. As an alternative to complying with API 570, the facility must comply with the following requirements:

(a) Buried pipelines constructed after the adoption date of this rule must be coated. Coatings shall be designed and inspected to meet the following conditions consistent with the definition of best achievable protection:

(i) Coatings shall effectively electrically isolate the external surfaces of the pipeline system from the environment.

(ii) Coatings shall have sufficient adhesion to effectively resist underfilm migration of moisture.

(iii) Coatings must be sufficiently ductile to resist cracking.

(iv) The coating shall have sufficient impact and abrasion resistance or otherwise be protected to resist damage due to soil stress and normal handling (including concrete coating application, installation of river weights and anode bracelet installation, where applicable).

(v) The coating must be compatible with cathodic protection.

(vi) The coating must be compatible with the operating temperature of the pipeline.

(vii) Coatings shall be inspected immediately before, during, or after pipe installation to detect coating faults. Faults in the coating shall be repaired and reinspected.

(b) All buried coated pipelines shall have properly operated cathodic protection which is maintained during the operational life of the pipeline system. Cathodic protection shall be maintained on pipeline systems which are out of service but not abandoned unless the operator can show that the pipeline integrity has been properly monitored and secured as approved by the department prior to operation of the abandoned pipeline. Pipeline owners or operators may perform a corrosion study to demonstrate that cathodic protection is not required as an option to installing cathodic protection. Corrosion studies shall follow the following guidelines as a minimum:

(i) Corrosion studies shall be completed by a professional engineer with experience in corrosion control of buried pipelines, a NACE certified corrosion specialist or by a per-

son knowledgeable and qualified to perform the required testing and inspection who is approved by the department.

(ii) Corrosion studies for pipelines shall include at a minimum, the following:

(A) Pipeline thickness and corrosion rate for existing pipelines;

(B) Presence of stray DC currents;

(C) Soil resistivity/conductivity;

(D) Soil moisture content;

(E) Soil pH;

(F) Chloride ion concentration; and

(G) Sulfide ion concentration.

(c) All pipelines with cathodic protection are subject to the following requirements where applicable:

(i) Cathodic protection systems must be tested to determine system adequacy on an annual basis.

Note: The National Association of Corrosion Standard RP-02-85, "Control of External Corrosion on Metallic Buried, Partially Buried, or Submerged Liquid Storage Systems," may be used to comply with this section.

(ii) Impressed current cathodic protection rectifiers must be inspected every two months.

(iii) Where insulating devices are installed to provide electrical isolation of pipeline systems to facilitate the application of corrosion control, they shall be properly rated for temperature, pressure and electrical properties, and shall be resistant to the commodity carried in the pipeline system.

(iv) Buried pipeline systems shall be installed so that they are not in electrical contact with any metallic structures. This requirement shall not preclude the use of electrical bonding to facilitate the application of cathodic protection.

(v) Tests shall be carried out to determine the presence of stray currents. Where stray currents are present, measures shall be taken to mitigate detrimental effects.

(d) Buried bare pipelines shall be inspected in accordance with section 7 of API 570 dated June 1993. Pipeline thickness and corrosion rates shall be determined at an interval of no more than half of the remaining life of the pipeline as determined from corrosion rates or every five years whichever is more frequent. Pipeline thickness and corrosion rate shall be initially established within thirty-six months after the adoption date of this rule. The pipeline shall be operated in accordance with American Society of Mechanical Engineers (ASME) supplement to ASME B31G-1991 entitled "*Manual for Determining the Remaining Strength of Corroded Pipe*" for transmission pipelines issued June 27, 1991, API 570 dated June 1993 or a standard approved by the department.

(5) Whenever any buried pipe is exposed for any reason, the operator shall provide a nondestructive examination of the pipe for evidence of external corrosion. If the operator finds that there is active corrosion, the extent of that corrosion must be determined and if necessary repaired.

(6) Each facility shall maintain all pumps and valves that could affect waters of the state in the event of a failure. Transfer pipeline pumps and valves and storage tank valves shall be inspected annually and maintained in accordance with the manufacturers recommendations or an industrial standard approved by the department to ensure that they are functioning properly. Valves shall be locked when the facility is not attended. Necessary measures shall be taken to ensure that

valves are protected from inadvertent opening or vandalism if located outside the facility or at an unattended facility.

(7) A written record must be kept of all inspections and tests covered by this section.

(8) Facilities shall have the capability of detecting a transfer pipeline leak equal to eight percent of the maximum design flow rate within fifteen minutes for transfer pipelines connected to tank vessels. Leak detection capability shall be determined by the facility using best engineering judgment. Deficiencies with leak detection systems such as false alarms must be addressed and accounted for by the facility. Facilities may meet these requirements by:

(a) Visual inspection provided the entire pipeline is visible and inspected every fifteen minutes; or

(b) Instrumentation; or

(c) Completely containing the entire circumference of the pipeline provided that a leak can be detected within fifteen minutes; or

(d) Conducting an acceptable hydrotest of the pipeline immediately before the oil transfer with visual surveillance of the exposed pipeline every fifteen minutes; or

(e) A combination of the above strategies; or

(f) A method approved by the department which meets the standard identified in this section.

Leak detection system operation and operator response must be described in the facility operations manual.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-100, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-110 Inspections. The department may verify compliance with this chapter by announced and unannounced inspections in accordance with RCW 90.56.410. During an inspection the department may require the facility to provide proof of compliance by producing all required records, documents as well as demonstrating spill prevention equipment and procedures required by this rule.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-110, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-120 Recordkeeping. Records required by this rule shall be maintained and available for a minimum of three years. Storage tank and pipeline records shall be maintained for the life of the equipment. Records shall be available to the department for inspection or photocopying upon request.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-120, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-130 Noncompliance. Any violation of this chapter may be subject to the enforcement sanctions of chapters 90.48 and 90.56 RCW.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-130, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-140 Rule review. The department shall review the requirements of this section every five years to ensure that best achievable protection of public health and environment is being achieved. This review shall include a review of current and updated industry standards, federal and state regulations, equipment and operational procedures.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-140, filed 5/4/94, effective 6/4/94.]

WAC 173-180A-150 Severability. If any provision of this chapter is held invalid, the remainder of this rule is not affected.

[Statutory Authority: RCW 90.56.220. 94-10-084, § 173-180A-150, filed 5/4/94, effective 6/4/94.]

Chapter 173-180B WAC

FACILITY OIL-HANDLING OPERATIONS MANUAL STANDARDS

WAC

173-180B-010	Purpose.
173-180B-020	Authority.
173-180B-030	Definitions.
173-180B-040	Applicability.
173-180B-050	Manual preparation.
173-180B-060	Manual format requirements.
173-180B-070	Manual content requirements.
173-180B-080	Manual submittal.
173-180B-090	Manual review.
173-180B-100	Manual maintenance and use.
173-180B-110	Inspections.
173-180B-120	Manual update timeline.
173-180B-130	Noncompliance with manual requirements.
173-180B-140	Severability.

WAC 173-180B-010 Purpose. The purpose of this chapter is to establish operations manual requirements which, when followed, will:

- (1) Help to prevent oil and petroleum spills from occurring;
- (2) Ensure that facilities are operated in a manner which will provide the best achievable protection of public health and the environment;
- (3) Provide improved protection of Washington waters and natural resources from the impacts of oil spills caused by operational errors.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-010, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-020 Authority. RCW 90.56.230 provides statutory authority for operations manual preparation and review requirements established by this chapter.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-020, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-030 Definitions. "Best achievable protection" means the highest level of protection that can be achieved through the use of the best achievable technology and those staffing levels, training procedures, and operational methods that provide the greatest degree of protection achievable. The director's determination of best achievable protection shall be guided by the critical need to protect the state's natural resources and waters, while considering: The additional protection provided by the measures; the technological achievability of the measures; and the cost of the measures.

"Best achievable technology" means the technology that provides the greatest degree of protection, taking into consideration processes that are being developed, or could feasibly be developed, given overall reasonable expenditures on

research and development, and processes that are currently in use. In determining what is best achievable technology, the director shall consider the effectiveness, engineering feasibility, and commercial availability of the technology.

"Board" means the pollution control hearings board.

"Bulk" means material that is stored or transported in a loose, unpackaged liquid, powder, or granular form capable of being conveyed by a pipe, bucket, chute, or belt system.

"Cargo vessel" means a self-propelled ship in commerce, other than a tank vessel or a passenger vessel, greater than three hundred or more gross tons, including but not limited to, commercial fish processing vessels and freighters.

"Covered vessel" means a tank vessel, cargo vessel, or passenger vessel.

"Department" means the department of ecology.

"Director" means the director of the department of ecology.

"Discharge" means any spilling, leaking, pumping, pouring, emitting, emptying or dumping.

Facility:

"Facility" means any structure, group of structures, equipment, pipeline, or device, other than a vessel, located on or near the navigable waters of the state that transfers oil in bulk to or from a tank vessel or pipeline, that is used for producing, storing, handling, transferring, processing, or transporting oil in bulk.

A facility does not include any: Railroad car, motor vehicle, or other rolling stock while transporting oil over the highways or rail lines of this state; underground storage tank regulated by the department or a local government under chapter 90.76 RCW; a motor vehicle motor fuel outlet; a facility that is operated as part of an exempt agricultural activity as provided in RCW 82.04.330; or a marine fuel outlet that does not dispense more than three thousand gallons of fuel to a ship that is not a covered vessel, in a single transaction.

"Navigable waters of the state" means those waters of the state, and their adjoining shorelines, that are subject to the ebb and flow of the tide and/or are presently used, have been used in the past, or may be susceptible for use to transport intrastate, interstate, or foreign commerce.

"Oil" or "oils" means naturally occurring liquid hydrocarbons at atmospheric temperature and pressure coming from the earth, including condensate and natural gasoline, and any fractionation thereof, including, but not limited to, crude oil, petroleum, gasoline, fuel oil, diesel oil, oil sludge, oil refuse, and oil mixed with wastes other than dredged spoil. Oil does not include any substance listed in Table 302.4 of 40 CFR Part 302 adopted August 14, 1989, under section 101 (14) of the federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by P.L. 99-499.

"Offshore facility" means any facility, as defined in this section, located in, on, or under any of the navigable waters of the state, but does not include any land of the state, other than submerged land.

"Onshore facility" means any facility, as defined in this section, any part of which is located in, on, or under any land of the state, other than submerged land, that because of its location, could reasonably be expected to cause substantial

harm to the environment by discharging oil into or on the navigable waters of the state or the adjoining shorelines.

Owner or operator:

"Owner" or "operator" means: In the case of a vessel, any person owning, operating, or chartering by demise, the vessel; in the case of an onshore or offshore facility, any person owning or operating the facility; and in the case of an abandoned vessel or onshore or offshore facility, the person who owned or operated the vessel or facility immediately before its abandonment.

Operator does not include any person who owns the land underlying a facility immediately before its abandonment.

"Passenger vessel" means a ship of greater than three hundred or more gross tons or five hundred or more international gross tons carrying passengers for compensation.

"Person" means any political subdivision, government agency, municipality, industry, public or private corporation, copartnership, association, firm, individual, or any other entity whatsoever.

"Ship" means any boat, ship, vessel, barge, or other floating craft of any kind.

"Spill" means an unauthorized discharge of oil which enters the waters of the state.

"Tank vessel" means a ship that is constructed or adapted to carry, or that carries, oil in bulk as cargo or cargo residue, and that:

Operates on the waters of the state; and

Transfers oil in a port or place subject to the jurisdiction of this state.

"Transmission pipeline" means a pipeline whether interstate or intrastate, subject to regulation by the United States Department of Transportation under 49 CFR 195, as amended through December 5, 1991, through which oil moves in transportation, including line pipes, valves, and other appurtenances connected to line pipe, pumping units, and fabricated assemblies associated with pumping units.

"Transfer" means any movement of oil between a tank vessel or transmission pipeline and the facility.

"Transfer pipeline" is a buried or aboveground pipeline used to carry oil between a tank vessel or transmission pipeline and the first valve inside secondary containment at the facility provided that any discharge on the facility side of that first valve will not directly impact waters of the state. A transfer pipeline includes valves, and other appurtenances connected to the pipeline, pumping units, and fabricated assemblies associated with pumping units. A transfer pipeline does not include process pipelines, pipelines carrying ballast or bilge water, transmission pipelines, tank vessel or storage tanks. Instances where the transfer pipeline is not well defined will be determined on a case-by-case basis.

"Waters of the state" include lakes, rivers, ponds, streams, inland waters, underground water, salt waters, estuaries, tidal flats, beaches and land adjoining the seacoast of the state, sewers, and all other surface waters and watercourses within the jurisdiction of the state of Washington.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-030, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-040 Applicability. Operations manuals for onshore and offshore facilities must be prepared, sub-

(1999 Ed.)

mitted, and implemented, pursuant to the requirements in this chapter.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-040, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-050 Manual preparation. (1) Each facility shall prepare an operation and maintenance manual describing equipment and procedures involving the transfer, storage, and handling of oil that the operator employs or will employ to achieve best achievable protection for public health and the environment, and to prevent oil spills. The manual shall also describe equipment and procedures required for all vessels which transfer oil to or from a facility. At a minimum, manuals shall meet the requirements of this chapter.

(2) The manual shall be thorough and contain enough information, analyses, supporting data, and documentation to demonstrate the manual holder's ability to meet the requirements of this chapter and the requirements of chapter 173-180A WAC.

(3) Coast Guard operations manuals required under 33 CFR 154.300 may be submitted to satisfy manual requirements under this chapter if the department deems that such federal requirements equal or exceed those of the department, or if the manuals are modified or appended to satisfy manual requirements under this chapter.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-050, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-060 Manual format requirements.

(1) Manuals shall be divided into a system of chapters and sections and shall be organized in a format which provides easy access to information.

(2) The manual shall allow replacement of chapter and appendix pages with revisions, without requiring replacement of the entire manual.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-060, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-070 Manual content requirements.

(1) Each operations manual submitted to the department shall contain a submittal agreement which:

(a) Includes the name, address, and phone number of the submitting party.

(b) Verifies acceptance of the manual by the owner or operator of the facility by either signature of the owner or operator or signature by a person with the authority to bind the corporation which owns such facility;

(c) Commits execution of the manual by the owner or operator of the facility, and verifies authority for the plan holder to make appropriate expenditures in order to execute plan provisions.

(d) Includes the name, location, and address of the facility, type of facility, and starting date of operations.

(e) Each manual shall include a log sheet to record amendments to the manual. The log sheet shall be placed at the front of the manual. The log sheet shall provide for a record of the section amended, the date that the old section was replaced with the amended section, and the initials of the individual making the change. A description of the amend-

ment and its purpose shall also be included in the log sheet, or filed in the form of an amendment letter immediately following the log sheet.

(2) Each manual shall include a detailed table of contents based on chapter, section, and appendix numbers and titles, as well as tables and figures.

(3) Where applicable, topics identified in the table of contents may be cross referenced with other submissions required by chapter 90.56 RCW including contingency and prevention plans, or 33 CFR 156 provided that a copy of the *Coast Guard Operations Manual* has been submitted to ecology.

(4) Operations manuals shall address at a minimum the following topics for marine transfers to or from facilities:

(a) The geographic location of the facility shown on a topographic map;

(b) A physical description of the facility including a plan of the facility showing mooring areas, transfer locations, control stations, oil flow patterns, and locations of safety equipment;

(c) A statement identifying facility operation hours;

(d) A discussion of the sizes, types, and number of vessels that the facility can transfer oil to or from, including simultaneous transfers;

(e) A description of all oil types transferred to or from the facility including:

(i) Generic and chemical name; and

(ii) The following oil information:

(A) The name of the oil;

(B) A description of the appearance of the oil;

(C) The hazards involved in handling the oil;

(D) Instructions for safe handling of oil;

(E) The procedures to be followed if the oil spills or leaks, or if a person is exposed to the oil; and

(F) A list of fire fighting procedures and extinguishing agents effective with fires involving the oil.

(f) A discussion of the minimum number of persons or equipment required to perform transfer operations and their duties;

(g) The names and telephone numbers of facility, federal, state, local and other personnel who may be called by the employees of the facility in case of an emergency;

(h) The duties of the transfer watchmen;

(i) Instructions in the use of each communication system;

(j) The location and facilities of each personnel shelter, if any;

(k) A description and instructions for the use of drip and discharge collection and vessel slop reception facilities, if any;

(l) Emergency plans and procedures including a description of and the location of each emergency shutdown system;

(m) Quantity, types, locations, and instructions for use of monitoring devices;

(n) Quantity, type, location, instructions for use, and time limits for gaining access to containment equipment;

(o) Quantity, type, location, and instructions for use of fire extinguishing equipment;

(p) Maximum relief valve settings (or maximum system pressures when relief valves are not provided) for each transfer system;

(q) Detailed procedures for:

(i) Operating each loading arm including the limitations of each loading arm;

(ii) Transferring oil;

(iii) Completion of pumping; and

(iv) Emergencies.

(r) Procedures for reporting and initial containment of oil discharges;

(s) A brief summary of applicable federal, state, and local oil pollution laws and regulations;

(t) If applicable, procedures for shielding portable lighting;

(u) A discussion of facility operation procedures for conducting oil transfers including transfer startups and shutdowns;

(v) Recordkeeping procedures and sample forms which are associated with the requirements in chapters 173-180A and 173-180B WAC;

(w) Example maintenance schedules incorporating manufacturers recommendations or an industrial standard approved by the department, preventative maintenance, replacement criteria for transfer pipelines, pumps and valves;

(x) A discussion of equipment and procedures required for all vessels which transfer oil to the facility. Procedures for verifying that vessels meet facility requirements and operations manual procedures;

(y) A section in accordance with the National Fire Protection Association (NFPA), Flammable and Combustible Code, No. 30-1993, Chapter 2, Section 2-10 which requires that written procedures be developed to describe overfill prevention procedures. Overfill prevention procedures shall be described for transfers to storage tanks and tank vessels;

(z) A discussion of the leak detection system and/or procedures implemented by the facility.

(5) Operations manuals shall address at a minimum the following topics for transfers to or from transmission pipelines:

(a) The geographic location of the facility shown on a topographic map;

(b) A physical description of the facility including a plan of the facility showing transfer locations, control stations, oil flow patterns, and locations of safety equipment;

(c) A statement identifying facility operation hours;

(d) A description of all oil types transferred to or from the facility including:

(i) Generic and chemical name; and

(ii) The following oil information:

(A) The name of the oil;

(B) A description of the appearance of the oil;

(C) A description of the odor of the oil;

(D) The hazards involved in handling the oil;

(E) Instructions for safe handling of oil;

(F) The procedures to be followed if the oil spills or leaks, or if a person is exposed to the oil; and

(G) A list of fire fighting procedures and extinguishing agents effective with fires involving the oil.

(e) A discussion of the minimum number of persons required to perform transfer operations and their duties;

(f) The names and telephone numbers of facility, federal, state, local and other personnel who may be called by the employees of the facility in case of an emergency;

(g) The duties of the facility operator;

(h) A description of each communication system;

(i) The location and facilities of each personnel shelter, if any;

(j) Emergency plans and procedures including a description of and the location of each emergency shutdown system;

(k) Quantity, types, locations, and instructions for use of monitoring devices;

(l) Quantity, type, location, instructions for use, and time limits for gaining access to containment equipment;

(m) Quantity, type, location, and instructions for use of fire extinguishing equipment;

(n) Maximum relief valve settings (or maximum system pressures when relief valves are not provided) for each transfer system;

(o) Detailed procedures for:

(i) Transferring oil;

(ii) Completion of transfer; and

(iii) Emergencies.

(p) Procedures for reporting and initial containment of oil discharges;

(q) A brief summary of applicable federal, state, and local oil pollution laws and regulations;

(r) A description of the training and qualification program for persons in charge;

(s) A discussion of facility operation procedures for conducting oil transfers including transfer startups and shutdowns;

(t) Recordkeeping procedures and sample forms to be used;

(u) Example maintenance schedules incorporating manufacturers recommendations or an industrial standard approved by the department, preventative maintenance replacement criteria for transfer pipelines, pumps and valves;

(v) A section in accordance with the National Fire Protection Association (NFPA), Flammable and Combustible Code, No. 30-1993, Chapter 2, Section 2-10 which requires that written procedures be developed to describe overfill prevention procedures. Overfill prevention procedures shall be described for transfers to storage tanks and tank vessels.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-070, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-080 Manual submittal. (1) Manuals for onshore and offshore facilities shall be submitted to ecology within eighteen months after the adoption date of this rule.

(2) Any onshore or offshore facility that first begins operating after the above deadline shall submit a manual to the department at least sixty-five calendar days prior to the beginning of operations.

(3) Three copies of the manual and appendices shall be delivered to:

Spill Management Section,
Operations Manual Review
Washington Department of Ecology
P.O. Box 47600

Olympia, WA 98504-7600

(4) The plan submitter may request that proprietary information be kept confidential under RCW 43.21A.160.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-080, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-090 Manual review. (1) Upon receipt of a manual, ecology shall determine promptly whether the manual is complete. If the department determines that a manual is incomplete, the submitter shall be notified of deficiencies.

(2) A manual shall be approved if, in addition to meeting criteria in this section, that when implemented, it can provide best achievable protection from damages cause by the discharge of oil into waters of the state.

(3) When reviewing manuals, ecology shall, in addition to the above criteria, consider the following:

(a) The volume and type of oil(s) addressed by the facility prevention plan;

(b) The history and circumstances of prior spills by similar types of facilities, including spills reported to the state and federal government in Washington state;

(c) Inspection reports;

(d) The presence of operating hazards;

(e) The sensitivity and value of natural resources within the geographic area covered by the plan; and

(f) Any pertinent local, state, federal agency, or public comments received on the manual.

(4) Ecology shall endeavor to notify the facility owner or operator within five working days after the review is completed whether the manual has been approved.

(a) If the plan receives approval, the facility owner or operator shall receive an approval letter describing the terms of approval, including expiration dates pursuant to WAC 173-180-085(4).

(b)(i) Ecology may approve a manual conditionally by requiring a facility owner or operator to operate with specific precautionary measures until acceptable components of the plan are resubmitted and approved.

(ii) Precautionary measures may include, but are not limited to, reducing oil transfer rates, increasing personnel levels, or restricting operations to daylight hours. Precautionary measures may also include additional requirements to ensure availability to response equipment.

(iii) A manual holder shall have thirty days after the department gives notification of conditional status to submit and implement required changes to ecology, with the option for an extension at ecology's discretion. Manual holders who fail to meet conditional requirements or provide required changes in the time allowed shall lose conditional approval status.

(c) If manual approval is denied, the facility owner or operator shall receive an explanation of the factors for disapproval and a list of deficiencies. The owner or operator of the facility must resubmit the manual within ninety days of notification of reasons for noncompliance, responding to the reasons and incorporating any suggested modifications. The facility shall not continue oil storage, transfer, production, or other operations until a manual for that facility has been approved.

(d) A manual holder may appeal ecology's decision under WAC 173-04-010.

(e) Approval of a manual by ecology does not constitute an express assurance regarding the adequacy of the manual nor constitute a defense to liability imposed under state law.

(5) It shall be legal to operate a facility if a proposed operations manual has been submitted to the department and the department has not provided the facility with a formal response.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-090, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-100 Manual maintenance and use.

(1) All equipment and operations of the facility shall be completed and maintained in accordance with the facility's operation manual. The owner or operator shall ensure that all covered vessels docked at an onshore or offshore facility comply with the terms of the operations manual for the facility.

(2) Each facility covered by the manual shall possess a copy of the manual and keep it in an immediately accessible location.

(3) Facilities shall ensure that all employees involved in oil transfer, or storage operations, are familiar with the manual provisions through regular training. Orientation materials for new employees involved in oil transfer or storage operations shall contain a copy of the manual.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-100, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-110 Inspections. Ecology may verify compliance with this chapter by announced and unannounced inspections in accordance with RCW 90.56.410. During an inspection ecology may require the facility to provide proof of compliance by producing all required records, documents as well as demonstrating spill prevention equipment and procedures.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-110, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-120 Manual update timeline. (1) Ecology shall be notified in writing prior to any significant changes which could affect implementation of the manual.

(a) A significant change includes, but is not limited to:

(i) A change in the owner or operator of the facility;

(ii) A change in the types of oil handled at the facility;

(iii) A substantial change in the facility's oil-handling capacity;

(iv) Noncompliance with the federal Oil Pollution Act of 1990;

(v) A substantial change in oil spill prevention technology installed at the facility, or other substantial changes to facility technology, operations, or personnel procedures based on requirements of amended or new rules adopted by ecology; and

(vi) A change which would require that the operations manual be modified.

(b) If the change will reduce the facility's ability to implement the manual, the manual holder shall also provide a schedule for the return of the manual to full implementation capability.

[Title 173 WAC—p. 298]

(c) A facsimile will be considered written notice for the purposes of this section.

(d) Failure to notify ecology of significant changes shall be considered noncompliance with this chapter and subject to the provisions of WAC 173-180B-070.

(2) If ecology finds that, as a result of the change, the manual no longer meets approval criteria, the department may, at its discretion, place conditions on approval, or revoke approval. The department may also require the manual holder to amend its manual to incorporate the change.

(3) Within thirty calendar days of making a change to the operations manual, the facility owner or operator shall distribute the amended page(s) of the plan to ecology and other manual holders.

(4) Manuals shall be reviewed by ecology every five years. Manuals shall be submitted for reapproval unless the manual holder submits a letter requesting that ecology review the manual already in the department's possession. The manual holder shall submit the manual or such letter at least one hundred eighty calendar days in advance of the manual expiration date.

(5) Ecology may review a manual and require changes following any spill for which the manual holder is responsible.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-120, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-130 Noncompliance with manual requirements. Any violation of this chapter may be subject to the enforcement sanctions of chapter 90.48 RCW.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-130, filed 5/4/94, effective 6/4/94.]

WAC 173-180B-140 Severability. If any provision of this chapter is held invalid, the remainder of this rule is not affected.

[Statutory Authority: RCW 90.56.230. 94-10-083, § 173-180B-140, filed 5/4/94, effective 6/4/94.]

Chapter 173-180C WAC

FACILITY PERSONNEL OIL-HANDLING TRAINING AND CERTIFICATION

WAC

173-180C-010	Purpose.
173-180C-020	Authority.
173-180C-030	Definitions.
173-180C-040	Applicability.
173-180C-050	Training requirements.
173-180C-060	Certification program.
173-180C-070	Minimum criteria for certification programs.
173-180C-080	Program approval.
173-180C-090	Inspections.
173-180C-095	Noncompliance with requirements.
173-180C-098	Severability.

WAC 173-180C-010 Purpose. The purpose of this chapter is to establish onshore and offshore facility personnel oil-handling training and certification requirements which, when followed, will:

(1) Provide improved protection of Washington waters and natural resources by preventing oil spills caused by human factors;

(1999 Ed.)

(2) Ensure that key facility personnel involved in oil-handling operations are adequately trained and have demonstrated competency; and

(3) Establish certification that personnel are in compliance with training requirements.

[Statutory Authority: RCW 90.56.220, 93-01-089 (Order 91-64), § 173-180C-010, filed 12/16/92, effective 1/16/93.]

WAC 173-180C-020 Authority. RCW 90.56.220 provides statutory authority for the personnel training and certification requirements established by this chapter.

[Statutory Authority: RCW 90.56.220, 93-01-089 (Order 91-64), § 173-180C-020, filed 12/16/92, effective 1/16/93.]

WAC 173-180C-030 Definitions. (1) "Bulk" means material that is stored or transported in a loose, unpackaged liquid, powder, or granular form capable of being conveyed by a pipe, bucket, chute, or belt system.

(2) "Cargo vessel" means a self-propelled ship in commerce, other than a tank vessel or a passenger vessel, of three hundred or more gross tons, including but not limited to, commercial fish processing vessels and freighters.

(3) "Certification" means the documentation that a facility employee has met all requirements of an oil spill prevention training and job competency program that meets the requirements of this chapter.

(4) "Department" means the state of Washington department of ecology.

(5) "Director" means the director of the state of Washington department of ecology.

(6) "Discharge" means any spilling, leaking, pumping, pouring, emitting, emptying, or dumping.

(7)(a) "Facility" means any structure, group of structures, equipment, pipeline, or device, other than a vessel, located on or near the navigable waters of the state that both:

(i) Transfers oil in bulk to or from a tank vessel or pipeline; and

(ii) Is used for producing, storing, handling, transferring, processing, or transporting oil in bulk.

(b) A facility does not include any:

(i) Railroad car, motor vehicle, or other rolling stock while transporting oil over the highways or rail lines of this state, or while transferring oil to or from the rolling stock;

(ii) Underground storage tank regulated by the department or a local government under chapter 90.76 RCW;

(iii) Motor vehicle motor fuel outlet;

(iv) Facility that is operated as part of an exempt agricultural activity as provided in RCW 82.04.330; or

(v) Marine fuel outlet that dispenses three thousand gallons or less of fuel in a single transaction to a ship other than a tank vessel, cargo vessel, or passenger vessel. Marine fuel outlets that dispense more than three thousand gallons of fuel to any vessel in a single transaction do not meet this exemption.

(8) "Gross ton" means a vessel's approximate volume as defined in Title 46, United States Code of Federal Regulations, Part 69.

(9) "Human factors" means human conditions, such as inadequate knowledge or fatigue, which can lead to incompetency or poor judgment.

(10) "Human factor risks" means risks of causing an oil spill due to the effects of human factors on competency and judgment.

(11) "Indirect operations" means involvement in on-site activities, such as new construction, in a capacity that indirectly involves the risk of an oil spill to waters of the state due to potential impacts to nearby oil-handling operations (e.g., operating digging equipment next to an active transfer pipeline).

(12) "Key" means a position with direct responsibility for performing or overseeing the transfer, storage, handling, or monitoring of oil at a facility, or a job function where typical human factors present the probability of a spill occurring.

(13) "Maintenance" means direct involvement in maintaining and repairing the equipment used for the transfer, storage, handling, or monitoring of oil at a facility in a capacity that involves the risk of an oil spill to waters of the state.

(14) "Management" means direct involvement in managing the transfer, storage, handling, or monitoring of oil at a facility by setting operations policies and procedures that involve the risk of an oil spill to waters of the state.

(15) "Marine facility" means any facility used for tank vessel wharfage or anchorage, including any equipment used for the purpose of handling or transferring oil in bulk to or from a tank vessel.

(16) "Maximum extent practicable" means the highest level of effectiveness that can be achieved through the use of facility personnel and best achievable technology. In determining what is the maximum extent practicable, the director shall consider, at a minimum, the effectiveness, engineering feasibility, commercial availability, safety, and the cost of the measures.

(17) "Navigable waters of the state" means those waters of the state, and their adjoining shorelines, that are subject to the ebb and flow of the tide and/or are presently used, have been used in the past, or may be susceptible for use to transport intrastate, interstate, or foreign commerce.

(18) "Offshore facility" means any facility, as defined in subsection (7) of this section, located in, on, or under any of the navigable waters of the state, but does not include a facility any part of which is located in, on, or under any land of the state, other than submerged land.

(19) "Oil" or "oils" means naturally occurring liquid hydrocarbons at atmospheric temperature and pressure coming from the earth, including condensate and natural gasoline, and any fractionation thereof, including, but not limited to, crude oil, petroleum, gasoline, fuel oil, diesel oil, oil sludge, oil refuse, and oil mixed with wastes other than dredged spoil, including oil-contaminated ballast or bilge water. Oil does not include any substance listed in Table 302.4 of 40 C.F.R. Part 302 adopted August 14, 1989, under section 101(14) of the Federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by P.L. 99-499.

(20) "Onshore facility" means any facility, as defined in subsection (7) of this section, any part of which is located in, on, or under any land of the state, other than submerged land, that because of its location, could reasonably be expected to cause substantial harm to the environment by discharging oil

into or on the navigable waters of the state or the adjoining shorelines.

(21) "On-the-job training" means learning procedures and equipment use through observation of experienced and competent personnel, and supervised hands-on practice.

(22) "Operations" means direct involvement in the transfer, storage, handling, or monitoring of oil at a facility in a capacity that involves the risk of an oil spill to waters of the state. This functional group includes but is not limited to the person-in-charge, storage tank operators, pipeline operators, and oil transfer monitors.

(23)(a) "Owner or operator" means:

(i) In the case of an onshore or offshore facility, any person owning or operating the facility; and

(ii) In the case of an abandoned onshore or offshore facility, the person who owned or operated the facility immediately before its abandonment.

(b) "Operator" does not include any person who owns the land underlying a facility if the person is not involved in the operations of the facility.

(24) "Passenger vessel" means a ship of three hundred or more gross tons with a fuel capacity of at least six thousand gallons carrying passengers for compensation.

(25) "Person" means any political subdivision, government agency, municipality, industry, public or private corporation, copartnership, association, firm, individual, or any other entity whatsoever.

(26) "Person-in-charge" means the individual identified as the person in charge of transfer operations as required under 33 C.F.R. 154.710.

(27) "Personnel" means individuals employed by, or under contract with, a facility.

(28) "Pipeline" means, for the purposes of subsection (7)(a) (i) of this section, a pipeline connected to a marine facility, and not owned or operated by the facility referred to in subsection (7)(a) of this section.

(29) "Ship" means any boat, ship, vessel, barge, or other floating craft of any kind.

(30) "Spill" means an unauthorized discharge of oil which enters waters of the state.

(31) "Supervisory" means involvement in directly supervising the transfer, storage, handling, or monitoring of oil at a facility by implementing operations policies and procedures that involve the risk of an oil spill to waters of the state.

(32) "Tank vessel" means a ship that is constructed or adapted to carry, or that carries, oil in bulk as cargo or cargo residue, and that:

(a) Operates on the waters of the state; or

(b) Transfers oil in a port or place subject to the jurisdiction of this state.

(33) "Waters of the state" includes lakes, rivers, ponds, streams, inland waters, underground water, salt waters, estuaries, tidal flats, beaches and lands adjoining the seacoast of the state, sewers, and all other surface waters and watercourses within the jurisdiction of the state of Washington.

[Statutory Authority: RCW 90.56.220, 93-01-089 (Order 91-64), § 173-180C-030, filed 12/16/92, effective 1/16/93.]

WAC 173-180C-040 Applicability. Personnel oil-handling training and certification programs for onshore and off-

shore facilities must be developed, approved, and implemented, pursuant to requirements in this chapter.

[Statutory Authority: RCW 90.56.220, 93-01-089 (Order 91-64), § 173-180C-040, filed 12/16/92, effective 1/16/93.]

WAC 173-180C-050 Training requirements. (1) Each onshore and offshore facility shall develop and implement oil spill prevention training for key supervisory, operations, maintenance, management, and indirect operations personnel identified pursuant to subsection (3) of this section. Training shall be designed, to the maximum extent practicable, to promote job competency and environmental awareness for the purpose of preventing oil spills. Non-English speaking personnel subject to the facility's training requirements shall be trained in a manner that allows comprehension by such personnel.

(2) Oil spill prevention training programs must be approved by the department pursuant to WAC 173-180C-080.

(3) The facility shall identify, in writing, the specific position titles which the facility has identified to be subject to its oil spill prevention training requirements. In making this determination, the facility shall evaluate the functions of facility personnel positions using the definitions of "key," "supervisory," "operations," "maintenance," "management," and "indirect operations" under WAC 173-180C-030. For cases where certain job titles associated with indirect operations can not be identified in advance, the facility shall identify the types of job orders or work sites which may involve the need for indirect operations oil spill prevention training.

(4) The facility shall identify, in writing, the specific initial classroom and/or on-the-job oil spill prevention training requirements for each position, including minimum hours, that are appropriate for each position given the facility's training needs and human factor risks.

(5) Requirements for training of operations and supervisory personnel shall focus on building personnel competency in operating procedures and spill prevention systems specific to the facility. Oil spill prevention training requirements shall incorporate the following training topics at a minimum:

(a) Overview of all oil handling, transfer, storage, and monitoring/leak detection operations at the facility;

(b) Operating procedures and checklists specific to trainee's job function;

(c) Problem assessment, including recognition of human factor risks and how they can be minimized;

(d) Awareness of preventative maintenance procedures;

(e) Awareness of local environmental sensitivity and oil spill impacts;

(f) Major components of facility's oil spill prevention plan;

(g) Major components of facility's operations manual;

(h) Major components of facility's oil spill contingency plan;

(i) Decision-making for abnormal operating events and emergencies, including emergency spill prevention and safe shut down conditions, responsibilities, and procedures;

(j) Routine and emergency communications procedures;

(k) Overview of applicable oil spill prevention and response laws and regulations; and

(l) Drug and alcohol use awareness, pursuant to WAC 173-180D-060(11).

(6) Requirements for initial oil spill prevention training of management personnel shall incorporate the following training topics at a minimum:

(a) Overview of all oil handling, transfer, storage, and monitoring/leak detection operations at the facility;

(b) Management role in operations and oil spill prevention;

(c) Recognition of human factor risks and how they can be minimized;

(d) Awareness of local environmental sensitivity and oil spill impacts;

(e) Major components of facility's oil spill prevention plan;

(f) Major components of facility's operations manual;

(g) Major components of facility's oil spill contingency plan;

(h) Decision-making for abnormal operating events and emergencies, including emergency spill prevention and safe shut down conditions, responsibilities, and procedures;

(i) Overview of applicable oil spill prevention and response laws and regulations; and

(j) Drug and alcohol use awareness, pursuant to WAC 173-180D-060(11).

(7) Requirements for initial oil spill prevention training of maintenance personnel shall incorporate the following training topics at a minimum:

(a) Overview of all oil handling, transfer, storage, and monitoring/leak detection operations at applicable maintenance work sites within the facility;

(b) Equipment problem assessment and preventative maintenance procedures;

(c) Awareness of local environmental sensitivity and oil spill impacts;

(d) Major components of facility's oil spill prevention plan;

(e) Major components of facility's operations manual;

(f) Major components of facility's oil spill contingency plan;

(g) Emergency spill prevention and safe shut down conditions, responsibilities, and procedures;

(h) Overview of applicable oil spill prevention and response laws and regulations; and

(i) Drug and alcohol use awareness, pursuant to WAC 173-180D-060(11).

(8) Requirements for initial oil spill prevention training of indirect operations personnel shall incorporate the following training topics at a minimum:

(a) Overview of oil handling, transfer, storage, and monitoring/leak detection operations at specific indirect operations work site within the facility;

(b) Awareness of local environmental sensitivity and oil spill impacts;

(c) Notification procedures for emergency spill prevention actions; and

(d) For facility employees, drug and alcohol use awareness, pursuant to WAC 173-180D-060(11).

(9) Training topics identified in subsections (5) through (8) of this section, do not prescribe fixed subject titles for

(1999 Ed.)

class outlines or training organization. Facilities may combine or integrate these topics as appropriate, but must ensure that information on each topic is presented in the applicable personnel training program.

(10) The facility shall identify, in writing, the specific oil spill prevention continuing education requirements for each affected position, including minimum hours, that are appropriate given the facility's training needs and human factor risks. Ongoing training shall occur at least annually, and at a minimum address:

(a) Any changes in the core topics identified in subsections (5) through (8) of this section, unless affected personnel have already been informed about the change after its occurrence;

(b) Refresher awareness training on environmental sensitivity and oil spill impacts;

(c) Review and analysis of oil spills which have occurred during the past year;

(d) Refresher training on emergency spill prevention procedures; and

(e) For key supervisory, operations, and management personnel, a practice exercise of the facility's procedures for preventing a spill during a particular abnormal operations event.

(11) Facilities are encouraged to apply or modify existing training programs required under federal Process Safety Management requirements (29 C.F.R. 1910), Coast Guard Person-in-charge requirements (33 C.F.R. 154.710), and other federal/state training requirements in order to meet the above oil spill prevention training requirements.

(12) Existing personnel that have entered their current position prior to adoption of this chapter can be regarded as having met the facility's initial oil spill prevention training requirements if:

(a) The facility has documented that those personnel have received the required training in the past; or

(b) The facility attests in writing and in detail how those personnel have had on-the-job training or other experience equivalent to the facility's initial training requirements including type and frequency of past training when known.

(13) Facilities shall develop follow up remedial training for personnel clearly responsible for causing an oil spill while functioning in their position, unless such personnel no longer occupy a position identified under subsection (3) of this section.

(14) Contractors hired by the facility to perform key supervisory, operations, maintenance, management, or indirect operations functions, as identified by the facility under subsection (3) of this section, are considered "personnel" for the purposes of this chapter, and shall be subject to the same oil spill prevention training requirements as facility employees. The facility is responsible to validate that such contractors have met the facility's oil spill prevention training requirements before they perform a key supervisory, operations, maintenance, management, or indirect operations function.

(15) Facilities shall develop minimum training and/or experience qualifications for trainers who will demonstrate facility-specific procedures, equipment use, supervise prac-

tice sessions, and provide other on-the-job training to new operations personnel.

(16) Facilities shall develop and maintain written oil spill prevention training materials, such as training manuals or checklists.

(17) Oil spill prevention training shall be documented, and records shall be kept at the facility in a central and accessible location for at least five years from the date of training completion.

[Statutory Authority: RCW 90.56.220. 93-01-089 (Order 91-64), § 173-180C-050, filed 12/16/92, effective 1/16/93.]

WAC 173-180C-060 Certification program. (1) Each onshore and offshore facility shall develop and implement a program to certify that key supervisory and operations personnel identified pursuant to WAC 173-180C-050(3) have met the facility's oil spill prevention training program requirements, and are competent to perform the operations or supervisory functions associated with their position. The facility is not required to certify personnel other than key supervisory and operations personnel. The certification program shall be designed, to the maximum extent practicable, to ensure job competency and environmental awareness for the purpose of preventing oil spills.

(2) Certification programs must meet minimum criteria pursuant to WAC 173-180C-070.

(3) Certification programs must be approved by the department pursuant to WAC 173-180C-080.

[Statutory Authority: RCW 90.56.220. 93-01-089 (Order 91-64), § 173-180C-060, filed 12/16/92, effective 1/16/93.]

WAC 173-180C-070 Minimum criteria for certification programs. (1) The facility oil spill prevention certification program shall address all key supervisory and operations personnel identified pursuant to WAC 173-180C-050(3).

(2) The facility shall develop and maintain written certification procedures, including:

(a) Minimum competency requirements to achieve certification;

(b) The process to develop and test competency in key supervisory and operations personnel;

(c) The process to issue and track certificates; and

(d) Policies regarding loss or lack of certified status.

(3) The facility shall maintain a written certificate or other record for supervisory and operations personnel which have met the facility's certification requirements. This record shall document:

(a) The certified individual's name and position;

(b) Types and hours of training completed;

(c) Name of trainer;

(d) Results of performance tests and evaluations; and

(e) Signatures of the trainee and trainer.

(4) Copies of certification records shall be kept at the facility in a central and accessible location for at least five years from the date of certification.

(5) The facility certification program shall incorporate methods to evaluate and confirm job competency, including:

(a) A written examination, or oral examination documented in writing, which tests general knowledge about

training topics identified under WAC 173-180C-050(5), with an appropriate passing score established by the facility;

(b) A practical evaluation of understanding and performance of routine and emergency operations specific to a position's job function, including:

(i) Observation of performance of each oil handling, transfer, storage, and monitoring duty assigned to a position prior to unsupervised performance of that duty; and

(ii) Practice exercises involving procedures to prevent a spill during abnormal operations events.

(6) The facility's program shall only provide for certification of an individual who has:

(a) Met the facility's oil spill prevention initial training requirements tied to the individual's position, as developed pursuant to WAC 173-180C-050(4); and

(b) Passed a competency evaluation developed under subsection (5) of this section.

(7) Recertification shall occur at least once every three years, based on:

(a) Successful completion of continuing education requirements; and

(b) Satisfactory performance in a reevaluation of competency as developed under subsection (5) of this section.

[Statutory Authority: RCW 90.56.220. 93-01-089 (Order 91-64), § 173-180C-070, filed 12/16/92, effective 1/16/93.]

WAC 173-180C-080 Program approval. (1) Facilities must develop or modify their training and certification program to meet rule criteria, begin implementing the program, and if necessary, update the description of this program in their oil spill prevention plan pursuant to chapter 173-180D WAC requirements:

(a) Within twelve months from adoption of this rule, for facilities with combined pipeline and aboveground tank oil storage capacity of one million gallons or more; and

(b) Within eighteen months from adoption of this rule, for facilities with combined pipeline and aboveground tank oil storage capacity of less than one million gallons.

(2) Within six months from the date that facilities must meet rule criteria pursuant to subsection (1) of this section, the facility shall have conducted its certification procedures, as developed pursuant to WAC 173-180C-070(2), for all existing personnel that are subject to the facility's certification requirements and have entered their current position prior to adoption of this chapter.

(3) The department shall review the facility's training and certification program after the date that facilities must meet rule criteria pursuant to subsection (1) of this section. This review shall be accomplished by a general on-site inspection by the department through evaluation of the facility's training materials, testing records and certification records, and consultation with personnel.

(4) The department will notify facilities regarding approval status within thirty calendar days from completing inspections performed under subsection (2) of this section.

(5) Facilities that do not receive approval will have ninety calendar days to address deficiencies in their training and certification program, with options for a time extension based on the department's discretion. For those personnel that were trained or certified after the deadlines established in

subsection (1) of this section but prior to program approval, retraining or recertification of such personnel due to changes required by the department's approval process can be postponed until the next retraining or recertification cycle as established by the facility pursuant to this chapter.

(6) Training and certification program approval is valid for five years. Significant changes to the facility's program must be documented through an update of the facility's prevention plan pursuant to chapter 173-180D WAC requirements. Minor upgrades in training and certification programs, such as expansion of training hours or updates to testing materials, are not required to be submitted to the department through a prevention plan update. The department may perform announced and unannounced inspections at facilities to verify compliance.

(7) A training and certification program shall be approved if, in addition to meeting criteria in WAC 173-180C-060 and 173-180C-070, it demonstrates that when implemented, it can, to the maximum extent practicable:

(a) Provide protection from human factor oil spill risks identified in the risk analysis required by WAC 173-180D-060(16);

(b) Minimize the likelihood that facility oil spills will occur and minimize the size and impacts of those facility oil spills which do occur;

(c) Provide effective oil spill prevention training to key supervisory, operations, maintenance, management, and indirect operations personnel;

(d) Ensure proper evaluation of job competency; and

(e) Provide an effective system to clearly document and track personnel training and certification.

(8) When reviewing programs, the department shall, in addition to the above criteria, consider the following at a minimum:

(a) The volume and type of oil(s) handled by facility, and frequency of oil-handling operations;

(b) Number of facility personnel;

(c) The history and circumstances of prior spills by similar types of facilities, including spill reports by ecology on-scene coordinators;

(d) Inspection reports;

(e) The presence of hazards unique to the facility, such as seismic activity or production processes; and

(f) The sensitivity and value of natural resources that could be affected by a spill from the facility.

(9) The department may approve a program with an expedited review as set out in this section if that program has been approved by a federal agency or other state which the department has deemed to apply approval criteria which equal or exceed those of the department.

(10) If the program receives approval, the facility owner or operator shall receive a certificate of approval describing the terms of approval, including expiration dates pursuant to subsection (6) of this section.

(a) The department may conditionally approve a program by requiring a facility owner or operator to operate with specific precautionary measures until unacceptable components of the program are resubmitted and approved.

(i) Precautionary measures may include, but are not limited to, reducing oil transfer rates, increasing personnel lev-

(1999 Ed.)

els, or restricting operations to daylight hours or favorable weather conditions. Precautionary measures may also include additional requirements to ensure availability of response equipment.

(ii) A facility shall have thirty calendar days after the department gives notification of conditional status to make the required changes, with the option for an extension at the department's discretion. Facilities which fail to meet conditional requirements or make required changes in the time allowed shall lose conditional approval status.

(b) If approval is denied or revoked, the facility owner or operator shall receive an explanation of the factors for disapproval and a list of deficiencies. The facility may be subject to penalties identified in WAC 173-180C-095.

(c) The department's decisions under this chapter are reviewable in superior court.

(d) Approval of a training and certification program by the department does not constitute an express assurance regarding the adequacy of the program nor constitute a defense to liability imposed under state law.

(11) The department shall prepare guidance material to aid department staff responsible for program review. This material shall be made available to facility staff and other interested parties. While the guidance manual will be used as a tool to conduct review of a program, the department will not be bound by the contents of the manual. Oil spill prevention training and test materials developed by the department for technical assistance purposes may be used to meet part of a facility's training and certification program requirements under this chapter.

(12) The department may review a program following any spill at the facility.

[Statutory Authority: RCW 90.56.220, 93-01-089 (Order 91-64), § 173-180C-080, filed 12/16/92, effective 1/16/93.]

WAC 173-180C-090 Inspections. The department may verify compliance with this chapter by announced and unannounced inspections in accordance with RCW 90.48.090.

(1) During inspections, department staff may require appropriate facility personnel to demonstrate proof of training and certification.

(2) The department shall endeavor to provide a completed inspection report to the facility owner and operator within thirty calendar days from the inspection date.

[Statutory Authority: RCW 90.56.220, 93-01-089 (Order 91-64), § 173-180C-090, filed 12/16/92, effective 1/16/93.]

WAC 173-180C-095 Noncompliance with requirements. Any violation of this chapter may be subject to enforcement and penalty sanctions of RCW 90.48.144 as amended by section 27, chapter 73, Laws of 1992. These penalties include a civil penalty of up to ten thousand dollars a day for every violation.

[Statutory Authority: RCW 90.56.220, 93-01-089 (Order 91-64), § 173-180C-095, filed 12/16/92, effective 1/16/93.]

WAC 173-180C-098 Severability. If any provision of this chapter is held invalid, the remainder of the rule is not affected.

[Statutory Authority: RCW 90.56.220, 93-01-089 (Order 91-64), § 173-180C-098, filed 12/16/92, effective 1/16/93.]

Chapter 173-180D WAC FACILITY OIL SPILL PREVENTION PLAN STANDARDS

WAC

173-180D-010	Purpose.
173-180D-020	Authority.
173-180D-030	Definitions.
173-180D-040	Applicability.
173-180D-050	Plan preparation.

WAC 173-180D-010 Purpose. The purpose of this chapter is to establish onshore and offshore facility oil spill prevention plan requirements which, when followed, will:

- (1) Minimize the likelihood that facility oil spills will occur;
- (2) Minimize the size and impacts of those facility oil spills which do occur;
- (3) Facilitate coordination of local, state, regional, tribal, and other prevention and contingency plans;
- (4) Provide improved protection of Washington waters and natural resources from the impacts of oil spills; and
- (5) Emphasize that oil spill prevention is the top priority strategy for protecting Washington waters and natural resources from the impacts of oil spills.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-010, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-020 Authority. RCW 90.56.200, 90.56.300, and 90.56.310 provide statutory authority for the prevention plan preparation and review requirements established by this chapter.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-020, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-030 Definitions. (1) "Best achievable protection" means the highest level of protection that can be achieved through the use of the best achievable technology and those staffing levels, training procedures, and operational methods that provide the greatest degree of protection achievable. The director's determination of best achievable protection shall be guided by the critical need to protect the state's natural resources and waters, while considering:

- (a) The additional protection provided by the measures;
- (b) The technological achievability of the measures; and
- (c) The cost of the measures.

(2) "Best achievable technology" means the technology that provides the greatest degree of protection, taking into consideration processes that are being developed, or could feasibly be developed, given overall reasonable expenditures on research and development, and processes that are currently in use. In determining what is best achievable technol-

ogy, the director shall consider the effectiveness, engineering feasibility, and commercial availability of the technology.

(3) "Bulk" means material that is stored or transported in a loose, unpackaged liquid, powder, or granular form capable of being conveyed by a pipe, bucket, chute, or belt system.

(4) "Cargo vessel" means a self-propelled ship in commerce, other than a tank vessel or a passenger vessel, of three hundred or more gross tons, including but not limited to, commercial fish processing vessels and freighters.

(5) "Department" means the state of Washington department of ecology.

(6) "Director" means the director of the state of Washington department of ecology.

(7) "Discharge" means any spilling, leaking, pumping, pouring, emitting, emptying, or dumping.

(8)(a) "Facility" means any structure, group of structures, equipment, pipeline, or device, other than a vessel, located on or near the navigable waters of the state that both:

(i) Transfers oil in bulk to or from a tank vessel or pipeline; and

(ii) Is used for producing, storing, handling, transferring, processing, or transporting oil in bulk.

(b) A facility does not include any:

(i) Railroad car, motor vehicle, or other rolling stock while transporting oil over the highways or rail lines of this state;

(ii) Underground storage tank regulated by the department or a local government under chapter 90.76 RCW;

(iii) Motor vehicle motor fuel outlet;

(iv) Facility that is operated as part of an exempt agricultural activity as provided in RCW 82.04.330; or

(v) Marine fuel outlet that dispenses three thousand gallons or less of fuel in a single transaction to a ship other than a tank vessel, cargo vessel, or passenger vessel. Marine fuel outlets that dispense more than three thousand gallons of fuel to any vessel in a single transaction do not meet this exemption.

(9) "Gross ton" means a vessel's approximate volume as defined in Title 46, United States Code of Federal Regulations, Part 69.

(10) "Marine facility" means any facility used for tank vessel wharfage or anchorage, including any equipment used for the purpose of handling or transferring oil in bulk to or from a tank vessel.

(11) "Maximum extent practicable" means the highest level of effectiveness that can be achieved through the use of facility personnel and best achievable technology. In determining what is the maximum extent practicable, the director shall consider, at a minimum, the effectiveness, engineering feasibility, commercial availability, safety, and the cost of the measures.

(12) "Navigable waters of the state" means those waters of the state, and their adjoining shorelines, that are subject to the ebb and flow of the tide and/or are presently used, have been used in the past, or may be susceptible for use to transport intrastate, interstate, or foreign commerce.

(13) "Offshore facility" means any facility, as defined in subsection (8) of this section, located in, on, or under any of the navigable waters of the state, but does not include a facil-

ity any part of which is located in, on, or under any land of the state, other than submerged land.

(14) "Oil" or "oils" means naturally occurring liquid hydrocarbons at atmospheric temperature and pressure coming from the earth, including condensate and natural gasoline, and any fractionation thereof, including, but not limited to, crude oil, petroleum, gasoline, fuel oil, diesel oil, oil sludge, oil refuse, and oil mixed with wastes other than dredged spoil, including oil-contaminated ballast or bilge water. Oil does not include any substance listed in Table 302.4 of 40 C.F.R. Part 302 adopted August 14, 1989, under section 101(14) of the Federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by P.L. 99-499.

(15) "Onshore facility" means any facility, as defined in subsection (8) of this section, any part of which is located in, on, or under any land of the state, other than submerged land, that because of its location, could reasonably be expected to cause substantial harm to the environment by discharging oil into or on the navigable waters of the state or the adjoining shorelines.

(16)(a) "Owner or operator" means:

(i) In the case of an onshore or offshore facility, any person owning or operating the facility; and

(ii) In the case of an abandoned onshore or offshore facility, the person who owned or operated the facility immediately before its abandonment.

(b) "Operator" does not include any person who owns the land underlying a facility if the person is not involved in the operations of the facility.

(17) "Passenger vessel" means a ship of three hundred or more gross tons with a fuel capacity of at least six thousand gallons carrying passengers for compensation.

(18) "Person" means any political subdivision, government agency, municipality, industry, public or private corporation, copartnership, association, firm, individual, or any other entity whatsoever.

(19) "Pipeline" means, for the purposes of subsection (8)(a)(i) of this section, a pipeline connected to a marine facility, and not owned or operated by the facility referred to in subsection (8)(a) of this section.

(20) "Plan" means oil spill prevention plan.

(21) "Ship" means any boat, ship, vessel, barge, or other floating craft of any kind.

(22) "Spill" means an unauthorized discharge of oil which enters waters of the state.

(23) "Tank vessel" means a ship that is constructed or adapted to carry, or that carries, oil in bulk as cargo or cargo residue, and that:

(a) Operates on the waters of the state; or

(b) Transfers oil in a port or place subject to the jurisdiction of this state.

(24) "Transporting" means, for the purposes of subsection (8)(b)(i) of this section, the act of moving oil over the highways or rail lines of this state, and the act of transferring oil to or from the rolling stock.

(25) "Waters of the state" includes lakes, rivers, ponds, streams, inland waters, underground water, salt waters, estuaries, tidal flats, beaches and lands adjoining the seacoast of

the state, sewers, and all other surface waters and watercourses within the jurisdiction of the state of Washington.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-030, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-040 Applicability. Oil spill prevention plans for onshore and offshore facilities must be prepared, submitted, and implemented, pursuant to requirements in this chapter.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-040, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-050 Plan preparation. (1) Each onshore and offshore facility shall prepare a plan for prevention of oil spills from the facility into the waters of the state, and for the protection of fisheries and wildlife, other natural resources, and public or private property from oil spills.

(2) Plans shall be thorough and contain enough information, analyses, supporting data, and documentation to demonstrate the plan holder's ability to meet the requirements of this chapter.

(3) *Spill Prevention Countermeasure and Control Plans, Operation Manuals*, and other prevention documents which meet federal requirements under 33 C.F.R. 154, 33 C.F.R. 156, 40 C.F.R. 109, 40 C.F.R. 112, or the Federal Oil Pollution Act of 1990 may be submitted to satisfy plan requirements under this chapter if the department deems that such federal requirements equal or exceed those of the department, or if the plans are modified or appended to satisfy plan requirements under this chapter.

(4) Plans which meet requirements of other states may be submitted to satisfy plan requirements under this chapter if the department deems that such state requirements equal or exceed those of the department, or if the plans are modified or appended to satisfy plan requirements under this chapter.

(5) Prevention plans may be combined with contingency plans required by chapter 173-181 WAC.

(6) Plans, when implemented, shall be designed to be capable of providing the best achievable protection from damages caused by the discharge of oil into the waters of the state. At a minimum, plans shall meet the criteria specified in this chapter.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-050, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-055 Plan format requirements. (1) Plans shall be organized in a format which provides easy access to prevention information. Plans shall be divided into a system of chapters and sections. Chapters and sections shall be numbered and identified with a system of index tabs.

(2) Plans shall be formatted to allow replacement of chapter and appendix pages with revisions, without requiring replacement of the entire plan.

(3) If combined with a contingency plan, the prevention plan shall be clearly separated from contingency plan elements.

(4) Prevention plan content requirements specified in WAC 173-180D-060 are presented in suggested but not requisite order.

(5) Computerized plans, in addition to a hard copy, may be submitted to the department.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-055, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-060 Plan content requirements. (1)

Each plan shall contain a submittal agreement which:

(a) Includes the name, address, and phone number of submitting party;

(b) Verifies acceptance of the plan by the owner or operator of the facility by either signature of the owner or operator or signature by a person with authority to bind the corporation which owns or operates the facility;

(c) Commits the owner or operator of the facility to execution of the plan, and verifies that the plan holder is authorized to make appropriate expenditures in order to execute plan provisions; and

(d) Includes the name, location, and address of the facility, type of facility, starting date of operations, types of oil(s) handled, and oil volume capacity.

(2) Each plan shall include a log sheet to record amendments to the plan. The log sheet shall be placed at the front of the plan. The log sheet shall provide for a record of the section amended, the date that the old section was replaced with the amended section, verification that the department was notified of the amendment pursuant to WAC 173-180D-085, and the initials of the individual making the change. A description of the amendment and its purpose shall also be included in the log sheet, or filed in the form of an amendment letter immediately after the log sheet.

(3) Each plan shall include a detailed table of contents based on chapter, section, and appendix numbers and titles, as well as tables and figures.

(4) Each plan shall describe its purpose and scope, including but not limited to:

(a) The onshore facility or offshore facility operations covered by the plan;

(b) The relationship of the prevention plan to other oil spill plans and operation manuals held by the facility; and

(c) The relationship of the plan to all applicable local, state, regional, tribal, and federal government prevention plans, including the Washington State-wide Master Oil and Hazardous Substance Spill Contingency Plan.

(d) Information required under facility oil spill contingency plan standards in WAC 173-181-050(4); spill prevention, countermeasure, and control plan standards in 40 C.F.R. 112.4(a); or facility operations manual standards in 33 C.F.R. 154.310(1-4) may be used to address (a) of this subsection.

(5) Each plan shall describe the procedures and time periods for updating the plan and distributing the plan and updates to appropriate parties.

(6) Each plan shall establish that the facility is in compliance with the Federal Oil Pollution Act of 1990. Within thirty calendar days after federal deadlines for facility requirements under that act, the plan shall be updated to include any applicable evidence of compliance.

(7) Within thirty calendar days after evidence of financial responsibility is required by rules adopted by the department pursuant to chapter 88.44 RCW, the plan shall be updated to include any applicable evidence of compliance.

(8) Each plan shall describe the types and frequency of spill prevention training provided to personnel. Within thirty calendar days after personnel certification is required by rules adopted by the department pursuant to RCW 90.56.220, the plan shall be updated to include any applicable evidence of compliance.

(9) Within thirty calendar days after submittal of an operations manual is required by rules adopted by the department pursuant to RCW 90.56.230, the plan shall be updated to include any applicable evidence of compliance.

(10) Each plan shall provide evidence that the facility has an approved oil spill contingency plan or has submitted a contingency plan to the department in accordance with standards and deadlines established by chapter 173-181 WAC.

(11) Each plan shall address the facility's alcohol and drug use awareness and treatment program for all facility personnel.

(a) The plan shall include at a minimum:

(i) Documentation of an alcohol and drug awareness program. The awareness program shall provide training and information materials to all employees on recognition of alcohol and drug abuse; treatment opportunities, including opportunities under the Alcohol and Drug Addiction Treatment and Support Act pursuant to chapter 388-40 WAC; and applicable company policies;

(ii) A description of the facility's existing drug and alcohol treatment programs; and

(iii) A description of existing provisions for the screening of supervisory and key employees for alcohol and drug abuse and related work impairment.

(b) Evidence of conformance with applicable federal "Drug-Free Workplace" guidelines or other federal or state requirements may be used to address (a) of this subsection.

(12) Each plan shall describe the facility's existing maintenance and inspection program.

(a) The description shall summarize:

(i) Frequency and type of all regularly scheduled inspection and preventive maintenance procedures for tanks; pipelines; other key storage, transfer, or production equipment, including associated pumps, valves, and flanges; and over-pressure safety devices and other spill prevention equipment;

(ii) Integrity testing of storage tanks and pipelines, including but not limited to frequency; pressures used (including ratio of test pressure to maximum operating pressure, and duration of pressurization); means of identifying that a leak has occurred; and measures to reduce spill risk if test material is product;

(iii) External and internal corrosion detection and repair;

(iv) Damage criteria for equipment repair or replacement; and

(v) Any other aspect of the maintenance and inspection program.

(b) The plan shall include a current index of maintenance and inspection records of the storage and transfer facilities and related equipment.

(c) Documentation required under 40 C.F.R. 112.7(e) or 33 C.F.R. 154 Subparts C and D may be used to address elements of this subsection.

(d) Existing copies of the facility's maintenance and inspection records for the five-year period prior to plan sub-

mittal shall be maintained and shall be available for inspection if requested by the department. The plan shall document the use of a system to maintain such records over a five-year period for subsequent activity.

(13) Each plan shall describe spill prevention technology currently installed and in use, including:

- (a) Tank and pipeline materials and design;
- (b) Storage tank overflow alarms, low level alarms; tank overflow cut-off switches; automatic transfer shut-down systems; methods to alert operators; system accuracy; and tank fill margin remaining at time of alarm activation in terms of vertical distance, quantity of liquid, and time before overflow would occur at maximum pumping rate;

Documentation required under 40 C.F.R. 112.7(e)(2)(viii) or 33 C.F.R. 154.310 (a)(12-13) may be used to address some or all of these elements;

- (c) Leak detection systems for both active and nonactive pipeline conditions, including detection thresholds in terms of duration and percentage of pipeline flow; limitations on system performance due to normal pipeline events; and procedures for operator response to leak alarms;

Documentation required under 40 C.F.R. 112.7(e)(3) may be used to address some or all of these elements;

- (d) Rapid pump and valve shutdown procedures, including means of ensuring that surge and over-pressure conditions do not occur; rates of valve closure; sequence and time duration (average and maximum) for entire procedure; automatic and remote control capabilities; and displays of system status for operator use;

Documentation required under 40 C.F.R. 112.7(e)(3) may be used to address some or all of these elements;

- (e) Methods to minimize of post-shutdown residual drain-out from pipes, including criteria for locating valves; identification of all valves (including types and means of operation) that may be open during a transfer process; and any other techniques for reducing drain-out;

- (f) Means of relieving pressure due to thermal expansion of liquid in pipes during quiescent periods;

- (g) Secondary containment, including capacity, permeability, and material design;

Documentation required under 40 C.F.R. 112.7(e)(1) and (2)(iii-iv) may be used to address some or all of these elements;

- (h) Internal and external corrosion control coatings and monitoring;

- (i) Storm water and other drainage retention, treatment, and discharge systems, including maximum storage capacities and identification of any applicable discharge permits;

Documentation required under 40 C.F.R. 112.7(e)(1) and (2)(iii and ix) may be used to address some or all of these elements; and

- (j) Criteria for suspension of operations while leak detection or other spill control systems are inoperative.

(14) Each plan shall describe measures taken to ensure facility site security, including:

- (a) Procedures to control and monitor facility access;
- (b) Facility lighting (documentation required under 33 C.F.R. 154.570 may be used to address some or all of this element);

- (c) Signage; and

(d) Right of way identification or other measures to prevent third-party damage (documentation required under 40 C.F.R. 112.7(e)(3)(v) and (9) may be used to address some or all of this element).

(15) Each plan shall list any discharges of oil in excess of twenty-five barrels (one thousand fifty gallons) to the land or waters of the state which occurred during the five-year period prior to the plan submittal date. For each discharge, the plan shall describe:

- (a) Quantity;
- (b) Type of oil;
- (c) Geographic location;
- (d) Analysis of cause, including source(s) of discharged oil and contributing factors (e.g., third party human error, adverse weather, etc.); and
- (e) Measures taken to remedy the cause and prevent a reoccurrence;

For the period between July 1, 1987, and January 1, 1993, the facility shall provide existing information regarding (a) through (e) of this subsection for such discharges, and shall document the use of a system to record complete information for subsequent discharges.

(16) Each plan shall include a detailed and comprehensive analysis of facility spill risks based on the information required in subsections (11) through (15) of this section, and other relevant information.

(a) The risk analysis shall:

- (i) Evaluate the construction, age, corrosion, inspection and maintenance, operation, and oil spill risk of the transfer, production, and storage systems in the facility, including piping, tanks, pumps, valves, and associated equipment;

- (ii) Evaluate spill minimization and containment systems within the facility;

- (iii) Be prepared under the supervision of (and bear the seal of) a licensed professional engineer or another individual which the department has deemed to have an acceptable level of expertise.

- (b) Documentation required under 40 C.F.R. 112.7(b) and (c) may be used to address some or all of the elements of this subsection.

(17) Each plan shall describe how the facility will incorporate those measures that will provide best achievable protection to address the spill risks identified in the risk analysis required in subsection (16) of this section.

- (a) Information documented pursuant to 40 C.F.R. 112.7(e) and 33 C.F.R. 154.310 may be used to address some or all of these elements of this subsection.

- (b) Within six months after facility operation standards are adopted by rule by the department pursuant to RCW 90.56.220, the plan shall be updated to address how the facility will meet prevention standards and deadlines established by that rule.

(18) If the prevention plan is combined with a contingency plan, the prevention plan may incorporate information required in this section by reference if that information is provided in the contingency plan.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-060, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-065 Plan submittal. (1) Plans for onshore and offshore facilities shall be submitted to the department by January 1, 1993.

(2) Any onshore or offshore facility that first begins operating after the deadlines stated in subsection (1) of this section shall submit a plan to the department at least sixty-five calendar days prior to the beginning of operations.

(3) Three copies of the plan and appendices shall be delivered to:

Spill Management Section, Prevention Plan Review
Washington Department of Ecology
P.O. Box 47600
Olympia, WA 98504-7600

(4) Onshore and offshore facility plans may be submitted by:

(a) The facility owner or operator; or

(b) A primary response contractor approved by the department pursuant to WAC 173-181-090, in conformance with signature requirements under WAC 173-180D-060(1).

(5) A single plan may be submitted for more than one facility, provided that the plan meets the requirements in this chapter for each facility listed.

(6) The plan submitter may request that proprietary information be kept confidential under RCW 43.21A.160.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-065, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-070 Plan review. (1) The department shall endeavor to review each plan in sixty-five calendar days. If the plan is submitted in conjunction with a contingency plan required under chapter 173-181 WAC, the department may extend the prevention plan review period an additional sixty-five calendar days. Upon receipt of a plan, the department shall evaluate promptly whether the plan is incomplete. If the department determines that a plan is incomplete, the submitter shall be notified of deficiencies. The review period shall not begin until the department receives a complete plan.

(2) The department shall regularly notify interested parties of any prevention plans which are under review by the department, and make plans available for review by all department programs, other state, local, tribal, and federal agencies, and the public. The department shall accept comments on the plan from any interested party during the first thirty calendar days of review by the department.

(3) A plan shall be approved if, in addition to meeting criteria in WAC 173-180D-055 and 173-180D-060, it demonstrates that when implemented, it can:

(a) Provide best achievable protection from damages caused by the discharge of oil into the waters of the state;

(b) Minimize the likelihood that facility oil spills will occur;

(c) Minimize the size and impacts of those facility oil spills which do occur; and

(d) After the adoption of facility operation standards by rule by the department pursuant to RCW 90.56.220:

(i) Provide for compliance with prevention standards and deadlines established by facility operation standards adopted by rule by the department pursuant to RCW 90.56.220; and

(ii) Provide, to the maximum extent practicable, protection from oil spill risk factors identified in the risk analysis required by WAC 173-180D-060(16), for those risk factors not addressed by facility operation standards adopted by rule by the department pursuant to RCW 90.56.220.

(4) When reviewing plans, the department shall, in addition to the above criteria, consider the following at a minimum:

(a) The volume and type of oil(s) addressed by the plan;

(b) The history and circumstances of prior spills by similar types of facilities, including spill reports by ecology on-scene coordinators;

(c) Inspection reports;

(d) The presence of hazards unique to the facility, such as seismic activity or production processes;

(e) The sensitivity and value of natural resources within the geographic area covered by the plan; and

(f) Any pertinent local, state, tribal, federal agency, or public comments received on the plan.

(5) The department may approve a plan based upon an expedited review pursuant to criteria set out in this chapter, if that plan has been approved by a federal agency or other state which the department has deemed to apply approval criteria which equal or exceed those of the department.

(6) The department shall endeavor to notify the facility owner or operator within five working days after the review is completed whether the plan has been approved.

(a) If the plan receives approval, the facility owner or operator shall receive a certificate of approval describing the terms of approval, including expiration dates pursuant to WAC 173-180D-085(4).

(b) The department may conditionally approve a plan by requiring a facility owner or operator to operate with specific precautionary measures until unacceptable components of the plan are resubmitted and approved.

(i) Precautionary measures may include, but are not limited to, reducing oil transfer rates, increasing personnel levels, or restricting operations to daylight hours or favorable weather conditions. Precautionary measures may also include additional requirements to ensure availability of response equipment.

(ii) A plan holder shall have thirty calendar days after the department gives notification of conditional status to submit to the department and implement required changes, with the option for an extension at the department's discretion. Plan holders who fail to meet conditional requirements or provide required changes in the time allowed shall lose conditional approval status.

(c) If plan approval is denied or revoked, the facility owner or operator shall receive an explanation of the factors for disapproval and a list of deficiencies. The facility shall not continue oil storage, transfer, production, or other operations until a plan for that facility has been approved.

(d) The department's decisions under this chapter are reviewable in superior court.

(e) If a plan holder demonstrates an inability to comply with an approved prevention plan or otherwise fails to comply with requirements of this chapter, the department may, at its discretion:

(i) Place conditions on approval pursuant to (b) of this subsection; or

(ii) Revoke its approval pursuant to (c) of this subsection.

(f) Approval of a plan by the department does not constitute an express assurance regarding the adequacy of the plan nor constitute a defense to liability imposed under state law.

(7) The department shall prepare a manual to aid department staff responsible for plan review. This manual shall be made available to plan preparers. While the manual will be used as a tool to conduct review of a plan, the department will not be bound by the contents of the manual.

(8) The department shall work with the office of marine safety to ensure that no duplication of regulatory responsibilities occurs in the review of prevention plans from marine facilities.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-070, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-075 Inspections. (1) The department may verify compliance with this chapter by announced and unannounced inspections in accordance with RCW 90.48.090.

(2) During inspections, department staff may require the plan holder to test operations of spill prevention technology installed in the facility.

(3) The department shall endeavor to provide a completed inspection report to the facility owner and operator within thirty calendar days from the inspection date.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-075, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-080 Plan maintenance and use. (1) Each facility covered by the plan shall conspicuously locate copies of the plan within the facility to ensure that a copy of the plan is immediately accessible to all facility personnel involved in supervising or implementing oil handling operations.

(2) Facilities shall ensure that all employees involved in oil transfer, production, or storage operations are familiar with the plan provisions through regular training. Orientation materials for new employees involved in oil transfer, production, or storage operations shall contain a copy of the plan.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-080, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-085 Plan update timeline. (1) The department shall be notified in writing as soon as possible and prior to completion of any significant change which could affect the plan. If the change will reduce the facility's ability to implement the plan, the plan holder shall also provide a schedule for the return of the plan to full implementation capability.

(a) A significant change includes, but is not limited to:
 (i) A change in the owner or operator of the facility;
 (ii) A change in the types of oil handled at the facility;
 (iii) A five percent or greater change in the facility's oil handling capacity;

(iv) Noncompliance with the Federal Oil Pollution Act of 1990;

(1999 Ed.)

(v) Noncompliance with state financial responsibility requirements developed under chapter 88.44 RCW; and

(vi) A substantial change in oil spill prevention technology installed at the facility, or other substantial changes to facility equipment, operations, personnel procedures, or any other change, including compliance with amended or new rules adopted by the department, which substantially affects the level of risk described pursuant to WAC 173-180D-060(16).

(b) Changes which are not considered significant include, but are not limited to, minor variations (less than five percent) in oil handling capacity, maintenance schedules, and operating procedures, provided that none of these changes will increase the risk of a spill.

(c) The facility shall update the plan's list of discharges, as required by WAC 173-180D-060(15), within thirty calendar days after an oil discharge by the facility in excess of twenty-five barrels (one thousand fifty gallons).

(d) A facsimile will be considered written notice for the purposes of this subsection.

(e) Failure to notify the department of significant changes shall be considered noncompliance with this chapter and subject to provisions of WAC 173-180D-070 (6)(e).

(2) If the department finds that, as a result of the change, the plan no longer meets approval criteria pursuant to WAC 173-180D-070, the department may, at its discretion, place conditions on approval or revoke approval in accordance with WAC 173-180D-070 (6)(e). The department may also require the plan holder to amend its plan to incorporate the change.

(3) Within thirty calendar days of making a change to the prevention plan, the facility owner or operator shall distribute the amended page(s) of the plan to the department and other plan holders.

(4) Plans shall be reviewed by the department at least every five years pursuant to WAC 173-180D-070. Plans shall be submitted for reapproval unless the plan holder submits a letter requesting that the department review the plan already in the department's possession. The plan holder shall submit the plan or such a letter at least sixty-five calendar days in advance of the plan expiration date.

(5) The department may review a plan following any spill at the facility.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-085, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-090 Noncompliance with plan requirements. (1) Any violation of this chapter may be subject to the enforcement and penalty sanctions of RCW 90.56.300 and 90.56.310.

(2) In addition to other penalties, the department may assess a civil penalty of up to one hundred thousand dollars against any person who violates this section. Each day that a facility or person violates this section shall be considered a separate violation.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310. 92-15-035 (Order 91-59), § 173-180D-090, filed 7/8/92, effective 8/8/92.]

WAC 173-180D-098 Severability. If any provision of this chapter is held invalid, the remainder of the rule is not affected.

[Statutory Authority: RCW 90.56.300, 90.56.200 and 90.56.310, 92-15-035 (Order 91-59), § 173-180D-098, filed 7/8/92, effective 8/8/92.]

173-181-094	Submittal of contractor approval applications.
173-181-096	Contractor application review.
173-181-098	Severability.

WAC 173-181-010 Purpose. The purpose of this chapter is to establish onshore and offshore facility oil spill contingency plan requirements and response contractor standards which, when followed, will:

- (1) Maximize the effectiveness and timeliness of oil spill response by responsible parties and response contractors;
- (2) Ensure readiness of equipment and personnel;
- (3) Support coordination with state, federal, and other contingency plans; and
- (4) Provide improved protection of Washington waters and natural resources from the impacts of oil spills.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-010, filed 11/5/91, effective 12/6/91.]

WAC 173-181-020 Authority. RCW 90.48.371, 90.48.372, 90.48.373, 90.48.374, 90.48.375, 90.48.376, 90.48.377, and 90.48.380, as recodified by section 1115, chapter 200, Laws of 1991, provide statutory authority for the contingency plan preparation and review requirements and response contractor standards established by this chapter.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-020, filed 11/5/91, effective 12/6/91.]

WAC 173-181-030 Definitions. (1) "Average efficiency factor" means a factor used to estimate limitations of equipment efficiency from variables such as sea state, current velocity, or visibility.

(2) "Best achievable technology" means the technology that provides the greatest degree of protection, taking into consideration processes that are developed, or could feasibly be developed given overall reasonable expenditures on research and development, and processes that are currently in use. In determining what is best achievable technology, the director shall consider the effectiveness, engineering feasibility, and commercial availability of the technology.

[Title 173 WAC—p. 310]

(3) "Board" means the pollution control hearings board.

(4) "Bulk" means material that is stored or transported in a loose, unpackaged liquid, powder, or granular form capable of being conveyed by a pipe, bucket, chute, or belt system.

(5) "Cargo vessel" means a self-propelled ship in commerce, other than a tank vessel or a passenger vessel, of greater than three hundred or more gross tons, including but not limited to commercial fish processing vessels and freighters.

(6) "Department" means the state of Washington department of ecology.

(7) "Director" means the director of the state of Washington department of ecology.

(8) "Discharge" means any spilling, leaking, pumping, pouring, emitting, emptying, or dumping.

(9)(a) "Facility" means any structure, group of structures, equipment, pipeline, or device, other than a vessel, located on or near the navigable waters of the state that (both):

(i) Transfers oil in bulk to or from a tank vessel or pipeline; and

(ii) Is used for producing, storing, handling, transferring, processing, or transporting oil in bulk.

(b) A facility does not include any:

(i) Railroad car, motor vehicle, or other rolling stock while transporting oil over the highways or rail lines of this state;

(ii) Underground storage tank regulated by the department or a local government under chapter 90.76 RCW;

(iii) Motor vehicle motor fuel outlet;

(iv) Facility that is operated as part of an exempt agricultural activity as provided in RCW 82.04.330; or

(v) Marine fuel outlet that does not dispense more than three thousand gallons of fuel to a ship that is not a tank vessel, cargo vessel, or passenger vessel, in a single transaction.

(10) "Gross ton" means a vessel's approximate volume as defined under Title 46, United States Code of Federal Regulations, Part 69.

(11) "Interim storage site" means a site used to temporarily store recovered oil or oily waste until the recovered oil or oily waste is disposed of at a permanent disposal site. Interim storage sites include trucks, barges, and other vehicles used to store recovered oil or oily waste until transport begins.

(12) "Liquefied petroleum gas" means petroleum gas converted to a liquid state by pressure and cooling, including but not limited to natural gas, butane, and propane.

(13) "Marine facility" means any facility used for tank vessel wharfage or anchorage, including any equipment used for the purpose of handling or transferring oil in bulk to or from a tank vessel.

(14) "Maximum extent practicable" means the highest level of effectiveness that can be achieved through staffing levels, training procedures, and best achievable technology. In determining what is the maximum extent practicable, the director shall consider the effectiveness, engineering feasibility, commercial availability, safety, and the cost of the measures.

(15) "Navigable waters of the state" means those waters of the state, and their adjoining shorelines, that are subject to

(1999 Ed.)

the ebb and flow of the tide and/or are presently used, have been used in the past, or may be susceptible for use to transport intrastate, interstate, or foreign commerce.

(16) "Offshore facility" means any facility, as defined in subsection (9) of this section, located in, on, or under any of the navigable waters of the state, but does not include a facility, any part of which is located in, on, or under any land of the state, other than submerged land.

(17) "Oil" or "oils" means naturally occurring liquid hydrocarbons at atmospheric temperature and pressure coming from the earth, including condensate and natural gasoline, and any fractionation thereof, including, but not limited to, crude oil, petroleum, gasoline, fuel oil, diesel oil, oil sludge, oil refuse, and oil mixed with wastes other than dredged spoil. Oil does not include any substance listed in Table 302.4 of 40 C.F.R. Part 302 adopted August 14, 1989, under section 101(14) of the Federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by P.L. 99-499.

(18) "Oily waste" means oil contaminated waste resulting from an oil spill or oil spill response operations.

(19) "Onshore facility" means any facility, as defined in subsection (9) of this section, any part of which is located in, on, or under any land of the state, other than submerged land, that because of its location, could reasonably be expected to cause substantial harm to the environment by discharging oil into or on the navigable waters of the state or the adjoining shorelines.

(20)(a) "Owner or operator" means:

(i) In the case of an onshore or offshore facility, any person owning or operating the facility; and

(ii) In the case of an abandoned onshore or offshore facility, the person who owned or operated the facility immediately before its abandonment.

(b) "Operator" does not include any person who owns the land underlying a facility if the person is not involved in the operations of the facility.

(21) "Passenger vessel" means a ship of greater than three hundred or more gross tons or five hundred or more international gross tons carrying passengers for compensation.

(22) "Person" means any political subdivision, government agency, municipality, industry, public or private corporation, copartnership, association, firm, individual, or any other entity whatsoever.

(23) "Pipeline" means, for the purposes of subsection (9)(a)(i) of this section, a pipeline connected to a marine facility, and not owned or operated by the facility referred to in subsection (9)(a) of this section.

(24) "Plan" means oil spill response, cleanup, and disposal contingency plan.

(25) "Primary response contractor" means a response contractor that is directly responsible to a contingency plan holder, either by a contract or written agreement.

(26) "Response contractor" means an individual, organization, association, or cooperative that provides or intends to provide equipment and/or personnel for oil spill containment, cleanup, and/or removal activities.

(27) "Ship" means any boat, ship, vessel, barge, or other floating craft of any kind.

(28) "Spill" means an unauthorized discharge of oil which enters waters of the state.

(29) "Tank vessel" means a ship that is constructed or adapted to carry, or that carries, oil in bulk as cargo or cargo residue, and that:

(a) Operates on the waters of the state; or

(b) Transfers oil in a port or place subject to the jurisdiction of this state.

(30) "Waters of the state" includes lakes, rivers, ponds, streams, inland waters, underground water, salt waters, estuaries, tidal flats, beaches and lands adjoining the seacoast of the state, sewers, and all other surface waters and watercourses within the jurisdiction of the state of Washington.

(31) "Worst case spill" means:

(a) For an offshore facility, the largest possible spill considering storage, production, and transfer capacity complicated by adverse weather conditions (during which wind, reduced visibility, and sea state hinder but do not preclude normal response operations); or

(b) For an onshore facility, the entire volume of the largest above ground storage tank on the facility site complicated by adverse weather conditions (during which wind, reduced visibility, and sea state hinder but do not preclude normal response operations), unless the department determines that a larger volume is more appropriate given a particular facility's site characteristics and storage, production, and transfer capacity.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-030, filed 11/5/91, effective 12/6/91.]

WAC 173-181-035 Applicability. (1) Oil spill response, cleanup, and disposal contingency plans must be prepared, submitted, and used pursuant to requirements in this chapter, for onshore and offshore facilities.

(2) Federal plans required under 33 C.F.R. 154, 40 C.F.R. 109, 40 C.F.R. 110, or the Federal Oil Pollution Act of 1990 may be submitted to satisfy plan requirements under this chapter if the department deems that such federal requirements possess approval criteria which equal or exceed those of the department.

(3) Response contractors must be approved by the department before they may serve as primary response contractors for an onshore or offshore facility contingency plan.

(4) For those sections of contingency plans which address liquified petroleum gases, the department may excuse plan holders from meeting requirements in this chapter that are not applicable to spill response for liquified petroleum gases due to their physical properties.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-035, filed 11/5/91, effective 12/6/91.]

WAC 173-181-040 Plan preparation. (1) Each onshore and offshore facility shall prepare a contingency plan for the containment and cleanup of oil spills from the facility into the waters of the state, and for the protection of fisheries and wildlife, other natural resources, and public or private property from such spills.

(2) Plans shall be in a form usable for oil spill control, containment, cleanup, and disposal operations and shall be

capable of being located according to requirements in WAC 173-181-075.

(3) Plans shall be thorough and contain enough information, analyses, supporting data, and documentation to demonstrate the plan holder's ability to meet the requirements of this chapter.

(4) Plans shall be designed to be capable to the maximum extent practicable, when implemented, of promptly and properly removing oil and minimizing environmental damage from a variety of spill sizes, including small chronic spills, and worst case spills. At a minimum, plans shall meet the criteria specified in WAC 173-181-045 and 173-181-050; criteria are presented in suggested but not requisite order.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-040, filed 11/5/91, effective 12/6/91.]

WAC 173-181-045 Plan format requirements. (1)

Plans shall be prepared using a combined narrative and graphic format which facilitates both the study of detailed spill response information and quick access to general information given emergency information needs and time constraints.

(2) Plans shall be divided into a system of chapters and appendices. Chapters and sections shall be numbered. Chapters should be reserved primarily for information on emergency response and cleanup operations, such as notification procedures or description of the spill response organization structure. Appendices should be used primarily for supplemental background and documentation information, such as response scenarios or description of drills and exercises.

(3) A system of index tabs shall be used to provide easy reference to particular chapters or appendices.

(4) Plans shall be formatted to allow replacement of chapter or appendix pages with revisions without requiring replacement of the entire plan.

(5) A simplified field document suitable for on-site use in the event of a spill and summarizing key notification and action elements of the plan shall also be prepared and submitted as part of the plan.

(6) Computerized plans may be submitted to the department in addition to a hard copy. Computerized plans, accompanied by a hard copy, may be used to meet the requirements of WAC 173-181-075.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-045, filed 11/5/91, effective 12/6/91.]

WAC 173-181-050 Plan content requirements. (1)

Each plan shall contain a submittal agreement which:

(a) Includes the name, address, and phone number of the submitting party;

(b) Verifies acceptance of the plan, including any incorporated contingency plans, by the owner or operator of the facility by either signature of the owner or operator or signature by a person with authority to bind the corporation which owns such facility;

(c) Commits execution of the plan, including any incorporated contingency plans, by the owner or operator of the facility, and verifies authority for the plan holder to make appropriate expenditures in order to execute plan provisions; and

(d) Includes the name, location, and address of the facility, type of facility, starting date of operations, types of oil(s) handled, and oil volume capacity.

(2) Each plan shall include a log sheet to record amendments to the plan. The log sheet shall be placed at the front of the plan. The log sheet shall provide for a record of the section amended, the date that the old section was replaced with the amended section, verification that the department was notified of the amendment pursuant to WAC 173-181-080(3), and the initials of the individual making the change. A description of the amendment and its purpose shall also be included in the log sheet, or filed in the form of an amendment letter immediately after the log sheet.

(3) Each plan shall include a detailed table of contents based on chapter, section, and appendix numbers and titles, as well as tables and figures.

(4) Each plan shall describe the purpose and scope of that plan, including:

(a) The geographic area covered by the plan;

(b) The onshore facility or offshore facility operations covered by the plan; and

(c) The size of the worst case spill from the facility.

(5) Each plan shall describe the procedures and time periods corresponding to updates of the plan and distribution of the plan and updates to affected and interested parties.

(6) Each plan shall present a strategy to ensure use of the plan for spill response and cleanup operations pursuant to requirements in WAC 173-181-075.

(7) Each plan shall describe the organization of the spill response system, including all task assignments addressed by requirements of this section. This description shall identify the role of an incident commander or primary spill response manager, who shall possess the lead authority in spill response and cleanup decisions. The plan shall describe how a smooth transfer of the incident commander or primary spill response manager position between individuals will be accomplished. An organizational diagram depicting the chain of command shall also be included.

(8)(a) For each primary response contractor which a plan holder may or does rely on to perform or supplement its response operations within the geographic area covered by the plan, the plan shall state that contractor's name, address, phone number, or other means of contact at any time of the day, and response capability (e.g., land spills only). For each primary response contractor, the plan shall include a letter of intent signed by the primary response contractor which indicates the contractor's willingness to respond. Copies of written contracts or agreements with primary response contractors shall be available for inspection, if requested by the department.

(b) If a plan holder is a member of an oil spill response cooperative and relies on that cooperative to perform or supplement its response operations within the geographic area covered by the plan, the plan shall state the cooperative's name, address, phone number, and response capability. The plan shall also include proof of cooperative membership.

(c) Plans which rely on primary response contractors shall rely only on primary response contractors approved by the department under WAC 173-181-090.

(9) Each plan shall briefly describe its relation to all applicable local, state, regional, and federal government response plans. Plans shall address how the plan holder's response organization will be coordinated with an incident command system utilized by state and federal authorities.

(10) Each plan shall list procedures which will be used to detect and document the presence and size of a spill, including methods which are effective during low visibility conditions. In addition, the plan shall describe the use, if any, of mechanical or electronic monitoring or alarm systems (including threshold sensitivities) used to detect oil discharges into adjacent land or water from tanks, pipes, manifolds, and other transfer or storage equipment.

(11) Each plan shall describe procedures which will be taken to immediately notify appropriate parties that a spill has occurred.

(a) The plan holder shall maintain a notification call out list which shall be available if requested by the department for inspection, and which:

(i) Provides a contact at any time of the day for all spill response personnel identified under subsection (7) of this section, including the contact's name, position title, phone number or other means of contact for any time of the day, and an alternate contact in the event the individual is unavailable;

(ii) Lists the name and phone number of all government agencies which must be notified in the event of an oil spill pursuant to requirements under RCW 90.48.360 as recodified by section 1115, chapter 200, Laws of 1991, and other state and federal requirements; and

(iii) Establishes a clear order of priority for immediate notification;

(b) The plan shall identify a central reporting office or individual who is responsible for implementing the call out process; and

(c) The plan shall utilize a system of categorizing incident type and severity. Plan holders are encouraged to utilize the system established by the department in the Washington state-wide master oil and hazardous substance spill contingency plan as developed pursuant to RCW 90.48.378 as recodified by section 1115, chapter 200, Laws of 1991.

(12) Each plan shall describe the personnel (including contract personnel) available to respond to an oil spill, including:

(a) A job description for each type of spill response position needed as indicated in the spill response organization scheme addressed in subsection (7) of this section;

(b) The number of personnel available to perform each type of spill response position;

(c) Arrangements for prepositioning personnel at strategic locations which will meet criteria pursuant to WAC 173-181-065 (3)(d);

(d) The type and frequency of spill response operations and safety training that each individual in a spill response position receives to attain the level of qualification demanded by their job description; and

(e) The procedures, if any, to train and use volunteers willing to assist in spill response operations. Volunteer procedures for wildlife rescue shall comply with rules adopted by the Washington department of wildlife.

(13)(a) Each plan shall list the type, quantity, age, location, maintenance schedule, and availability of equipment used during spill response, including equipment used for oil containment, recovery, storage, and removal, shoreline and adjacent lands cleanup, wildlife rescue and rehabilitation, and communication.

(b) For equipment listed under (a) of this subsection that is not owned by or available exclusively to the plan holder, the plan shall also estimate the extent to which other contingency plans rely on that same equipment.

(c) For oil containment and recovery equipment, the plan also shall include equipment make and model, and the manufacturer's nameplate capacity of the response equipment (in gallons per minute), and applicable design limits (e.g., maximum wave height capability; inland waters vs. open ocean).

(d) Based on information described in (c) of this subsection, the plan shall state the maximum amount of oil which could be recovered per twenty-four-hour period.

(e) For purposes of determining plan adequacy under WAC 173-181-065, and to assess realistic capabilities based on potential limitations by weather, sea state, and other variables, the data presented in (c) and (d) of this subsection will be multiplied by an average efficiency factor of twenty percent. The department will apply a higher efficiency factor for equipment listed in a plan if that plan holder provides adequate evidence that the higher efficiency factor is warranted for particular equipment. The department may assign a lower efficiency factor to particular equipment listed in a plan if it determines that the performance of that equipment warrants such a reduction.

(f) The plan shall provide arrangements for prepositioning of oil spill response equipment at strategic locations which will meet criteria pursuant to WAC 173-181-065 (3)(d).

(14) Each plan shall describe the communication system used for spill notification and response operations, including:

(a) Communication procedures;

(b) The communication function (e.g., ground-to-air) assigned to each channel or frequency used; and

(c) The maximum geographic range for each channel or frequency used.

(15) Each plan shall describe the process to establish sites needed for spill response operations, including location or location criteria for:

(a) A central command post;

(b) A central communications post if located away from the command post; and

(c) Equipment and personnel staging areas.

(16)(a) Each plan shall present a flowchart or decision tree describing the procession of each major stage of spill response operations from spill discovery to completion of cleanup. The flowchart or decision tree shall describe the general order and priority in which key spill response activities are performed.

(b) Each plan shall describe all key spill response operations in checklist form, to be used by spill response managers in the event of an oil spill.

(17)(a) Each plan shall list the local, state, and other government authorities responsible for the emergency procedures peripheral to spill containment and cleanup, including:

(i) Procedures to control fires and explosions, and to rescue people or property threatened by fire or explosion;

(ii) Procedures to control ground and air traffic which may interfere with spill response operations; and

(iii) Procedures to manage access to the spill response site.

(b) Each plan shall describe the plan holder's role in these emergency operation procedures prior to the arrival of proper authorities.

(18) Each plan shall describe equipment and procedures to be used by the facility personnel to minimize the magnitude of the spill and minimize structural damage which may increase the quantity of oil spilled. Damage control procedures shall include methods to slow or stop pipeline, storage tank, and other leaks, and methods to achieve immediate emergency shutdown.

(19) Each plan shall describe, in detail, methods to contain spilled oil and remove it from the environment. Methods shall describe deployment of equipment and personnel, using diagrams or other visual aids when possible. Response methods covered must include:

(a) Surveillance methods used to detect and track the extent and movement of the spill;

(b) Methods to contain and remove oil in offshore waters;

(c) Methods to contain and remove oil in near-shore waters, including shoreline protection procedures and oil diversion/pooling procedures; and

(d) Methods to contain and remove oil, including surface oil, subsurface oil, and oiled debris and vegetation, from a variety of shoreline, adjacent land, and beach types.

(20) Each plan shall briefly describe initial equipment and personnel deployment activities which will accomplish the response standard listed in WAC 173-181-065 (3)(d), and provide an estimate of the actual execution time.

(21) If the plan holder will use dispersants, coagulants, bioremediants, or other chemical agents for response operations, conditions permitting, the plan shall describe:

(a) Type and toxicity of chemicals;

(b) Under what conditions they will be applied in conformance with all applicable local, state, and federal requirements, including the state-wide master oil and hazardous substance spill contingency plan;

(c) Methods of deployment; and

(d) Location and accessibility of supplies and deployment equipment.

(22) If the plan holder will use in-situ burning for response operations, conditions permitting, the plan shall describe:

(a) Type of burning operations;

(b) Under what conditions burning will be applied in conformance with all applicable local, state, and federal requirements, including the state-wide master oil and hazardous substance spill contingency plan;

(c) Methods of application; and

(d) Location and accessibility of supplies and deployment equipment.

(23) Each plan shall describe how environmental protection will be achieved, including:

(a) Protection of sensitive shoreline and island habitat by diverting or blocking oil movement;

(b) Priorities for sensitive area protection in the geographic area covered by the plan as designated by the department in environmentally sensitive area maps referenced in the state-wide master oil and hazardous substance spill contingency plan;

(c) Rescue and rehabilitation of birds, marine mammals, and other wildlife contaminated or otherwise affected by the oil spill in compliance with rules adopted by the Washington department of wildlife; and

(d) Measures taken to reduce damages to the environment caused by shoreline and adjacent land cleanup operations, such as impacts to sensitive shoreline habitat by heavy machinery.

(24)(a) Each plan shall describe site criteria and methods used for interim storage of oil recovered and oily wastes generated during response and cleanup operations, including sites available within the facility. Interim storage methods and sites shall be designed to prevent contamination by recovered oil and oily wastes.

(b) If use of interim storage sites will require approval by local, state, or federal officials, the plan shall include information which could expedite the approval process, including a list of appropriate contacts and a brief description of procedures to follow for each applicable approval process.

(c) Each plan shall describe methods and sites used for permanent disposal of oil recovered and oily wastes generated during response and cleanup operations.

(d) Interim storage and permanent disposal methods and sites shall be sufficient to keep up with oil recovery operations and handle the entire volume of oil recovered and oily wastes generated.

(e) Interim storage and permanent disposal methods and sites shall comply with all applicable local, state, and federal requirements.

(25) Each plan shall describe procedures to protect the health and safety of oil spill response workers, volunteers, and other individuals on-site. Provisions for training, decontamination facilities, safety gear, and a safety officer position shall be addressed.

(26) Each plan shall explain post-spill review procedures, including methods to review both the effectiveness of the plan and the need for plan amendments. Post-spill procedures shall provide for a debrief of the department.

(27)(a) Each plan shall describe the schedule and type of drills and other exercises which will be practiced to ensure readiness of the plan elements, including drills which satisfy WAC 173-181-070(3).

(b) Tests of internal call out procedures shall be performed at least once every ninety calendar days and documented by the plan holder. Such tests are only required to involve notification, not actual deployment.

(28) Unless the plan holder has received approval for a prevention plan submitted pursuant to chapter 200, Laws of 1991, each onshore facility and offshore facility plan shall describe measures taken to reduce the likelihood that a spill will occur which exceed or are not covered by existing state and federal requirements, including:

(a) Type and frequency of personnel training on methods to minimize operational risks;

(b) Methods to ensure equipment integrity, including inspection and maintenance schedules;

(c) Methods to reduce spills during transfer operations, including overfill prevention; and

(d) Secondary containment for tanks, pipes, manifolds, or other structures used for storage or movement of oil other than liquefied petroleum gases.

(29) Each facility plan shall list the spill risk variables within the geographic area covered by the plan, including:

(a) Types, physical properties, and amounts of oil handled;

(b) A written description and map indicating site topography, storm water and other drainage systems, mooring areas, pipelines, tanks, and other oil processing, storage, and transfer sites and operations; and

(c) A written description of sites or operations with a history of or high potential for oil spills.

(30) Each plan shall list the environmental variables within the geographic area covered by the plan, including:

(a) Natural resources, including coastal and aquatic habitat types and sensitivity by season, breeding sites, presence of state or federally listed endangered or threatened species, and presence of commercial and recreational species (environmental variable information may be obtained directly from environmentally sensitive area maps referenced in the state-wide master oil and hazardous substance spill contingency plan);

(b) Public resources, including public beaches, water intakes, drinking water supplies, and marinas;

(c) Seasonal hydrographic and climatic conditions; and

(d) Physical geographic features, including relative isolation of coastal regions, beach types, and other geological characteristics.

(31) Each plan shall list the logistical resources within the geographic area covered by the plan, including:

(a) Facilities for fire services, medical services, and accommodations; and

(b) Shoreline access areas, including boat launches.

(32)(a) Each plan shall describe detailed, plausible, step-by-step response scenarios for:

(i) A small oil spill less than five hundred gallons; and

(ii) A worst case spill as described in the plan pursuant to subsection (4)(c) of this section.

(b) Each scenario description shall include:

(i) The circumstances surrounding the spill, including size, type, location, climatic and hydrographic conditions, time, and cause;

(ii) An estimate of oil movement during the first seventy-two hours, including likely shoreline contact points; and

(iii) Estimates of response time and percent recovery for each major phase of operations.

(c) If a plan applies to multiple facilities, each scenario description shall discuss implementation of the plan in the event of simultaneous separate spills.

(33) Each plan shall include a glossary of technical terms and abbreviations used in the plan.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-050, filed 11/5/91, effective 12/6/91.]

(1999 Ed.)

WAC 173-181-060 Plan submittal. (1)(a) Plans for onshore facilities capable of storing one million gallons or more of oil, and offshore facilities shall be submitted to the department within six months after adoption of this chapter.

(b) All other onshore facilities shall submit plans to the department by January 1, 1993.

(2) Any onshore or offshore facility that first begins operating after the above deadlines shall submit a plan to the department at least sixty-five calendar days prior to the beginning of operations.

(3) Three copies of the plan and appendices shall be delivered to:

Spill Management Section,
Contingency Plan Review
Washington Department of Ecology
PV-11
P.O. Box 47600
Olympia, WA 98504-7600

(4) Onshore and offshore facility plans may be submitted by:

(a) The facility owner or operator; or

(b) A primary response contractor approved by the department pursuant to WAC 173-181-090, in conformance with requirements under WAC 173-181-050(1).

(5) A single plan may be submitted for more than one facility, provided that the plan contents meet the requirements in this chapter for each facility listed.

(6) The plan submitter may request that proprietary information be kept confidential under RCW 43.21B.160.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-060, filed 11/5/91, effective 12/6/91.]

WAC 173-181-065 Plan review. (1) The department shall endeavor to review each plan in sixty-five calendar days. Upon receipt of a plan, the department shall evaluate promptly whether the plan is incomplete. If the department determines that a plan is incomplete, the submitter shall be notified of deficiencies. The review period shall not begin until the department receives a complete plan.

(2) The department shall regularly notify interested parties of any contingency plans which are under review by the department, and make plans available for review to all department programs, other state, local, and federal agencies, and the public. The department shall accept comments from these interested parties on the plan during the first thirty calendar days of review by the department.

(3) A plan shall be approved if, in addition to meeting criteria in WAC 173-181-045 and 173-181-050, it demonstrates that when implemented, it can:

(a) To the maximum extent practicable, provide for prompt and proper response to and cleanup of a variety of spills, including small chronic spills, and worst case spills;

(b) To the maximum extent practicable, provide for prompt and proper protection of the environment from oil spills;

(c) Provide for immediate notification and mobilization of resources upon discovery of a spill;

(d) Provide for initial deployment of response equipment and personnel at the site of the spill within one hour of the

plan holder's awareness that a spill has occurred given suitable safety conditions; and

(e) Use as primary response contractors, only those response contractors approved by the department pursuant to WAC 173-181-090.

(4) When reviewing plans, the department shall, in addition to the above criteria, consider the following:

(a) The volume and type of oil(s) addressed by the plan;

(b) The history and circumstances of prior spills by similar types of facilities, including spill reports by department on-scene coordinators;

(c) The presence of operating hazards;

(d) The sensitivity and value of natural resources within the geographic area covered by the plan;

(e) Any pertinent local, state, federal agency, or public comments received on the plan;

(f) The extent to which reasonable, cost-effective spill prevention measures have been incorporated into the plan.

(5) The department may approve a plan without a full review as per provisions of this section if that plan has been approved by a federal agency or other state which the department has deemed to possess approval criteria which equal or exceed those of the department.

(6) The department shall prepare a manual to aid department staff responsible for plan review. This manual shall be made available to provide guidance for plan preparers. While the manual will be used as a tool to conduct review of a plan, the department will not be bound by the contents of the manual.

(7) The department shall endeavor to notify the facility owner or operator within five working days after the review is completed whether the plan has been approved.

(a) If the plan receives approval, the facility owner or operator shall receive a certificate of approval describing the terms of approval, including expiration dates.

(b)(i) The department may approve a plan conditionally by requiring a facility owner or operator to operate with specific precautionary measures until unacceptable components of the plan are resubmitted and approved.

(ii) Precautionary measures may include, but are not limited to, reducing oil transfer rates, increasing personnel levels, or restricting operations to daylight hours. Precautionary measures may also include additional requirements to ensure availability of response equipment.

(iii) A plan holder shall have thirty calendar days after the department gives notification of conditional status to submit and implement required changes to the department, with the option for an extension at the department's discretion. Plan holders who fail to meet conditional requirements or provide required changes in the time allowed shall lose conditional approval status.

(c) If plan approval is denied, the facility owner or operator shall receive an explanation of the factors for disapproval and a list of actions to be taken to gain approval. The facility shall not continue oil storage, transfer, production, or other operations until a plan for that facility has been approved.

(d) A plan holder may appeal the department's decision under WAC 173-04-010.

(e) If a plan holder demonstrates an inability to comply with an approved contingency plan or otherwise fails to com-

ply with requirements of this chapter, the department may, at its discretion:

(i) Place conditions on approval pursuant to (b) of this subsection; or

(ii) Revoke its approval pursuant to (c) of this subsection.

(f) Approval of a plan by the department does not constitute an express assurance regarding the adequacy of the plan nor constitute a defense to liability imposed under state law.

(8) The department shall work with the office of marine safety to ensure that no duplication of regulatory responsibilities occurs in the review of contingency plans from marine facilities.

[Statutory Authority: RCW 90.48.035. 91-22-087 (Order 91-12), § 173-181-065, filed 11/5/91, effective 12/6/91.]

WAC 173-181-070 Drills and inspections. (1) For the purpose of determining plan adequacy, the department may require a plan holder to participate in one unannounced full deployment drill annually. The department shall choose plan holders for such drills through a random process.

(2) The department may require a plan holder to participate in one announced, limited deployment drill annually. The department shall choose plan holders for such drills through a random process.

(3) Requirements under subsections (1) and (2) of this section may be met:

(a) By drills led by other state, local, or federal authorities if the department finds that the criteria for drill execution and review equal or exceed those of the department;

(b) By drills initiated by the plan holder, if the department is involved in participation, review, and evaluation of the drill, and if the department finds that the drill adequately tests the plan; and

(c) By responses to actual spill events, if the department is involved in participation, review, and evaluation of the spill response, and if the department finds that the spill event adequately tests the plan.

(4) The department may excuse a primary response contractor from full deployment participation in more than one drill, if in the past twelve months, the primary response contractor has performed to the department's satisfaction in a full deployment drill or an exercise listed in subsection (3) of this section.

(5) The department shall review the degree to which the specifications of the plan are implemented during the drill. The department shall endeavor to notify the facility owner or operator of the review results within thirty calendar days following the drill. If the department finds deficiencies in the plan, the department shall report those deficiencies to the plan holder and require the plan holder to make specific amendments to the plan pursuant to requirements in WAC 173-181-080.

(6) The department shall publish an annual report on plan drills, including a summary of response times, actual equipment and personnel use, recommendations for plan requirement changes, and industry response to those recommendations.

(7) The department may require the facility owner or operator to participate in additional drills beyond those

required in subsections (1) and (2) of this section if the department is not satisfied with the adequacy of the plan during exercises or spill response events.

(8) The department may verify compliance with this chapter by unannounced inspections in accordance with RCW 90.48.090.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-070, filed 11/5/91, effective 12/6/91.]

WAC 173-181-075 Plan maintenance and use. (1) At least one copy of the plan shall be kept in a central location accessible at any time by the incident commander or spill response manager named in accordance with WAC 173-181-050(7). Each facility covered by the plan shall possess a copy of the plan and keep it in a conspicuous and accessible location.

(2) A field document prepared under WAC 173-181-045(5) shall be available to all appropriate personnel.

(3) A facility owner or operator shall implement the plan in the event of a spill. The facility owner or operator must receive approval from the department before it conducts any major aspect of the spill response contrary to the plan unless:

(a) Such actions are necessary to protect human health and safety;

(b) Such actions must be performed immediately in response to unforeseen conditions to avoid additional environmental damage; or

(c) The plan holder has been directed to perform such actions by the department or the United States Coast Guard.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-075, filed 11/5/91, effective 12/6/91.]

WAC 173-181-080 Plan update timeline. (1) The department shall be notified in writing as soon as possible and within twenty-four hours of any significant change which could affect implementation of the plan, including a substantial decrease in available spill response equipment or personnel. The plan holder shall also provide a schedule for the prompt return of the plan to full operational status. A facsimile will be considered written notice for the purposes of this subsection. Changes which are not considered significant include minor variations in equipment or personnel characteristics, call out lists, or operating procedures. Failure to notify the department of significant changes shall be considered noncompliance with this chapter and subject to provisions of WAC 173-181-065 (7)(e).

(2) If the department finds that, as a result of the change, the plan no longer meets approval criteria pursuant to WAC 173-181-065, the department may, in its discretion, place conditions on approval or revoke approval in accordance to WAC 173-181-065 (7)(e). Plan holders are encouraged to maintain back-up response resources in order to ensure that their plans can always be fully implemented.

(3) Within thirty calendar days of an approved change, the facility owner or operator shall distribute the amended page(s) of the plan to the department and other plan holders.

(4) Plans shall be reviewed by the department every five years pursuant to WAC 173-181-065. Plans shall be submitted for reapproval unless the plan holder submits a letter requesting that the department review the plan already in the

(1999 Ed.)

department's possession. The plan holder shall submit the plan or such a letter at least sixty-five calendar days in advance of the plan expiration date.

(5) The department may review a plan following any spill for which the plan holder is responsible.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-080, filed 11/5/91, effective 12/6/91.]

WAC 173-181-085 Noncompliance with plan requirements. (1) Any violation of this chapter may be subject to the enforcement and penalty sanctions of RCW 90.48.376 as recodified by section 1115, chapter 200, Laws of 1991.

(2) The department may notify the secretary of state to suspend the business license of any onshore or offshore facility or other person that is in violation of this section. The department may assess a civil penalty of up to one hundred thousand dollars against any person who is in violation of this section. Each day that a facility or person is in violation of this section shall be considered a separate violation.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-085, filed 11/5/91, effective 12/6/91.]

WAC 173-181-090 Contractor standards. (1) Primary response contractors listed in an offshore or onshore facility contingency plan must be approved by the department. Response contractors which are listed in a contingency plan only as subcontractors to a primary response contractor do not have to be approved by the department.

(2) Primary response contractors shall be approved by the department subject to the following conditions:

(a) Equipment, equipment maintenance, and equipment and personnel deployment readiness must be verifiable by departmental inspection. Any resources not on site at the time of an inspection must be accounted for by company records. Approval of personnel readiness shall require capability of a one hour call out time in which personnel must be able to begin mobilization of response efforts. Equipment readiness shall include being available and able to be deployed to a spill site without delay, not counting normal maintenance and repairs;

(b) Response personnel shall comply with all appropriate safety and training requirements listed in WAC 296-62-300. Training records may be audited for verification; and

(c) Determination of an acceptable safety history by review of pertinent records on a case-by-case, best-professional-judgment basis. Lack of a safety history will not be grounds for denying approval.

(3) The department shall work with the office of marine safety to ensure that no duplication of regulatory responsibilities occurs in the review of primary response contractors.

[Statutory Authority: RCW 90.48.035, 91-22-087 (Order 91-12), § 173-181-090, filed 11/5/91, effective 12/6/91.]

WAC 173-181-092 Contractor approval information required. To apply for approval, contractors shall submit the following items to the department:

(1) Contractor's name, UBI number, address, and phone number;

[Title 173 WAC—p. 317]

(2) Response capability, including geographic area of response coverage, with any exclusions;

(3) The types of oil and media (e.g., marine, fresh water, or land) to which the contractor is willing and able to respond;

(4) An organizational diagram depicting chain of command;

(5) A call out list as described in WAC 173-181-050 (11)(a)(i);

(6) A list of all response equipment and personnel pursuant to WAC 173-181-050 (12)(a), (b), and (d) and (13)(a) and (c); and

(7) A list of all OSHA/WISHA citations and reports, lost-time accidents, and accident claims related to oil spill response operations for the last five years. Any applicant with less than five years under their current business name or organization shall provide a listing of any oil spill response contract businesses owned or operated by the principals in the new company within the last five years, including a brief description of the companies and their safety history information listed above.

[Statutory Authority: RCW 90.48.035. 91-22-087 (Order 91-12), § 173-181-092, filed 11/5/91, effective 12/6/91.]

WAC 173-181-094 Submittal of contractor approval applications. (1) Three copies of the contractor's approval application shall be delivered to:

Spill Management Section,
Response Contractor Approval
Washington Department of Ecology
PV-11
P.O. Box 47600
Olympia, WA 98504-7600

(2) Applications may be submitted at any time after adoption of this chapter. If submitted with a contingency plan, the information required pursuant to WAC 173-181-092 shall be presented separately.

[Statutory Authority: RCW 90.48.035. 91-22-087 (Order 91-12), § 173-181-094, filed 11/5/91, effective 12/6/91.]

WAC 173-181-096 Contractor application review.

(1) The department shall endeavor to review each application for primary response contractor approval in forty-five calendar days. Upon receipt of an application, the department shall evaluate promptly whether the application is incomplete. If the department determines that an application is incomplete, the submitter shall be notified of deficiencies. The forty-five day review period shall begin when the application is complete.

(2) An application shall be approved if it meets the conditions specified in WAC 173-181-090.

(3) The department shall endeavor to notify the applicant that the application has been approved/not approved within five working days after the review is completed.

(a) If the application is approved, the contractor shall receive a certificate of approval describing the terms of approval, including expiration dates.

(b) If the application is not approved, the contractor shall receive an explanation of the factors for disapproval and a list

of actions to be taken to gain approval. The contractor may not act as a primary response contractor for a facility contingency plan until approved by the department.

(c) A contractor may appeal the department's decision under WAC 173-04-010.

(d) Approval of a response contractor by the department does not constitute an express assurance regarding the adequacy of the contractor nor constitute a defense to liability imposed under state law.

(4) Response contractor approvals shall be reviewed by the department every two years pursuant to WAC 173-181-094. Reapproval applications shall be submitted sixty calendar days in advance of the approval expiration date.

(5) An approved contractor shall notify the department in writing as soon as possible and within twenty-four hours of any significant change in the information reported in the approval application, such as a substantial change in equipment ownership. A facsimile received by the department will be considered written notice for the purposes of this subsection. Failure to notify the department may result in loss of approval status. Upon notification, the department may review the approval of the primary response contractor pursuant to this section. If the department determines that approval conditions are no longer met, approval may be withdrawn.

[Statutory Authority: RCW 90.48.035. 91-22-087 (Order 91-12), § 173-181-096, filed 11/5/91, effective 12/6/91.]

WAC 173-181-098 Severability. If any provision of this chapter is held invalid, the remainder of the rule is not affected.

[Statutory Authority: RCW 90.48.035. 91-22-087 (Order 91-12), § 173-181-098, filed 11/5/91, effective 12/6/91.]

Chapter 173-183 WAC

PREASSESSMENT SCREENING AND OIL SPILL COMPENSATION SCHEDULE REGULATIONS

WAC

173-183-010	Purpose.
173-183-020	Authority.
173-183-030	Applicability.
173-183-100	Definitions.

THE RDA COMMITTEE AND PREASSESSMENT SCREENING

173-183-200	Preassessment screening process.
173-183-210	Incident discovery and reporting.
173-183-220	Initial site reconnaissance and notification of the RDA committee.
173-183-230	RDA committee.
173-183-240	Preassessment screening.
173-183-250	Damage assessment studies.
173-183-260	Restoration and enhancement projects proposed by the PLP.
173-183-270	Participation.

OIL SPILL COMPENSATION SCHEDULE GENERAL

173-183-300	Purpose.
173-183-310	Authority.
173-183-320	Compensation schedule.
173-183-330	Resource damage assessment using the compensation schedule.
173-183-340	Oil class ranking.

COMPENSATION SCHEDULE FOR SPILLS INTO MARINE AND ESTUARINE WATERS, EXCLUDING ESTUARINE WATERS OF THE COLUMBIA RIVER

173-183-400	Vulnerability of marine and estuarine environments to oil spills.
173-183-410	Marine and estuarine habitat vulnerability.
173-183-420	Marine bird vulnerability.
173-183-430	Marine fisheries vulnerability.
173-183-440	Shellfish vulnerability.
173-183-450	Salmon vulnerability.
173-183-460	Marine mammal vulnerability.
173-183-470	Marine and estuarine recreation vulnerability.

COMPENSATION SCHEDULE FOR SPILLS INTO THE COLUMBIA RIVER ESTUARY

173-183-500	Vulnerability of the Columbia River estuary environment to oil spills.
-------------	--

COMPENSATION SCHEDULE FOR SPILLS INTO FRESHWATER STREAMS, RIVERS, AND LAKES

173-183-600	Vulnerability of freshwater stream, river, and lake environments to oil spills.
173-183-610	Freshwater vulnerability index.
173-183-620	Habitat index.

COMPENSATION SCHEDULE FOR SPILLS INTO FRESHWATER WETLANDS

173-183-700	Vulnerability of freshwater wetland environments to oil spills.
173-183-710	Wetlands vulnerability classification.

CALCULATION OF DAMAGES USING THE COMPENSATION SCHEDULE

173-183-800	Calculation of damages using the compensation schedule general.
173-183-810	On-scene coordinator responsibilities.
173-183-820	RDA committee chair responsibilities.
173-183-830	Calculation of damages for spills into marine and estuarine waters, except the Columbia River estuary.
173-183-840	Calculation of damages for spills into the Columbia River estuary.
173-183-850	Calculation of damages for spills in freshwater streams, rivers, and lakes.
173-183-860	Calculation of damages for spills into freshwater wetlands.
173-183-865	Calculation of damages for spills entering more than one type of receiving environment.
173-183-870	Modification of damages based on actions taken by the PLP.
173-183-880	Damage claim.
173-183-890	Substitution of damages.
173-183-900	Annual report.
173-183-910	Severability.
173-183-920	Appendices.

WAC 173-183-010 Purpose. The purpose of this rule is to establish procedures for convening a resource damage assessment (RDA) committee, preassessment screening of resource damages resulting from oil spills to determine which damage assessment methods to use, and determining damages in cases where the compensation schedule is selected as the damage assessment methodology to apply. The RDA committee, utilizing the preassessment screening process, shall determine whether a detailed resource damage assessment studies should be conducted or whether the compensation schedule authorized under RCW 90.48.366 and 90.48.367 will be used to assess damages for each oil spill into state waters.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-010, filed 4/23/92, effective 5/24/92.]

WAC 173-183-020 Authority. This regulation implements RCW 90.48.366, 90.48.367, and 90.48.368 of the (1999 Ed.)

Water Pollution Control Act, as amended in 1987, 1989, and 1991.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-020, filed 4/23/92, effective 5/24/92.]

WAC 173-183-030 Applicability. This chapter shall apply to all oil spills into the waters of the state. Under this chapter, the department may require or take any and all actions necessary to investigate and assess damages from those spills.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-030, filed 4/23/92, effective 5/24/92.]

WAC 173-183-100 Definitions. (1) "Columbia River estuary environment" means the habitat and all other public resources associated with or dependent on the estuarine waters of the Columbia River.

(2) "Compensation schedule" means the set of procedures enumerated in WAC 173-183-300 through 173-183-870 to determine the public resource damages resulting from an oil spill for cases in which damages are not quantifiable at a reasonable cost.

(3) "Damages" means the amount of monetary compensation necessary to:

(a) Restore any injured public resource to its condition before sustaining injury as a result of an oil discharge in violation of chapter 90.48 or 90.56 RCW, to the extent technically feasible, including any loss in value incurred during the period between injury and restoration in cases where damages are quantifiable at a reasonable cost; or

(b) Adequately compensate for the loss or diminution in value as determined through application of the compensation schedule provided in WAC 173-183-300 through 173-183-870 in cases where damages are not quantifiable at a reasonable cost.

(4) "Department" means the department of ecology.

(5) "Director" means the director of the department of ecology, or his or her designee.

(6) "Discharge" means any spilling, leaking, pumping, pouring, emitting, emptying, or dumping.

(7) "Estuarine environment" means the habitat and all other public resources associated with or dependent on estuarine waters of the state.

(8) "Estuarine waters" or "estuarine waters of the state" means the waters within state jurisdiction that are semi-enclosed by land but have open, partly obstructed, or sporadic access to the ocean, and in which seawater is at least occasionally diluted by freshwater runoff from land. Estuarine waters of the state include adjacent tidal flats and beaches up to the limit of tidal inundation or wave splash. For purposes of this chapter, estuarine waters of the state include those designated on the map attached as Appendix 1 to this chapter, and the portion of the Columbia River estuary within state jurisdiction upstream to river mile 46 or the line drawn perpendicularly across the river which touches the upstream end of Puget Island.

(9) "Freshwater stream, river, and lake environment" means the habitat and all other public resources associated with or dependent on the streams, rivers, and lakes under state jurisdiction.

(10) "Freshwater wetland" or "freshwater wetlands" means lands transitional between terrestrial and freshwater aquatic systems where the water table is usually at or near the surface or the land is covered by shallow water, and lands having one or more of the following attributes at least periodically: The land supports predominantly hydrophytes; the substrate is predominately undrained hydric soil; and the substrate is nonsoil and saturated with water or covered by shallow water at some time during the growing season each year.

(11) "Freshwater wetland environment" means the habitat and all other public resources associated with or dependent on the freshwater wetlands of the state.

(12) "Freshwaters" or "freshwaters of the state" means all waters of the state except those classified as marine and estuarine waters of the state as defined in this chapter, including lakes, rivers, streams, ponds, other surface waters and wetlands.

(13) "Habitat" means the substrate and complement of associated biota not otherwise included in the vulnerability rankings in the applicable compensation schedule(s) that is part of this chapter.

(14) "Immediate removal" or "immediately removes" means removal of the spilled oil, or portions thereof, from the receiving environment by the potentially liable party within six hours of spill initiation.

(15) "Initial department responder" means the department of ecology spill responder who first arrives at the scene of the spill.

(16) "Injury" or "injuries" means an adverse change, either long- or short-term, to a public resource resulting either directly or indirectly from exposure to a discharge of oil in violation of chapter 90.48 or 90.56 RCW.

(17) "Loss in services" means a temporary or permanent reduction in the ability of the resource to provide its use or benefit to the public or to other resources.

(18) "Loss in value or lost value" of a damaged resource means the amount equal to the sum of consumptive, nonconsumptive, and indirect use values, as well as lost taxation, leasing, and licensing revenues during the period between injury and restoration; indirect use values may include existence, bequest, option, and aesthetic values.

(19) "Marine and estuarine habitats" mean the habitats found in marine and estuarine waters of the state as defined in this chapter.

(20) "Marine birds" means all seabirds, shorebirds, waterfowl, raptors and other avifauna that are dependent on marine and estuarine environments of the state for some portion of their life requirements including feeding, breeding, and habitat.

(21) "Marine environment" means the habitat and all other public resources associated with or dependent on marine waters of the state.

(22) "Marine fish," in context of the compensation schedule, means the species listed in Appendix 2.

(23) "Marine mammals" means the cetaceans, pinnipeds, sea otters, and river otters associated with marine and estuarine waters of the state.

(24) "Marine waters" or "marine waters of the state" means all coastal waters not appreciably diluted by freshwater, including open coastal areas, straits, and euhaline inland

waters extending from the seaward limit of state jurisdiction to:

(a) The landward limit of tidal inundation or wave splash; or

(b) The seaward limit of estuarine waters of the state.

(25) "Not quantifiable at a reasonable cost" means any diminution in value of a public resource that cannot be measured with sufficient precision or accuracy by currently available and accepted procedures within a reasonable time frame.

(26) "Oil" or "oils" means naturally occurring liquid hydrocarbons at atmospheric temperature and pressure coming from the earth, including condensate and natural gasoline, and any fractionation thereof, including, but not limited to, crude oil, petroleum gasoline, fuel oil, diesel oil, oil sludge, oil refuse, and oil mixed with wastes other than dredged spoil. Oil does not include any substance listed in Table 302.4 of C.F.R. Part 302 adopted August 14, 1989, under section 101(14) of the Federal Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended by P.L. 99-499.

(27) "On scene coordinator" (OSC) means the department official who supervises the spill response team and compiles the initial report concerning the facts and circumstances of the spill for the department.

(28) "Person" means any political subdivision, government agency, municipality, industry, public or private corporation, copartnership, association, firm, individual, or any other entity whatsoever.

(29) "Potentially liable party" means the person or persons who may be liable for damages resulting from an oil spill.

(30) "Preassessment screening" means the investigation and determination of the facts and circumstances surrounding an oil spill which are used to determine whether a damage assessment investigation should be conducted, or alternatively, whether the compensation schedule will be used to assess damages.

(31) "Public resources" or "publicly owned resources" means fish, animals, vegetation, land, waters of the state, and other resources belonging to, managed by, held in trust by, appertaining to, or otherwise controlled by the state.

(32) "Reasonable cost" for a damage assessment means a cost that is anticipated to be less than the amount of damages that may have occurred or may occur.

(33) "Receiving environment" means waters of the state exposed to the spill and all public resources associated with or dependent on the exposed waters.

(34) "Resource damage assessment committee" or "RDA committee" means the preassessment screening committee established under RCW 90.48.368 and charged with determining whether to conduct detailed damage assessment studies or to apply the compensation schedule for oil spills into waters of the state, and overseeing reconnaissance and damage assessment activities.

(35) "Restoration or enhancement projects or studies" means an activity that is intended to restore, replenish, restock, or replace public resources, or to further investigate the long-term effect of resource injuries as determined by the RDA committee for the benefit of the public.

(36) "Salmon," in context of the compensation schedule, means the species listed in Appendix 3.

(37) "Scientific advisory board" means the advisory group established by the department to assist in development of the compensation schedule as required by RCW 90.48.366.

(38) "Season" or "seasons" means winter, spring, summer, and/or fall, where winter occurs during the months December through February, spring occurs during the months March through May, summer occurs during the months June through August, and fall occurs during the months September through November.

(39) "Shellfish," in context of the compensation schedule, means the species listed in Appendix 4, but does not include privately grown shellfish on public lands.

(40) "Spill" means an unauthorized discharge of oil into waters of the state.

(41) "State" means state of Washington.

(42) "State trustee agencies" means the state agencies with responsibility for protecting and/or managing public resources.

(43) "Subregion" or "subregions" means the areas into which state marine and estuarine waters have been divided for purposes of the compensation schedule as designated on the maps attached as Appendix 1.

(44) "Technical feasibility" or "technically feasible" means that given available technology, a restoration or enhancement project can be successfully completed at a cost that is not disproportionate to the value of the public resource before the injury.

(45) "Trust resources" means the public resource(s) under a particular state agency's jurisdiction for protection and/or management.

(46) "Unquantifiable damage" means any diminution in value of a public resource that cannot be measured with sufficient precision or accuracy by currently available and accepted procedures within a reasonable period of time.

(47) "Waters of the state" or "state waters" includes lakes, rivers, ponds, streams, inland waters, underground water, salt waters, estuaries, tidal flats, beaches, and lands adjoining the seacoast of the state, sewers, and all other surface waters and watercourses within the jurisdiction of the state of Washington.

(48) "Wetland" or "wetlands" means lands transitional between terrestrial and aquatic systems where the water table is usually at or near the surface or the land is covered by shallow water, and lands having one or more of the following attributes at least periodically: The land supports predominantly hydrophytes; the substrate is predominantly undrained hydric soil; and the substrate is nonsoil and saturated with water or covered by shallow water at some time during the growing season each year.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-100, filed 4/23/92, effective 5/24/92.]

(1999 Ed.)

THE RDA COMMITTEE AND PREASSESSMENT SCREENING

WAC 173-183-200 Preassessment screening process.

(1) Findings from the preassessment screening shall be used to determine whether a formal damage assessment investigation should be conducted or whether the compensation schedule will be applied to assess public resource damages associated with spills of oil into state waters.

(2) The preassessment screening process shall occur concurrently with reconnaissance and cleanup activities as defined in WAC 173-183-220(2).

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-200, filed 4/23/92, effective 5/24/92.]

WAC 173-183-210 Incident discovery and reporting.

The state on-scene coordinator (OSC) or initial department responder, shall provide prompt notice to the committee chair when there is evidence of an oil spill into state waters.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-210, filed 4/23/92, effective 5/24/92.]

WAC 173-183-220 Initial site reconnaissance and notification of the RDA committee.

(1) The on-scene coordinator (OSC) or initial department responder to an oil spill shall report the following to the RDA committee chair as soon as practicable:

(a) Initial determination of the type and character of the oil(s) spilled;

(b) Initial determination of location of the spill, general type of habitat(s) impacted, geographic coverage of the spill, and amount of oil(s) spilled; and

(c) Initial determination of potentially liable party identity.

(2) The RDA committee chair shall notify RDA committee members of an oil spill as soon as practicable after receiving a report by the OSC or initial department responder, and provide a preliminary assessment of the potential risks to public resources.

(3) The RDA committee may, upon notification of an oil spill, initiate or authorize the RDA committee chair to initiate any necessary reconnaissance activities to:

(a) Further identify public resources at risk;

(b) Determine the extent to which public resources are, or may be, adversely affected;

(c) Document actual or potential injury to public resources; and

(d) Determine which local, state, and federal agencies and Indian tribes may have interests or jurisdiction over any of the public resources that may be adversely affected by the spill.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-220, filed 4/23/92, effective 5/24/92.]

WAC 173-183-230 RDA committee. (1) The following state agencies shall have membership on the RDA committee: Departments of ecology, fisheries, health, natural resources, wildlife, and the parks and recreation commission.

[Title 173 WAC—p. 321]

(2) Agencies with membership on the RDA committee shall nominate a representative and alternate to be appointed to the committee by the director.

(3) The department of ecology shall chair the RDA committee.

(4) The department may select representatives from the following agencies and governments for participation on the RDA committee on a spill-by-spill basis: Departments of emergency management, as well as other federal, state, and local agencies, and tribal and local governments whose presence would enhance reconnaissance or damage assessment activities of spill response.

If a selected representative declines or is unable to participate on the committee, the representative shall provide written notice to the department within twelve hours of being notified so that a replacement member may be appointed. Prompt consideration will be given to other local, state, or federal agency, or tribal government requests for participation on the RDA committee on a spill-by-spill basis.

(5) The RDA committee shall convene as soon as possible, but no later than thirty days after the department receives notification of a spill, or the next regularly scheduled meeting of the committee following a spill.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-230, filed 4/23/92, effective 5/24/92.]

WAC 173-183-240 Preassessment screening. (1) The primary duty of the RDA committee during the preassessment screening is to determine whether detailed damage assessment studies should be conducted under RCW 90.48.367, or alternatively, whether the compensation schedule authorized under RCW 90.48.366 and 90.48.367 will be used to assess damages.

(2) The RDA committee shall consider information collected during reconnaissance and cleanup as well as other relevant background information pertaining to threatened public resources or resource use for the preassessment screening.

(3) The RDA committee shall consider the following factors when determining the type of damage assessment to be conducted:

(a) Whether evidence from reconnaissance investigations suggests that injury has occurred or is likely to occur to publicly owned resources;

(b) The potential loss in services provided by public resources injured or likely to be injured and the expected value of the potential loss;

(c) Whether a restoration project to return lost services is technically feasible;

(d) The accuracy of damage quantification methods that could be used and the anticipated cost-effectiveness of applying each method;

(e) The extent to which likely injury to public resources can be verified with available quantification methods; and

(f) Whether the injury, once quantified, can be translated into monetary values with sufficient precision or accuracy.

(4) The department shall apply the compensation schedule to determine the amount of damages if the RDA committee determines that:

(a) Restoration or enhancement of the injured resources is not technically feasible;

[Title 173 WAC—p. 322]

(b) Damages are not quantifiable at a reasonable cost; and

(c) The restoration and enhancement projects or studies proposed by the potentially liable party are insufficient to adequately compensate the people of the state for public resource damages.

(5) The RDA committee is encouraged to work cooperatively with the potentially liable party, to the greatest extent possible, to increase the efficiency of the damage assessment process, and shall provide for the ongoing involvement of the potentially liable party.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-240, filed 4/23/92, effective 5/24/92.]

WAC 173-183-250 Damage assessment studies. (1) If the RDA committee, after considering the factors enumerated in WAC 173-183-240(3), determines that the damages to be investigated are quantifiable at a reasonable cost and that proposed assessment studies are clearly linked to quantification of the damages incurred, then the RDA committee may authorize damage assessment studies.

(2) If the RDA committee authorizes damage assessment studies under RCW 90.48.367(3), the RDA committee chair shall promptly notify the potentially liable party of this decision.

(3) The state trustee agency(ies) responsible for the potentially injured resource and habitat shall conduct the damage assessment studies and pursue all appropriate remedies with the responsible party. The RDA committee shall consider the proposed damage assessment studies and the effects of any proposed remedies in a timely manner, consistent with WAC 173-183-240(3).

(4) As new information becomes available, the committee may reevaluate the scope of damage assessment studies using the factors listed in WAC 173-183-240(3), and may reduce or expand the scope of damage assessment studies as appropriate.

(5) The department may negotiate with a potentially liable party to perform restoration and enhancement projects or studies which may substitute for all or part of the damages determined through the damage assessment studies.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-250, filed 4/23/92, effective 5/24/92.]

WAC 173-183-260 Restoration and enhancement projects proposed by the PLP. (1) The potentially liable party (PLP) may propose restoration or enhancement projects or studies during the preassessment screening phase to substitute for some or all of:

(a) The damages calculated from the compensation schedule authorized under RCW 90.48.366 and 90.48.367; or

(b) The claims from damage assessment studies authorized under RCW 90.48.142 and 90.48.367.

(2) To be considered as part of the preassessment screening decision process specified in WAC 173-183-240, PLP proposals must be submitted to the RDA committee chair within ten days of PLP notification by the RDA committee.

(3) The RDA committee may accept the PLP proposal in lieu of some or all of:

(1999 Ed.)

(a) The damages calculated from the compensation schedule authorized under RCW 90.48.366 and 90.48.367; or

(b) The claims from damage assessment studies authorized under RCW 90.48.142 and 90.48.367.

(4) For the RDA committee to find a proposal sufficient to adequately compensate the people of the state for public resource damages, the PLP proposal must at least contain the following elements:

(a) An investigation of all potentially injured public resources to determine if they have been exposed to the spilled oil;

(b) Follow-up investigations on all public resources documented to be exposed to determine if exposure has resulted in injury;

(c) Follow-up investigations on all public resources documented to be injured by the spill to quantify the injury;

(d) Quantification of damages for all public resources where injury has been quantified; and

(e) Restoration/enhancement projects to compensate for public resource injuries to the extent technically feasible; and, for damages that cannot be compensated by technically feasible restoration or enhancement projects, implementation of projects/studies to compensate for these losses. Public resource restoration and enhancement projects and studies shall be prioritized as follows:

(i) On-site, in-kind;

(ii) Off-site, in-kind;

(iii) On-site, out-of-kind; and

(iv) Off-site, out-of-kind.

(5) Prior to the PLP initiating any projects or studies intended to substitute for damages, the PLP's proposal must be approved by the RDA committee. If a PLP proposal is found to be acceptable to the RDA committee, the committee shall notify the PLP of this decision.

(6) If RDA committee finds a PLP project and study plan proposal to be acceptable, the RDA committee shall oversee all projects and studies conducted by the PLP.

(7) Upon completion of the PLP's project and study plan, the RDA committee shall decide the extent to which the PLP's projects and studies substitute for public resource damages as identified in subsection (3) of this section.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-260, filed 4/23/92, effective 5/24/92.]

WAC 173-183-270 Participation. To efficiently implement WAC 173-183-250 the RDA committee may develop public resource damage assessment agreements to facilitate cooperation between state and federal agencies and Indian tribes.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-270, filed 4/23/92, effective 5/24/92.]

OIL SPILL COMPENSATION SCHEDULE GENERAL

WAC 173-183-300 Purpose. The purpose of this section is to establish a compensation schedule that will provide a simple methodology for assessing damages to public resources from oil spills into fresh, marine, and estuarine waters of the state. The intent is to provide an alternate methodology to the extensive and expensive natural resource dam-

(1999 Ed.)

age assessments presently being conducted following oil spills. This section provides the procedures for:

(1) Establishing the relative vulnerability of public resources to oil spills by taking into consideration the relative toxicity of the oil spilled and the sensitivity of public resources present in the receiving environment; and

(2) Determining adequate monetary compensation for injury to public resources resulting from an oil spill.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-300, filed 4/23/92, effective 5/24/92.]

WAC 173-183-310 Authority. This regulation implements the establishment of a resource damage compensation schedule consistent with the provisions of RCW 90.48.366 for the discharge of oil in violation of chapter 90.48 or 90.56 RCW which requires the department to establish the compensation schedule in consultation with the departments of fisheries, wildlife, and natural resources, and the parks and recreation commission, and with the assistance of a scientific advisory board.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-310, filed 4/23/92, effective 5/24/92.]

WAC 173-183-320 Compensation schedule. (1) The compensation schedule determines adequate compensation for unquantifiable damages or for damages not quantifiable at a reasonable cost for persons liable under RCW 90.48.142.

(2) Adequate compensation as determined from the compensation schedule is derived from preexisting information of resource vulnerability to a class of oil spilled in a particular subregion of the state during a particular season, plus any additional information collected at the reconnaissance stage of the spill response.

(3) Under RCW 90.48.366, the amount of compensation assessed under this schedule shall be no less than one dollar per gallon of oil spilled and no greater than fifty dollars per gallon of oil spilled.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-320, filed 4/23/92, effective 5/24/92.]

WAC 173-183-330 Resource damage assessment using the compensation schedule. The compensation schedule includes:

(1) A relative ranking for each of the classes of oil defined in this chapter as determined by their known chemical, physical, and mechanical properties, and other factors that may affect the severity and persistence of the spill on the receiving environment;

(2) A relative vulnerability ranking of receiving environments which takes into account location of the spill, habitat and public resource sensitivity to oil, seasonal distribution of public resources, areas of recreational use and aesthetic importance, the proximity of the spill to important habitats for birds, aquatic mammals, fish, or to species listed as threatened or endangered under state or federal law, and other areas of special ecological or recreational importance as determined by the department;

(3) A quantitative method for determining public resource damages resulting from an oil spill, based on the oil effects and vulnerability rankings designed to compensate the

[Title 173 WAC—p. 323]

people of this state for those damages that cannot be quantified at a reasonable cost that result from oil spills; and

(4) A method for adjusting damages calculated under the compensation schedule based on actions taken by the potentially liable party that:

(a) Demonstrate a recognition and affirmative acceptance of responsibility for the spill, such as the immediate removal of oil and the amount of oil removed from the environment; or

(b) Enhance or impede the detection of the spill, the determination of the quantity of oil spilled, or the extent of damage, including the unauthorized removal of evidence such as injured fish or wildlife.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-330, filed 4/23/92, effective 5/24/92.]

WAC 173-183-340 Oil class ranking. (1) The purpose of this section is to provide a relative ranking of the severity of effects caused by a spilled oil. The ranking is based on the known chemical, physical, and mechanical properties of oils in the six classes identified in this section, as well as other properties affecting propensity to cause acute toxicity and mechanical injury, and to persist in the environment. For purposes of the compensation schedule, relative rankings of the severity of effects caused by a spilled oil are provided for the following classes of oils:

- (a) Prudhoe Bay crude oil;
- (b) Bunker C;
- (c) No. 2 fuel oil;
- (d) Gasoline;
- (e) Kerosene; and
- (f) Kerosene-type jet fuel.

(2) The relative ranking scores for the oil classes range from 1 to 5, where 1 represents the least harmful effect and 5 represents the most harmful effect. For purposes of RCW 90.48.366 and 90.48.367, the acute toxicity, mechanical injury, and persistence relative ranking scores for the oils described by the classes enumerated in subsection (1) of this section shall be as follows:

Table 1. Acute Toxicity, Mechanical Injury and Persistence Relative Ranking Scores for Classified Oils (OIL).

Oil Class	Acute Toxicity	Mechanical Injury	Persistence
Prudhoe Bay Crude Oil	0.9	3.6	5
Bunker C	2.3	5.0	5
No. 2 Fuel Oil	2.3	3.2	2
Gasoline	5.0	1.0	1
Kerosene	1.4	2.4	1
Kerosene-type Jet Fuel	1.4	2.4	1

(3) In cases where the spilled oil is not described by any of the oil classes listed in subsection (1) of this section, or is a mixture of oils, the department shall determine the acute toxicity, mechanical injury, and persistence scores as follows:

(a) By assigning the acute toxicity, mechanical injury, and persistence scores assigned to the oil class best describing the spilled oil from subsection (2) of this section; or

[Title 173 WAC—p. 324]

(b) By using the following guidance to determine the acute toxicity, mechanical injury, and persistence relative ranking scores:

(i) Acute toxicity relative ranking score. An acute toxicity raw score is determined by summing the weighted averages of the 1-, 2-, and 3-ringed aromatic compounds comprising the spilled oil and dividing this sum by 107, where aromatic compound composition is determined by percent-weight, and weighting is determined by aqueous solubility of the aromatic compounds, as described by the following formula:

Acute Toxicity Raw Score=

$$[(\text{SOL}_1 * \text{PCT-WT}_1) + (\text{SOL}_2 * \text{PCT-WT}_2) + (\text{SOL}_3 * \text{PCT-WT}_3)] / 107$$

where SOL_i = solubility in seawater of i-ring aromatic hydrocarbons, and

PCT-WT_i = percent weight of i-ring aromatic hydrocarbons in the spilled oil, $i = 1, 2, \text{ and } 3$.

The final acute toxicity relative ranking score is determined by rounding the acute toxicity raw score to the nearest 0.1 using standard rounding procedures where decimals less than 0.05 are rounded down and decimals equal to or greater than 0.05 are rounded up.

(ii) Mechanical injury relative ranking score. A mechanical injury raw score is determined by subtracting 0.688 from the specific gravity of the spilled oil and dividing this result by 0.062 as follows:

$$\text{Mechanical Injury Score} = (\text{SP} - 0.688) / 0.062$$

where SP = specific gravity of the spilled oil.

The final mechanical injury ranking score is determined by rounding the mechanical injury raw score to the nearest 0.1 using standard rounding procedures where decimals less than 0.05 are rounded down and decimals equal to or greater than 0.05 are rounded up.

(iii) Persistence relative ranking score. A persistence relative ranking score is determined from empirical data describing the length of time the spilled oil is known to, or is likely to, persist in a variety of habitat types. Scoring is assigned on a 1 to 5 scale as follows:

SCORE	ANTICIPATED PERSISTENCE
5	5 - 10 years or more
4	2 - 5 years
3	1 - 2 years
2	1 month to 1 year
1	days to weeks.

(4) In cases where the spilled oil is comprised of two or more types of oil, damages shall be calculated under the schedule for each oil type and then summed to calculate total damages liability.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-340, filed 4/23/92, effective 5/24/92.]

Reviser's note: The brackets and enclosed material in the text of the above section occurred in the copy filed by the agency.

COMPENSATION SCHEDULE FOR SPILLS INTO MARINE AND ESTUARINE WATERS, EXCLUDING ESTUARINE WATERS OF THE COLUMBIA RIVER

WAC 173-183-400 Vulnerability of marine and estuarine environments to oil spills. (1) The purpose of this section is to describe the method of ranking vulnerability of marine and estuarine environments, excluding the Columbia

(1999 Ed.)

River estuary environment to oil spills for the purposes of assessing damages using the compensation schedule.

(2) Marine and estuarine waters of the state excluding the Columbia River estuary are divided into sixteen regions and one hundred thirty-one subregions for purposes of RCW 90.48.366, as designated on the maps attached as Appendix 5 of this chapter.

(3) A spill vulnerability score (SVS) shall be calculated at the time of a spill for the most sensitive subregion and season impacted by the spill. The SVS rates the vulnerability of public resources to spilled oil based on the propensity of the oil to cause acute toxicity and mechanical injury, and to persist in the environment. SVS is determined by summing the vulnerability scores for marine birds, marine mammals, fishery species, recreational use and habitats for the subregion(s) and most sensitive season impacted by the spill. The formula to be used to calculate SVS for each of the three oil effects, acute toxicity, mechanical injury, and persistence, is as follows:

Spill vulnerability score (SVS)_{ij}=

$HVS_i + BVS_j + MVS_j + MFVS_j + SFVS_j + SAVS_j + RVS_j$

where HVS_i = habitat vulnerability to oil's propensity to cause i

BVS = marine bird vulnerability score (WAC 173-183-420(3));

MVS = marine mammal vulnerability score (WAC 173-183-460(3));

$MFVS$ = marine fisheries vulnerability score (WAC 173-183-430(3));

$SFVS$ = shellfish vulnerability score (WAC 173-183-440(3));

$SAVS$ = salmon vulnerability score (WAC 173-183-450(5));

RVS = recreation vulnerability score (WAC 173-183-470(3));

i= acute toxicity (AT), mechanical injury (MI), or persistence (Per); and

j= the most sensitive season affected by the spill: Spring, summer, fall, or winter

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-400, filed 4/23/92, effective 5/24/92.]

WAC 173-183-410 Marine and estuarine habitat vulnerability. (1) The purpose of this section is to provide a marine and estuarine habitat vulnerability ranking. The marine and estuarine habitats present in the state are:

(a) Classified into thirty-seven types based on substrate type, energy regime and depth of occurrence; and

(b) Relatively ranked and scored for vulnerability to oil spills on a 1 to 5 scale, where a habitat vulnerability score (hv) of 5 represents the greatest vulnerability and an hv of 1 represents the least vulnerability.

(2) Marine and estuarine habitat vulnerability scores (hv) are based on the following:

(a) Presence of living public resources at risk, where living public resources include only those not otherwise incorporated into the compensation schedule in the marine fish, shellfish, salmon, marine mammal or marine bird vulnerability rankings of WAC 173-183-420 through 173-183-460; and

(b) Predicted sensitivity to the acute toxicity, mechanical injury and persistence effects of oil based on energy regime of the habitat and propensity to entrain oil.

(3) For purposes of RCW 90.48.366, marine and estuarine habitats of the state are classified into the following thirty-seven habitat types:

(a) Marine intertidal habitats.

(i) Exposed and semi-exposed rocky shores. Bedrock and boulder habitats exposed to the full range of wave energies of the Pacific (i.e., on the outer coast), or to extensive wave fetch along the Strait of Juan de Fuca. Rocky areas on the coast partly protected behind sea stacks or islands also fall into this category.

(ii) Sand-scoured rocky shores. Rocky headlands or sea stacks directly adjacent to high energy sandy beaches such that there is much suspended sand in the water, which scours the rock. Unique plants and animals are found here.

(iii) Protected rocky shores. Bedrock and boulder habitats lacking oceanic swell and extensive wave fetch; e.g., inside waters of the San Juan Islands, headlands in bays off the Strait of Juan de Fuca or well protected behind islands on the outer coast.

(iv) Semi-exposed cobble and mixed-coarse beaches. Beaches exposed to moderate wave action composed of cobble overlying sand, or to somewhat less wave action, with a mix of cobble, gravel, and sand where no one component occupies more than seventy percent of the surface. Algae may grow on larger cobbles, and animals live both on the surface and in the sediment. Species vary dramatically with degree of wave exposure and composition of the sediment. Found inside the San Juan Islands, outside of Whidbey Island, at semi-protected sites along the Strait, and behind island and sea stacks on the coast.

(v) Semi-exposed gravel beaches. Unstable beaches, containing some sand in more protected areas. Many sites along the Strait of Juan de Fuca.

(vi) Exposed sandy beaches. Pure marine sands found in moderate to high-energy areas, e.g., on the outer coast and along the Strait of Juan de Fuca. Mouths of bays with some wave action also fall into this category.

(vii) Semi-protected mixed-fine beaches. Mixed sand and silt habitats, found in bays and inlets with some wave action so they are not dominated by the finer sediments (muds). Patches of gravel may be present high on the shore.

(viii) Protected mud flats. Areas of little to no wave energy, where fine sediments settle and accumulate organic matter. Found in calm bays and inlets with little freshwater influx (i.e., not estuaries).

(b) Marine subtidal.

(i) Shallow subtidal rock and boulders. Areas less than 15 m depth with some currents so that sediments do not totally cover bedrock. Kelp beds are found in these habitats, which are widespread in the state.

(ii) Deep subtidal rock and boulders. Areas deeper than 15 m and thus lacking in significant algal cover, but still with enough currents to keep the substrate exposed. Common in the San Juans and the Strait.

(iii) Deep subtidal cobble and mixed-coarse areas. "Scoured" areas in channels or passes with high currents,

composed entirely of cobbles or with gravel and sand mixed in.

(iv) Shallow subtidal mixed-coarse to mixed-fine areas (low energy). Areas ranging from cobbles lying over a matrix of sand and gravel to mixed sand and silt, in waters less than 15 m. Bays and inlets commonly have this range of substrate types. Plants and animals exist both on the cobbles and in the sediment.

(v) Shallow subtidal gravel or mixed-fine areas (high energy). Areas just offshore of sand or gravel beaches, where swells or wave action keep fine sediments from accumulating. Substrates range from pure gravel to gravel mixed with sand and shells. Common in the Strait.

(vi) Deep subtidal sand. Areas deeper than 15 m in the Strait or on the coast where swells keep the substratum fairly coarse.

(vii) Deep subtidal mixed-fine areas. Areas of sand, shells, and pebbles with some currents removing finer particles.

(viii) Deep subtidal muddy areas. Areas with no swell and few currents, where fine silts settle out and accumulate organic matter.

(ix) Open water. Areas deeper than 20 m.

(c) Estuarine intertidal.

(i) Open rocky shores. Rocky intertidal areas (including hardpan and riprap) in areas exposed to moderate waves or currents, e.g., on headlands in Puget Sound.

(ii) Open mixed-coarse beaches. One of the most common beach types in Puget Sound, composed of a mix of cobble, gravel, and sand in areas with some wave action that keeps finer silts suspended. Sparse salt marsh vegetation may occur at the tops of these beaches, especially in quieter areas.

(iii) Open gravel beaches. Areas of gravel or pebbles, often overlying sand, in areas of moderate wave action.

(iv) Open sandy beaches. Common habitats of gently sloping beaches but moderate wave action. May have gravel on the upper shore. Found in Puget Sound and in some areas of other estuaries, including Grays Harbor.

(v) Sandy low marshes. Found on spits, berms, and deltas where sand collects. Areas of different salinities are dominated by different marsh plant communities. Widespread (although disturbed) throughout the Puget Trough.

(vi) Mixed-fine beaches and low marshes. Found in backwaters or deltas away from large channels, where the substrate is mixed sand and mud, sometimes with patches of gravel or peat. Substrate is stable and organic-rich. Marsh communities vary with salinity.

(vii) Saline lagoons. Areas where water-borne sediments are deposited into a spit closing off an embayment, which is flushed regularly or irregularly. Salinities vary with evaporation and runoff but are generally high.

(viii) Low-salinity lagoons. Lagoons that are nearly separated from tidal/salt influence by a berm, and where there is a source of freshwater. Substrate is usually soft silt. This habitat is rare in the state.

(ix) Mud flats. Areas lacking in gravel or significant amounts of sand due to limited wave action, usually found in the heads of bays and inlets. Includes undisturbed channels

and sloughs which drain slowly through a tidal cycle, and which may contain some sand.

(x) High salt marshes. Areas above normal high water but salt influenced, with organic/peat substrata. Salinities vary, and plant communities with them.

(xi) Transition zone wetland. Areas transitional between salt marshes and uplands, where salt water only rarely inundates. Substrata are peat or fine silts.

(d) Estuarine subtidal.

(i) Shallow subtidal rock and boulders. Areas less than 15 m deep with moderate currents or wave action that remove silt. Kelp beds develop here.

(ii) Deep subtidal rock and boulders. Areas in narrow channels or around headlands where currents remove sediment that otherwise would settle in these deeper areas. These habitats are essentially marine, since freshwater tends to stay layered in shallow water.

(iii) Shallow subtidal cobble and mixed-coarse areas. Mixed cobble, gravel, and sand remain in shallow areas fairly open to wave action or currents.

(iv) Deep subtidal cobble and mixed-coarse areas. Tidal currents running through deep channels in Puget Sound keep fine silts from settling and create areas of mixed cobbles, sand, and gravel.

(v) Shallow subtidal sandy or mixed-fine areas. High-current areas with little debris and some gravel, or less current-swept with more debris. Both are common outside of enclosed bays in Puget Sound.

(vi) Deep subtidal sandy or mixed-fine areas. Current-swept areas below 15 m. Organic debris and gravel tend to accumulate deeper (below 30 m), leading to different assemblages there.

(vii) Shallow subtidal muddy bays. Common habitats in open to partly enclosed bays in Puget Sound, where limited water movement allows fine sediments to accumulate. Organic enrichment is high, especially in more enclosed bays.

(viii) Deep subtidal muddy bays. Habitats in the heads and centers of inlets in Puget Sound where there is little motion and the substrate is soft mud and sand. Assemblages vary with depth and amount of organic debris accumulated.

(ix) Open water. Areas deeper than twenty meters.

(4) For purposes of RCW 90.48.366, marine and estuarine habitat vulnerability scores (hv) for each of the habitat types classified in subsection (3) of this section shall be as follows:

TABLE 2. Habitat Vulnerability for a Single Habitat Type and Oil Effect (hv)

HABITAT TYPE	HABITAT VULNERABILITY (hv)		
	ACUTE (hv _{AT})	MECH (hv _{MI})	PERS (hv _{PER})
MARINE INTERTIDAL			
Exposed and semi-exposed rock shores	3.7	4.3	3.1
Sand-scoured rocky shores	3.3	3.8	2.7
Protected rocky shores	3.0	3.5	3.0
Semi-exposed cobble and mixed-coarse beaches	3.2	3.2	3.2
Semi-exposed gravel beaches	3.2	1.4	2.0
Exposed sandy beaches	2.9	1.3	1.8

HABITAT TYPE	HABITAT VULNERABILITY (hv)		
	ACUTE (hv _{AT})	MECH (hv _{MI})	PERS (hv _{PER})
Semi-protected mixed-fine beaches	3.2	2.6	3.7
Protected mud flats	3.8	2.7	4.3
MARINE SUBTIDAL			
Shallow subtidal rock and boulders	3.7	3.7	3.1
Deep subtidal rock and boulders	2.7	2.7	3.3
Deep subtidal cobble and mixed coarse	1.5	2.2	2.2
Shallow subtidal mixed-coarse to mixed-fine	3.6	3.6	3.6
Shallow subtidal gravel or mixed-fine	2.8	1.6	2.3
Deep subtidal sand	1.6	2.0	1.6
Deep subtidal mixed-fine	1.5	2.6	3.1
Deep subtidal muddy	2.0	2.0	3.2
Open water	5.0	3.2	2.2
ESTUARINE INTERTIDAL			
Open rocky shores	3.0	3.5	3.0
Open mixed-coarse beaches and low marsh	3.7	3.2	3.2
Open gravel beaches	3.4	1.5	2.2
Open sandy beaches	3.3	2.8	2.3
Sandy low marshes	3.5	3.0	3.0
Mixed-fine beaches and low marshes	4.3	4.3	4.3
Saline lagoons	3.7	3.7	4.1
Low-salinity lagoons	3.0	3.5	3.9
Mud flats	3.7	2.6	4.1
High salt marshes	3.0	3.5	3.9
Transition zone wetlands	3.0	3.5	3.9
ESTUARINE SUBTIDAL			
Shallow subtidal rock and boulders	3.2	3.2	2.6
Deep subtidal rock and boulders	2.3	2.3	2.8
Shallow subtidal cobble and mixed-coarse	2.6	3.2	3.2
Deep subtidal cobble and mixed-coarse	1.5	2.2	2.2
Shallow subtidal sandy or mixed-fine	3.2	3.2	3.2
Deep subtidal sandy or mixed-fine	2.0	2.4	2.8
Shallow subtidal muddy bays	3.0	2.4	3.9
Deep subtidal muddy bays	1.8	1.8	2.9
Open water	5.0	3.2	2.2

(5) When seagrass or kelp are present in a particular habitat type, the portion of the habitat type with seagrass or kelp shall be treated as a separate habitat type. The habitat vulnerability for a particular habitat type and oil effect (hv) shall be multiplied by a factor of 1.5 for habitat types with seagrass or kelp present. The RDA committee shall be responsible for determining whether seagrass or kelp are present in a habitat type, and the portion of a habitat type containing seagrass or kelp.

(6) In general, several of the habitat types classified in this section may be affected by a particular spill. The habitat vulnerability score for a particular spill and oil effect (HVS_i) is composite of the habitat vulnerability scores for each of the habitat types affected by the spill which takes into consideration the percent coverage of each habitat type in the area of spill impact.

(7) The habitat vulnerability score for a particular spill and oil effect (HVS) shall be determined as follows:

(a) For spills of 1,000 gallons or more. Sum the weighted habitat vulnerability scores for each habitat type exposed to

the spill as described by the formula provided in (c) of this subsection, where weighting is defined by percent coverage of each habitat type within the area of spill exposure.

(b) For spills of less than 1,000 gallons. Sum the weighted habitat vulnerability scores for each habitat type present in the subregion(s) exposed to the spill as described by the formula provided in (c) of this subsection, where weighting is defined by percent coverage of each habitat type present in the subregion(s) exposed to the spill.

(c) The formula to calculate the raw habitat vulnerability score for a particular spill and oil effect (HVS_i) is as follows:

$$HVS_i = \sum_{j=1}^n (hv_{ij} \times PC_j)$$

where PC_j = Percent-coverage of habitat-type j expressed as a decimal;

hv_{ij} = habitat vulnerability for a particular habitat type & oil effect;

j = habitat type;

i = acute toxicity (AT), mechanical injury (MI) and persistence (PER); and

n = number of habitats to be considered as determined under (a) and (b) of this subsection.

(d) The final HVS_{AT}, HVS_{MI}, and HVS_{PER} scores are found by rounding the raw scores calculated from the formula in (c) of this subsection to the nearest 0.01 as follows: Decimals less than 0.005 shall be rounded down and decimals equal to or greater than 0.005 shall be rounded up.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-410, filed 4/23/92, effective 5/24/92.]

WAC 173-183-420 Marine bird vulnerability. (1)

Each of the marine and estuarine subregions of state waters established in WAC 173-183-400(2) is relatively ranked and scored for marine bird vulnerability to oil spills on a 1 to 5 scale for each season, where a score of 5 represents the greatest vulnerability and a score of 1 represents the least vulnerability.

(2) The marine bird vulnerability ranking relatively ranks the vulnerability of seabirds, shorebirds, and waterfowl present in a subregion during a particular season to oil spills, where vulnerability is based on population status, abundance, roosting habits, escape behavior, flocking behavior, feeding specialization, population size, reproductive capacity, breeding dispersion, winter dispersion, seasonal exposure to waters where oil spills could occur, and significance of Washington population to total population.

(3) Marine bird seasonal vulnerability scores for each of the marine and estuarine subregions defined in WAC 173-183-400 are based on existing information and determinations made by the marine bird subcommittee of the scientific advisory board. For purposes of RCW 90.48.366, marine bird seasonal vulnerability scores (BVS) for each of the subregions defined in WAC 173-183-400 shall be as follows:

(4) The shellfish vulnerability score for a spill shall be multiplied by 1.5 when any number of individuals of state or federal threatened or endangered shellfish species are exposed to spilled oil.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-440, filed 4/23/92, effective 5/24/92.]

WAC 173-183-450 Salmon vulnerability. (1) The salmon vulnerability ranking is based on seasonal habitat preference of juveniles during outmigration, adults as they return to spawn and the presence of oil in river mouths during peak occurrence of salmon runs. The salmon vulnerability ranking was developed from existing information and determinations of the salmon subcommittee of the scientific advisory board. In the case of Chinook salmon, habitat preference differs for subyearlings and yearlings.

(2) The vulnerability of five salmon species in nine habitats are relatively scored for vulnerability to oil spills on a 1 to 5 scale for each season, where 5 represents the most vul-

nerable condition, and a score of 1 represents the least vulnerable condition, as follows:

Table 7. Vulnerability of Salmon Species and/or Species Yearclass by Habitat and Season

The habitat-types classified under WAC 173-183-400 correlate with the habitats listed in Table 7 as follows:

TABLE 8. KEY TO TRANSLATING MARINE/ESTUARINE HABITAT TYPES CLASSIFIED UNDER WAC 173-183-410 TO SALMON VULNERABILITY HABITATS

MARINE/ESTUARINE HABITAT TYPE from WAC 173-183-410(3)	EQUIVALENT SALMON VULNERABILITY HABITAT
Marine Intertidal, exposed and semi-exposed rocky shores	Intertidal, rocky
Marine Intertidal, sand-scoured rocky shores	Intertidal, rocky
Marine Intertidal, protected rocky shores	Intertidal, rocky
Estuarine Intertidal, open rocky shores	Intertidal, rocky
Marine Intertidal, semi-exposed cobble and mixed-course beaches	Intertidal, cobble
Estuarine Intertidal, open mixed-course beaches	Intertidal, cobble
Marine Intertidal, semi-exposed gravel beaches	Intertidal, gravel
Estuarine Intertidal, open gravel beaches	Intertidal, gravel
Marine Intertidal, exposed sandy beaches	Intertidal, sand (presence of vegetation will be determined at the time of the spill)
Marine Intertidal, semi-protected mixed-fine beaches	Intertidal, sand (presence of vegetation will be determined at the time of the spill)
Estuarine Intertidal, open sandy beaches	Intertidal, sand (presence of vegetation will be determined at the time of the spill)
Estuarine Intertidal, sandy low marshes	Intertidal, sand (presence of vegetation will be determined at the time of the spill)
Estuarine Intertidal, mixed-fine beaches and low marshes	Intertidal, sand (presence of vegetation will be determined at the time of the spill)
Marine Intertidal, protected mud flats	Intertidal, mud (presence of vegetation will be determined at the time of the spill)
Estuarine Intertidal, mud flats	Intertidal, mud (presence of vegetation will be determined at the time of the spill)
all Marine and Estuarine Subtidal categories except open water	Subtidal
Marine Subtidal, open water	Pelagic
Estuarine Subtidal, open water	Pelagic

(3) For each oil spill where the compensation schedule is applied, the RDA committee shall determine the following:

(a) For spills greater than 1,000 gallons, the salmon vulnerability habitat(s) exposed to spilled oil and each habitat's percent-coverage of the total area exposed to spilled oil;

(b) For spills of less than 1,000 gallons, the salmon vulnerability habitat(s) in the subregion(s) exposed to spilled oil and the percent-coverage of these habitats in the exposed subregion(s);

(c) The season in which spill impacts will be greatest;

(d) The individual species/year class vulnerability score (SAVSi) as described in subsection (4) of this section; and

(e) The composite salmon vulnerability score for a spill (SAVS_s) as described in subsection (5) of this section.

(4) From the information enumerated in subsection (2) of this section, the RDA committee shall determine the species/year class vulnerability score for a spill (SAVS_i) by summing the weighted species/year class vulnerability scores for each of the salmon vulnerability habitats classified in Table 8 of subsection (2) of this section, where weighting is defined as percent-coverage of the salmon vulnerability habitats as determined in subsection (3) of this section, as follows:

$$\text{SAVS}_i = (\text{savs}_i * \text{PCT-COV}_i) + (\text{savs}_2 * \text{PCT-COV}_2) + \dots + (\text{savs}_n * \text{PCT-COV}_n)$$

where SAVS_i= salmon vulnerability score for a species/year class;
 savs_j= species/year class habitat vulnerability score for the season of greatest spill impact from subsection (2) of this section;
 PCT-COV_j= percent-coverage of habitat j from subsection (2) of this section;
 i= Chinook, subyearling (Cs); Chinook, yearling (Cy); Coho (C); Pink (P); Chum (Ch); and Sockeye (So); and
 n= the number of salmon vulnerability habitats used to calculate SAVS as determined in subsection (3) of this section.

(5) The raw salmon vulnerability score for a spill (SAVS_s) shall be calculated as follows:

(a) In years when pink salmon are present in state waters. The chinook salmon spill vulnerability scores for subyearlings (SAVS_{Cs}) and yearlings (SAVS_{Cy}) as determined in subsection (4) of this section shall be averaged, then added to the spill vulnerability scores for coho (SAVS_C), pink (SAVS_P), chum (SAVS_{Ch}) and sockeye (SAVS_{So}) salmon as determined in subsection (4) of this section. The sum of these scores shall then be divided by 5, as described by the following formula:

$$\text{SAVS}_s = [(\text{SAVS}_{Cs} + \text{SAVS}_{Cy})/2 + \text{SAVS}_C + \text{SAVS}_P + \text{SAVS}_{Ch} + \text{SAVS}_{So}]/5$$

where SAVS_s= salmon vulnerability score for a spill;
 SAVS_{Cs}= chinook, subyearling vulnerability score from subsection (4) of this section;
 SAVS_{Cy}= chinook (yearling) vulnerability score from subsection (4) of this section;
 SAVS_C= coho salmon vulnerability score from subsection (4) of this section;
 SAVS_P= pink salmon vulnerability score from subsection (4) of this section;
 SAVS_{Ch}= chum salmon vulnerability score from subsection (4) of this section;
 SAVS_{So}= sockeye salmon vulnerability score from subsection (4) of this section;

(b) In years when pink salmon are not present in state waters. The chinook salmon spill vulnerability scores for subyearlings (SAVS_{Cs}) and yearlings (SAVS_{Cy}) as determined in subsection (4) of this section shall be averaged,

then added to the spill vulnerability scores for coho (SAVS_C), chum (SAVS_{Ch}) and sockeye (SAVS_{So}) salmon as determined in subsection (4) of this section. The sum of these scores shall then be divided by 4, as described by the following formula:

$$\text{SAVS}_s = [(\text{SAVS}_{Cs} + \text{SAVS}_{Cy})/2 + \text{SAVS}_C + \text{SAVS}_{Ch} + \text{SAVS}_{So}]/4$$

where SAVS_s= salmon vulnerability score for a spill;
 SAVS_{Cs}= chinook, subyearling vulnerability score from subsection (4) of this section;
 SAVS_{Cy}= chinook (yearling) vulnerability score from subsection (4) of this section;
 SAVS_C= coho salmon vulnerability score from subsection (4) of this section;
 SAVS_P= pink salmon vulnerability score from subsection (4) of this section;
 SAVS_{Ch}= chum salmon vulnerability score from subsection (4) of this section;
 SAVS_{So}= sockeye salmon vulnerability score from subsection (4) of this section;

(6) If spilled oil enters a river mouth, SAVS_i from subsection (4) of this section shall be assigned a score of 5 for each species/year class in peak occurrence in a river mouth during the period of time the spilled oil enters and remains in the river mouth. Scores of 5 determined for species/year classes under this subsection shall supersede SAVS_s scores calculated under subsection (4) of this section. The RDA committee shall make determinations of whether oil enters a river mouth and whether species/year classes are in peak occurrence when spilled oil is present in a river mouth.

(7) The final SAVS_s score is found by rounding the raw SAVS_s score calculated in subsection (5) of this section to the nearest 0.01 as follows: Decimals less than 0.005 shall be rounded down and decimals equal to or greater than 0.005 shall be rounded up.

(8) The final salmon vulnerability score for a spill shall be multiplied by 1.5 when any number of individuals of state or federal threatened or endangered salmon races and/or runs are exposed to spilled oil.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 and 92-13-083 (Order 91-13 and 91-13A), § 173-183-450, filed 4/23/92 and 6/16/92, effective 5/24/92 and 7/17/92.]

Reviser's note: The brackets and enclosed material in the text of the above section occurred in the copy filed by the agency.

WAC 173-183-460 Marine mammal vulnerability.

(1) Each of the marine and estuarine subregions of state waters designated in WAC 173-183-400(2) is relatively ranked and scored for marine mammal vulnerability to oil spills on a 1 to 5 scale for each season where 5 represents the greatest vulnerability and 1 represents the least vulnerability.

(2) Marine mammal vulnerability ranking scores take into consideration species presence, diversity, population status, breeding vulnerability, presence of young, physiological vulnerability, primary habitat, feeding habitats and abundance.

(3) Marine mammal seasonal vulnerability scores for each of the marine and estuarine subregions of state waters

are based on existing information and determinations made by the marine mammals subcommittee of the scientific advisory board. For purposes of RCW 90.48.366, marine mammal vulnerability ranking scores for subregions classified in WAC 173-183-400(2) are as follows:

(4) The marine mammal vulnerability score for a spill shall be multiplied by 1.5 when any number of state or fed-

eral threatened or endangered marine mammal species are exposed to spilled oil.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-460, filed 4/23/92, effective 5/24/92.]

WAC 173-183-470 Marine and estuarine recreation vulnerability. (1) Each of the marine and estuarine subregions of state waters designated in WAC 173-183-400(2) are relatively ranked and scored for recreation vulnerability on a 1 to 5 scale for each season where a score of 5 represents the greatest vulnerability and a score of 1 represents the least vulnerability.

(2) Recreation vulnerability ranking scores take into consideration seasonal level of participation in recreational activities, number of recreation sites and types of recreational amenities available in a subregion.

(3) Recreation vulnerability ranking scores for each of the marine and estuarine subregions of state waters in each season has been determined from existing information and recommendations of the recreation subcommittee of the scientific advisory board. For purposes of RCW 90.48.366, recreation vulnerability ranking scores (RVS) for the subregions designated in WAC 173-183-400(2) are as follows:

COMPENSATION SCHEDULE FOR SPILLS INTO THE COLUMBIA RIVER ESTUARY

WAC 173-183-500 Vulnerability of the Columbia River estuary environment to oil spills. (1) The purpose of this section is to describe the method of ranking vulnerability of the Columbia River estuary environment to oil spills for purposes of assessing damages using the compensation schedule.

(2) The Columbia River estuary has been distinguished from other estuarine waters of the state because it resides within the jurisdiction of two states, Washington and Oregon.

(3) For purposes of RCW 90.48.366, estuarine waters of the Columbia River are divided into one kilometer square cells. Bird, fish, mammal, invertebrate, habitat, and human use resource sensitivity have been evaluated for each cell by season. Seasonal resource sensitivities are ranked for each cell on a 1 to 5 scale where 5 represents the greatest sensitivity and 1 represents the least sensitivity as designated on the maps attached as Appendix 6 of this chapter.

(4) A vulnerability score (VS) shall be calculated at the time of a spill for each cell and for the most sensitive season impacted by the spill. The VS rates the vulnerability of public resources to the spilled oil.

(a) VS for a particular cell is determined by summing the sensitivity scores assigned to each cell for bird, fish, mammal, invertebrate, habitat, and human use resources as follows:

$$VS_{ij} = BSS_{ij} + FSS_{ij} + MSS_{ij} + ISS_{ij} + HSS_{ij} + HUS_{ij}$$

where VS_{ij} = spill vulnerability score for a particular cell and season

BSS = bird sensitivity score (from Appendix 6 of this chapter)

FSS = fish sensitivity score (from Appendix 6 of this chapter)

MSS = mammal sensitivity score (from Appendix 6 of this chapter)

ISS = invertebrate sensitivity score (from Appendix 6 of this chapter)

HSS = habitat sensitivity score (from Appendix 6 of this chapter)

HUS = human use sensitivity score (from Appendix 6 of this chapter)

i = the cell under consideration

j = the most sensitive season impacted; fall, winter, spring, or summer

(b) The raw vulnerability score for a spill (SVS) is determined by calculating the average of the vulnerability scores for the cells exposed to the spill as follows:

$$SVS_j = (VS_1 + VS_2 + \dots + VS_x) / x$$

where VS_i = vulnerability score for cell i (from subsection (4)(a) of this section),

x = number of cells exposed to the spill, and

(5) The final SVS score is found by rounding the raw SVS score calculated from the formula in subsection (4) of this section to the nearest 0.01 as follows: Decimals less than 0.005 shall be rounded down and decimals equal to or greater than 0.005 shall be rounded up.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-500, filed 4/23/92, effective 5/24/92.]

COMPENSATION SCHEDULE FOR SPILLS INTO FRESHWATER STREAMS, RIVERS, AND LAKES

WAC 173-183-600 Vulnerability of freshwater stream, river, and lake environments to oil spills. (1) The purpose of this section is to describe the method of ranking the vulnerability of state freshwater stream, river, and lake environments, and portions thereof, to oil spills for purposes of applying the compensation schedule.

(2) Vulnerability of freshwater stream, river, and lake environments to oil spills is based on water type classifications and a habitat index.

(3) For each oil spill into a freshwater stream, river, or lake, a spill vulnerability score (SVS) is calculated. The SVS rates the vulnerability of public resources to spilled oil based on the spilled oil's propensity to cause acute toxicity, mechanical injury, and to persist in the environment. SVS is determined by multiplying the freshwater vulnerability score, which is based on the water type classification, by the habitat index score as described by the following formula:

$$\text{Raw Spill Vulnerability Score (SVS)} = FVS * HI$$

where FVS = Freshwater vulnerability score (from WAC 173-183-610), and

HI = Habitat index (from WAC 173-183-620).

(4) The final SVS score is found by rounding the raw SVS score calculated from the formula in subsection (3) of this section to the nearest 0.01 as follows: Decimals less than 0.005 shall be rounded down and decimals equal to or greater than 0.005 shall be rounded up.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-600, filed 4/23/92, effective 5/24/92.]

WAC 173-183-610 Freshwater vulnerability index.

(1) For purposes of this chapter, freshwater streams, rivers, lakes, and portions thereof, are classified into 5 water types based on the identification system set forth in WAC 222-16-030 which is incorporated by reference.

(a) "Type 1 Water" means all waters, within their ordinary high-water mark, as inventoried as "shorelines of the state" under chapter 90.58 RCW.

(b) "Type 2 Water" shall mean segments of natural waters which are not classified as Type 1 Water and have a high use and are important from a water quality standpoint for:

- (i) Domestic water supplies;
- (ii) Public recreation;
- (iii) Fish spawning, rearing, or migration or wildlife uses; or
- (iv) Are highly significant to protect water quality.

(c) "Type 3 Water" shall mean segments of natural waters which are not classified as Type 1 or 2 Water and have a moderate to slight use and are moderately important from a water quality standpoint for:

- (i) Domestic water supplies;
- (ii) Public recreation;
- (iii) Fish spawning, rearing, or migration or wildlife uses; or
- (iv) Are highly significant to protect water quality.

(d) "Type 4 Water" shall mean segments of natural waters which are not classified as Type 1, 2, or 3. Their significance lies in their influence of water quality downstream in Type 1, 2, or 3 Waters. These may be perennial or intermittent.

(e) "Type 5 Water" means all other waters, in natural water courses, including streams with or without a well-defined channel, areas of perennial or intermittent seepage, ponds, and natural sinks. Drainage ways having short periods of runoff are considered to be Type 5 Waters.

(3) The vulnerability of freshwater environments is based on the stream typing system established in WAC 222-16-030 incorporated by reference. The rating of biological and recreational resources ranges from 1 to 5 where 5 represents the most sensitive category and 1 represents the least sensitive category as follows:

TABLE 11. Freshwater Vulnerability Score (FVS).

FVS	QUALIFICATION
5	"Type 1 waters"
4	"Type 2 waters"
3	"Type 3 waters"
2	"Type 4 waters"
1	"Type 5 waters"

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-610, filed 4/23/92, effective 5/24/92.]

WAC 173-183-620 Habitat index. (1) Most state freshwaters vary to some degree from the natural condition as increased activities within individual watersheds have decreased stream, river, and/or lake habitat quality. In order to account for that degradation prior to assessing damages using the compensation schedule, a habitat index (HI) is calculated to represent existing stream conditions prior to the oil spill.

[Title 173 WAC—p. 336]

culated to represent existing stream conditions prior to the oil spill.

(2) For each stream, river, or lake impacted by an oil spill where the preassessment screening committee determines that the compensation schedule shall be used, a habitat index (HI) shall be calculated following an oil spill using the following methodology. The HI measures the amount of stream degradation from natural conditions and shall be calculated using the following formula:

$$\text{Habitat Index (HI)} = [(P_1 + P_2 + P_3 + P_4 + P_5 + P_6) + N_p] \times f_1 \times f_2 \times f_3$$

where: P_1 = barriers to natural fish movement
 P_2 = urbanization
 P_3 = condition of riparian vegetation
 P_4 = condition of floodplain
 P_5 = land use of watershed
 P_6 = flow alteration
 N_p = number of P parameters used to calculate HI
 f_1 = channel modifications
 f_2 = impoundment
 f_3 = water quality

(3) The RDA committee shall determine which of the habitat quality parameters described in subsection (2) of this section are applicable to the particular spill under consideration. If a parameter is not applicable to the spill under consideration, the parameter shall not be included in the formula provided in subsection (2) of this section.

(4) Habitat quality parameters (P_i).

(a) Barriers to natural fish movement (P_1). Barriers, to some degree, limit the free passage of fish upstream thus limiting the ability of streams to recover. The scoring of this parameter is based on the influence of barriers in the natural dispersal of fish populations as follows:

Table 12. Scoring of Barriers to Natural Fish Movement (P_1).

RATING QUALIFICATION	
10	No manmade obstructions to free upstream passage of fish
8	No dams or other structures causing a vertical drop of more than 1 foot during low flow
5	No dams or other structures causing a vertical drop of more than 3 foot during low flow
3	No dams or other structures causing a vertical drop of more than 10 foot during low flow
0	One to several dams or other structures each causing a drop of more than 10 feet during low flow

(b) Urbanization (P_2). Urban development has historically had negative habitat effects on freshwater ecosystems. The percent of urban development in a watershed directly influences siltation, riparian abuse, and water quality deterioration. The scoring of this parameter is based on the percent of urbanization in the stream watershed.

Table 13. Scoring of Urbanization (P_2).

RATING QUALIFICATION	
10	Less than 5 percent of the watershed in urban development

RATING QUALIFICATION

- 8 Five to 10 percent of the watershed in urban development
- 5 Ten to 40 percent of the watershed in urban development
- 3 Forty to 70 percent of the watershed in urban development
- 0 Seventy to 100 percent of the watershed in urban development

(c) Condition of riparian vegetation (P_3). Riparian vegetation is important to seventy percent of the animal and bird species in Washington for some part of their life cycle. It also exerts thermal regulatory and thermal controls for the aquatic system. The scoring of this parameter is based on the percent of banks that are protected by effective riparian vegetation.

Table 14. Scoring of Condition of Riparian Vegetation (P_3).

RATING QUALIFICATION

- 10 Ninety to 100 percent of the banks are protected by appropriate perennial vegetation
- 8 Sixty to 90 percent of the banks are protected by appropriate perennial vegetation
- 5 Forty to 60 percent of the banks are protected by appropriate perennial vegetation
- 3 Ten to 40 percent of the banks are protected by appropriate perennial vegetation
- 0 Zero to 10 percent of the banks are protected by appropriate perennial vegetation

(d) Condition of the floodplain (P_4). The condition of the floodplain forecasts the amount of sedimentation and erosion in the watershed and as such is a primary predictor of stream degradation. The rating of this parameter is as follows:

Table 15. Scoring of the Condition of the Floodplain (P_4).

RATING QUALIFICATION

- 10 Little or no evidence of active or recent erosion of the floodplain during floods
- 5 All segments show evidence of occasional erosion of the floodplain. Stream channel essentially intact
- 0 Floodplain severely eroded and degraded, stream channel poorly defined with much lateral erosion and much reduced flow capacity

(e) Land use of the watershed (P_5). Land use practices exert a great deal of influence on the quality of the aquatic habitat. The rating of this parameter is as follows:

Table 16. Scoring of Land Use of the Watershed (P_5).

RATING QUALIFICATION

- 10 More than 80 percent of the watershed protected by timber, improved pasture, terraces, or other conservation practices
- 8 Sixty to 80 percent of the watershed protected by timber, improved pasture, terraces, or other conservation practices
- 5 Forty to 60 percent of the watershed protected by timber, improved pasture, terraces, or other conservation practices

RATING QUALIFICATION

- 3 Twenty to 40 percent of the watershed protected by timber, improved pasture, terraces, or other conservation practices
- 1 Zero to 20 percent of the watershed protected by timber, improved pasture, terraces, or other conservation practices

(f) Flow alteration (P_6). Alteration of the natural flow regime can frequently alter habitat conditions that are necessary for certain behavioral and ecological needs of species. The rating of this parameter is as follows:

Table 17. Scoring for Flow Alteration (P_6).

RATING QUALIFICATION

- 10 Less than 1 percent of the watershed controlled by impoundments and/or less than 50 percent of the watershed controlled by farm ponds
- 8 One to 30 percent of the watershed controlled by impoundments and/or less than 50 percent of the watershed controlled by farm ponds
- 5 Thirty to 60 percent of the watershed controlled by impoundments and/or less than 50 percent of the watershed controlled by farm ponds
- 3 Sixty to 95 percent of the watershed controlled by impoundments and/or less than 50 percent of the watershed controlled by farm ponds
- 0 Ninety-five to 100 percent of the watershed controlled by impoundments and/or less than 50 percent of the watershed controlled by farm ponds

(5) Habitat alteration functions (F). Each habitat alteration function has the power to reduce the habitat quality rating, dependent on the type and extent of alteration. Functions are expressed on a scale of 0 to 1.0.

(a) Channel modification (F_1). Channel modification can have a dramatic effect of the ability of a stream to provide for a diversity of habitats. This parameter is rated as follows:

$$\text{Channel Modification } (F_1) = 1.0 - (SM * FR)$$

where F_1 = Channel modification rate

SM = Percent stream reach modified, expressed as a decimal

FR = Percent fish reduction, expressed as a decimal

Table 18. Scoring for Percent Fish Reduction (FR).

CHANNEL MODIFICATION	% FISH REDUCTION
Clearing, Snagging	25
Channel realignment	80
Channel paving	95

(b) Water quality (F_2). Water quality exerts a variety of detrimental and/or beneficial on the aquatic ecosystem. This parameter is rated as follows:

Table 19. Scoring for Water Quality (F_2).

RATING QUALIFICATION

- 1.0 Stream water unpolluted. No pollutants detected by standard methods

RATING QUALIFICATION

0.8	Occasional above normal levels of one or more water pollutants usually present, but detectable only by analysis
0.5	Occasional visible signs of oversupply of nutrients or other pollutants detected by analysis
0.4	Occasional fish kills averaging about every 4 years or more
0.2	Occasional fish kills occurring more often than every 4 years
0.0	Grossly polluted waters with fish kills occurring annually or more frequently

(c) Streambed condition (F₃). The condition of the substrate habitat can be altered in such a way as to reduce the effective habitat available to the aquatic community as a whole. This parameter is ranked as follows:

Table 20. Scoring of Streambed Condition.

RATING QUALIFICATION

1.0	No apparent unstable material in channel with substrate of bedrock, boulders, rubble, gravel or firm alluvium
0.9	Traces of unstabilized silt, sand, or gravel in quiet areas or large pools with firm substrate
0.8	Quiet areas covered with unstable materials, deep pools restricted to areas of greatest scour
0.7	Pools shallow, filled with silt, sand or gravel, riffles contain noticeable silt deposits
0.5	Streambed completely covered by varying thicknesses of transported material such as silt, sand and gravel
0.0	Stream channel nearly or completely filled with unconsolidated, transported material; no surface flow except during floods

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-620, filed 4/23/92, effective 5/24/92.]

Reviser's note: The brackets and enclosed material in the text of the above section occurred in the copy filed by the agency.

COMPENSATION SCHEDULE FOR SPILLS INTO FRESHWATER WETLANDS

WAC 173-183-700 Vulnerability of freshwater wetland environments to oil spills. (1) The purpose of this section is to describe the method of ranking the vulnerability of freshwater wetland environments to oil spills for purposes of assessing damages by applying the compensation schedule.

(2) Vulnerability of freshwater wetland environments to oil spills is based on a wetlands classification which rates the vulnerability of a wetland to spilled oil. Wetland environments are classified into five categories which represent the sensitivity of habitat, plants, animals, and recreational use to oil spills. For purposes of this chapter, the wetlands vulnerability score shall be equal to the spill vulnerability score as follows:

Spill Vulnerability Score (SVS) = WVS

where WVS = wetlands vulnerability score (from WAC 173-183-710).

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-700, filed 4/23/92, effective 5/24/92.]

[Title 173 WAC—p. 338]

WAC 173-183-710 Wetlands vulnerability classification.

(1) Freshwater wetland environments and portions thereof, are classified into 4 types based on the identification system set forth below.

(a) Category I wetlands. The following types of wetlands are classed as category I wetlands:

(i) Documented habitat for threatened or endangered plant, animal, or fish species recognized by federal or state agencies; or

(ii) Documented Natural Heritage wetland sites or high quality native wetland communities which qualify as Natural Heritage wetland sites; or

(iii) Documented habitat of regional (Pacific Coast) or national significance for migratory birds; or

(iv) Regionally rare wetland communities; or

(v) Wetlands with irreplaceable ecological functions; or

(vi) Documented wetlands of local significance.

(b) Category II wetlands. The following types of wetlands are classed as category II wetlands:

(i) Documented habitat recognized by federal and state agencies for sensitive plant, animal, or fish species; or

(ii) Documented priority habitats and species recognized by state agencies; or

(iii) Wetlands with significant functions which may not be adequately replicated through creation or restoration; or

(iv) Wetlands with significant habitat value; or

(v) Documented wetlands of local significance.

(c) Category III wetlands. The following types of wetlands are classed as category III when they satisfy no category I, II, or IV criteria.

(d) Category IV wetlands. The following types of wetlands are classed as category IV wetlands:

(i) Wetlands less than one acre in size and hydrologically isolated and comprised of one vegetated class that is dominated (more than eighty percent areal cover) by one species from the list in Table 21; or

(ii) Wetlands less than two acres and hydrologically isolated with one vegetative class and more than ninety percent of the areal cover is any combination of species from the list in Table 22.

Table 21. List of invasive/exotic plant species for rating Category IV wetlands.

Common name	Scientific name
Soft Rush	<i>Juncus effusus</i>
Reed	<i>Phragmites communis</i>
Buttercup	<i>Ranunculus repens</i>
Reed Canary Grass	<i>Phalaris arundinaceae</i>
Purple loosestrife	<i>Lythrum salicaria</i>
Townsend's cordgrass	<i>Spartina townsendii</i>
Non-native blackberry	<i>Rubus discolor, laciniatus, vestitus, macrophyllus</i>
Velvet grass	<i>Holcus lanatus, mollis</i>
Fescue	<i>Festuca arundinaceae, pratensis</i>
Quackgrass	<i>Agropyron repens</i>
Meadow foxtail	<i>Alopecurus pratensis, aequalis</i>
Orchardgrass	<i>Dactylis glomerata</i>
Ryegrass	<i>Lolium perenne, multiflorum, temulentum</i>
Timothy	<i>Phleum pratense</i>
Bluegrass	<i>Poa compressa, palustris, pratensis</i>
Bromes	<i>Bromus tectorum, rigidus, brizaformis, geocalinus, japonicus, mollis, commutatus, inarmis, cractus</i>
Sandbur	<i>Cauchrus longispinus</i>
Crab Grass	<i>Digitaria sanguinalis</i>

Common name	Scientific name
Barnyard grass	<i>Echinochloa crusgalli</i>
Green Bristlegrass	<i>Setaria viridis</i>
Foxtail Barley	<i>Hordeum jubatum</i>
Dogtail	<i>Cynosurus cristatus, achinatus</i>
Russian Thistle	<i>Salsola kali</i>
Knotweeds	<i>Polygonum aviculare, concoloculus, cuspidatum, lapathifolium, persicaria</i>
Tumblemustards	<i>Sisymbrium altissimum, loesclii, officinale</i>
Scotch broom	<i>Cytisus scoparius</i>
Sweet clover	<i>Melilotus alba, officinalis</i>
Bird's foot trefoil	<i>Lotus corniculatus</i>
Alfalfa	<i>Medicago sativa</i>
Clover	<i>Trifolium dubium, pratense, repens, arvense, subterraneum, hybridum</i>
Spurge	<i>Euphorbia pepius, caula</i>
St. John's wort	<i>Hypericum parvifolium</i>
Teasel	<i>Dipsacus sylvestris</i>
Pineapple weed	<i>Marricaria matricarioides</i>
Tansy	<i>Tanacetum vulgare</i>
Thistles	<i>Cirsium vulgare, arvense</i>
Burdock	<i>Arctium minus</i>
Knapweeds	<i>Centauras solstitialis, repens, cyanus, maculosa</i>
Cultivated species; wheat, corn, barley, triticum, rye	

Table 22. List of native species for rating of Category IV wetlands.

Common name	Scientific name
Hard hack	<i>Spirea douglasii</i>
Cattail	<i>Typha latifolia</i>
Soft rush	<i>Juncus effusus</i>

(2) Freshwater wetland environment vulnerability score (WVS). The vulnerability of freshwater wetland environments is based on the stream typing system established in WAC 222-16-030 incorporated by reference. The rating of the freshwater wetland environment vulnerability ranges from 1 to 5, where 5 represents the most sensitive category and 1 represents the least sensitive category as follows:

Table 23. Freshwater Wetlands Vulnerability Score (WVS).

WVS	QUALIFICATION
5	Category I wetlands
4	Category II wetlands
3	Category III wetlands
1	Category IV wetlands

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-710, filed 4/23/92, effective 5/24/92.]

CALCULATION OF DAMAGES USING THE COMPENSATION SCHEDULE

WAC 173-183-800 Calculation of damages using the compensation schedule general. The purpose of WAC 173-183-800 to 173-183-850 are to describe:

(1) The responsibilities of the OSC and RDA committee chair in applying the compensation schedule; and

(2) The procedures for determining public resource damages using the compensation schedule.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-800, filed 4/23/92, effective 5/24/92.]

(1999 Ed.)

WAC 173-183-810 On-scene coordinator responsibilities. (1) The OSC or department responder, or his or her designee, shall make the following determinations:

- (a) Quantity and type of oil spilled;
- (b) Extent and location of the spill; and
- (c) The amount of oil cleaned up on a daily basis, and in total.

(2) The potentially liable party (PLP) may hire an independent expert to determine the volume of oil spilled and cleaned up, including the volume cleaned up within the first six hours after spill initiation. The volume determinations made by the independent expert shall be used in calculations of damages under the compensation schedule if the independent expert selected is acceptable to both the PLP and the department. Determinations by the mutually agreed upon independent expert of the quantity of oil spilled and cleaned up shall be provided to the RDA committee chair within sixty days of the spill under consideration.

(3) The OSC or department responder shall provide the information enumerated in subsection (1) of this section to the RDA committee chair in a timely manner.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-810, filed 4/23/92, effective 5/24/92.]

WAC 173-183-820 RDA committee chair responsibilities. (1) The RDA committee chair shall, in consultation with the OSC and RDA committee, determine the following:

(a) For spills into marine or estuarine environments excluding the Columbia River estuary:

(i) The acute toxicity, mechanical injury and persistence oil class rankings for the spilled oil as provided in WAC 173-183-360;

(ii) Subregion(s) exposed to the spilled oil;

(iii) Habitat types exposed to the spilled oil as classified in WAC 173-183-410 for spills of 1,000 gallons or more;

(iv) Percent coverage of each habitat type within the area of spill exposure for spills of 1,000 gallons or more;

(v) Percent coverage of habitat types present within the subregion(s) exposed to spilled oil for spills of less than 1,000 gallons.

(vi) A spill's habitat vulnerability scores (HVS) for acute toxicity, mechanical injury, and persistence as determined by the procedures outlined in WAC 173-183-400; and

(vii) The spill vulnerability scores (SVS_{AT}, SVS_{MI}, SVS_{PER}) for the most vulnerable season affected by the spill using the formula provided in WAC 173-183-400.

(b) For spills in the estuarine waters of the Columbia River:

(i) The acute toxicity, mechanical injury, and persistence oil class rankings for the spilled oil as provided in WAC 173-183-360;

(ii) The cell(s) exposed to the spilled oil; and

(iii) The spill vulnerability score (SVS) for the most vulnerable season affected by the spilled oil using the procedures provided in WAC 173-183-500.

(c) For spills in freshwater streams, rivers, and lakes:

(i) The acute toxicity, mechanical injury and persistence oil class rankings for the spilled oil as provided in WAC 173-183-360;

(ii) Freshwater vulnerability score as described in WAC 173-183-610;

(iii) Freshwater habitat index as described in WAC 173-183-620; and

(iv) Spill vulnerability score (SVS) as outlined in WAC 173-183-600 for each stream, river, and/or lake environment exposed to the spill; and

(d) For spills in freshwater wetlands:

(i) The acute toxicity, mechanical injury, and persistence oil class rankings for the spilled oil as provided in WAC 173-183-360;

(ii) Freshwater wetland vulnerability score as described in WAC 173-183-710;

(iii) Spill vulnerability score (SVS) as outlined in WAC 173-183-700 for each wetland exposed to the spill.

(2) For spills that enter more than one environment, the RDA committee chair shall, in consultation with the OSC and RDA committee, make the determinations enumerated under subsection (1)(a) through (d) of this section.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-820, filed 4/23/92, effective 5/24/92.]

WAC 173-183-830 Calculation of damages for spills into marine and estuarine waters, except the Columbia River estuary. (1) The formula provided in subsection (2) of this section shall be used to determine damages liability for spills into marine and estuarine waters, except the estuarine waters of Columbia River. The value of the variables used in the formula shall be determined by:

(a) The OSC as enumerated in WAC 173-183-810(1);

(b) The mutually agreed upon independent expert, if applicable, as described in WAC 173-183-810(2); and

(c) The RDA committee chair as enumerated in WAC 173-183-820 (1)(a).

(2) In making the determination of percent-coverage of habitat types, the RDA committee chair may assume that the habitat-type visible at low tide extends out to the 20 meter depth contour.

(3) Damages liability shall be calculated using the following formula:

Damages (\$) =

$$\text{gallons spilled} * 0.1 * [(OIL_{AT} * SVS_{AT,j}) + (OIL_{MI} * SVS_{MI,j}) + (OIL_{PER} * SVS_{PER,j})]$$

where: gallons spilled = the number of gallons of oil spilled as determined by the procedures outlined in WAC 173-183-810;

SVS_{ij} = spill vulnerability score (from WAC 173-183-400(3));

OIL_{AT} = Acute Toxicity Score for Oil (from WAC 173-183-360);

OIL_{MI} = Mechanical Injury Score for Oil (from WAC 173-183-360); and

OIL_{PER} = Persistence Score for Oil (from WAC 173-183-360).

i = acute toxicity, mechanical injury and persistence effect of oil

j = the most sensitive season affected by the spill

0.1 = multiplier to adjust the damages calculated to the \$1-50 per gallon range.

Formula results shall be rounded to the nearest 0.01 to determine damages liability as follows: Decimals less than 0.005 shall be rounded down, and decimals equal to or greater than 0.005 shall be rounded up.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-830, filed 4/23/92, effective 5/24/92.]

Reviser's note: The brackets and enclosed material in the text of the above section occurred in the copy filed by the agency.

WAC 173-183-840 Calculation of damages for spills into the Columbia River estuary. (1) The formula provided in subsection (2) of this section shall be used to determine damages liability for spills into the estuarine waters of Columbia River. The value of the variables used in the formula shall be determined by:

(a) The OSC as enumerated in WAC 173-183-810(1);

(b) The mutually agreed upon independent expert, if applicable, as described in WAC 173-183-810(2); and

(c) The RDA committee chair as enumerated in WAC 173-183-820 (1)(b).

(2) Damages liability shall be calculated using the following formula:

Damages (\$) =

$$\text{gallons spilled} * 0.2 * SVS_j * (OIL_{AT} + OIL_{MI} + OIL_{PER})$$

where: gallons spilled = the number of gallons of oil spilled as determined by procedures outlined in WAC 173-183-810

SVS_j = spill vulnerability score (from WAC 173-183-500(3));

j = the most sensitive season affected by the spill
OIL_{AT} = Acute Toxicity Score for Oil (from WAC 173-183-360);

OIL_{MI} = Mechanical Injury Score for Oil (from WAC 173-183-360); and

OIL_{PER} = Persistence Score for Oil (from WAC 173-183-360).

0.2 = multiplier to adjust the damages calculated to the \$1-50 per gallon range.

Formula results shall be rounded to the nearest 0.01 to determine damages liability as follows: Decimals less than 0.005 shall be rounded down, and decimals equal to or greater than 0.005 shall be rounded up.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-840, filed 4/23/92, effective 5/24/92.]

WAC 173-183-850 Calculation of damages for spills in freshwater streams, rivers, and lakes. (1) The formula provided in subsection (2) of this section shall be used to determine damages liability for spills into freshwater streams, rivers, and lakes. The value of the variables used in the formula shall be determined by:

(a) The OSC as enumerated in WAC 173-183-810(1);

(b) The mutually agreed upon independent expert, if applicable, as described in WAC 173-183-810(2); and

(c) The RDA committee chair as enumerated in WAC 173-183-820 (1)(c).

(2) Damages liability shall be calculated using the following formula:

Damages (\$) =

gallons spilled * 0.08 * SVS * (OIL_{AT} + OIL_{MI} + OIL_{PER})

where: gallons spilled = the number of gallons of oil spilled as determined by the procedures outlined in WAC 173-183-810;

SVS = Spill vulnerability score [from WAC 173-183-600(3)];

OIL_{AT} = Acute Toxicity Score for Oil [from WAC 173-183-360];

OIL_{MI} = Mechanical Injury Score for Oil [from WAC 173-183-360]; and

OIL_{PER} = Persistence Score for Oil [from WAC 173-183-360].

0.08 = multiplier to adjust damages calculated to the \$1-50 per gallon range;

Formula results shall be rounded to the nearest 0.01 to determine damages liability as follows: Decimals less than 0.005 shall be rounded down, and decimals equal to or greater than 0.005 shall be rounded up.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-850, filed 4/23/92, effective 5/24/92.]

Reviser's note: The brackets and enclosed material in the text of the above section occurred in the copy filed by the agency.

WAC 173-183-860 Calculation of damages for spills into freshwater wetlands. (1) The formula provided in subsection (2) of this section shall be used to determine damages liability for spills into freshwater wetlands. The value of the variables used in the formula shall be determined by:

(a) The OSC as enumerated in WAC 173-183-810(1);

(b) The mutually agreed upon independent expert, if applicable, as described in WAC 173-183-810(2); and

(c) the RDA committee chair as enumerated in WAC 173-183-820 (1)(d).

(2) Damages liability shall be calculated using the following formula:

Damages (\$) =

gallons spilled * 0.81 * SVS * (OIL_{AT} + OIL_{MI} + OIL_{PER})

where: gallons spilled = the number of gallons of oil spilled as determined by procedures outlined in WAC 173-183-810;

SVS = Spill vulnerability score [from WAC 173-183-700(3)];

OIL_{AT} = Acute Toxicity Score for Oil [from WAC 173-183-360];

OIL_{MI} = Mechanical Injury Score for Oil [from WAC 173-183-360]; and

OIL_{PER} = Persistence Score for Oil [from WAC 173-183-360].

0.81 = multiplier to adjust damages calculated to the \$1-50 per gallon range;

Formula results shall be rounded to the nearest 0.01 to determine damages liability as follows: Decimals less than

(1999 Ed.)

0.005 shall be rounded down, and decimals equal to or greater than 0.005 shall be rounded up.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-860, filed 4/23/92, effective 5/24/92.]

Reviser's note: The brackets and enclosed material in the text of the above section occurred in the copy filed by the agency.

WAC 173-183-865 Calculation of damages for spills entering more than one type of receiving environment. For spills that enter more than one type of receiving environment, as classified in WAC 173-183-400, 173-183-500, 173-183-600, and 173-183-700, damages liability shall be determined as follows:

(1) Damages shall be calculated using the procedures enumerated in WAC 173-183-800 through 173-183-890 for each of the receiving environment types exposed to spilled oil;

(2) Total damages liability shall be equal to the greatest of the damages calculated for the receiving environment types exposed to spilled oil as determined in subsection (1) of this section.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-865, filed 4/23/92, effective 5/24/92.]

WAC 173-183-870 Modification of damages based on actions taken by the PLP. (1) Damages calculated under WAC 173-183-830 through 173-183-860 may be reduced by the amounts specified in subsections (2) through (5) of this section, as determined by the RDA committee, in the following cases:

(a) Where the potentially liable party takes an action that results in no spill exposure and no injury to the following special features: Seal and sea lion haulouts, public recreational areas, smelt, sand lance, and herring spawning areas, salmon concentration areas, hardshell and softshell clam beds, and seabird breeding colonies;

(b) Where the potentially liable party takes an action that restores, rehabilitates, or enhances resources injured by the spill; and

(c) Where the potentially liable party immediately booms spilled oil that has not come into contact with the shore, in areas where water depth is greater than twenty meters, and immediately removes the spilled oil that has been contained in booming.

(2) When the conditions specified under subsection (1)(a) of this section are met, compensation shall be reduced by the amount that the special feature that was protected contributed to the amount of damages calculated under WAC 173-183-830 through 173-183-860. Decisions on how much the protected special feature contributed to the amount of damages calculated under the compensation schedule shall be made by the RDA committee.

(3) When conditions specified under subsection (1)(b) of this section are met, amount of damages calculated under WAC 173-183-830 through 173-183-860 may be reduced. Decisions on reduction of damages shall be made by the RDA committee.

(4) When the conditions specified under subsection (1)(c) of this section are met, the damages calculated under

WAC 173-183-830 through 173-183-860 shall be reduced as described by the following steps:

(a) Two separate damages calculations shall be made using the applicable damage liability formula(s) provided in WAC 173-183-830 through 173-183-860. The number of gallons used in the first formula shall be the number of gallons immediately removed from the receiving environment as described in subsection (1)(c) of this section. The number of gallons used the second formula shall be the number of gallons spilled but not immediately removed from the receiving environment. The values of all other formula variables shall be as defined for the applicable formulas in WAC 173-183-830 through 173-183-860, except as described in subsection (4)(b) of this section;

(b) The values of the mechanical injury (OIL_{MI}) and persistence (OIL_{PER}) scores for oils shall be reduced by ten percent in the first formula; and

(c) Damages derived from the first and second formulas shall be added together to calculate the reduced damages liability.

(5) In no case shall the modifications to compensation enumerated in subsections (1) through (4) of this section result in a reduction of damages to less than one dollar per gallon of oil spilled.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-870, filed 4/23/92, effective 5/24/92.]

WAC 173-183-880 Damage claim. (1) The department shall provide documentation to the liable party that details the information and calculations that were used to assess damages under the compensation schedule. This documentation shall be provided to the liable party along with the damages liability claim.

(2) The liable party shall pay the full amount specified in the damages liability claim to the department within thirty days of receipt.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-880, filed 4/23/92, effective 5/24/92.]

WAC 173-183-890 Substitution of damages. The department may negotiate with a potentially liable party to perform restoration and enhancement projects or studies which may substitute for all or part of the damages determined through application of the procedures in WAC 173-183-300 through 173-183-870.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-890, filed 4/23/92, effective 5/24/92.]

WAC 173-183-900 Annual report. The department shall submit an annual report to the appropriate standing committees of the legislature that addresses each spill for which the RDA committee was convened. The following information shall be included in the report for each spill addressed: The outcome of the preassessment screening, and compensation claims imposed or damage assessment studies conducted, and the revenues to and expenditures from the coastal protection fund.

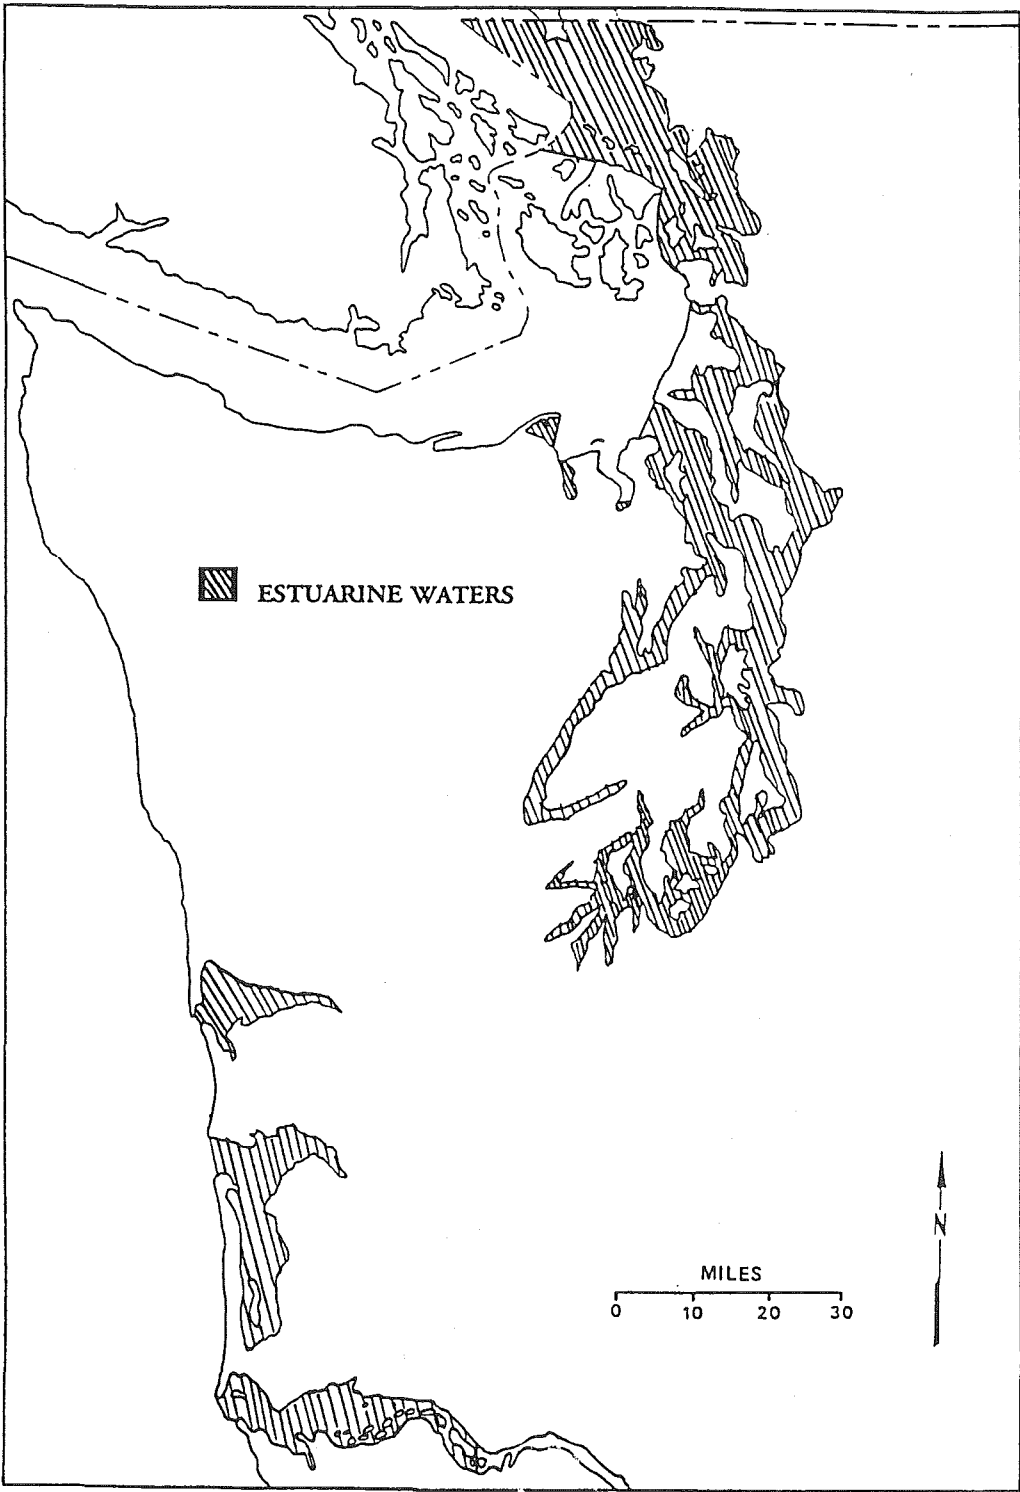

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-900, filed 4/23/92, effective 5/24/92.]

WAC 173-183-910 Severability. If any provision of this rule or its application to any person or circumstance is held invalid, the remainder of the rule or application of the provision to other persons or circumstances is not affected.

[Statutory Authority: Chapter 90.48 RCW. 92-10-005 (Order 91-13), § 173-183-910, filed 4/23/92, effective 5/24/92.]

WAC 173-183-920 Appendices.

APPENDIX 1: ESTUARINE WATERS OF THE STATE

APPENDIX 2: SPECIES AND SPECIES GROUPS INCLUDED IN THE MARINE FISH VULNERABILITY RANKING

Common Name		Scientific Name	Common Name	Scientific Name
Pacific sleeper shark	Somniosus pacificus	Skates	Rajidae	
Spiny dogfish	Squalus acanthias	Spotted ratfish	Hyrodlaguscolleri	
		Green sturgeon	Acipensermedirostris	
		White sturgeon	Acipensertransmontanus	

Common Name	Scientific Name
Pacific herring	<i>Clupeapallasii</i>
Northern anchovy	<i>Engraulismordax</i>
Surf smelt	<i>Hypomesuspretiosus</i>
Night smelt	<i>Spirinchusstarksi</i>
Long fin smelt	<i>Spirinchusthaleichthys</i>
Eulachon	<i>Thaleichthyspacificus</i>
Pacific cod	<i>Gadusmacrocephalus</i>
Pacific tomcod	<i>Microgadusproximus</i>
Walleye pollock	<i>Theragrachalcogramma</i>
Whiting	<i>Merlucciusproductus</i>
Plainfin midshipman	<i>Porichthysnotatus</i>
Tubenout	<i>Aulorhynchusfavidus</i>
Three-spine stickleback	<i>Gasterosteusaculeatus</i>
Pacific Ocean perch	<i>Sebastesalutis</i>
Brown rockfish	<i>Sebastesauriculatus</i>
Silvergray rockfish	<i>Sebastesbrevispinis</i>
Copper rockfish	<i>Sebastescaurinus</i>
Puget Sound rockfish	<i>Sebastesemphaeus</i>
Widow rockfish	<i>Sebastesentomelas</i>
Yellowtail rockfish	<i>Sebastesflavidus</i>
Quillback rockfish	<i>Sebastesmaliger</i>
Black rockfish	<i>Sebastesmelanops</i>
Blue rockfish	<i>Sebastesmystinus</i>
China rockfish	<i>Sebastesnebulosus</i>
Bocaccio	<i>Sebastespaucispinis</i>
Canary rockfish	<i>Sebastespinniger</i>
Yelloweye rockfish	<i>Sebastesruberrimus</i>
Shortspine thornyhead	<i>Sebastolobusalascanus</i>
Longspine thornyhead	<i>Sebastolobusaltivelis</i>
Sablefish	<i>Anoplopomafimbria</i>
Kelp Greenling	<i>Hexagrammosdecagrammus</i>
Lingcod	<i>Ophiodonelongatus</i>
Red Irish lord	<i>Hemilepidotus</i>
Pacific staghorn sculpin	<i>Leptocottusarmatus</i>
Cabezon	<i>Scorpaenichthysmarmoratus</i>
Redtail surfperch	<i>Amphistichusrhodoterus</i>
Shiner surfperch	<i>Cymatogasteraggregata</i>
Pile surfperch	<i>Damalichthysvacca</i>
Striped surfperch	<i>Embiotocalateralis</i>
Eelpouts	<i>Zoarcidae</i>
Snake prickleback	<i>Lumpenussagitta</i>
Gunnels	<i>Pholididae</i>
Wolf-eel	<i>Anarrhichthysocellatus</i>
Pacific sand lance	<i>Ammodyteshexapterus</i>
Pacific sand dab	<i>Citharichthysordidus</i>
Speckled sand dab	<i>Citharichthysstigmaeus</i>
Arrowtooth flounder	<i>Atheresthesstomias</i>
Petrale sole	<i>Eposettajordani</i>
Rex sole	<i>Glyptocephaluszachirus</i>
Pacific halibut	<i>Hippoglossusstenolepis</i>
Rock sole	<i>Lepidopsettabilineata</i>
Dover sole	<i>Microstomuspacificus</i>
English sole	<i>Parophrysvelutus</i>
Starry Flounder	<i>Platichthysstellatus</i>
Sand sole	<i>Psettichthysmelanostictus</i>

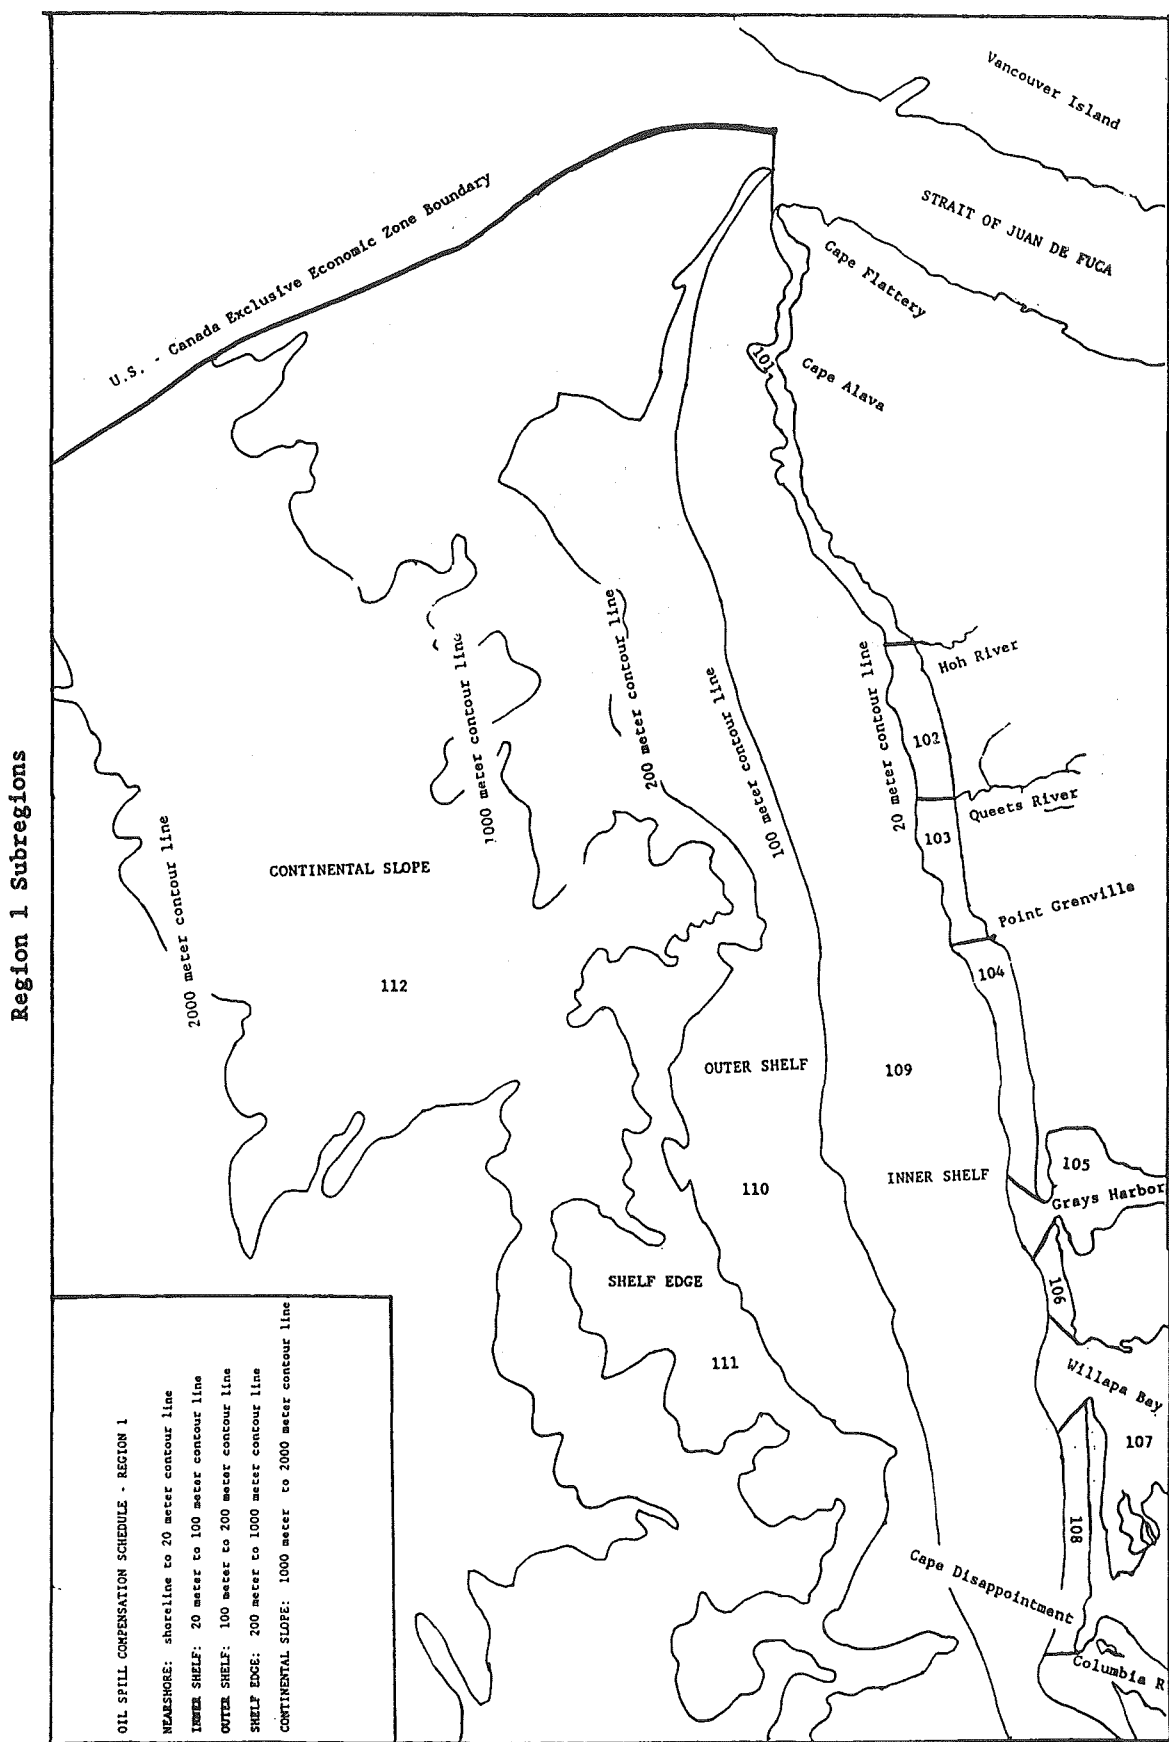

APPENDIX 3: SPECIES INCLUDED IN THE SALMON VULNERABILITY RANKING

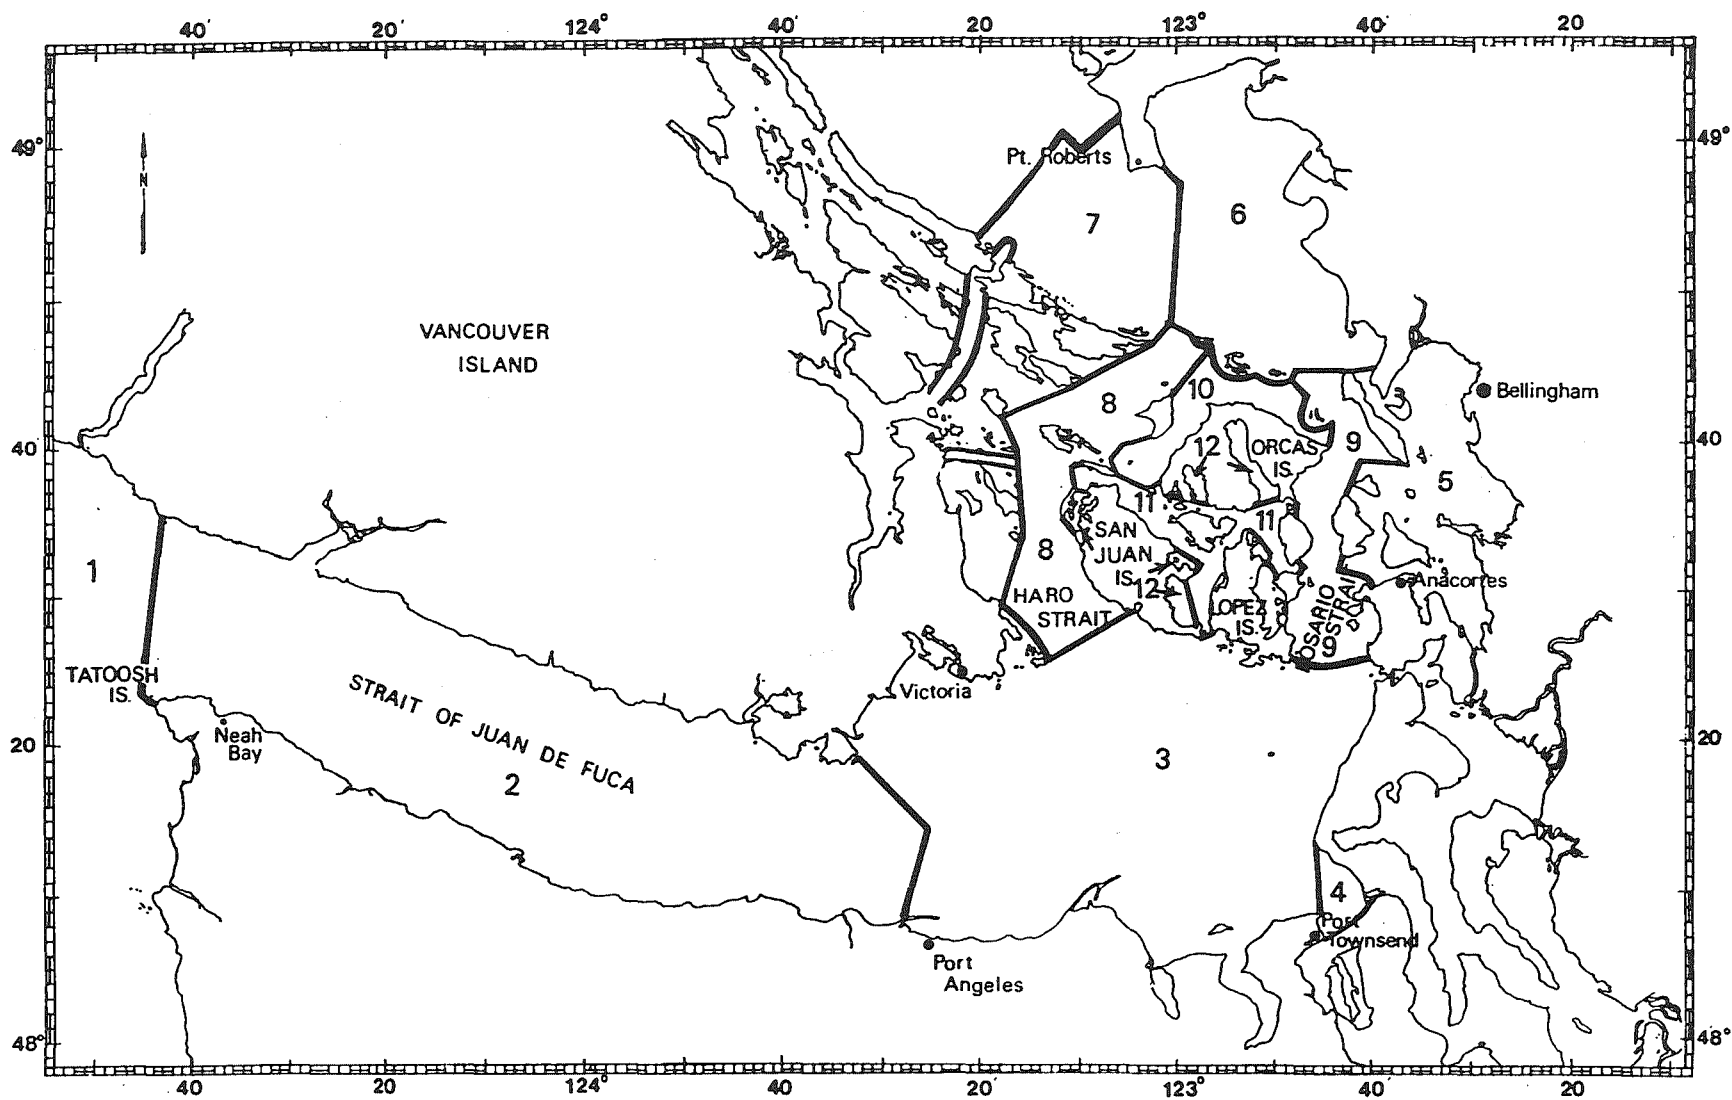

Common Name	Scientific Name
Chinook	<i>Oncorhynchus tshawytscha</i>
Coho	<i>O. kisutch</i>
Pink	<i>O. gorbushca</i>
Chum	<i>O. keta</i>
Sockeye	<i>O. nerka</i>

APPENDIX 4: SPECIES INCLUDED IN THE SHELLFISH VULNERABILITY RANKING

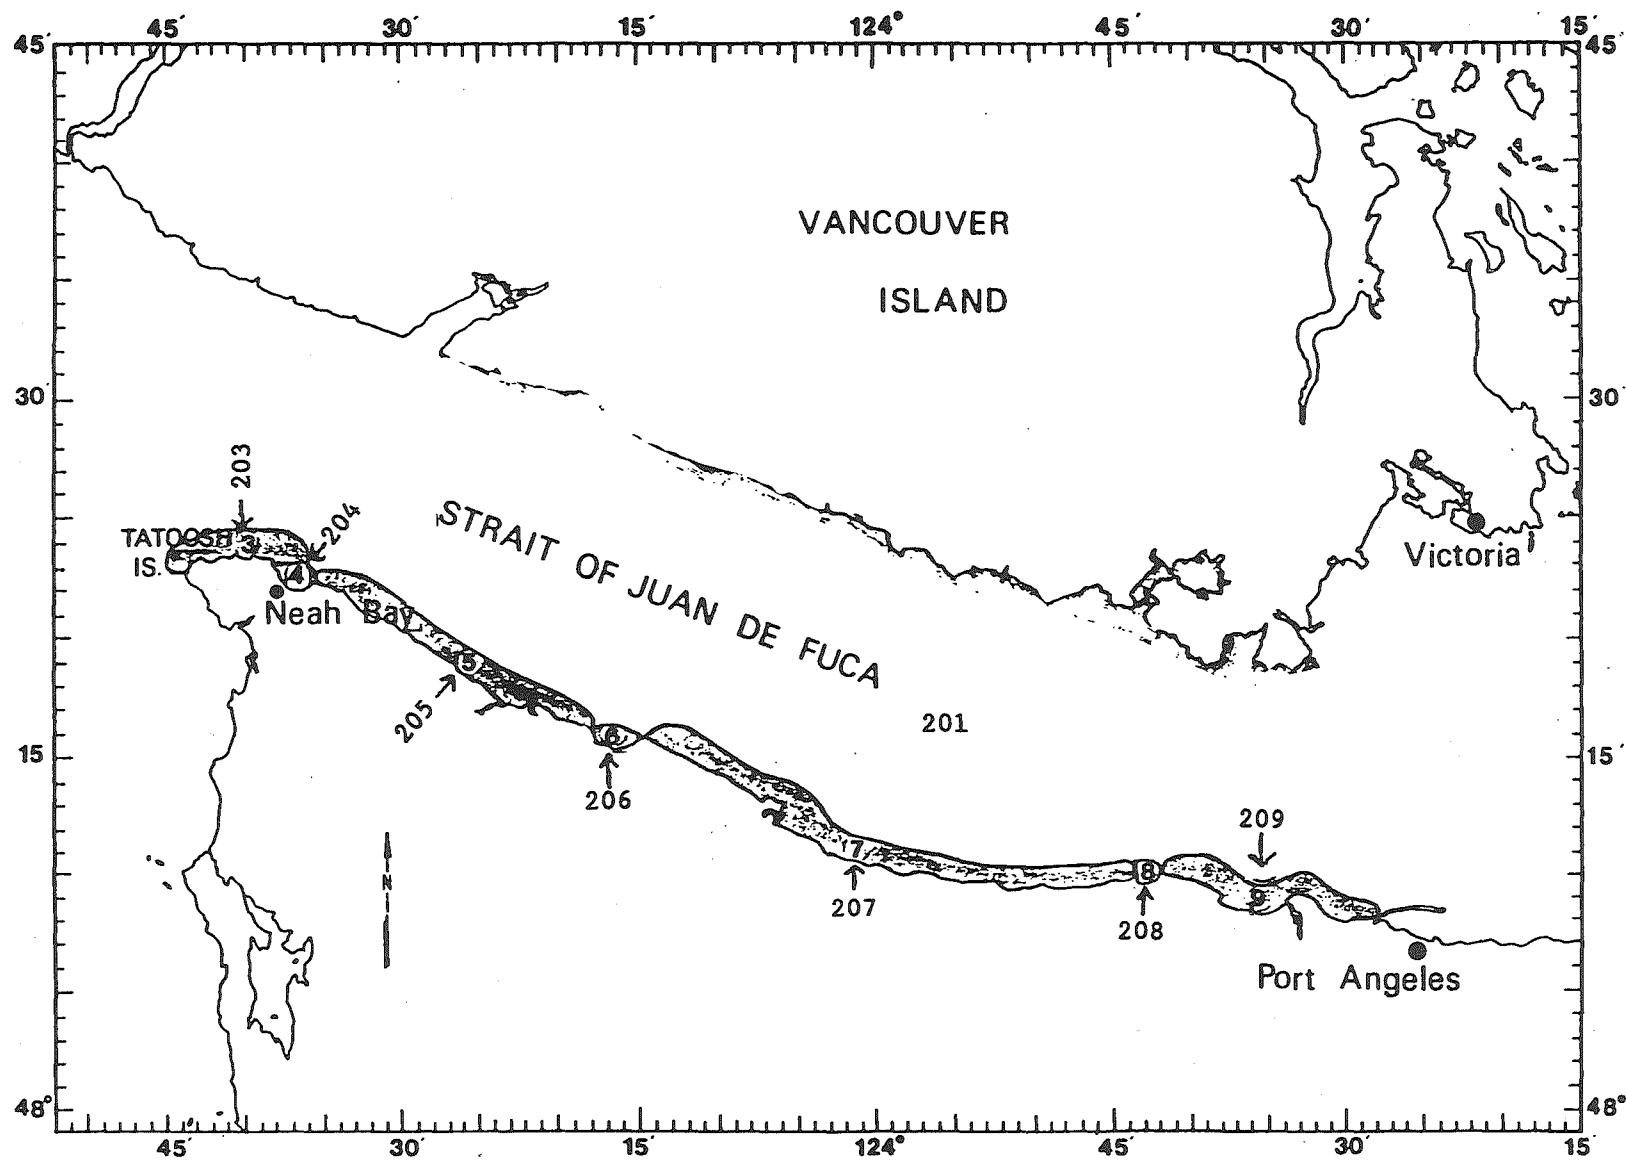

Common Name	Scientific Name
Pacific Oyster	<i>Crassostrea gigas</i>
Olympia Oyster	<i>Ostrea lurida</i>
Pacific Razor Clam	<i>Siliqua patula</i>
Geoduck	<i>Panope generosa</i>
Butter Clam	<i>Saxidomus giganteus</i>
Native Little Neck	<i>Protothaca staminea</i>
Manila Clam	<i>Venerupis japonica</i>
Gaper Clam	<i>Tresus nuttalli</i>
Horse Clam	<i>T. capax</i>
Eastern Soft Shell	<i>Mya arenaria</i>
Cockles	<i>Clinocardium nuttalli</i>
Pink Scallop	<i>Chlamys rubida</i>
Spiny Scallop	<i>C. hastata</i>
Rock Scallop	<i>Hinnites multirugous</i>
Weather-vane Scallop	<i>Pecten caurinus</i>
Bay Mussel	<i>Mytilus spp.</i>
California Mussel	<i>M. californianus</i>
Goose(neck) Barnacle	<i>Pollicipes polymerus</i>
Squid	<i>Loligo opalescens</i>
Octopus	<i>Octopus dofleini</i>
Northern Abalone	<i>Haliotis kamschatkana</i>
Limpets	subsistence harvest species
Whelks	subsistence harvest species
Moon Snail	<i>Polinices</i>
Chitons	subsistence harvest species
Sea Cucumber	<i>Parastichopus californicus</i>
Red Sea Urchin	<i>Strongylocentrotus franciscanus</i>
Green Sea Urchin	<i>S. droebachiensis</i>
Purple Sea Urchin	<i>S. purpuratus</i>
Dungeness Crab	<i>Cancer magister</i>
Red (Rock) Crab	<i>C. productus</i>
Spot Shrimp	<i>Pandalus platyceros</i>
Coon Stripe Shrimp	<i>P. danae</i>
Side Shrimp	<i>Pandalopsis dispar</i>
Pink Shrimp	<i>Pandalus jordani</i> & <i>P. borealis</i>
Ghost Shrimp	<i>Callinassa spp.</i>
Mud Shrimp	<i>Upogebia pugettensis</i>
Humpback Shrimp	<i>Pandalus hypsinotus</i>

APPENDIX 5: COMPENSATION SCHEDULE REGIONS AND SUBREGIONS

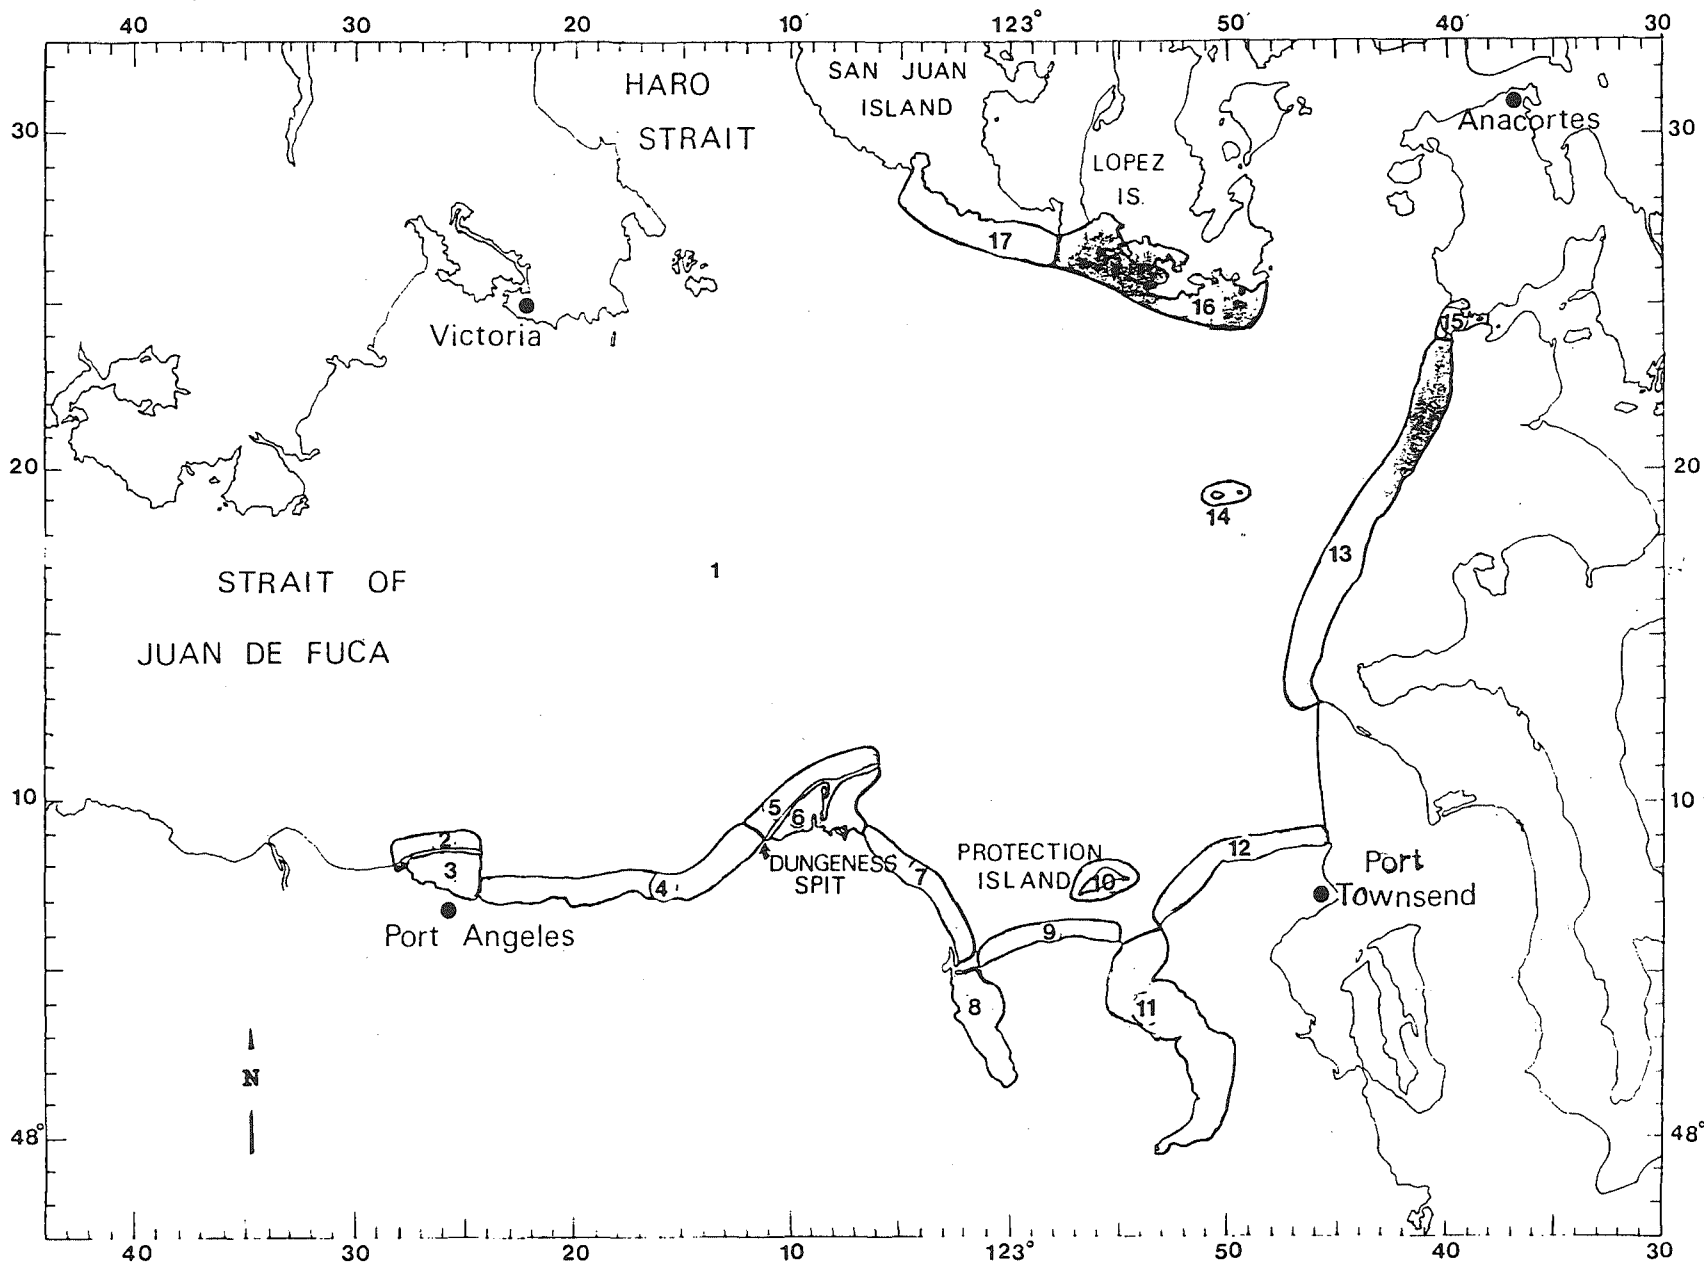

Northern Puget Sound, Strait of Juan de Fuca and Outer Coast
Compensation Schedule Regions

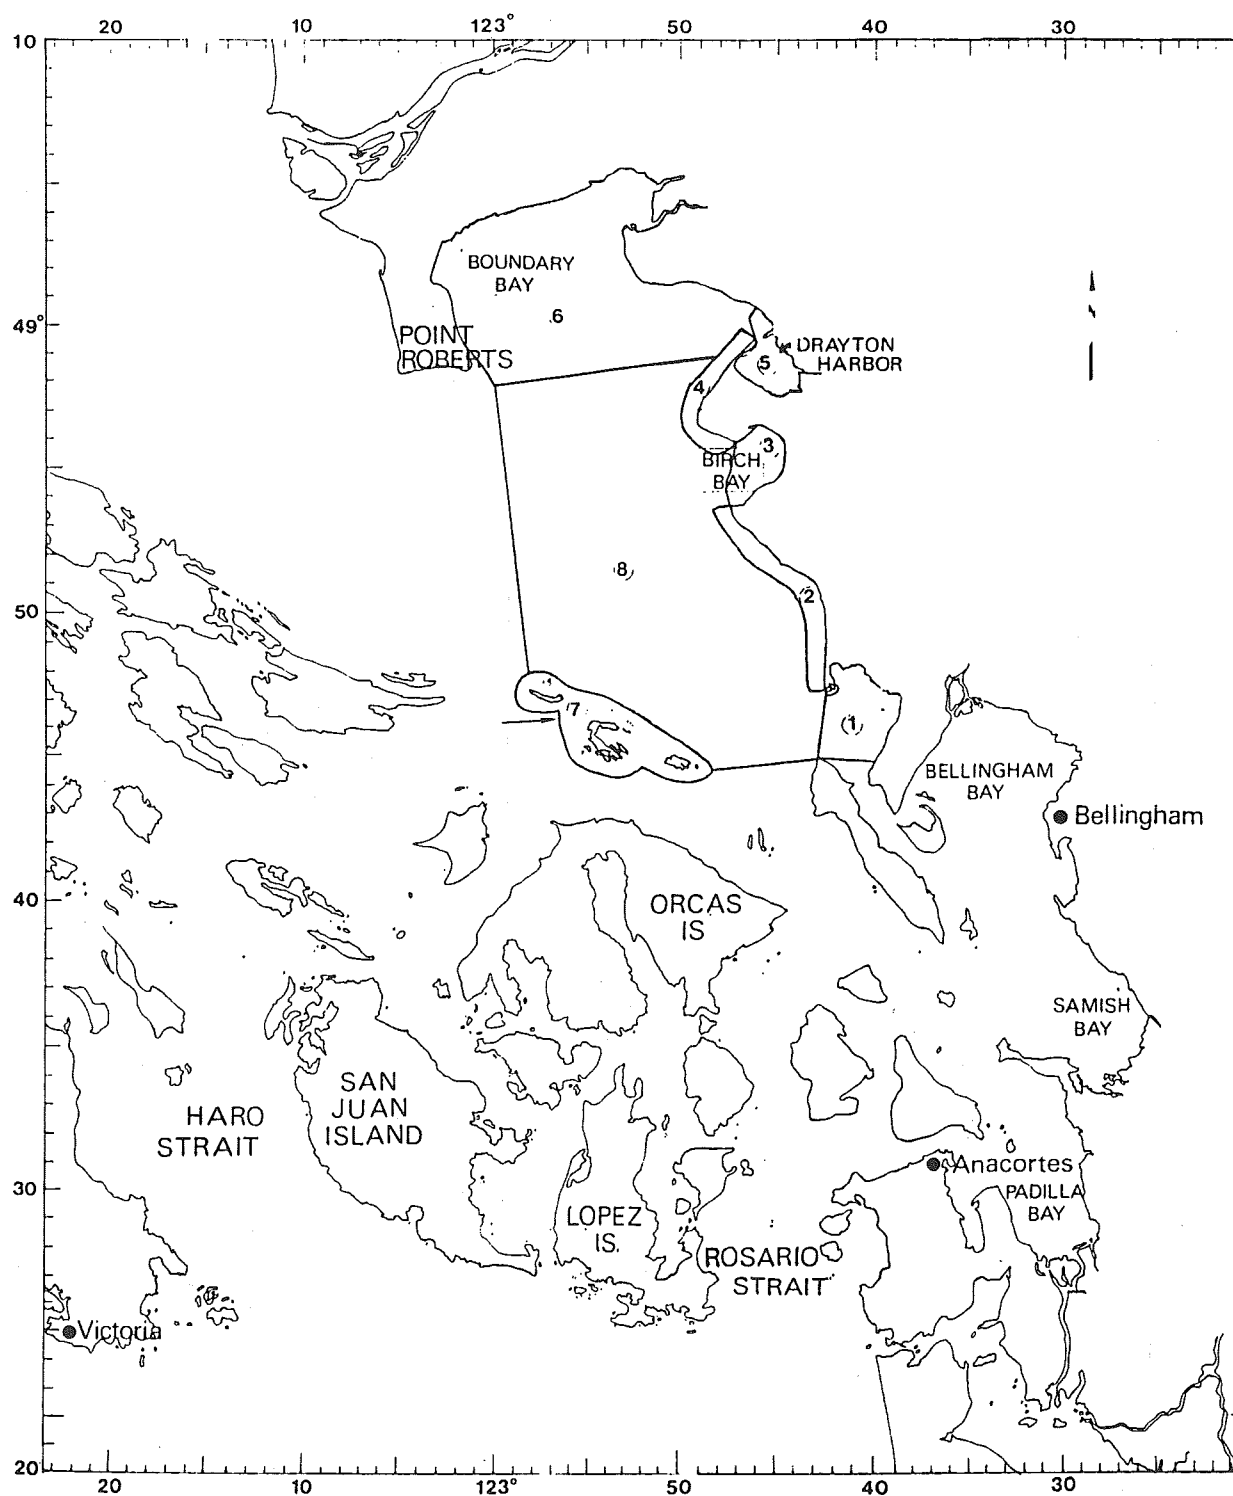

Region 2 Subregions

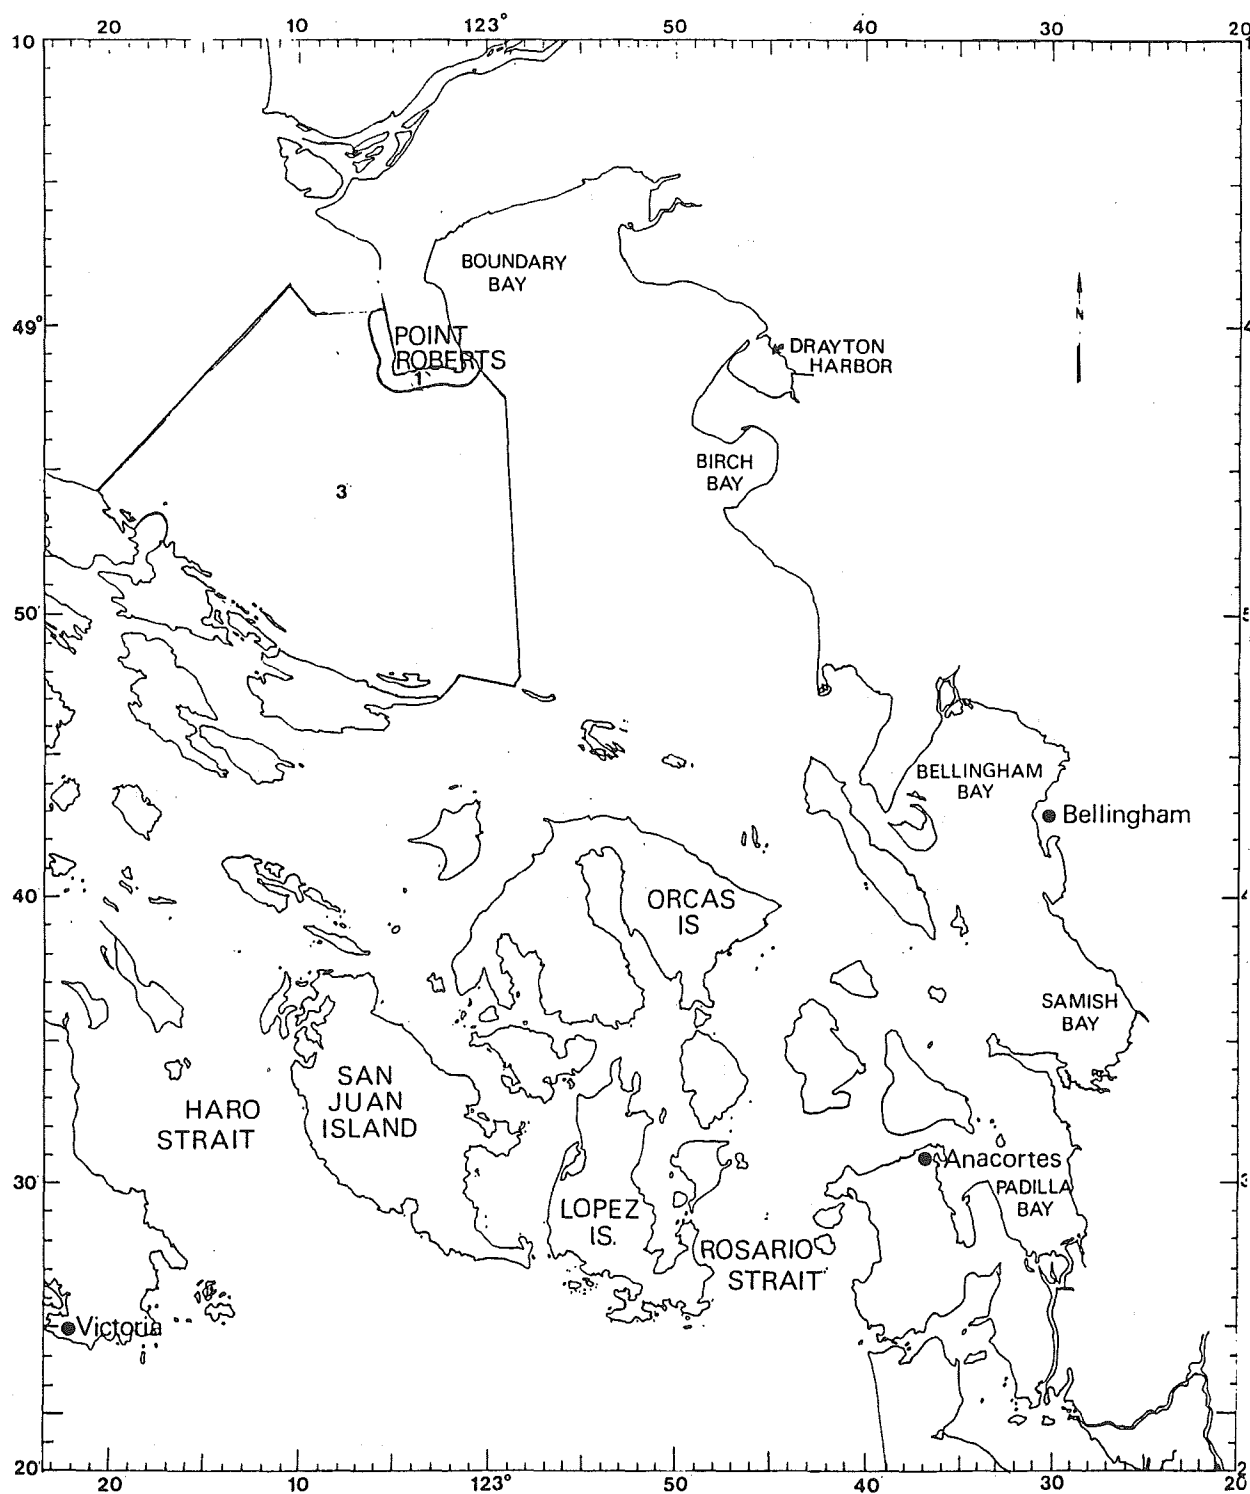

REGION 3 SUBREGIONS 301 THROUGH 317

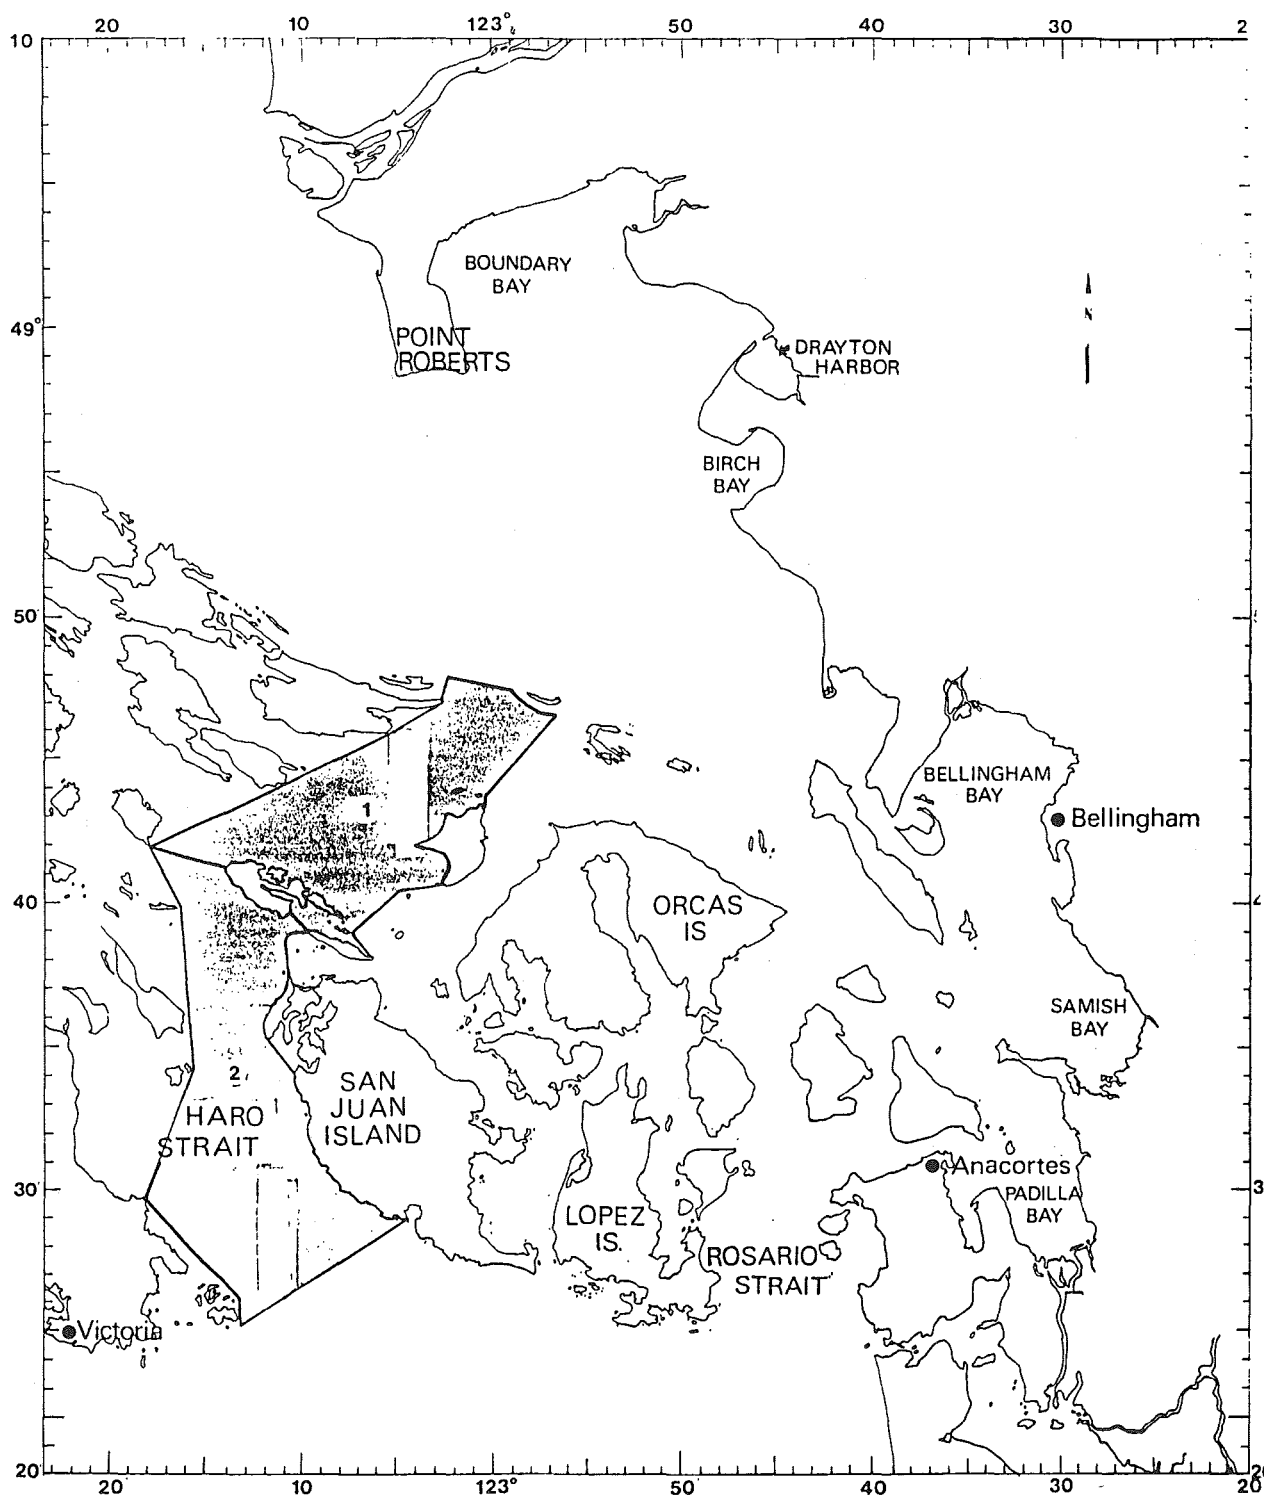

REGION 5 SUBREGIONS 501 THROUGH 507

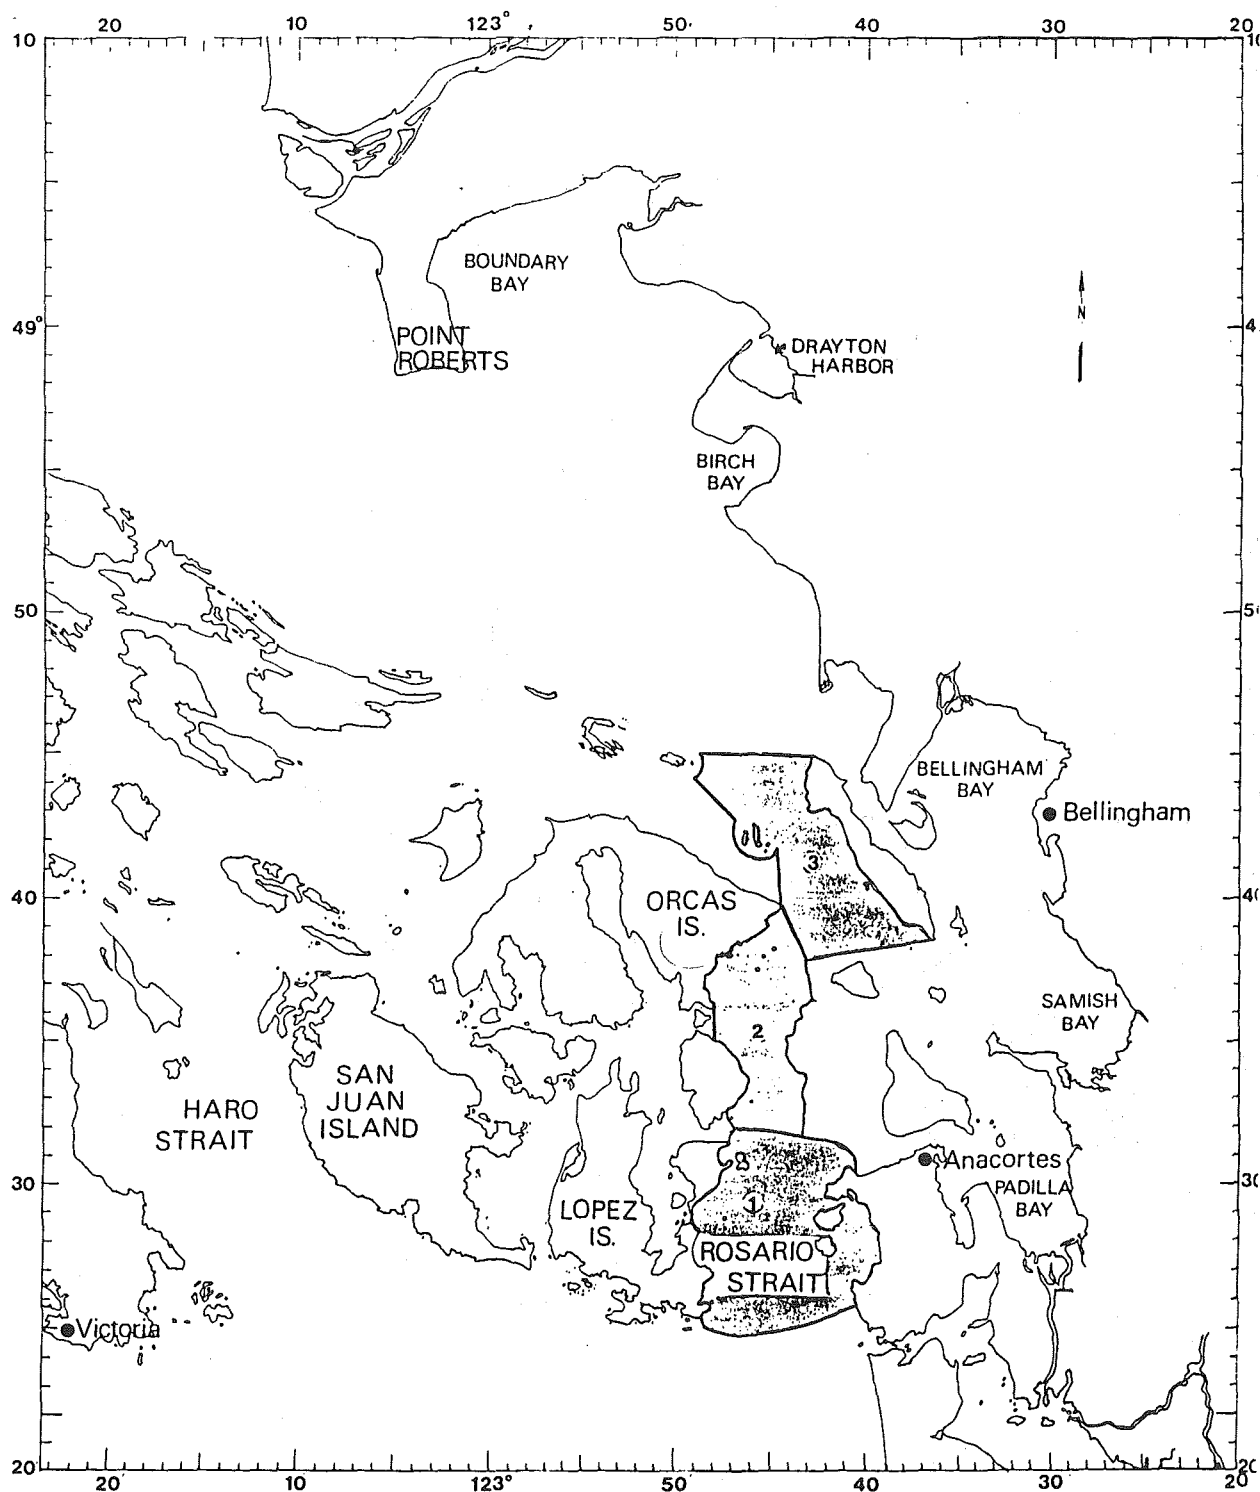

REGION 6 SUBREGIONS 601 THROUGH 607

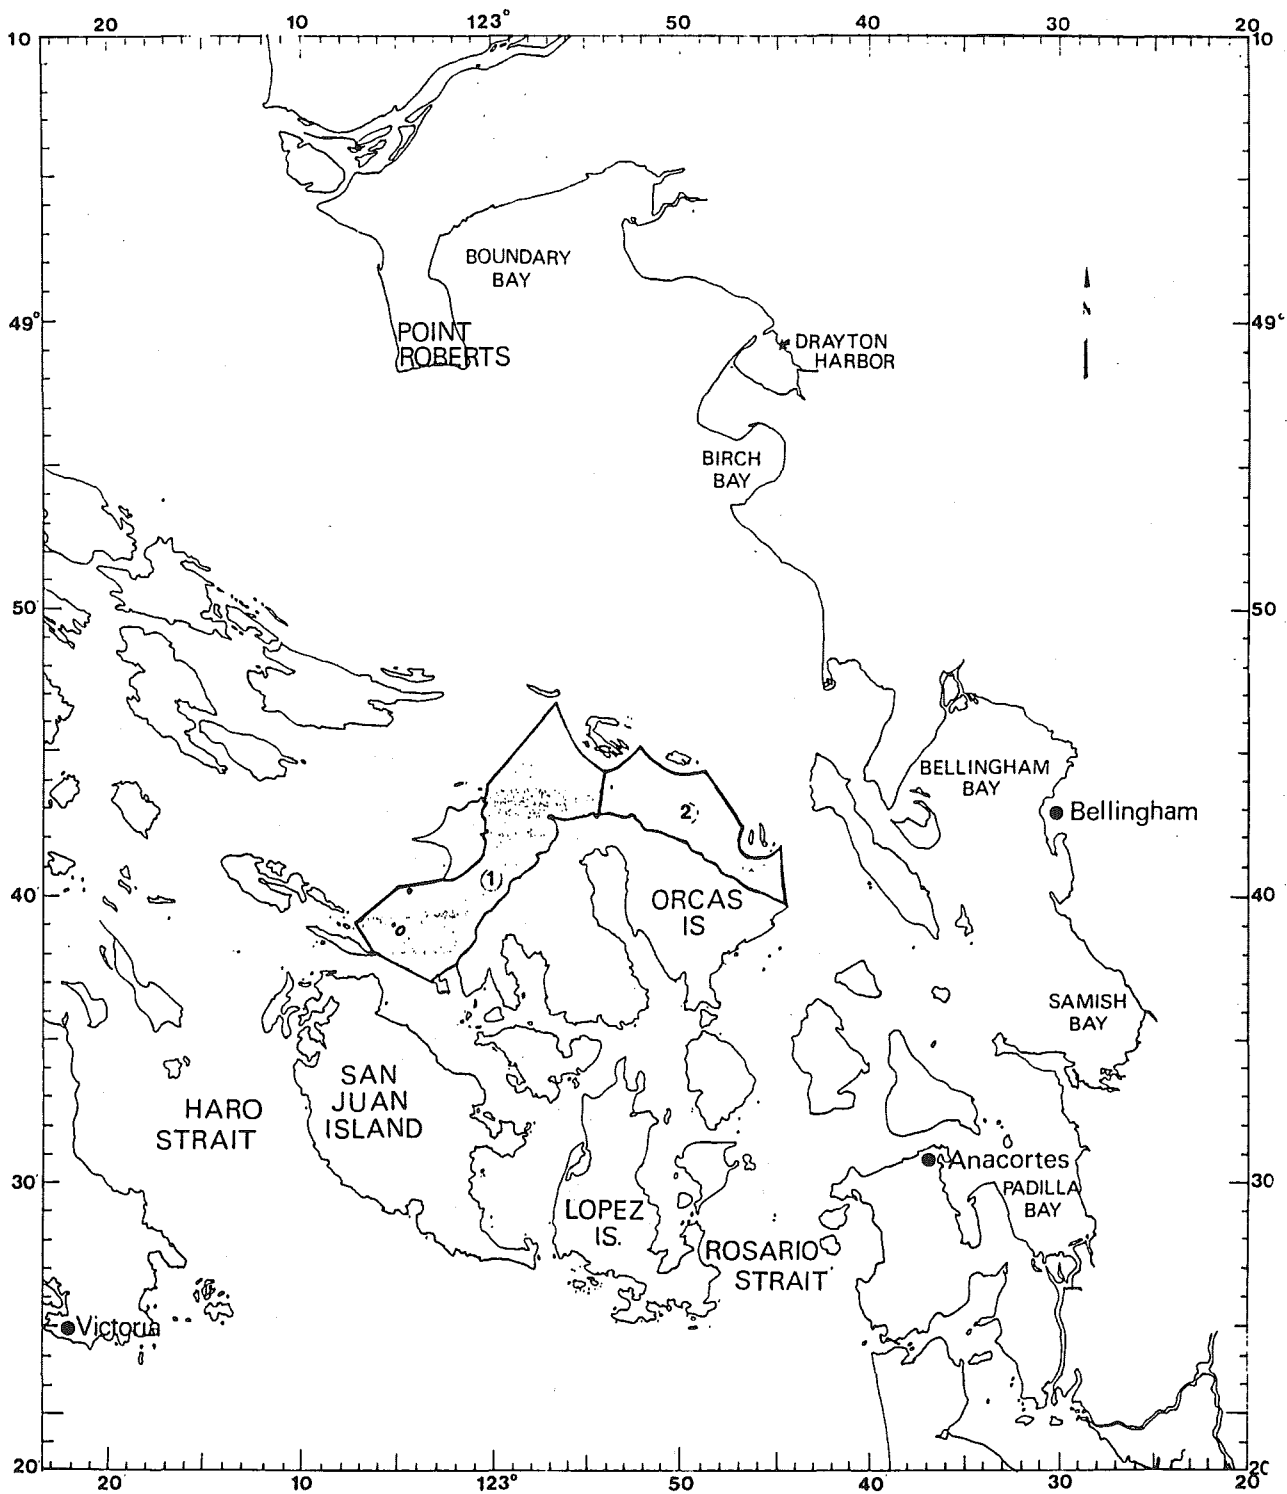

REGION 7 SUBREGIONS 701 AND 703

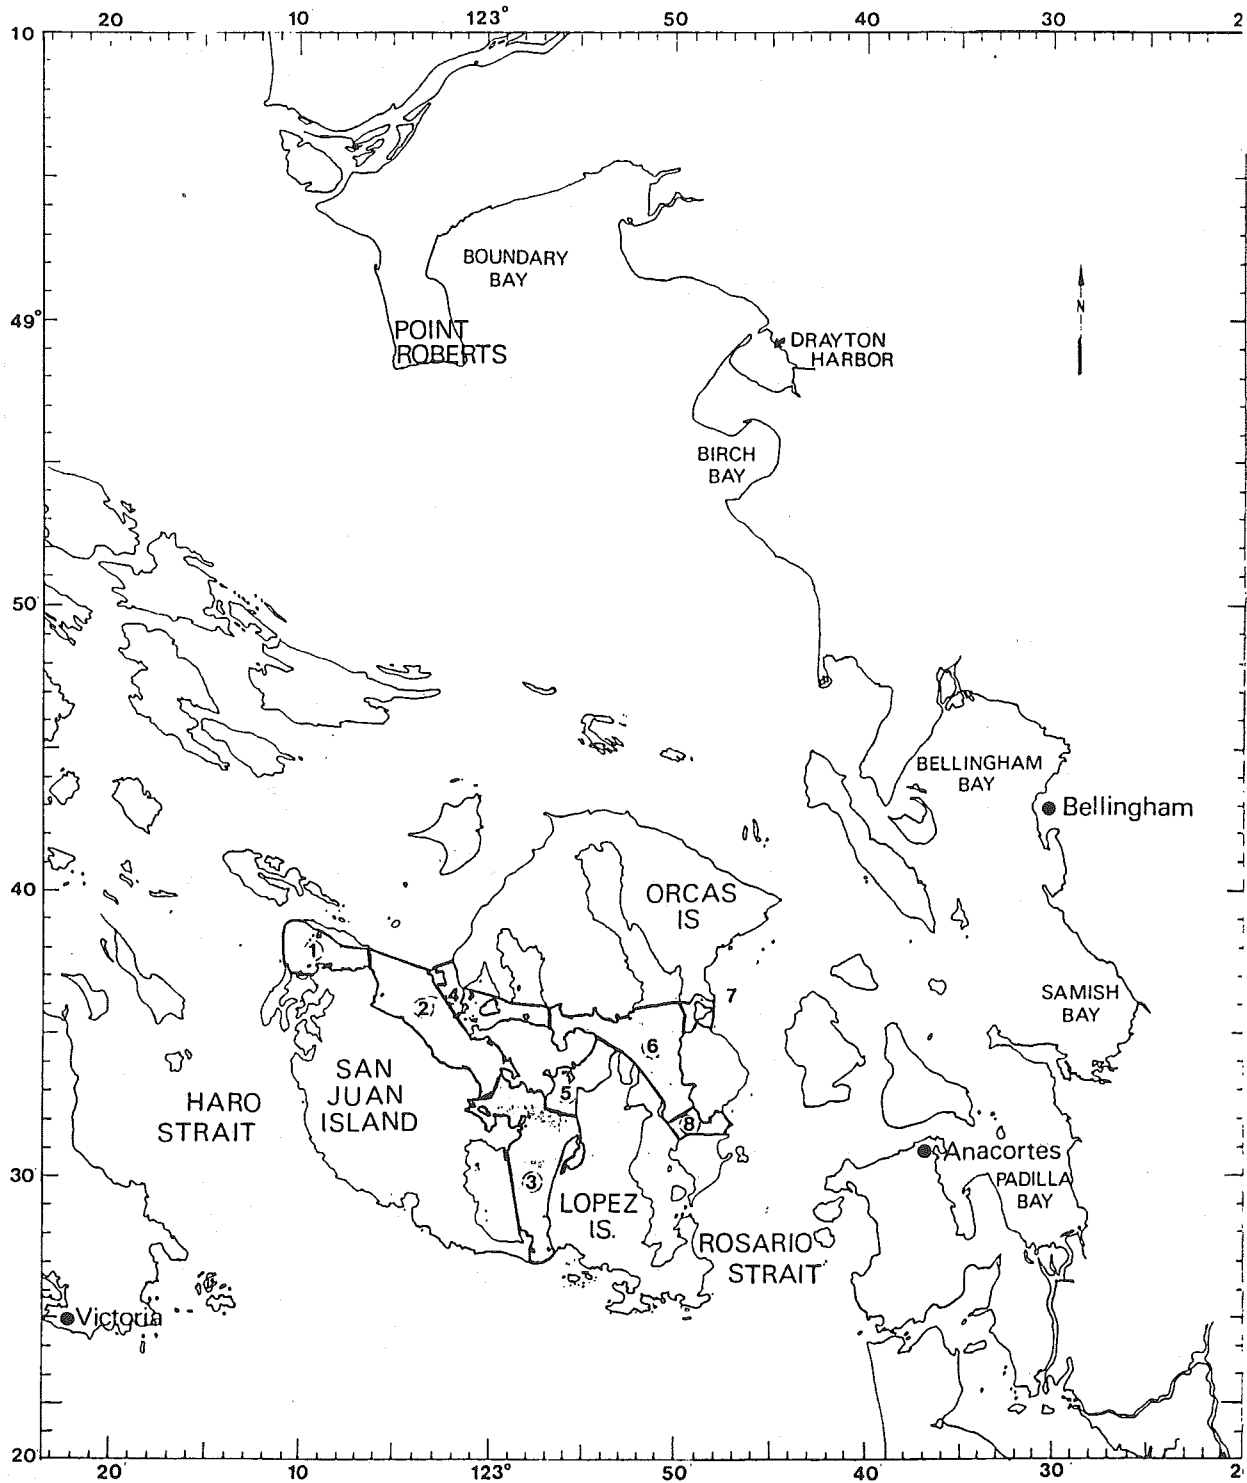

REGION 8 SUBREGIONS 801 AND 802

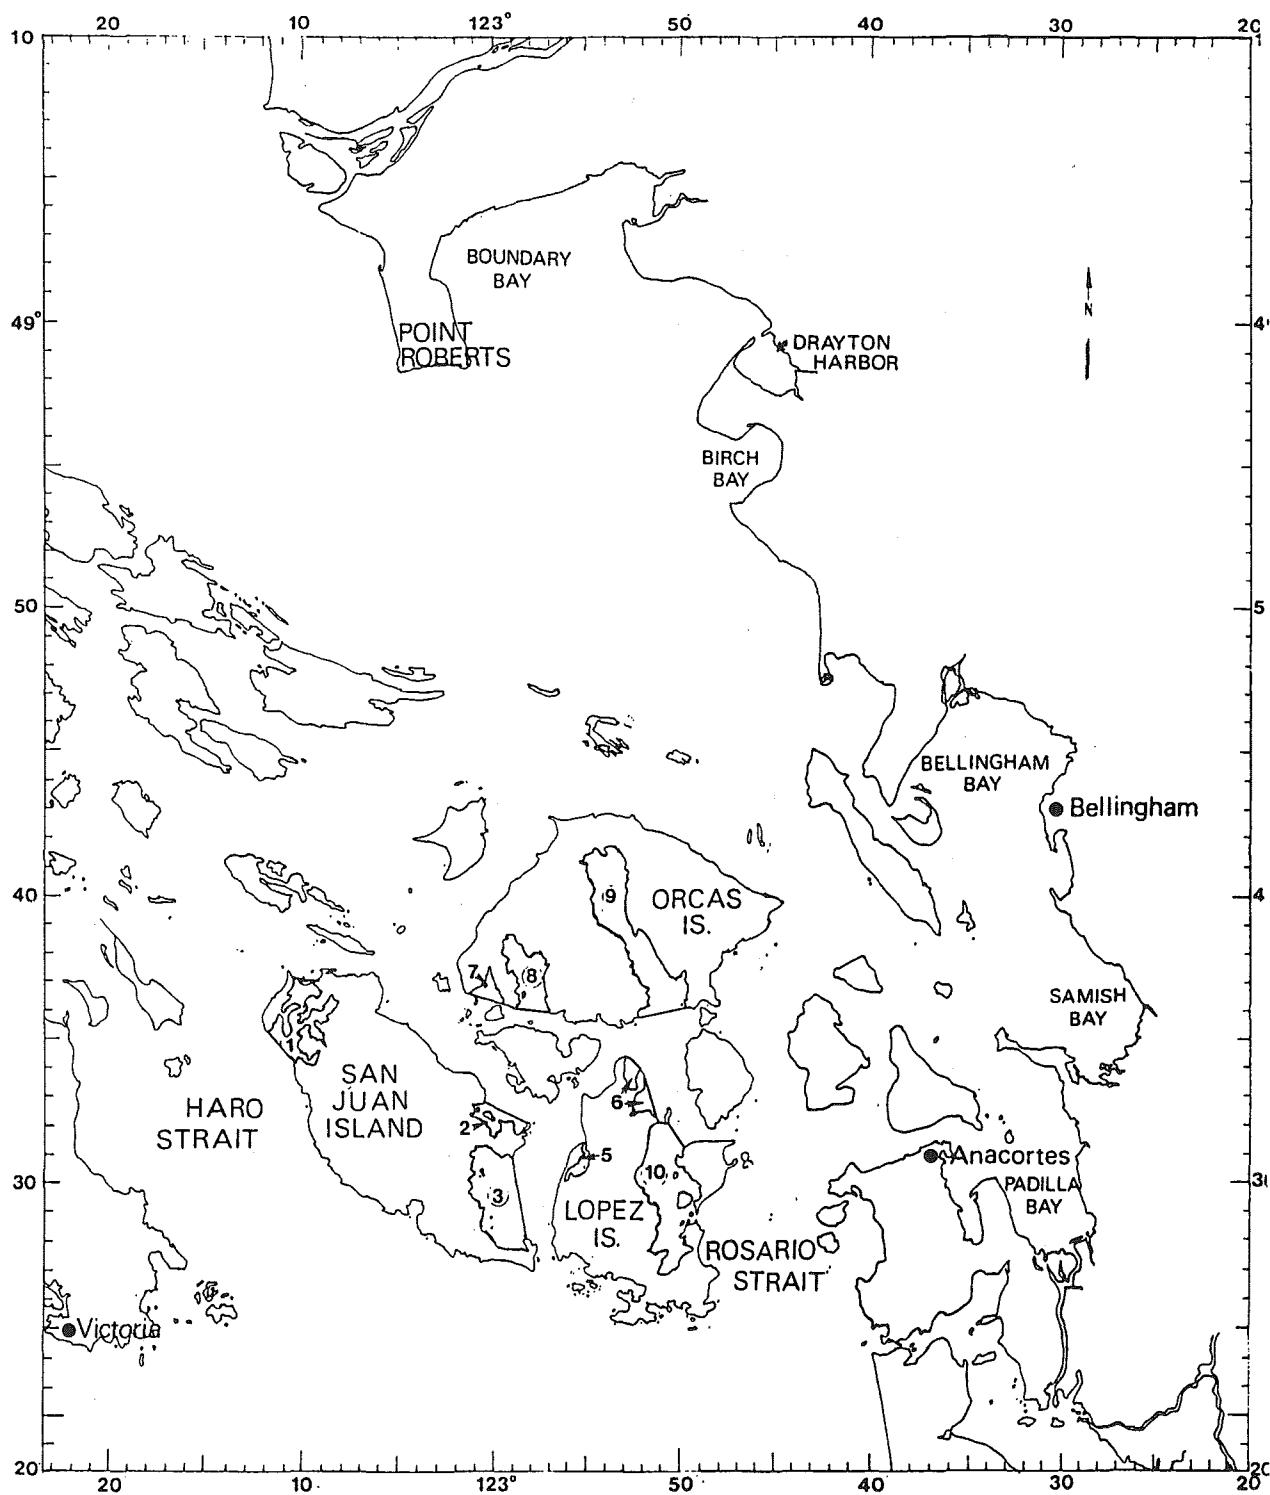

REGION 9 SUBREGIONS 901 THROUGH 903

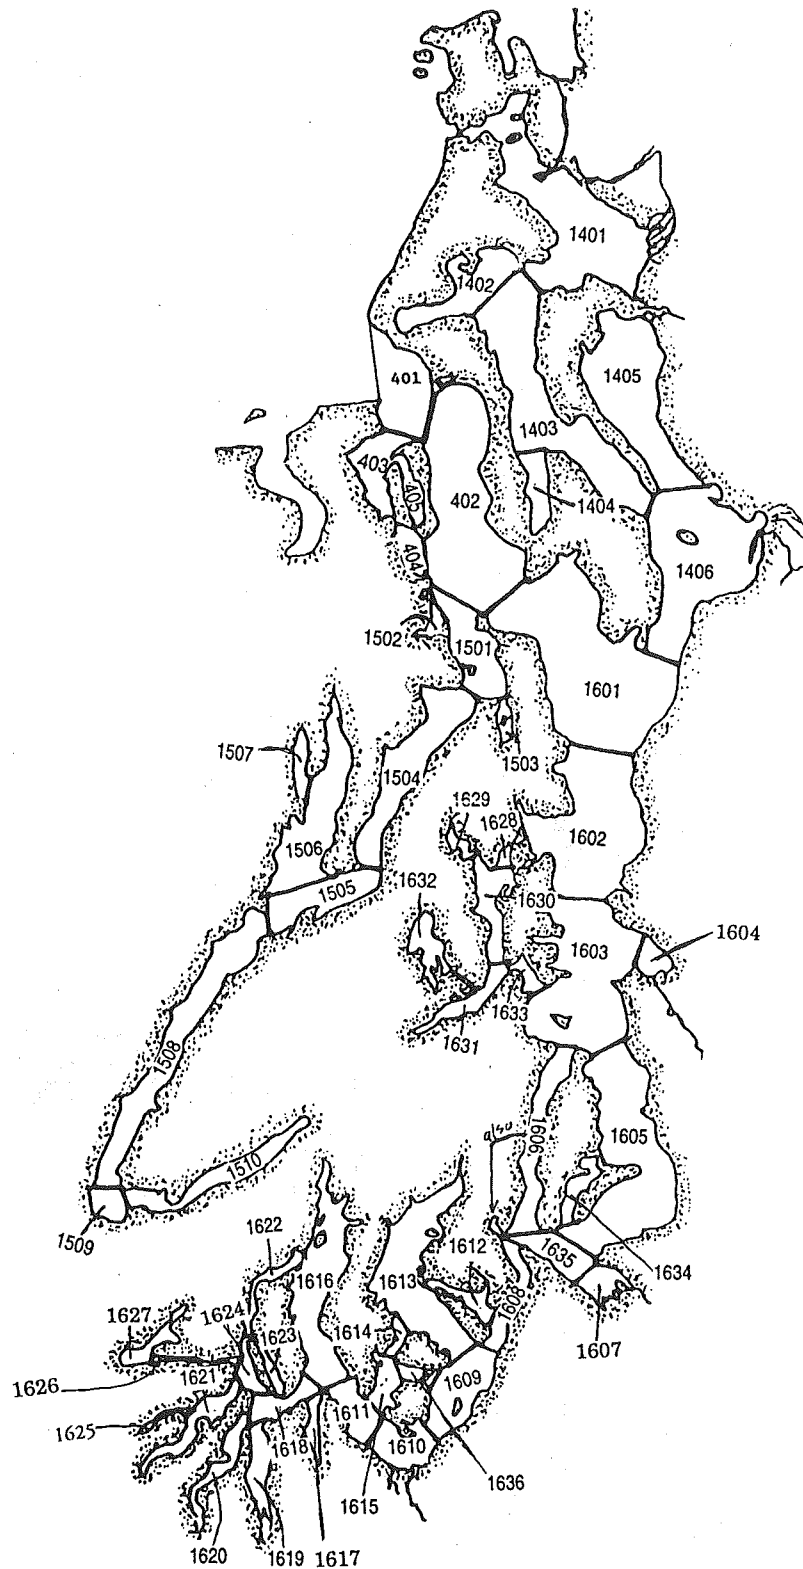

REGION 10 SUBREGIONS 1001 AND 1002

REGION 11 SUBREGIONS 1101 THROUGH 1108

REGION 12 SUBREGIONS 1201 THROUGH 1203 AND 1205 THROUGH 1210

SUBREGIONS OF REGIONS 4, 14, 15 AND 16

Chapter 173-200 WAC

WATER QUALITY STANDARDS FOR GROUND
WATERS OF THE STATE OF WASHINGTON

WAC

173-200-010	Introduction.
173-200-020	Definitions.
173-200-030	Antidegradation policy.
173-200-040	Criteria.
173-200-050	Enforcement limit.
173-200-060	Point of compliance.
173-200-070	Early warning value.
173-200-080	Evaluation.
173-200-090	Special protection areas.
173-200-100	Implementation and enforcement.

WAC 173-200-010 Introduction. (1) This chapter implements chapter 90.48 RCW, the Water Pollution Control Act and chapter 90.54 RCW, the Water Resources Act of 1971.

(2) This chapter applies to all ground waters of the state that occur in a saturated zone or stratum beneath the surface of land or below a surface water body.

(3) This chapter shall not apply to:

(a) Contaminant concentrations found in saturated soils where those contaminants are chemicals or nutrients that have been applied at agronomic rates for agricultural purpose if those contaminants will not cause pollution of any ground waters below the root zone.

(b) Contaminant concentrations found in saturated soils where those contaminants are constituents that have been applied at approved rates and under approved methods of land treatment if those contaminants will not cause pollution of any ground waters below the root zone.

(c) Clean up actions approved by the department under the Model Toxics Control Act, chapter 70.105D RCW, or approved by the United States Environmental Protection Agency under the Comprehensive Environmental Response Compensation and Liability Act, 42 U.S.C. 9601 et seq. Ground water cleanup standards for such sites shall be developed under WAC 173-340-720.

(1999 Ed.)

(4) The goal of this chapter is to maintain the highest quality of the state's ground waters and protect existing and future beneficial uses of the ground water through the reduction or elimination of the discharge of contaminants to the state's ground waters.

(5) To implement this goal, this chapter establishes ground water quality standards which, together with the state's technology-based treatment requirements, provide for the protection of the environment and human health and protection of existing and future beneficial uses of ground waters.

[Statutory Authority: RCW 90.48.035, 90-22-023, § 173-200-010, filed 10/31/90, effective 12/1/90.]

WAC 173-200-020 Definitions. As used in this chapter:

(1) "Activity" means any site, area, facility, structure, vehicle, installation, or discharge which may produce pollution.

(2) "Artificial ground water" means ground water that has been put in place through means, such as irrigation, other than natural recharge.

(3) "Background water quality" means the concentrations of chemical, physical, biological, or radiological constituents, or other characteristics in or of ground water at a particular point in time and upgradient of an activity that have not been affected by that activity.

(4) "Beneficial uses" means uses of waters of the state which include but are not limited to use for domestic, stock watering, industrial, commercial, agricultural, irrigation, mining, fish and wildlife maintenance and enhancement, recreation, generation of electric power and preservation of environmental and aesthetic values, and all other uses compatible with the enjoyment of the public waters of the state.

(5) "Best management practices" or "BMPs" mean schedules of activities, prohibitions of practices, maintenance of procedures, and other management practices, to prevent or reduce the pollution of ground waters of the state. BMPs also include treatment requirements, operating procedures and practices to control plant site runoff, spillage or leaks, sludge or water disposal, or drainage from raw material storage.

[Title 173 WAC—p. 385]

(6) "Carcinogen" means any substance or agent that produces or tends to produce cancer in humans. For implementation of this chapter, the term carcinogen will apply to all substances on the United States Environmental Protection Agency Integrated Risk Information System, IRIS data base, of A (known human) and B1 and B2 (probable human) carcinogens for which IRIS listed an oral slope factor.

(7) "Contaminant" means any chemical, physical, biological, or radiological substance that does not occur naturally in ground water or that occurs at concentrations greater than those in the natural levels.

(8) "Criteria" means numerical values or narrative standards that represent the maximum allowable contaminant concentrations in the ground water.

(9) "Department" means the Washington state department of ecology.

(10) "Early warning value" means a concentration set in accordance with WAC 173-200-070 that is a percentage of a ground water quality enforcement limit.

(11) "Enforcement limit" means the value assigned to any contaminant for the purposes of regulating that contaminant.

(12) "Ground water" means water in a saturated zone or stratum beneath the surface of land or below a surface water body.

(13) "Human-caused pollution" means pollution resulting from human activity.

(14) "Isolated ground water" means ground water fully separated from other ground waters by an impermeable layer of rock or strata.

(15) "Maximum contaminant level" or "MCL" means the maximum concentration of a contaminant in water established by the Environmental Protection Agency under the Federal Safe Drinking Water Act (42 U.S.C. 300f et seq.) and published in 40 C.F.R. 141 as presently promulgated or as subsequently amended or repromulgated.

(16) "Maximum contaminant level goal" or "MCLG" means the maximum concentration of a contaminant established by the Environmental Protection Agency under the Federal Safe Drinking Water Act (42 U.S.C. 300f et seq.) and published in 40 C.F.R. 141 as presently promulgated or subsequently amended or repromulgated, for which no known or anticipated adverse effects on human health occur including an adequate margin of safety.

(17) "Natural ground water quality" means ground water quality that was present before any human-caused pollution.

(18) "Naturally nonpotable ground water" means ground water that is unsuitable for drinking water because of natural ground water quality and for which current treatment methods are considered unreasonable and impractical.

(19) "Permit" means a department authorization, license, or equivalent control document issued to a facility, activity, or entity authorized to treat, store, dispose, or discharge materials or wastes. This includes, but is not limited to, state waste discharge permits issued pursuant to chapter 173-216 WAC, permits for dangerous waste management facilities issued pursuant to chapter 173-303 WAC, and permits for ground water withdrawal issued pursuant to chapter 90.44 RCW.

(20) "Person" means any political subdivision, government agency, municipality, industry, public or private corpo-

ration, partnership, association, firm, individual, or any other entity whatsoever.

(21) "Point of compliance" means the location, set in accordance with WAC 173-200-060, where the ground water quality enforcement limit shall not be exceeded.

(22) "Pollution" means such contamination, or other alteration of the physical, chemical or biological properties, of any waters of the state, including change in temperature, taste, color, turbidity, or odor of the waters, or such discharge of any liquid, gaseous, solid, radioactive, or other substance into any waters of the state as will or is likely to create a nuisance or render such waters harmful, detrimental or injurious to the public health, safety or welfare, or to domestic, commercial, industrial, agricultural, recreational, or other legitimate beneficial uses, or to livestock, wild animals, birds, fish, or other aquatic life.

(23) "Practical quantification level" or "PQL" means the lowest concentration of a substance that can be reliably achieved within specific limits of precision, accuracy, representativeness, completeness, and comparability during routine laboratory operating conditions.

(24) "Root zone" means the zone that extends from the surface of the soil to the depth of the lowest root and is specific to a species of plant, group of plants, or crop.

(25) "Saturated zone" means the zone below the water table in which all interstices are filled with water.

(26) "Seasonal ground water" means ground water that exists for a temporary period of the year and is usually associated with a particular activity or phenomenon.

(27) "State waste discharge permit" means a permit issued in accordance with the state waste discharge permit program, chapter 173-216 WAC.

[Statutory Authority: RCW 90.48.035, 90-22-023, § 173-200-020, filed 10/31/90, effective 12/1/90.]

WAC 173-200-030 Antidegradation policy. (1) The antidegradation policy of the state of Washington, is generally guided by chapter 90.48 RCW, the Water Pollution Control Act, and chapter 90.54 RCW, the Water Resources Act of 1971. The goal of this policy is to ensure the purity of the state's ground waters and to protect the natural environment.

(2) The antidegradation policy is as follows:

(a) Existing and future beneficial uses shall be maintained and protected and degradation of ground water quality that would interfere with or become injurious to beneficial uses shall not be allowed.

(b) Degradation shall not be allowed of high quality ground waters constituting an outstanding national or state resource, such as waters of national and state parks and wildlife refuges, and waters of exceptional recreational or ecological significance.

(c) Whenever ground waters are of a higher quality than the criteria assigned for said waters, the existing water quality shall be protected, and contaminants that will reduce the existing quality thereof shall not be allowed to enter such waters, except in those instances where it can be demonstrated to the department's satisfaction that:

(i) An overriding consideration of the public interest will be served; and

(ii) All contaminants proposed for entry into said ground waters shall be provided with all known, available, and reasonable methods of prevention, control, and treatment prior to entry.

[Statutory Authority: RCW 90.48.035, 90-22-023, § 173-200-030, filed 10/31/90, effective 12/1/90.]

WAC 173-200-040 Criteria. (1) Ground waters in the state of Washington support many different beneficial uses. The purpose of these criteria is to establish maximum contaminant concentrations for the protection of a variety of beneficial uses of Washington's ground water.

(a) Drinking water is the beneficial use generally requiring the highest quality of ground water.
